APOLOGY

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

In what relation the Apology of Plato stands to the real defence of Socrates, there are no means of determining. It certainly agrees in tone and character with the description of Xenophon, who says in the Memorabilia that Socrates might have been acquitted 'if in any moderate degree he would have conciliated the favour of the dicasts;' and who informs us in another passage, on the testimony of Hermogenes, the friend of Socrates, that he had no wish to live; and that the divine sign refused to allow him to prepare a defence, and also that Socrates himself declared this to be unnecessary, on the ground that all his life long he had been preparing against that hour. For the speech breathes throughout a spirit of defiance, (ut non supplex aut reus sed magister aut dominus videretur esse judicum', Cic. de Orat.); and the loose and desultory style is an imitation of the 'accustomed manner' in which Socrates spoke in 'the agora and among the tables of the money-changers.' The allusion in the Crito may, perhaps, be adduced as a further evidence of the literal accuracy of some parts. But in the main it must be regarded as the ideal of Socrates, according to Plato's conception of him, appearing in the greatest and most public scene of his life, and in the height of his triumph, when he is weakest, and yet his mastery over mankind is greatest, and his habitual irony acquires a new meaning and a sort of tragic pathos in the face of death. The facts of his life are summed up, and the features of his character are brought out as if by accident in the course of the defence. The conversational manner, the seeming want of arrangement, the ironical simplicity, are found to result in a perfect work of art, which is the portrait of Socrates.

Yet some of the topics may have been actually used by Socrates; and the recollection of his very words may have rung in the ears of his disciple. The Apology of Plato may be compared generally with those speeches of Thucydides in which he has embodied his conception of the lofty character and policy of the great Pericles, and which at the same time furnish a commentary on the situation of affairs from the point of view of the historian. So in the Apology there is an ideal rather than a literal truth; much is said which was not said, and is only Plato's view of the situation. Plato was not, like Xenophon, a chronicler of facts; he does not appear in any of his writings to have aimed at literal accuracy. He is not therefore to be supplemented from the Memorabilia and Symposium of Xenophon, who belongs to an entirely different class of writers. The Apology of Plato is not the report of what Socrates said, but an elaborate composition, quite as much so in fact as one of the Dialogues. And we may perhaps even indulge in the fancy that the actual defence of Socrates was as much greater than the Platonic defence as the master was greater than the disciple. But in any case, some of the words used by him must have been remembered, and some of the facts recorded must have actually occurred. It is significant that Plato is said to have been present at the defence (Apol.), as he is also said to have been absent at the last scene in the Phaedo. Is it fanciful to suppose that he meant to give the stamp of authenticity to the one and not to the other?—especially when we consider that these two passages are the only ones in which Plato makes mention of himself. The circumstance that Plato was to be one of his sureties for the payment of the fine which he proposed has the appearance of truth. More suspicious is the statement that Socrates received the first impulse to his favourite calling of cross-examining the world from the Oracle of Delphi; for he must already have been famous before Chaerephon went to consult the Oracle (Riddell), and the story is of a kind which is very likely to have been invented. On the whole we arrive at the conclusion that the Apology is true to the character of Socrates, but we cannot show that any single sentence in it was actually spoken by him. It breathes the spirit of Socrates, but has been cast anew in the mould of Plato.

There is not much in the other Dialogues which can be compared with the Apology. The same recollection of his master may have been present to the mind of Plato when depicting the sufferings of the Just in the Republic. The Crito may also be regarded as a sort of appendage to the Apology, in which Socrates, who has defied the judges, is nevertheless represented as scrupulously obedient to the laws. The idealization of the sufferer is carried still further in the Gorgias, in which the thesis is maintained, that 'to suffer is better than to do evil;' and the art of rhetoric is described as only useful for the purpose of self-accusation. The parallelisms which occur in the so-called Apology of Xenophon are not worth noticing, because the writing in which they are contained is manifestly spurious. The statements of the Memorabilia respecting the trial and death of Socrates agree generally with Plato; but they have lost the flavour of Socratic irony in the narrative of Xenophon.

The Apology or Platonic defence of Socrates is divided into three parts: 1st. The defence properly so called; 2nd. The shorter address in mitigation of the penalty; 3rd. The last words of prophetic rebuke and exhortation.

The first part commences with an apology for his colloquial style; he is, as he has always been, the enemy of rhetoric, and knows of no rhetoric but truth; he will not falsify his character by making a speech. Then he proceeds to divide his accusers into two classes; first, there is the nameless accuser—public opinion. All the world from their earliest years had heard that he was a corrupter of youth, and had seen him caricatured in the Clouds of Aristophanes. Secondly, there are the professed accusers, who are but the mouth-piece of the others. The accusations of both might be summed up in a formula. The first say, 'Socrates is an evil-doer and a curious person, searching into things under the earth and above the heaven; and making the worse appear the better cause, and teaching all this to others.' The second, 'Socrates is an evil-doer and corrupter of the youth, who does not receive the gods whom the state receives, but introduces other new divinities.' These last words appear to have been the actual indictment (compare Xen. Mem.); and the previous formula, which is a summary of public opinion, assumes the same legal style.

The answer begins by clearing up a confusion. In the representations of the Comic poets, and in the opinion of the multitude, he had been identified with the teachers of physical science and with the Sophists. But this was an error. For both of them he professes a respect in the open court, which contrasts with his manner of speaking about them in other places. (Compare for Anaxagoras, Phaedo, Laws; for the Sophists, Meno, Republic, Tim., Theaet., Soph., etc.) But at the same time he shows that he is not one of them. Of natural philosophy he knows nothing; not that he despises such pursuits, but the fact is that he is ignorant of them, and never says a word about them. Nor is he paid for giving instruction—that is another mistaken notion:—he has nothing to teach. But he commends Evenus for teaching virtue at such a 'moderate' rate as five minae. Something of the 'accustomed irony,' which may perhaps be expected to sleep in the ear of the multitude, is lurking here.

He then goes on to explain the reason why he is in such an evil name. That had arisen out of a peculiar mission which he had taken upon himself. The enthusiastic Chaerephon (probably in anticipation of the answer which he received) had gone to Delphi and asked the oracle if there was any man wiser than Socrates; and the answer was, that there was no man wiser. What could be the meaning of this—that he who knew nothing, and knew that he knew nothing, should be declared by the oracle to be the wisest of men? Reflecting upon the answer, he determined to refute it by finding 'a wiser;' and first he went to the politicians, and then to the poets, and then to the craftsmen, but

always with the same result—he found that they knew nothing, or hardly anything more than himself; and that the little advantage which in some cases they possessed was more than counter-balanced by their conceit of knowledge. He knew nothing, and knew that he knew nothing: they knew little or nothing, and imagined that they knew all things. Thus he had passed his life as a sort of missionary in detecting the pretended wisdom of mankind; and this occupation had quite absorbed him and taken him away both from public and private affairs. Young men of the richer sort had made a pastime of the same pursuit, 'which was not unamusing.' And hence bitter enmities had arisen; the professors of knowledge had revenged themselves by calling him a villainous corrupter of youth, and by repeating the commonplaces about atheism and materialism and sophistry, which are the stock-accusations against all philosophers when there is nothing else to be said of them.

The second accusation he meets by interrogating Meletus, who is present and can be interrogated. 'If he is the corrupter, who is the improver of the citizens?' (Compare Meno.) 'All men everywhere.' But how absurd, how contrary to analogy is this! How inconceivable too, that he should make the citizens worse when he has to live with them. This surely cannot be intentional; and if unintentional, he ought to have been instructed by Meletus, and not accused in the court.

But there is another part of the indictment which says that he teaches men not to receive the gods whom the city receives, and has other new gods. 'Is that the way in which he is supposed to corrupt the youth?' 'Yes, it is.' 'Has he only new gods, or none at all?' 'None at all.' 'What, not even the sun and moon?' 'No; why, he says that the sun is a stone, and the moon earth.' That, replies Socrates, is the old confusion about Anaxagoras; the Athenian people are not so ignorant as to attribute to the influence of Socrates notions which have found their way into the drama, and may be learned at the theatre. Socrates undertakes to show that Meletus (rather unjustifiably) has been compounding a riddle in this part of the indictment: 'There are no gods, but Socrates believes in the existence of the sons of gods, which is absurd.'

Leaving Meletus, who has had enough words spent upon him, he returns to the original accusation. The question may be asked, Why will he persist in following a profession which leads him to death? Why?—because he must remain at his post where the god has placed him, as he remained at Potidaea, and Amphipolis, and Delium, where the generals placed him. Besides, he is not so overwise as to imagine that he knows whether death is a good or an evil; and he is certain that desertion of his duty is an evil. Anytus is quite right in saying that they should never have indicted him if they meant to let him go. For he will certainly obey God rather than man; and will continue to preach to all men of all ages the necessity of virtue and improvement; and if they refuse to listen to him he will still persevere and reprove them. This is his way of corrupting the youth, which he will not cease to follow in obedience to the god, even if a thousand deaths await him.

He is desirous that they should let him live—not for his own sake, but for theirs; because he is their heaven-sent friend (and they will never have such another), or, as he may be ludicrously described, he is the gadfly who stirs the generous steed into motion. Why then has he never taken part in public affairs? Because the familiar divine voice has hindered him; if he had been a public man, and had fought for the right, as he would certainly have fought against the many, he would not have lived, and could therefore have done no good. Twice in public matters he has risked his life for the sake of justice—once at the trial of the generals; and again in resistance to the tyrannical commands of the Thirty.

But, though not a public man, he has passed his days in instructing the citizens without fee or reward—this was his mission. Whether his disciples have turned out well or ill, he cannot justly be charged with the result, for he never promised to teach them anything. They might come if they liked, and they might stay away if they liked: and they did come, because they found an amusement in hearing the pretenders to wisdom detected. If they have been corrupted, their elder relatives (if not themselves) might surely come into court and witness against him, and there is an opportunity still for them to appear. But their fathers and brothers all appear in court (including 'this' Plato), to witness on his behalf; and if their relatives are corrupted, at least they are uncorrupted; 'and they are my witnesses. For they know that I am speaking the truth, and that Meletus is lying.'

This is about all that he has to say. He will not entreat the judges to spare his life; neither will he present a spectacle of weeping children, although he, too, is not made of 'rock or oak.' Some of the judges themselves may have complied with this practice on similar occasions, and he trusts that they will not be angry with him for not following their example. But he feels that such conduct brings discredit on the name of Athens: he feels too, that the judge has sworn not to give away justice; and he cannot be guilty of the impiety of asking the judge to break his oath, when he is himself being tried for impiety.

As he expected, and probably intended, he is convicted. And now the tone of the speech, instead of being more conciliatory, becomes more lofty and commanding. Anytus proposes death as the penalty: and what counter-proposition shall he make? He, the benefactor of the Athenian people, whose whole life has been spent in doing them good, should at least have the Olympic victor's reward of maintenance in the Prytaneum. Or why should he propose any counter-penalty when he does not know whether death, which Anytus proposes, is a good or an evil? And he is certain that imprisonment is an evil, exile is an evil. Loss of money might be an evil, but then he has none to give; perhaps he can make up a mina. Let that be the penalty, or, if his friends wish, thirty minae; for which they will be excellent securities.

(He is condemned to death.)

He is an old man already, and the Athenians will gain nothing but disgrace by depriving him of a few years of life. Perhaps he could have escaped, if he had chosen to throw down his arms and entreat for his life. But he does not at all repent of the manner of his defence; he would rather die in his own fashion than live in theirs. For the penalty of unrighteousness is swifter than death; that penalty has already overtaken his accusers as death will soon overtake him.

And now, as one who is about to die, he will prophesy to them. They have put him to death in order to escape the necessity of giving an account of their lives. But his death 'will be the seed' of many disciples who will convince them of their evil ways, and will come forth to reprove them in harsher terms, because they are younger and more inconsiderate.

He would like to say a few words, while there is time, to those who would have acquitted him. He wishes them to know that the divine sign never interrupted him in the course of his defence; the reason of which, as he conjectures, is that the death to which he is going is a good and not an evil. For either death is a long sleep, the best of sleeps, or a journey to another world in which the souls of the dead are gathered together, and in which there may be a hope of seeing the heroes of old—in

which, too, there are just judges; and as all are immortal, there can be no fear of any one suffering death for his opinions.

Nothing evil can happen to the good man either in life or death, and his own death has been permitted by the gods, because it was better for him to depart; and therefore he forgives his judges because they have done him no harm, although they never meant to do him any good.

He has a last request to make to them—that they will trouble his sons as he has troubled them, if they appear to prefer riches to virtue, or to think themselves something when they are nothing.

'Few persons will be found to wish that Socrates should have defended himself otherwise,'—if, as we must add, his defence was that with which Plato has provided him. But leaving this question, which does not admit of a precise solution, we may go on to ask what was the impression which Plato in the Apology intended to give of the character and conduct of his master in the last great scene? Did he intend to represent him (1) as employing sophistries; (2) as designedly irritating the judges? Or are these sophistries to be regarded as belonging to the age in which he lived and to his personal character, and this apparent haughtiness as flowing from the natural elevation of his position?

For example, when he says that it is absurd to suppose that one man is the corrupter and all the rest of the world the improvers of the youth; or, when he argues that he never could have corrupted the men with whom he had to live; or, when he proves his belief in the gods because he believes in the sons of gods, is he serious or jesting? It may be observed that these sophisms all occur in his cross-examination of Meletus, who is easily foiled and mastered in the hands of the great dialectician. Perhaps he regarded these answers as good enough for his accuser, of whom he makes very light. Also there is a touch of irony in them, which takes them out of the category of sophistry. (Compare Euthyph.)

That the manner in which he defends himself about the lives of his disciples is not satisfactory, can hardly be denied. Fresh in the memory of the Athenians, and detestable as they deserved to be to the newly restored democracy, were the names of Alcibiades, Critias, Charmides. It is obviously not a sufficient answer that Socrates had never professed to teach them anything, and is therefore not justly chargeable with their crimes. Yet the defence, when taken out of this ironical form, is doubtless sound: that his teaching had nothing to do with their evil lives. Here, then, the sophistry is rather in form than in substance, though we might desire that to such a serious charge Socrates had given a more serious answer.

Truly characteristic of Socrates is another point in his answer, which may also be regarded as sophistical. He says that 'if he has corrupted the youth, he must have corrupted them involuntarily.' But if, as Socrates argues, all evil is involuntary, then all criminals ought to be admonished and not punished. In these words the Socratic doctrine of the involuntariness of evil is clearly intended to be conveyed. Here again, as in the former instance, the defence of Socrates is untrue practically, but may be true in some ideal or transcendental sense. The commonplace reply, that if he had been guilty of corrupting the youth their relations would surely have witnessed against him, with which he concludes this part of his defence, is more satisfactory.

Again, when Socrates argues that he must believe in the gods because he believes in the sons of gods, we must remember that this is a refutation not of the original indictment, which is consistent enough—'Socrates does not receive the gods whom the city receives, and has other new divinities'—but of the interpretation put upon the words by Meletus, who has affirmed that he is a downright atheist. To this Socrates fairly answers, in accordance with the ideas of the time, that a downright atheist cannot believe in the sons of gods or in divine things. The notion that demons or lesser divinities are the sons of gods is not to be regarded as ironical or sceptical. He is arguing 'ad hominem' according to the notions of mythology current in his age. Yet he abstains from saying that he believed in the gods whom the State approved. He does not defend himself, as Xenophon has defended him, by appealing to his practice of religion. Probably he neither wholly believed, nor disbelieved, in the existence of the popular gods; he had no means of knowing about them. According to Plato (compare Phaedo; Symp.), as well as Xenophon (Memor.), he was punctual in the performance of the least religious duties; and he must have believed in his own oracular sign, of which he seemed to have an internal witness. But the existence of Apollo or Zeus, or the other gods whom the State approves, would have appeared to him both uncertain and unimportant in comparison of the duty of self-examination, and of those principles of truth and right which he deemed to be the foundation of religion. (Compare Phaedr.; Euthyph.; Republic.)

The second question, whether Plato meant to represent Socrates as braving or irritating his judges, must also be answered in the negative. His irony, his superiority, his audacity, 'regarding not the person of man,' necessarily flow out of the loftiness of his situation. He is not acting a part upon a great occasion, but he is what he has been all his life long, 'a king of men.' He would rather not appear insolent, if he could avoid it (ouch os authadizomenos touto lego). Neither is he desirous of hastening his own end, for life and death are simply indifferent to him. But such a defence as would be acceptable to his judges and might procure an acquittal, it is not in his nature to make. He will not say or do anything that might pervert the course of justice; he cannot have his tongue bound even 'in the throat of death.' With his accusers he will only fence and play, as he had fenced with other 'improvers of youth,' answering the Sophist according to his sophistry all his life long. He is serious when he is speaking of his own mission, which seems to distinguish him from all other reformers of mankind, and originates in an accident. The dedication of himself to the improvement of his fellow-citizens is not so remarkable as the ironical spirit in which he goes about doing good only in vindication of the credit of the oracle, and in the vain hope of finding a wiser man than himself. Yet this singular and almost accidental character of his mission agrees with the divine sign which, according to our notions, is equally accidental and irrational, and is nevertheless accepted by him as the guiding principle of his life. Socrates is nowhere represented to us as a freethinker or sceptic. There is no reason to doubt his sincerity when he speculates on the possibility of seeing and knowing the heroes of the Trojan war in another world. On the other hand, his hope of immortality is uncertain;—he also conceives of death as a long sleep (in this respect differing from the Phaedo), and at last falls back on resignation to the divine will, and the certainty that no evil can happen to the good man either in life or death. His absolute truthfulness seems to hinder him from asserting positively more than this; and he makes no attempt to veil his ignorance in mythology and figures of speech. The gentleness of the first part of the speech contrasts with the aggravated, almost threatening, tone of the conclusion. He characteristically remarks that he will not speak as a rhetorician, that is to say, he will not make a regular defence such as Lysias or one of the orators might have composed for him, or, according to some accounts, did compose for him. But he first procures himself a hearing by conciliatory words. He does not attack the Sophists; for they were open

to the same charges as himself; they were equally ridiculed by the Comic poets, and almost equally hateful to Anytus and Meletus. Yet incidentally the antagonism between Socrates and the Sophists is allowed to appear. He is poor and they are rich; his profession that he teaches nothing is opposed to their readiness to teach all things; his talking in the marketplace to their private instructions; his tarry-at-home life to their wandering from city to city. The tone which he assumes towards them is one of real friendliness, but also of concealed irony. Towards Anaxagoras, who had disappointed him in his hopes of learning about mind and nature, he shows a less kindly feeling, which is also the feeling of Plato in other passages (Laws). But Anaxagoras had been dead thirty years, and was beyond the reach of persecution.

It has been remarked that the prophecy of a new generation of teachers who would rebuke and exhort the Athenian people in harsher and more violent terms was, as far as we know, never fulfilled. No inference can be drawn from this circumstance as to the probability of the words attributed to him having been actually uttered. They express the aspiration of the first martyr of philosophy, that he would leave behind him many followers, accompanied by the not unnatural feeling that they would be fiercer and more inconsiderate in their words when emancipated from his control.

The above remarks must be understood as applying with any degree of certainty to the Platonic Socrates only. For, although these or similar words may have been spoken by Socrates himself, we cannot exclude the possibility, that like so much else, e.g. the wisdom of Critias, the poem of Solon, the virtues of Charmides, they may have been due only to the imagination of Plato. The arguments of those who maintain that the Apology was composed during the process, resting on no evidence, do not require a serious refutation. Nor are the reasonings of Schleiermacher, who argues that the Platonic defence is an exact or nearly exact reproduction of the words of Socrates, partly because Plato would not have been guilty of the impiety of altering them, and also because many points of the defence might have been improved and strengthened, at all more conclusive. (See English Translation.) What effect the death of Socrates produced on the mind of Plato, we cannot certainly determine; nor can we say how he would or must have written under the circumstances. We observe that the enmity of Aristophanes to Socrates does not prevent Plato from introducing them together in the Symposium engaged in friendly intercourse. Nor is there any trace in the Dialogues of an attempt to make Anytus or Meletus personally odious in the eyes of the Athenian public.

APOLOGY

How you, O Athenians, have been affected by my accusers, I cannot tell; but I know that they almost made me forget who I was—so persuasively did they speak; and yet they have hardly uttered a word of truth. But of the many falsehoods told by them, there was one which quite amazed me;—I mean when they said that you should be upon your guard and not allow yourselves to be deceived by the force of my eloquence. To say this, when they were certain to be detected as soon as I opened my lips and proved myself to be anything but a great speaker, did indeed appear to me most shameless—unless by the force of eloquence they mean the force of truth; for is such is their meaning, I admit that I am eloquent. But in how different a way from theirs! Well, as I was saying,

they have scarcely spoken the truth at all; but from me you shall hear the whole truth: not, however, delivered after their manner in a set oration duly ornamented with words and phrases. No, by heaven! but I shall use the words and arguments which occur to me at the moment; for I am confident in the justice of my cause (Or, I am certain that I am right in taking this course.): at my time of life I ought not to be appearing before you, O men of Athens, in the character of a juvenile orator—let no one expect it of me. And I must beg of you to grant me a favour:—If I defend myself in my accustomed manner, and you hear me using the words which I have been in the habit of using in the agora, at the tables of the money-changers, or anywhere else, I would ask you not to be surprised, and not to interrupt me on this account. For I am more than seventy years of age, and appearing now for the first time in a court of law, I am quite a stranger to the language of the place; and therefore I would have you regard me as if I were really a stranger, whom you would excuse if he spoke in his native tongue, and after the fashion of his country:—Am I making an unfair request of you? Never mind the manner, which may or may not be good; but think only of the truth of my words, and give heed to that: let the speaker speak truly and the judge decide justly.

And first, I have to reply to the older charges and to my first accusers, and then I will go on to the later ones. For of old I have had many accusers, who have accused me falsely to you during many years; and I am more afraid of them than of Anytus and his associates, who are dangerous, too, in their own way. But far more dangerous are the others, who began when you were children, and took possession of your minds with their falsehoods, telling of one Socrates, a wise man, who speculated about the heaven above, and searched into the earth beneath, and made the worse appear the better cause. The disseminators of this tale are the accusers whom I dread; for their hearers are apt to fancy that such enquirers do not believe in the existence of the gods. And they are many, and their charges against me are of ancient date, and they were made by them in the days when you were more impressible than you are now—in childhood, or it may have been in youth—and the cause when heard went by default, for there was none to answer. And hardest of all, I do not know and cannot tell the names of my accusers; unless in the chance case of a Comic poet. All who from envy and malice have persuaded you—some of them having first convinced themselves—all this class of men are most difficult to deal with; for I cannot have them up here, and cross-examine them, and therefore I must simply fight with shadows in my own defence, and argue when there is no one who answers. I will ask you then to assume with me, as I was saying, that my opponents are of two kinds; one recent, the other ancient: and I hope that you will see the propriety of my answering the latter first, for these accusations you heard long before the others, and much oftener.

Well, then, I must make my defence, and endeavour to clear away in a short time, a slander which has lasted a long time. May I succeed, if to succeed be for my good and yours, or likely to avail me in my cause! The task is not an easy one; I quite understand the nature of it. And so leaving the event with God, in obedience to the law I will now make my defence.

I will begin at the beginning, and ask what is the accusation which has given rise to the slander of me, and in fact has encouraged Meletus to proof this charge against me. Well, what do the slanderers say? They shall be my prosecutors, and I will sum up their words in an affidavit: 'Socrates is an evil-doer, and a curious person, who searches into things under the earth and in heaven, and he makes the worse appear the better cause; and he teaches the aforesaid doctrines to others.' Such is the nature of the accusation: it is just what you have yourselves seen in the comedy of Aristophanes (Aristoph., Clouds.), who has introduced a man whom he calls Socrates, going about and saying that

he walks in air, and talking a deal of nonsense concerning matters of which I do not pretend to know either much or little—not that I mean to speak disparagingly of any one who is a student of natural philosophy. I should be very sorry if Meletus could bring so grave a charge against me. But the simple truth is, O Athenians, that I have nothing to do with physical speculations. Very many of those here present are witnesses to the truth of this, and to them I appeal. Speak then, you who have heard me, and tell your neighbours whether any of you have ever known me hold forth in few words or in many upon such matters...You hear their answer. And from what they say of this part of the charge you will be able to judge of the truth of the rest.

As little foundation is there for the report that I am a teacher, and take money; this accusation has no more truth in it than the other. Although, if a man were really able to instruct mankind, to receive money for giving instruction would, in my opinion, be an honour to him. There is Gorgias of Leontium, and Prodicus of Ceos, and Hippias of Elis, who go the round of the cities, and are able to persuade the young men to leave their own citizens by whom they might be taught for nothing, and come to them whom they not only pay, but are thankful if they may be allowed to pay them. There is at this time a Parian philosopher residing in Athens, of whom I have heard; and I came to hear of him in this way:—I came across a man who has spent a world of money on the Sophists, Callias, the son of Hipponicus, and knowing that he had sons, I asked him: 'Callias,' I said, 'if your two sons were foals or calves, there would be no difficulty in finding some one to put over them; we should hire a trainer of horses, or a farmer probably, who would improve and perfect them in their own proper virtue and excellence; but as they are human beings, whom are you thinking of placing over them? Is there any one who understands human and political virtue? You must have thought about the matter, for you have sons; is there any one?' 'There is,' he said. 'Who is he?' said I; 'and of what country? and what does he charge?' 'Evenus the Parian,' he replied; 'he is the man, and his charge is five minae.' Happy is Evenus, I said to myself, if he really has this wisdom, and teaches at such a moderate charge. Had I the same, I should have been very proud and conceited; but the truth is that I have no knowledge of the kind.

I dare say, Athenians, that some one among you will reply, 'Yes, Socrates, but what is the origin of these accusations which are brought against you; there must have been something strange which you have been doing? All these rumours and this talk about you would never have arisen if you had been like other men: tell us, then, what is the cause of them, for we should be sorry to judge hastily of you.' Now I regard this as a fair challenge, and I will endeavour to explain to you the reason why I am called wise and have such an evil fame. Please to attend then. And although some of you may think that I am joking, I declare that I will tell you the entire truth. Men of Athens, this reputation of mine has come of a certain sort of wisdom which I possess. If you ask me what kind of wisdom, I reply, wisdom such as may perhaps be attained by man, for to that extent I am inclined to believe that I am wise; whereas the persons of whom I was speaking have a superhuman wisdom which I may fail to describe, because I have it not myself; and he who says that I have, speaks falsely, and is taking away my character. And here, O men of Athens, I must beg you not to interrupt me, even if I seem to say something extravagant. For the word which I will speak is not mine. I will refer you to a witness who is worthy of credit; that witness shall be the God of Delphi—he will tell you about my wisdom, if I have any, and of what sort it is. You must have known Chaerephon; he was early a friend of mine, and also a friend of yours, for he shared in the recent exile of the people, and returned with you. Well, Chaerephon, as you know, was very impetuous in all his doings, and he went to Delphi and boldly asked the oracle to tell him whether—as I was saying, I must beg you not to interrupt—he asked the

oracle to tell him whether anyone was wiser than I was, and the Pythian prophetess answered, that there was no man wiser. Chaerephon is dead himself; but his brother, who is in court, will confirm the truth of what I am saying.

Why do I mention this? Because I am going to explain to you why I have such an evil name. When I heard the answer, I said to myself, What can the god mean? and what is the interpretation of his riddle? for I know that I have no wisdom, small or great. What then can he mean when he says that I am the wisest of men? And yet he is a god, and cannot lie; that would be against his nature. After long consideration, I thought of a method of trying the question. I reflected that if I could only find a man wiser than myself, then I might go to the god with a refutation in my hand. I should say to him, 'Here is a man who is wiser than I am; but you said that I was the wisest.' Accordingly I went to one who had the reputation of wisdom, and observed him—his name I need not mention; he was a politician whom I selected for examination—and the result was as follows: When I began to talk with him, I could not help thinking that he was not really wise, although he was thought wise by many, and still wiser by himself; and thereupon I tried to explain to him that he thought himself wise, but was not really wise; and the consequence was that he hated me, and his enmity was shared by several who were present and heard me. So I left him, saying to myself, as I went away: Well, although I do not suppose that either of us knows anything really beautiful and good, I am better off than he is,—for he knows nothing, and thinks that he knows; I neither know nor think that I know. In this latter particular, then, I seem to have slightly the advantage of him. Then I went to another who had still higher pretensions to wisdom, and my conclusion was exactly the same. Whereupon I made another enemy of him, and of many others besides him.

Then I went to one man after another, being not unconscious of the enmity which I provoked, and I lamented and feared this: but necessity was laid upon me,—the word of God, I thought, ought to be considered first. And I said to myself, Go I must to all who appear to know, and find out the meaning of the oracle. And I swear to you, Athenians, by the dog I swear!—for I must tell you the truth—the result of my mission was just this: I found that the men most in repute were all but the most foolish; and that others less esteemed were really wiser and better. I will tell you the tale of my wanderings and of the 'Herculean' labours, as I may call them, which I endured only to find at last the oracle irrefutable. After the politicians, I went to the poets; tragic, dithyrambic, and all sorts. And there, I said to myself, you will be instantly detected; now you will find out that you are more ignorant than they are. Accordingly, I took them some of the most elaborate passages in their own writings, and asked what was the meaning of them—thinking that they would teach me something. Will you believe me? I am almost ashamed to confess the truth, but I must say that there is hardly a person present who would not have talked better about their poetry than they did themselves. Then I knew that not by wisdom do poets write poetry, but by a sort of genius and inspiration; they are like diviners or soothsayers who also say many fine things, but do not understand the meaning of them. The poets appeared to me to be much in the same case; and I further observed that upon the strength of their poetry they believed themselves to be the wisest of men in other things in which they were not wise. So I departed, conceiving myself to be superior to them for the same reason that I was superior to the politicians.

At last I went to the artisans. I was conscious that I knew nothing at all, as I may say, and I was sure that they knew many fine things; and here I was not mistaken, for they did know many things of which I was ignorant, and in this they certainly were wiser than I was. But I observed that even the good

artisans fell into the same error as the poets;—because they were good workmen they thought that they also knew all sorts of high matters, and this defect in them overshadowed their wisdom; and therefore I asked myself on behalf of the oracle, whether I would like to be as I was, neither having their knowledge nor their ignorance, or like them in both; and I made answer to myself and to the oracle that I was better off as I was.

This inquisition has led to my having many enemies of the worst and most dangerous kind, and has given occasion also to many calumnies. And I am called wise, for my hearers always imagine that I myself possess the wisdom which I find wanting in others: but the truth is, O men of Athens, that God only is wise; and by his answer he intends to show that the wisdom of men is worth little or nothing; he is not speaking of Socrates, he is only using my name by way of illustration, as if he said, He, O men, is the wisest, who, like Socrates, knows that his wisdom is in truth worth nothing. And so I go about the world, obedient to the god, and search and make enquiry into the wisdom of any one, whether citizen or stranger, who appears to be wise; and if he is not wise, then in vindication of the oracle I show him that he is not wise; and my occupation quite absorbs me, and I have no time to give either to any public matter of interest or to any concern of my own, but I am in utter poverty by reason of my devotion to the god.

There is another thing:—young men of the richer classes, who have not much to do, come about me of their own accord; they like to hear the pretenders examined, and they often imitate me, and proceed to examine others; there are plenty of persons, as they quickly discover, who think that they know something, but really know little or nothing; and then those who are examined by them instead of being angry with themselves are angry with me: This confounded Socrates, they say; this villainous misleader of youth!—and then if somebody asks them, Why, what evil does he practise or teach? they do not know, and cannot tell; but in order that they may not appear to be at a loss, they repeat the ready-made charges which are used against all philosophers about teaching things up in the clouds and under the earth, and having no gods, and making the worse appear the better cause; for they do not like to confess that their pretence of knowledge has been detected—which is the truth; and as they are numerous and ambitious and energetic, and are drawn up in battle array and have persuasive tongues, they have filled your ears with their loud and inveterate calumnies. And this is the reason why my three accusers, Meletus and Anytus and Lycon, have set upon me; Meletus, who has a quarrel with me on behalf of the poets; Anytus, on behalf of the craftsmen and politicians; Lycon, on behalf of the rhetoricians: and as I said at the beginning, I cannot expect to get rid of such a mass of calumny all in a moment. And this, O men of Athens, is the truth and the whole truth; I have concealed nothing, I have dissembled nothing. And yet, I know that my plainness of speech makes them hate me, and what is their hatred but a proof that I am speaking the truth?—Hence has arisen the prejudice against me; and this is the reason of it, as you will find out either in this or in any future enquiry.

I have said enough in my defence against the first class of my accusers; I turn to the second class. They are headed by Meletus, that good man and true lover of his country, as he calls himself. Against these, too, I must try to make a defence:—Let their affidavit be read: it contains something of this kind: It says that Socrates is a doer of evil, who corrupts the youth; and who does not believe in the gods of the state, but has other new divinities of his own. Such is the charge; and now let us examine the particular counts. He says that I am a doer of evil, and corrupt the youth; but I say, O men of Athens, that Meletus is a doer of evil, in that he pretends to be in earnest when he is only in jest, and

is so eager to bring men to trial from a pretended zeal and interest about matters in which he really never had the smallest interest. And the truth of this I will endeavour to prove to you.

Come hither, Meletus, and let me ask a question of you. You think a great deal about the improvement of youth?

Yes, I do.

Tell the judges, then, who is their improver; for you must know, as you have taken the pains to discover their corrupter, and are citing and accusing me before them. Speak, then, and tell the judges who their improver is.—Observe, Meletus, that you are silent, and have nothing to say. But is not this rather disgraceful, and a very considerable proof of what I was saying, that you have no interest in the matter? Speak up, friend, and tell us who their improver is.

The laws.

But that, my good sir, is not my meaning. I want to know who the person is, who, in the first place, knows the laws.

The judges, Socrates, who are present in court.

What, do you mean to say, Meletus, that they are able to instruct and improve youth?

Certainly they are.

What, all of them, or some only and not others?

All of them.

By the goddess Here, that is good news! There are plenty of improvers, then. And what do you say of the audience,—do they improve them?

Yes, they do.

And the senators?

Yes, the senators improve them.

But perhaps the members of the assembly corrupt them?—or do they too improve them?

They improve them.

Then every Athenian improves and elevates them; all with the exception of myself; and I alone am their corrupter? Is that what you affirm?

That is what I stoutly affirm.

I am very unfortunate if you are right. But suppose I ask you a question: How about horses? Does one man do them harm and all the world good? Is not the exact opposite the truth? One man is able to do them good, or at least not many;—the trainer of horses, that is to say, does them good, and others who have to do with them rather injure them? Is not that true, Meletus, of horses, or of any other animals? Most assuredly it is; whether you and Anytus say yes or no. Happy indeed would be the condition of youth if they had one corrupter only, and all the rest of the world were their improvers. But you, Meletus, have sufficiently shown that you never had a thought about the young: your carelessness is seen in your not caring about the very things which you bring against me.

And now, Meletus, I will ask you another question—by Zeus I will: Which is better, to live among bad citizens, or among good ones? Answer, friend, I say; the question is one which may be easily answered. Do not the good do their neighbours good, and the bad do them evil?

Certainly.

And is there anyone who would rather be injured than benefited by those who live with him? Answer, my good friend, the law requires you to answer—does any one like to be injured?

Certainly not.

And when you accuse me of corrupting and deteriorating the youth, do you allege that I corrupt them intentionally or unintentionally?

Intentionally, I say.

But you have just admitted that the good do their neighbours good, and the evil do them evil. Now, is that a truth which your superior wisdom has recognized thus early in life, and am I, at my age, in such darkness and ignorance as not to know that if a man with whom I have to live is corrupted by me, I am very likely to be harmed by him; and yet I corrupt him, and intentionally, too—so you say, although neither I nor any other human being is ever likely to be convinced by you. But either I do not corrupt them, or I corrupt them unintentionally; and on either view of the case you lie. If my offence is unintentional, the law has no cognizance of unintentional offences: you ought to have taken me privately, and warned and admonished me; for if I had been better advised, I should have left off doing what I only did unintentionally—no doubt I should; but you would have nothing to say to me and refused to teach me. And now you bring me up in this court, which is a place not of instruction, but of punishment.

It will be very clear to you, Athenians, as I was saying, that Meletus has no care at all, great or small, about the matter. But still I should like to know, Meletus, in what I am affirmed to corrupt the young. I suppose you mean, as I infer from your indictment, that I teach them not to acknowledge the gods which the state acknowledges, but some other new divinities or spiritual agencies in their stead. These are the lessons by which I corrupt the youth, as you say.

Yes, that I say emphatically.

Then, by the gods, Meletus, of whom we are speaking, tell me and the court, in somewhat plainer terms, what you mean! for I do not as yet understand whether you affirm that I teach other men to acknowledge some gods, and therefore that I do believe in gods, and am not an entire atheist—this you do not lay to my charge,—but only you say that they are not the same gods which the city recognizes—the charge is that they are different gods. Or, do you mean that I am an atheist simply, and a teacher of atheism?

I mean the latter—that you are a complete atheist.

What an extraordinary statement! Why do you think so, Meletus? Do you mean that I do not believe in the godhead of the sun or moon, like other men?

I assure you, judges, that he does not: for he says that the sun is stone, and the moon earth.

Friend Meletus, you think that you are accusing Anaxagoras: and you have but a bad opinion of the judges, if you fancy them illiterate to such a degree as not to know that these doctrines are found in the books of Anaxagoras the Clazomenian, which are full of them. And so, forsooth, the youth are said to be taught them by Socrates, when there are not unfrequently exhibitions of them at the theatre (Probably in allusion to Aristophanes who caricatured, and to Euripides who borrowed the notions of Anaxagoras, as well as to other dramatic poets.) (price of admission one drachma at the most); and they might pay their money, and laugh at Socrates if he pretends to father these extraordinary views. And so, Meletus, you really think that I do not believe in any god?

I swear by Zeus that you believe absolutely in none at all.

Nobody will believe you, Meletus, and I am pretty sure that you do not believe yourself. I cannot help thinking, men of Athens, that Meletus is reckless and impudent, and that he has written this indictment in a spirit of mere wantonness and youthful bravado. Has he not compounded a riddle, thinking to try me? He said to himself:—I shall see whether the wise Socrates will discover my facetious contradiction, or whether I shall be able to deceive him and the rest of them. For he certainly does appear to me to contradict himself in the indictment as much as if he said that Socrates is guilty of not believing in the gods, and yet of believing in them—but this is not like a person who is in earnest.

I should like you, O men of Athens, to join me in examining what I conceive to be his inconsistency; and do you, Meletus, answer. And I must remind the audience of my request that they would not make a disturbance if I speak in my accustomed manner:

Did ever man, Meletus, believe in the existence of human things, and not of human beings?...I wish, men of Athens, that he would answer, and not be always trying to get up an interruption. Did ever any man believe in horsemanship, and not in horses? or in flute-playing, and not in flute-players? No, my friend; I will answer to you and to the court, as you refuse to answer for yourself. There is no man who ever did. But now please to answer the next question: Can a man believe in spiritual and divine agencies, and not in spirits or demigods?

He cannot.

How lucky I am to have extracted that answer, by the assistance of the court! But then you swear in the indictment that I teach and believe in divine or spiritual agencies (new or old, no matter for that); at any rate, I believe in spiritual agencies,—so you say and swear in the affidavit; and yet if I believe in divine beings, how can I help believing in spirits or demigods;—must I not? To be sure I must; and therefore I may assume that your silence gives consent. Now what are spirits or demigods? Are they not either gods or the sons of gods?

Certainly they are.

But this is what I call the facetious riddle invented by you: the demigods or spirits are gods, and you say first that I do not believe in gods, and then again that I do believe in gods; that is, if I believe in demigods. For if the demigods are the illegitimate sons of gods, whether by the nymphs or by any other mothers, of whom they are said to be the sons—what human being will ever believe that there are no gods if they are the sons of gods? You might as well affirm the existence of mules, and deny that of horses and asses. Such nonsense, Meletus, could only have been intended by you to make trial of me. You have put this into the indictment because you had nothing real of which to accuse me. But no one who has a particle of understanding will ever be convinced by you that the same men can believe in divine and superhuman things, and yet not believe that there are gods and demigods and heroes.

I have said enough in answer to the charge of Meletus: any elaborate defence is unnecessary, but I know only too well how many are the enmities which I have incurred, and this is what will be my destruction if I am destroyed;—not Meletus, nor yet Anytus, but the envy and detraction of the world, which has been the death of many good men, and will probably be the death of many more; there is no danger of my being the last of them.

Some one will say: And are you not ashamed, Socrates, of a course of life which is likely to bring you to an untimely end? To him I may fairly answer: There you are mistaken: a man who is good for anything ought not to calculate the chance of living or dying; he ought only to consider whether in doing anything he is doing right or wrong—acting the part of a good man or of a bad. Whereas, upon your view, the heroes who fell at Troy were not good for much, and the son of Thetis above all, who altogether despised danger in comparison with disgrace; and when he was so eager to slay Hector, his goddess mother said to him, that if he avenged his companion Patroclus, and slew Hector, he would die himself—'Fate,' she said, in these or the like words, 'waits for you next after Hector;' he, receiving this warning, utterly despised danger and death, and instead of fearing them, feared rather to live in dishonour, and not to avenge his friend. 'Let me die forthwith,' he replies, 'and be avenged of my enemy, rather than abide here by the beaked ships, a laughing-stock and a burden of the earth.' Had Achilles any thought of death and danger? For wherever a man's place is, whether the place which he has chosen or that in which he has been placed by a commander, there he ought to remain in the hour of danger; he should not think of death or of anything but of disgrace. And this, O men of Athens, is a true saying.

Strange, indeed, would be my conduct, O men of Athens, if I who, when I was ordered by the generals whom you chose to command me at Potidaea and Amphipolis and Delium, remained where they placed me, like any other man, facing death—if now, when, as I conceive and imagine, God orders me to fulfil the philosopher's mission of searching into myself and other men, I were to desert

my post through fear of death, or any other fear; that would indeed be strange, and I might justly be arraigned in court for denying the existence of the gods, if I disobeyed the oracle because I was afraid of death, fancying that I was wise when I was not wise. For the fear of death is indeed the pretence of wisdom, and not real wisdom, being a pretence of knowing the unknown; and no one knows whether death, which men in their fear apprehend to be the greatest evil, may not be the greatest good. Is not this ignorance of a disgraceful sort, the ignorance which is the conceit that a man knows what he does not know? And in this respect only I believe myself to differ from men in general, and may perhaps claim to be wiser than they are:—that whereas I know but little of the world below, I do not suppose that I know: but I do know that injustice and disobedience to a better, whether God or man, is evil and dishonourable, and I will never fear or avoid a possible good rather than a certain evil. And therefore if you let me go now, and are not convinced by Anytus, who said that since I had been prosecuted I must be put to death; (or if not that I ought never to have been prosecuted at all); and that if I escape now, your sons will all be utterly ruined by listening to my words—if you say to me, Socrates, this time we will not mind Anytus, and you shall be let off, but upon one condition, that you are not to enquire and speculate in this way any more, and that if you are caught doing so again you shall die;—if this was the condition on which you let me go, I should reply: Men of Athens, I honour and love you; but I shall obey God rather than you, and while I have life and strength I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet and saying to him after my manner: You, my friend,—a citizen of the great and mighty and wise city of Athens,—are you not ashamed of heaping up the greatest amount of money and honour and reputation, and caring so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? And if the person with whom I am arguing, says: Yes, but I do care; then I do not leave him or let him go at once; but I proceed to interrogate and examine and cross-examine him, and if I think that he has no virtue in him, but only says that he has, I reproach him with undervaluing the greater, and overvaluing the less. And I shall repeat the same words to every one whom I meet, young and old, citizen and alien, but especially to the citizens, inasmuch as they are my brethren. For know that this is the command of God; and I believe that no greater good has ever happened in the state than my service to the God. For I do nothing but go about persuading you all, old and young alike, not to take thought for your persons or your properties, but first and chiefly to care about the greatest improvement of the soul. I tell you that virtue is not given by money, but that from virtue comes money and every other good of man, public as well as private. This is my teaching, and if this is the doctrine which corrupts the youth, I am a mischievous person. But if any one says that this is not my teaching, he is speaking an untruth. Wherefore, O men of Athens, I say to you, do as Anytus bids or not as Anytus bids, and either acquit me or not; but whichever you do, understand that I shall never alter my ways, not even if I have to die many times.

Men of Athens, do not interrupt, but hear me; there was an understanding between us that you should hear me to the end: I have something more to say, at which you may be inclined to cry out; but I believe that to hear me will be good for you, and therefore I beg that you will not cry out. I would have you know, that if you kill such an one as I am, you will injure yourselves more than you will injure me. Nothing will injure me, not Meletus nor yet Anytus—they cannot, for a bad man is not permitted to injure a better than himself. I do not deny that Anytus may, perhaps, kill him, or drive him into exile, or deprive him of civil rights; and he may imagine, and others may imagine, that he is inflicting a great injury upon him: but there I do not agree. For the evil of doing as he is doing—the evil of unjustly taking away the life of another—is greater far.

And now, Athenians, I am not going to argue for my own sake, as you may think, but for yours, that you may not sin against the God by condemning me, who am his gift to you. For if you kill me you will not easily find a successor to me, who, if I may use such a ludicrous figure of speech, am a sort of gadfly, given to the state by God; and the state is a great and noble steed who is tardy in his motions owing to his very size, and requires to be stirred into life. I am that gadfly which God has attached to the state, and all day long and in all places am always fastening upon you, arousing and persuading and reproaching you. You will not easily find another like me, and therefore I would advise you to spare me. I dare say that you may feel out of temper (like a person who is suddenly awakened from sleep), and you think that you might easily strike me dead as Anytus advises, and then you would sleep on for the remainder of your lives, unless God in his care of you sent you another gadfly. When I say that I am given to you by God, the proof of my mission is this:—if I had been like other men, I should not have neglected all my own concerns or patiently seen the neglect of them during all these years, and have been doing yours, coming to you individually like a father or elder brother, exhorting you to regard virtue; such conduct, I say, would be unlike human nature. If I had gained anything, or if my exhortations had been paid, there would have been some sense in my doing so; but now, as you will perceive, not even the impudence of my accusers dares to say that I have ever exacted or sought pay of any one; of that they have no witness. And I have a sufficient witness to the truth of what I say—my poverty.

Some one may wonder why I go about in private giving advice and busying myself with the concerns of others, but do not venture to come forward in public and advise the state. I will tell you why. You have heard me speak at sundry times and in divers places of an oracle or sign which comes to me, and is the divinity which Meletus ridicules in the indictment. This sign, which is a kind of voice, first began to come to me when I was a child; it always forbids but never commands me to do anything which I am going to do. This is what deters me from being a politician. And rightly, as I think. For I am certain, O men of Athens, that if I had engaged in politics, I should have perished long ago, and done no good either to you or to myself. And do not be offended at my telling you the truth: for the truth is, that no man who goes to war with you or any other multitude, honestly striving against the many lawless and unrighteous deeds which are done in a state, will save his life; he who will fight for the right, if he would live even for a brief space, must have a private station and not a public one.

I can give you convincing evidence of what I say, not words only, but what you value far more—actions. Let me relate to you a passage of my own life which will prove to you that I should never have yielded to injustice from any fear of death, and that 'as I should have refused to yield' I must have died at once. I will tell you a tale of the courts, not very interesting perhaps, but nevertheless true. The only office of state which I ever held, O men of Athens, was that of senator: the tribe Antiochis, which is my tribe, had the presidency at the trial of the generals who had not taken up the bodies of the slain after the battle of Arginusae; and you proposed to try them in a body, contrary to law, as you all thought afterwards; but at the time I was the only one of the Prytanes who was opposed to the illegality, and I gave my vote against you; and when the orators threatened to impeach and arrest me, and you called and shouted, I made up my mind that I would run the risk, having law and justice with me, rather than take part in your injustice because I feared imprisonment and death. This happened in the days of the democracy. But when the oligarchy of the Thirty was in power, they sent for me and four others into the rotunda, and bade us bring Leon the Salaminian from Salamis, as they wanted to put him to death. This was a specimen of the sort of commands which they were always giving with the view of implicating as many as possible in their crimes; and then I

showed, not in word only but in deed, that, if I may be allowed to use such an expression, I cared not a straw for death, and that my great and only care was lest I should do an unrighteous or unholy thing. For the strong arm of that oppressive power did not frighten me into doing wrong; and when we came out of the rotunda the other four went to Salamis and fetched Leon, but I went quietly home. For which I might have lost my life, had not the power of the Thirty shortly afterwards come to an end. And many will witness to my words.

Now do you really imagine that I could have survived all these years, if I had led a public life, supposing that like a good man I had always maintained the right and had made justice, as I ought, the first thing? No indeed, men of Athens, neither I nor any other man. But I have been always the same in all my actions, public as well as private, and never have I yielded any base compliance to those who are slanderously termed my disciples, or to any other. Not that I have any regular disciples. But if any one likes to come and hear me while I am pursuing my mission, whether he be young or old, he is not excluded. Nor do I converse only with those who pay; but any one, whether he be rich or poor, may ask and answer me and listen to my words; and whether he turns out to be a bad man or a good one, neither result can be justly imputed to me; for I never taught or professed to teach him anything. And if any one says that he has ever learned or heard anything from me in private which all the world has not heard, let me tell you that he is lying.

But I shall be asked, Why do people delight in continually conversing with you? I have told you already, Athenians, the whole truth about this matter: they like to hear the cross-examination of the pretenders to wisdom; there is amusement in it. Now this duty of cross-examining other men has been imposed upon me by God; and has been signified to me by oracles, visions, and in every way in which the will of divine power was ever intimated to any one. This is true, O Athenians, or, if not true, would be soon refuted. If I am or have been corrupting the youth, those of them who are now grown up and have become sensible that I gave them bad advice in the days of their youth should come forward as accusers, and take their revenge; or if they do not like to come themselves, some of their relatives, fathers, brothers, or other kinsmen, should say what evil their families have suffered at my hands. Now is their time. Many of them I see in the court. There is Crito, who is of the same age and of the same deme with myself, and there is Critobulus his son, whom I also see. Then again there is Lysanias of Sphettus, who is the father of Aeschines—he is present; and also there is Antiphon of Cephisus, who is the father of Epigenes; and there are the brothers of several who have associated with me. There is Nicostratus the son of Theosdotides, and the brother of Theodotus (now Theodotus himself is dead, and therefore he, at any rate, will not seek to stop him); and there is Paralus the son of Demodocus, who had a brother Theages; and Adeimantus the son of Ariston, whose brother Plato is present; and Aeantodorus, who is the brother of Apollodorus, whom I also see. I might mention a great many others, some of whom Meletus should have produced as witnesses in the course of his speech; and let him still produce them, if he has forgotten—I will make way for him. And let him say, if he has any testimony of the sort which he can produce. Nay, Athenians, the very opposite is the truth. For all these are ready to witness on behalf of the corrupter, of the injurer of their kindred, as Meletus and Anytus call me; not the corrupted youth only—there might have been a motive for that—but their uncorrupted elder relatives. Why should they too support me with their testimony? Why, indeed, except for the sake of truth and justice, and because they know that I am speaking the truth, and that Meletus is a liar.

Well, Athenians, this and the like of this is all the defence which I have to offer. Yet a word more. Perhaps there may be some one who is offended at me, when he calls to mind how he himself on a similar, or even a less serious occasion, prayed and entreated the judges with many tears, and how he produced his children in court, which was a moving spectacle, together with a host of relations and friends; whereas I, who am probably in danger of my life, will do none of these things. The contrast may occur to his mind, and he may be set against me, and vote in anger because he is displeased at me on this account. Now if there be such a person among you,—mind, I do not say that there is,—to him I may fairly reply: My friend, I am a man, and like other men, a creature of flesh and blood, and not 'of wood or stone,' as Homer says; and I have a family, yes, and sons, O Athenians, three in number, one almost a man, and two others who are still young; and yet I will not bring any of them hither in order to petition you for an acquittal. And why not? Not from any self-assertion or want of respect for you. Whether I am or am not afraid of death is another question, of which I will not now speak. But, having regard to public opinion, I feel that such conduct would be discreditable to myself, and to you, and to the whole state. One who has reached my years, and who has a name for wisdom, ought not to demean himself. Whether this opinion of me be deserved or not, at any rate the world has decided that Socrates is in some way superior to other men. And if those among you who are said to be superior in wisdom and courage, and any other virtue, demean themselves in this way, how shameful is their conduct! I have seen men of reputation, when they have been condemned, behaving in the strangest manner: they seemed to fancy that they were going to suffer something dreadful if they died, and that they could be immortal if you only allowed them to live; and I think that such are a dishonour to the state, and that any stranger coming in would have said of them that the most eminent men of Athens, to whom the Athenians themselves give honour and command, are no better than women. And I say that these things ought not to be done by those of us who have a reputation; and if they are done, you ought not to permit them; you ought rather to show that you are far more disposed to condemn the man who gets up a doleful scene and makes the city ridiculous, than him who holds his peace.

But, setting aside the question of public opinion, there seems to be something wrong in asking a favour of a judge, and thus procuring an acquittal, instead of informing and convincing him. For his duty is, not to make a present of justice, but to give judgment; and he has sworn that he will judge according to the laws, and not according to his own good pleasure; and we ought not to encourage you, nor should you allow yourselves to be encouraged, in this habit of perjury—there can be no piety in that. Do not then require me to do what I consider dishonourable and impious and wrong, especially now, when I am being tried for impiety on the indictment of Meletus. For if, O men of Athens, by force of persuasion and entreaty I could overpower your oaths, then I should be teaching you to believe that there are no gods, and in defending should simply convict myself of the charge of not believing in them. But that is not so—far otherwise. For I do believe that there are gods, and in a sense higher than that in which any of my accusers believe in them. And to you and to God I commit my cause, to be determined by you as is best for you and me.

There are many reasons why I am not grieved, O men of Athens, at the vote of condemnation. I expected it, and am only surprised that the votes are so nearly equal; for I had thought that the majority against me would have been far larger; but now, had thirty votes gone over to the other side, I should have been acquitted. And I may say, I think, that I have escaped Meletus. I may say more;

for without the assistance of Anytus and Lycon, any one may see that he would not have had a fifth part of the votes, as the law requires, in which case he would have incurred a fine of a thousand drachmae.

And so he proposes death as the penalty. And what shall I propose on my part, O men of Athens? Clearly that which is my due. And what is my due? What return shall be made to the man who has never had the wit to be idle during his whole life; but has been careless of what the many care for—wealth, and family interests, and military offices, and speaking in the assembly, and magistracies, and plots, and parties. Reflecting that I was really too honest a man to be a politician and live, I did not go where I could do no good to you or to myself; but where I could do the greatest good privately to every one of you, thither I went, and sought to persuade every man among you that he must look to himself, and seek virtue and wisdom before he looks to his private interests, and look to the state before he looks to the interests of the state; and that this should be the order which he observes in all his actions. What shall be done to such an one? Doubtless some good thing, O men of Athens, if he has his reward; and the good should be of a kind suitable to him. What would be a reward suitable to a poor man who is your benefactor, and who desires leisure that he may instruct you? There can be no reward so fitting as maintenance in the Prytaneum, O men of Athens, a reward which he deserves far more than the citizen who has won the prize at Olympia in the horse or chariot race, whether the chariots were drawn by two horses or by many. For I am in want, and he has enough; and he only gives you the appearance of happiness, and I give you the reality. And if I am to estimate the penalty fairly, I should say that maintenance in the Prytaneum is the just return.

Perhaps you think that I am braving you in what I am saying now, as in what I said before about the tears and prayers. But this is not so. I speak rather because I am convinced that I never intentionally wronged any one, although I cannot convince you—the time has been too short; if there were a law at Athens, as there is in other cities, that a capital cause should not be decided in one day, then I believe that I should have convinced you. But I cannot in a moment refute great slanders; and, as I am convinced that I never wronged another, I will assuredly not wrong myself. I will not say of myself that I deserve any evil, or propose any penalty. Why should I? because I am afraid of the penalty of death which Meletus proposes? When I do not know whether death is a good or an evil, why should I propose a penalty which would certainly be an evil? Shall I say imprisonment? And why should I live in prison, and be the slave of the magistrates of the year—of the Eleven? Or shall the penalty be a fine, and imprisonment until the fine is paid? There is the same objection. I should have to lie in prison, for money I have none, and cannot pay. And if I say exile (and this may possibly be the penalty which you will affix), I must indeed be blinded by the love of life, if I am so irrational as to expect that when you, who are my own citizens, cannot endure my discourses and words, and have found them so grievous and odious that you will have no more of them, others are likely to endure me. No indeed, men of Athens, that is not very likely. And what a life should I lead, at my age, wandering from city to city, ever changing my place of exile, and always being driven out! For I am quite sure that wherever I go, there, as here, the young men will flock to me; and if I drive them away, their elders will drive me out at their request; and if I let them come, their fathers and friends will drive me out for their sakes.

Some one will say: Yes, Socrates, but cannot you hold your tongue, and then you may go into a foreign city, and no one will interfere with you? Now I have great difficulty in making you understand my answer to this. For if I tell you that to do as you say would be a disobedience to the God, and

therefore that I cannot hold my tongue, you will not believe that I am serious; and if I say again that daily to discourse about virtue, and of those other things about which you hear me examining myself and others, is the greatest good of man, and that the unexamined life is not worth living, you are still less likely to believe me. Yet I say what is true, although a thing of which it is hard for me to persuade you. Also, I have never been accustomed to think that I deserve to suffer any harm. Had I money I might have estimated the offence at what I was able to pay, and not have been much the worse. But I have none, and therefore I must ask you to proportion the fine to my means. Well, perhaps I could afford a mina, and therefore I propose that penalty: Plato, Crito, Critobulus, and Apollodorus, my friends here, bid me say thirty minae, and they will be the sureties. Let thirty minae be the penalty; for which sum they will be ample security to you.

Not much time will be gained, O Athenians, in return for the evil name which you will get from the detractors of the city, who will say that you killed Socrates, a wise man; for they will call me wise, even although I am not wise, when they want to reproach you. If you had waited a little while, your desire would have been fulfilled in the course of nature. For I am far advanced in years, as you may perceive, and not far from death. I am speaking now not to all of you, but only to those who have condemned me to death. And I have another thing to say to them: you think that I was convicted because I had no words of the sort which would have procured my acquittal—I mean, if I had thought fit to leave nothing undone or unsaid. Not so; the deficiency which led to my conviction was not of words—certainly not. But I had not the boldness or impudence or inclination to address you as you would have liked me to do, weeping and wailing and lamenting, and saying and doing many things which you have been accustomed to hear from others, and which, as I maintain, are unworthy of me. I thought at the time that I ought not to do anything common or mean when in danger: nor do I now repent of the style of my defence; I would rather die having spoken after my manner, than speak in your manner and live. For neither in war nor yet at law ought I or any man to use every way of escaping death. Often in battle there can be no doubt that if a man will throw away his arms, and fall on his knees before his pursuers, he may escape death; and in other dangers there are other ways of escaping death, if a man is willing to say and do anything. The difficulty, my friends, is not to avoid death, but to avoid unrighteousness; for that runs faster than death. I am old and move slowly, and the slower runner has overtaken me, and my accusers are keen and quick, and the faster runner, who is unrighteousness, has overtaken them. And now I depart hence condemned by you to suffer the penalty of death,—they too go their ways condemned by the truth to suffer the penalty of villainy and wrong; and I must abide by my award—let them abide by theirs. I suppose that these things may be regarded as fated,—and I think that they are well.

And now, O men who have condemned me, I would fain prophesy to you; for I am about to die, and in the hour of death men are gifted with prophetic power. And I prophesy to you who are my murderers, that immediately after my departure punishment far heavier than you have inflicted on me will surely await you. Me you have killed because you wanted to escape the accuser, and not to give an account of your lives. But that will not be as you suppose: far otherwise. For I say that there will be more accusers of you than there are now; accusers whom hitherto I have restrained: and as they are younger they will be more inconsiderate with you, and you will be more offended at them. If you think that by killing men you can prevent some one from censuring your evil lives, you are mistaken; that is not a way of escape which is either possible or honourable; the easiest and the noblest way is not to

be disabling others, but to be improving yourselves. This is the prophecy which I utter before my departure to the judges who have condemned me.

Friends, who would have acquitted me, I would like also to talk with you about the thing which has come to pass, while the magistrates are busy, and before I go to the place at which I must die. Stay then a little, for we may as well talk with one another while there is time. You are my friends, and I should like to show you the meaning of this event which has happened to me. O my judges—for you I may truly call judges—I should like to tell you of a wonderful circumstance. Hitherto the divine faculty of which the internal oracle is the source has constantly been in the habit of opposing me even about trifles, if I was going to make a slip or error in any matter; and now as you see there has come upon me that which may be thought, and is generally believed to be, the last and worst evil. But the oracle made no sign of opposition, either when I was leaving my house in the morning, or when I was on my way to the court, or while I was speaking, at anything which I was going to say; and yet I have often been stopped in the middle of a speech, but now in nothing I either said or did touching the matter in hand has the oracle opposed me. What do I take to be the explanation of this silence? I will tell you. It is an intimation that what has happened to me is a good, and that those of us who think that death is an evil are in error. For the customary sign would surely have opposed me had I been going to evil and not to good.

Let us reflect in another way, and we shall see that there is great reason to hope that death is a good; for one of two things—either death is a state of nothingness and utter unconsciousness, or, as men say, there is a change and migration of the soul from this world to another. Now if you suppose that there is no consciousness, but a sleep like the sleep of him who is undisturbed even by dreams, death will be an unspeakable gain. For if a person were to select the night in which his sleep was undisturbed even by dreams, and were to compare with this the other days and nights of his life, and then were to tell us how many days and nights he had passed in the course of his life better and more pleasantly than this one, I think that any man, I will not say a private man, but even the great king will not find many such days or nights, when compared with the others. Now if death be of such a nature, I say that to die is gain; for eternity is then only a single night. But if death is the journey to another place, and there, as men say, all the dead abide, what good, O my friends and judges, can be greater than this? If indeed when the pilgrim arrives in the world below, he is delivered from the professors of justice in this world, and finds the true judges who are said to give judgment there, Minos and Rhadamanthus and Aeacus and Triptolemus, and other sons of God who were righteous in their own life, that pilgrimage will be worth making. What would not a man give if he might converse with Orpheus and Musaeus and Hesiod and Homer? Nay, if this be true, let me die again and again. I myself, too, shall have a wonderful interest in there meeting and conversing with Palamedes, and Ajax the son of Telamon, and any other ancient hero who has suffered death through an unjust judgment; and there will be no small pleasure, as I think, in comparing my own sufferings with theirs. Above all, I shall then be able to continue my search into true and false knowledge; as in this world, so also in the next; and I shall find out who is wise, and who pretends to be wise, and is not. What would not a man give, O judges, to be able to examine the leader of the great Trojan expedition; or Odysseus or Sisyphus, or numberless others, men and women too! What infinite delight would there be in conversing with them and asking them questions! In another world they do not put a man to death for asking questions: assuredly not. For besides being happier than we are, they will be immortal, if what is said is true.

Wherefore, O judges, be of good cheer about death, and know of a certainty, that no evil can happen to a good man, either in life or after death. He and his are not neglected by the gods; nor has my own approaching end happened by mere chance. But I see clearly that the time had arrived when it was better for me to die and be released from trouble; wherefore the oracle gave no sign. For which reason, also, I am not angry with my condemners, or with my accusers; they have done me no harm, although they did not mean to do me any good; and for this I may gently blame them.

Still I have a favour to ask of them. When my sons are grown up, I would ask you, O my friends, to punish them; and I would have you trouble them, as I have troubled you, if they seem to care about riches, or anything, more than about virtue; or if they pretend to be something when they are really nothing,—then reprove them, as I have reproved you, for not caring about that for which they ought to care, and thinking that they are something when they are really nothing. And if you do this, both I and my sons will have received justice at your hands.

The hour of departure has arrived, and we go our ways—I to die, and you to live. Which is better God only knows.

THE DIALOGUES OF PLATO

CHARMIDES

By Plato

Translated into English with Analyses and Introductions
By B. Jowett, M.A.

Master of Balliol College
Regius Professor of Greek in the University of Oxford
Doctor in Theology of the University of Leyden

TO MY FORMER PUPILS

in Balliol College and in the University of Oxford who during fifty years have been the best of friends to me these volumes are inscribed in grateful recognition of their never failing attachment.

The additions and alterations which have been made, both in the Introductions and in the Text of this Edition, affect at least a third of the work.

Having regard to the extent of these alterations, and to the annoyance which is naturally felt by the owner of a book at the possession of it in an inferior form, and still more keenly by the writer himself, who must always desire to be read as he is at his best, I have thought that the possessor of either of the former Editions (1870 and 1876) might wish to exchange it for the present one. I have therefore arranged that those who would like to make this exchange, on depositing a perfect and undamaged copy of the first or second Edition with any agent of the Clarendon Press, shall be entitled to receive a copy of a new Edition at half-price.

PREFACE TO THE FIRST EDITION.

The Text which has been mostly followed in this Translation of Plato is the latest 8vo. edition of Stallbaum; the principal deviations are noted at the bottom of the page.

I have to acknowledge many obligations to old friends and pupils. These are:—Mr. John Purves, Fellow of Balliol College, with whom I have revised about half of the entire Translation; the Rev. Professor Campbell, of St. Andrews, who has helped me in the revision of several parts of the work, especially of the Theaetetus, Sophist, and Politicus; Mr. Robinson Ellis, Fellow of Trinity College, and Mr. Alfred Robinson, Fellow of New College, who read with me the Cratylus and the Gorgias; Mr. Paravicini, Student of Christ Church, who assisted me in the Symposium; Mr. Raper, Fellow of Queen's College, Mr. Monro, Fellow of Oriel College, and Mr. Shadwell, Student of Christ Church, who gave me similar assistance in the Laws. Dr. Greenhill, of Hastings, has also kindly sent me remarks on the physiological part of the Timaeus, which I have inserted as corrections under the head of errata at the end of the Introduction. The degree of accuracy which I have been enabled to attain is in great measure due to these gentlemen, and I heartily thank them for the pains and time which they have bestowed on my work.

I have further to explain how far I have received help from other labourers in the same field. The books which I have found of most use are Steinhart and Muller's German Translation of Plato with Introductions; Zeller's 'Philosophie der Griechen,' and 'Platonische Studien;' Susemihl's 'Genetische Entwickelung der Paltonischen Philosophie;' Hermann's 'Geschichte der Platonischen Philosophie;' Bonitz, 'Platonische Studien;' Stallbaum's Notes and Introductions; Professor Campbell's editions of the 'Theaetetus,' the 'Sophist,' and the 'Politicus;' Professor Thompson's 'Phaedrus;' Th. Martin's 'Etudes sur le Timee;' Mr. Poste's edition and translation of the 'Philebus;' the Translation of the 'Republic,' by Messrs. Davies and Vaughan, and the Translation of the 'Gorgias,' by Mr. Cope.

I have also derived much assistance from the great work of Mr. Grote, which contains excellent analyses of the Dialogues, and is rich in original thoughts and observations. I agree with him in rejecting as futile the attempt of Schleiermacher and others to arrange the Dialogues of Plato into a harmonious whole. Any such arrangement appears to me not only to be unsupported by evidence, but to involve an anachronism in the history of philosophy. There is a common spirit in the writings of Plato, but not a unity of design in the whole, nor perhaps a perfect unity in any single Dialogue. The hypothesis of a general plan which is worked out in the successive Dialogues is an after-thought of the critics who have attributed a system to writings belonging to an age when system had not as yet taken possession of philosophy.

If Mr. Grote should do me the honour to read any portion of this work he will probably remark that I have endeavoured to approach Plato from a point of view which is opposed to his own. The aim of the Introductions in these volumes has been to represent Plato as the father of Idealism, who is not to be measured by the standard of utilitarianism or any other modern philosophical system. He is the poet or maker of ideas, satisfying the wants of his own age, providing the instruments of thought for future generations. He is no dreamer, but a great philosophical genius struggling with the unequal conditions of light and knowledge under which he is living. He may be illustrated by the writings of moderns, but he must be interpreted by his own, and by his place in the history of philosophy. We are not concerned to determine what is the residuum of truth which remains for ourselves. His truth may not be our truth, and nevertheless may have an extraordinary value and interest for us.

I cannot agree with Mr. Grote in admitting as genuine all the writings commonly attributed to Plato in antiquity, any more than with Schaarschmidt and some other German critics who reject nearly half of them. The German critics, to whom I refer, proceed chiefly on grounds of internal evidence; they appear to me to lay too much stress on the variety of doctrine and style, which must be equally acknowledged as a fact, even in the Dialogues regarded by Schaarschmidt as genuine, e.g. in the Phaedrus, or Symposium, when compared with the Laws. He who admits works so different in style and matter to have been the composition of the same author, need have no difficulty in admitting the Sophist or the Politicus. (The negative argument adduced by the same school of critics, which is based on the silence of Aristotle, is not worthy of much consideration. For why should Aristotle, because he has quoted several Dialogues of Plato, have quoted them all? Something must be allowed to chance, and to the nature of the subjects treated of in them.) On the other hand, Mr. Grote trusts mainly to the Alexandrian Canon. But I hardly think that we are justified in attributing much weight to the authority of the Alexandrian librarians in an age when there was no regular publication of books, and every temptation to forge them; and in which the writings of a school were naturally attributed to the founder of the school. And even without intentional fraud, there was an inclination to believe rather than to enquire. Would Mr. Grote accept as genuine all the writings which he finds in

the lists of learned ancients attributed to Hippocrates, to Xenophon, to Aristotle? The Alexandrian Canon of the Platonic writings is deprived of credit by the admission of the Epistles, which are not only unworthy of Plato, and in several passages plagiarized from him, but flagrantly at variance with historical fact. It will be seen also that I do not agree with Mr. Grote's views about the Sophists; nor with the low estimate which he has formed of Plato's Laws; nor with his opinion respecting Plato's doctrine of the rotation of the earth. But I 'am not going to lay hands on my father Parmenides' (Soph.), who will, I hope, forgive me for differing from him on these points. I cannot close this Preface without expressing my deep respect for his noble and gentle character, and the great services which he has rendered to Greek Literature.

Balliol College, January, 1871.

PREFACE TO THE SECOND AND THIRD EDITIONS.

In publishing a Second Edition (1875) of the Dialogues of Plato in English, I had to acknowledge the assistance of several friends: of the Rev. G.G. Bradley, Master of University College, now Dean of Westminster, who sent me some valuable remarks on the Phaedo; of Dr. Greenhill, who had again revised a portion of the Timaeus; of Mr. R.L. Nettleship, Fellow and Tutor of Balliol College, to whom I was indebted for an excellent criticism of the Parmenides; and, above all, of the Rev. Professor Campbell of St. Andrews, and Mr. Paravicini, late Student of Christ Church and Tutor of Balliol College, with whom I had read over the greater part of the translation. I was also indebted to Mr. Evelyn Abbott, Fellow and Tutor of Balliol College, for a complete and accurate index.

In this, the Third Edition, I am under very great obligations to Mr. Matthew Knight, who has not only favoured me with valuable suggestions throughout the work, but has largely extended the Index (from 61 to 175 pages) and translated the Eryxias and Second Alcibiades; and to Mr Frank Fletcher, of Balliol College, my Secretary. I am also considerably indebted to Mr. J.W. Mackail, late Fellow of Balliol College, who read over the Republic in the Second Edition and noted several inaccuracies.

In both editions the Introductions to the Dialogues have been enlarged, and essays on subjects having an affinity to the Platonic Dialogues have been introduced into several of them. The analyses have been corrected, and innumerable alterations have been made in the Text. There have been added also, in the Third Edition, headings to the pages and a marginal analysis to the text of each dialogue.

At the end of a long task, the translator may without impropriety point out the difficulties which he has had to encounter. These have been far greater than he would have anticipated; nor is he at all sanguine that he has succeeded in overcoming them. Experience has made him feel that a translation, like a picture, is dependent for its effect on very minute touches; and that it is a work of infinite pains, to be returned to in many moods and viewed in different lights.

I. An English translation ought to be idiomatic and interesting, not only to the scholar, but to the unlearned reader. Its object should not simply be to render the words of one language into the words of another or to preserve the construction and order of the original;—this is the ambition of a schoolboy, who wishes to show that he has made a good use of his Dictionary and Grammar; but is quite unworthy of the translator, who seeks to produce on his reader an impression similar or nearly similar to that produced by the original. To him the feeling should be more important than the exact word. He should remember Dryden's quaint admonition not to 'lacquey by the side of his author, but to mount up behind him.' (Dedication to the Aeneis.) He must carry in his mind a comprehensive view of the whole work, of what has preceded and of what is to follow,—as well as of the meaning of particular passages. His version should be based, in the first instance, on an intimate knowledge of the text; but the precise order and arrangement of the words may be left to fade out of sight, when the translation begins to take shape. He must form a general idea of the two languages, and reduce the one to the terms of the other. His work should be rhythmical and varied, the right admixture of words and syllables, and even of letters, should be carefully attended to; above all, it should be equable in style. There must also be quantity, which is necessary in prose as well as in verse: clauses, sentences, paragraphs, must be in due proportion. Metre and even rhyme may be rarely admitted; though neither is a legitimate element of prose writing, they may help to lighten a cumbrous expression (Symp.). The translation should retain as far as possible the characteristic qualities of the ancient writer—his freedom, grace, simplicity, stateliness, weight, precision; or the best part of him will be lost to the English reader. It should read as an original work, and should also be the most faithful transcript which can be made of the language from which the translation is taken, consistently with the first requirement of all, that it be English. Further, the translation being English, it should also be perfectly intelligible in itself without reference to the Greek, the English being really the more lucid and exact of the two languages. In some respects it may be maintained that ordinary English writing, such as the newspaper article, is superior to Plato: at any rate it is couched in language which is very rarely obscure. On the other hand, the greatest writers of Greece, Thucydides, Plato, Aeschylus, Sophocles, Pindar, Demosthenes, are generally those which are found to be most difficult and to diverge most widely from the English idiom. The translator will often have to convert the more abstract Greek into the more concrete English, or vice versa, and he ought not to force upon one language the character of another. In some cases, where the order is confused, the expression feeble, the emphasis misplaced, or the sense somewhat faulty, he will not strive in his rendering to reproduce these characteristics, but will re-write the passage as his author would have written it at first, had he not been 'nodding'; and he will not hesitate to supply anything which, owing to the genius of the language or some accident of composition, is omitted in the Greek, but is necessary to make the English clear and consecutive.

It is difficult to harmonize all these conflicting elements. In a translation of Plato what may be termed the interests of the Greek and English are often at war with one another. In framing the English sentence we are insensibly diverted from the exact meaning of the Greek; when we return to the Greek we are apt to cramp and overlay the English. We substitute, we compromise, we give and take, we add a little here and leave out a little there. The translator may sometimes be allowed to sacrifice minute accuracy for the sake of clearness and sense. But he is not therefore at liberty to omit words and turns of expression which the English language is quite capable of supplying. He must be patient and self-controlled; he must not be easily run away with. Let him never allow the attraction of a favourite expression, or a sonorous cadence, to overpower his better judgment, or think much of an ornament which is out of keeping with the general character of his work. He must ever be

casting his eyes upwards from the copy to the original, and down again from the original to the copy (Rep.). His calling is not held in much honour by the world of scholars; yet he himself may be excused for thinking it a kind of glory to have lived so many years in the companionship of one of the greatest of human intelligences, and in some degree, more perhaps than others, to have had the privilege of understanding him (Sir Joshua Reynolds' Lectures: Disc. xv.).

There are fundamental differences in Greek and English, of which some may be managed while others remain intractable. (1). The structure of the Greek language is partly adversative and alternative, and partly inferential; that is to say, the members of a sentence are either opposed to one another, or one of them expresses the cause or effect or condition or reason of another. The two tendencies may be called the horizontal and perpendicular lines of the language; and the opposition or inference is often much more one of words than of ideas. But modern languages have rubbed off this adversative and inferential form: they have fewer links of connection, there is less mortar in the interstices, and they are content to place sentences side by side, leaving their relation to one another to be gathered from their position or from the context. The difficulty of preserving the effect of the Greek is increased by the want of adversative and inferential particles in English, and by the nice sense of tautology which characterizes all modern languages. We cannot have two 'buts' or two 'fors' in the same sentence where the Greek repeats (Greek). There is a similar want of particles expressing the various gradations of objective and subjective thought—(Greek) and the like, which are so thickly scattered over the Greek page. Further, we can only realize to a very imperfect degree the common distinction between (Greek), and the combination of the two suggests a subtle shade of negation which cannot be expressed in English. And while English is more dependent than Greek upon the apposition of clauses and sentences, yet there is a difficulty in using this form of construction owing to the want of case endings. For the same reason there cannot be an equal variety in the order of words or an equal nicety of emphasis in English as in Greek.

(2) The formation of the sentence and of the paragraph greatly differs in Greek and English. The lines by which they are divided are generally much more marked in modern languages than in ancient. Both sentences and paragraphs are more precise and definite—they do not run into one another. They are also more regularly developed from within. The sentence marks another step in an argument or a narrative or a statement; in reading a paragraph we silently turn over the page and arrive at some new view or aspect of the subject. Whereas in Plato we are not always certain where a sentence begins and ends; and paragraphs are few and far between. The language is distributed in a different way, and less articulated than in English. For it was long before the true use of the period was attained by the classical writers both in poetry or prose; it was (Greek). The balance of sentences and the introduction of paragraphs at suitable intervals must not be neglected if the harmony of the English language is to be preserved. And still a caution has to be added on the other side, that we must avoid giving it a numerical or mechanical character.

(3) This, however, is not one of the greatest difficulties of the translator; much greater is that which arises from the restriction of the use of the genders. Men and women in English are masculine and feminine, and there is a similar distinction of sex in the words denoting animals; but all things else, whether outward objects or abstract ideas, are relegated to the class of neuters. Hardly in some flight of poetry do we ever endue any of them with the characteristics of a sentient being, and then only by speaking of them in the feminine gender. The virtues may be pictured in female forms, but they are not so described in language; a ship is humorously supposed to be the sailor's bride; more doubtful

are the personifications of church and country as females. Now the genius of the Greek language is the opposite of this. The same tendency to personification which is seen in the Greek mythology is common also in the language; and genders are attributed to things as well as persons according to their various degrees of strength and weakness; or from fanciful resemblances to the male or female form, or some analogy too subtle to be discovered. When the gender of any object was once fixed, a similar gender was naturally assigned to similar objects, or to words of similar formation. This use of genders in the denotation of objects or ideas not only affects the words to which genders are attributed, but the words with which they are construed or connected, and passes into the general character of the style. Hence arises a difficulty in translating Greek into English which cannot altogether be overcome. Shall we speak of the soul and its qualities, of virtue, power, wisdom, and the like, as feminine or neuter? The usage of the English language does not admit of the former, and yet the life and beauty of the style are impaired by the latter. Often the translator will have recourse to the repetition of the word, or to the ambiguous 'they,' 'their,' etc.; for fear of spoiling the effect of the sentence by introducing 'it.' Collective nouns in Greek and English create a similar but lesser awkwardness.

(4) To use of relation is far more extended in Greek than in English. Partly the greater variety of genders and cases makes the connexion of relative and antecedent less ambiguous: partly also the greater number of demonstrative and relative pronouns, and the use of the article, make the correlation of ideas simpler and more natural. The Greek appears to have had an ear or intelligence for a long and complicated sentence which is rarely to be found in modern nations; and in order to bring the Greek down to the level of the modern, we must break up the long sentence into two or more short ones. Neither is the same precision required in Greek as in Latin or English, nor in earlier Greek as in later; there was nothing shocking to the contemporary of Thucydides and Plato in anacolutha and repetitions. In such cases the genius of the English language requires that the translation should be more intelligible than the Greek. The want of more distinctions between the demonstrative pronouns is also greatly felt. Two genitives dependent on one another, unless familiarised by idiom, have an awkward effect in English. Frequently the noun has to take the place of the pronoun. 'This' and 'that' are found repeating themselves to weariness in the rough draft of a translation. As in the previous case, while the feeling of the modern language is more opposed to tautology, there is also a greater difficulty in avoiding it.

(5) Though no precise rule can be laid down about the repetition of words, there seems to be a kind of impertinence in presenting to the reader the same thought in the same words, repeated twice over in the same passage without any new aspect or modification of it. And the evasion of tautology—that is, the substitution of one word of precisely the same meaning for another—is resented by us equally with the repetition of words. Yet on the other hand the least difference of meaning or the least change of form from a substantive to an adjective, or from a participle to a verb, will often remedy the unpleasant effect. Rarely and only for the sake of emphasis or clearness can we allow an important word to be used twice over in two successive sentences or even in the same paragraph. The particles and pronouns, as they are of most frequent occurrence, are also the most troublesome. Strictly speaking, except a few of the commonest of them, 'and,' 'the,' etc., they ought not to occur twice in the same sentence. But the Greek has no such precise rules; and hence any literal translation of a Greek author is full of tautology. The tendency of modern languages is to become more correct as well as more perspicuous than ancient. And, therefore, while the English translator is limited in the power of expressing relation or connexion, by the law of his own language increased precision and

also increased clearness are required of him. The familiar use of logic, and the progress of science, have in these two respects raised the standard. But modern languages, while they have become more exacting in their demands, are in many ways not so well furnished with powers of expression as the ancient classical ones.

Such are a few of the difficulties which have to be overcome in the work of translation; and we are far from having exhausted the list. (6) The excellence of a translation will consist, not merely in the faithful rendering of words, or in the composition of a sentence only, or yet of a single paragraph, but in the colour and style of the whole work. Equability of tone is best attained by the exclusive use of familiar and idiomatic words. But great care must be taken; for an idiomatic phrase, if an exception to the general style, is of itself a disturbing element. No word, however expressive and exact, should be employed, which makes the reader stop to think, or unduly attracts attention by difficulty and peculiarity, or disturbs the effect of the surrounding language. In general the style of one author is not appropriate to another; as in society, so in letters, we expect every man to have 'a good coat of his own,' and not to dress himself out in the rags of another. (a) Archaic expressions are therefore to be avoided. Equivalents may be occasionally drawn from Shakspere, who is the common property of us all; but they must be used sparingly. For, like some other men of genius of the Elizabethan and Jacobean age, he outdid the capabilities of the language, and many of the expressions which he introduced have been laid aside and have dropped out of use. (b) A similar principle should be observed in the employment of Scripture. Having a greater force and beauty than other language, and a religious association, it disturbs the even flow of the style. It may be used to reproduce in the translation the quaint effect of some antique phrase in the original, but rarely; and when adopted, it should have a certain freshness and a suitable 'entourage.' It is strange to observe that the most effective use of Scripture phraseology arises out of the application of it in a sense not intended by the author. (c) Another caution: metaphors differ in different languages, and the translator will often be compelled to substitute one for another, or to paraphrase them, not giving word for word, but diffusing over several words the more concentrated thought of the original. The Greek of Plato often goes beyond the English in its imagery: compare Laws, (Greek); Rep.; etc. Or again the modern word, which in substance is the nearest equivalent to the Greek, may be found to include associations alien to Greek life: e.g. (Greek), 'jurymen,' (Greek), 'the bourgeoisie.' (d) The translator has also to provide expressions for philosophical terms of very indefinite meaning in the more definite language of modern philosophy. And he must not allow discordant elements to enter into the work. For example, in translating Plato, it would equally be an anachronism to intrude on him the feeling and spirit of the Jewish or Christian Scriptures or the technical terms of the Hegelian or Darwinian philosophy.

(7) As no two words are precise equivalents (just as no two leaves of the forest are exactly similar), it is a mistaken attempt at precision always to translate the same Greek word by the same English word. There is no reason why in the New Testament (Greek) should always be rendered 'righteousness,' or (Greek) 'covenant.' In such cases the translator may be allowed to employ two words—sometimes when the two meanings occur in the same passage, varying them by an 'or'—e.g. (Greek), 'science' or 'knowledge,' (Greek), 'idea' or 'class,' (Greek), 'temperance' or 'prudence,'—at the point where the change of meaning occurs. If translations are intended not for the Greek scholar but for the general reader, their worst fault will be that they sacrifice the general effect and meaning to the over-precise rendering of words and forms of speech.

(8) There is no kind of literature in English which corresponds to the Greek Dialogue; nor is the English language easily adapted to it. The rapidity and abruptness of question and answer, the constant repetition of (Greek), etc., which Cicero avoided in Latin (de Amicit), the frequent occurrence of expletives, would, if reproduced in a translation, give offence to the reader. Greek has a freer and more frequent use of the Interrogative, and is of a more passionate and emotional character, and therefore lends itself with greater readiness to the dialogue form. Most of the so-called English Dialogues are but poor imitations of Plato, which fall very far short of the original. The breath of conversation, the subtle adjustment of question and answer, the lively play of fancy, the power of drawing characters, are wanting in them. But the Platonic dialogue is a drama as well as a dialogue, of which Socrates is the central figure, and there are lesser performers as well:—the insolence of Thrasymachus, the anger of Callicles and Anytus, the patronizing style of Protagoras, the self-consciousness of Prodicus and Hippias, are all part of the entertainment. To reproduce this living image the same sort of effort is required as in translating poetry. The language, too, is of a finer quality; the mere prose English is slow in lending itself to the form of question and answer, and so the ease of conversation is lost, and at the same time the dialectical precision with which the steps of the argument are drawn out is apt to be impaired.

II. In the Introductions to the Dialogues there have been added some essays on modern philosophy, and on political and social life. The chief subjects discussed in these are Utility, Communism, the Kantian and Hegelian philosophies, Psychology, and the Origin of Language. (There have been added also in the Third Edition remarks on other subjects. A list of the most important of these additions is given at the end of this Preface.)

Ancient and modern philosophy throw a light upon one another: but they should be compared, not confounded. Although the connexion between them is sometimes accidental, it is often real. The same questions are discussed by them under different conditions of language and civilization; but in some cases a mere word has survived, while nothing or hardly anything of the pre-Socratic, Platonic, or Aristotelian meaning is retained. There are other questions familiar to the moderns, which have no place in ancient philosophy. The world has grown older in two thousand years, and has enlarged its stock of ideas and methods of reasoning. Yet the germ of modern thought is found in ancient, and we may claim to have inherited, notwithstanding many accidents of time and place, the spirit of Greek philosophy. There is, however, no continuous growth of the one into the other, but a new beginning, partly artificial, partly arising out of the questionings of the mind itself, and also receiving a stimulus from the study of ancient writings.

Considering the great and fundamental differences which exist in ancient and modern philosophy, it seems best that we should at first study them separately, and seek for the interpretation of either, especially of the ancient, from itself only, comparing the same author with himself and with his contemporaries, and with the general state of thought and feeling prevalent in his age. Afterwards comes the remoter light which they cast on one another. We begin to feel that the ancients had the same thoughts as ourselves, the same difficulties which characterize all periods of transition, almost the same opposition between science and religion. Although we cannot maintain that ancient and modern philosophy are one and continuous (as has been affirmed with more truth respecting ancient and modern history), for they are separated by an interval of a thousand years, yet they seem to recur in a sort of cycle, and we are surprised to find that the new is ever old, and that the teaching of the past has still a meaning for us.

III. In the preface to the first edition I expressed a strong opinion at variance with Mr. Grote's, that the so-called Epistles of Plato were spurious. His friend and editor, Professor Bain, thinks that I ought to give the reasons why I differ from so eminent an authority. Reserving the fuller discussion of the question for another place, I will shortly defend my opinion by the following arguments:—

(a) Because almost all epistles purporting to be of the classical age of Greek literature are forgeries. (Compare Bentley's Works (Dyce's Edition).) Of all documents this class are the least likely to be preserved and the most likely to be invented. The ancient world swarmed with them; the great libraries stimulated the demand for them; and at a time when there was no regular publication of books, they easily crept into the world.

(b) When one epistle out of a number is spurious, the remainder of the series cannot be admitted to be genuine, unless there be some independent ground for thinking them so: when all but one are spurious, overwhelming evidence is required of the genuineness of the one: when they are all similar in style or motive, like witnesses who agree in the same tale, they stand or fall together. But no one, not even Mr. Grote, would maintain that all the Epistles of Plato are genuine, and very few critics think that more than one of them is so. And they are clearly all written from the same motive, whether serious or only literary. Nor is there an example in Greek antiquity of a series of Epistles, continuous and yet coinciding with a succession of events extending over a great number of years.

The external probability therefore against them is enormous, and the internal probability is not less: for they are trivial and unmeaning, devoid of delicacy and subtlety, wanting in a single fine expression. And even if this be matter of dispute, there can be no dispute that there are found in them many plagiarisms, inappropriately borrowed, which is a common note of forgery. They imitate Plato, who never imitates either himself or any one else; reminiscences of the Republic and the Laws are continually recurring in them; they are too like him and also too unlike him, to be genuine (see especially Karsten, Commentio Critica de Platonis quae feruntur Epistolis). They are full of egotism, self-assertion, affectation, faults which of all writers Plato was most careful to avoid, and into which he was least likely to fall. They abound in obscurities, irrelevancies, solecisms, pleonasms, inconsistencies, awkwardnesses of construction, wrong uses of words. They also contain historical blunders, such as the statement respecting Hipparinus and Nysaeus, the nephews of Dion, who are said to 'have been well inclined to philosophy, and well able to dispose the mind of their brother Dionysius in the same course,' at a time when they could not have been more than six or seven years of age—also foolish allusions, such as the comparison of the Athenian empire to the empire of Darius, which show a spirit very different from that of Plato; and mistakes of fact, as e.g. about the Thirty Tyrants, whom the writer of the letters seems to have confused with certain inferior magistrates, making them in all fifty-one. These palpable errors and absurdities are absolutely irreconcilable with their genuineness. And as they appear to have a common parentage, the more they are studied, the more they will be found to furnish evidence against themselves. The Seventh, which is thought to be the most important of these Epistles, has affinities with the Third and the Eighth, and is quite as impossible and inconsistent as the rest. It is therefore involved in the same condemnation.—The final conclusion is that neither the Seventh nor any other of them, when carefully analyzed, can be imagined to have proceeded from the hand or mind of Plato. The other testimonies to the voyages of Plato to Sicily and the court of Dionysius are all of them later by several centuries than the events to which they refer. No extant writer mentions them older than Cicero and Cornelius Nepos. It does not seem impossible that so attractive a theme as the meeting of a

philosopher and a tyrant, once imagined by the genius of a Sophist, may have passed into a romance which became famous in Hellas and the world. It may have created one of the mists of history, like the Trojan war or the legend of Arthur, which we are unable to penetrate. In the age of Cicero, and still more in that of Diogenes Laertius and Appuleius, many other legends had gathered around the personality of Plato,—more voyages, more journeys to visit tyrants and Pythagorean philosophers. But if, as we agree with Karsten in supposing, they are the forgery of some rhetorician or sophist, we cannot agree with him in also supposing that they are of any historical value, the rather as there is no early independent testimony by which they are supported or with which they can be compared.

IV. There is another subject to which I must briefly call attention, lest I should seem to have overlooked it. Dr. Henry Jackson, of Trinity College, Cambridge, in a series of articles which he has contributed to the Journal of Philology, has put forward an entirely new explanation of the Platonic 'Ideas.' He supposes that in the mind of Plato they took, at different times in his life, two essentially different forms:—an earlier one which is found chiefly in the Republic and the Phaedo, and a later, which appears in the Theaetetus, Philebus, Sophist, Politicus, Parmenides, Timaeus. In the first stage of his philosophy Plato attributed Ideas to all things, at any rate to all things which have classes or common notions: these he supposed to exist only by participation in them. In the later Dialogues he no longer included in them manufactured articles and ideas of relation, but restricted them to 'types of nature,' and having become convinced that the many cannot be parts of the one, for the idea of participation in them he substituted imitation of them. To quote Dr. Jackson's own expressions,—'whereas in the period of the Republic and the Phaedo, it was proposed to pass through ontology to the sciences, in the period of the Parmenides and the Philebus, it is proposed to pass through the sciences to ontology': or, as he repeats in nearly the same words,—'whereas in the Republic and in the Phaedo he had dreamt of passing through ontology to the sciences, he is now content to pass through the sciences to ontology.'

This theory is supposed to be based on Aristotle's Metaphysics, a passage containing an account of the ideas, which hitherto scholars have found impossible to reconcile with the statements of Plato himself. The preparations for the new departure are discovered in the Parmenides and in the Theaetetus; and it is said to be expressed under a different form by the (Greek) and the (Greek) of the Philebus. The (Greek) of the Philebus is the principle which gives form and measure to the (Greek); and in the 'Later Theory' is held to be the (Greek) or (Greek) which converts the Infinite or Indefinite into ideas. They are neither (Greek) nor (Greek), but belong to the (Greek) which partakes of both.

With great respect for the learning and ability of Dr. Jackson, I find myself unable to agree in this newly fashioned doctrine of the Ideas, which he ascribes to Plato. I have not the space to go into the question fully; but I will briefly state some objections which are, I think, fatal to it.

(1) First, the foundation of his argument is laid in the Metaphysics of Aristotle. But we cannot argue, either from the Metaphysics, or from any other of the philosophical treatises of Aristotle, to the dialogues of Plato until we have ascertained the relation in which his so-called works stand to the philosopher himself. There is of course no doubt of the great influence exercised upon Greece and upon the world by Aristotle and his philosophy. But on the other hand almost every one who is capable of understanding the subject acknowledges that his writings have not come down to us in an authentic form like most of the dialogues of Plato. How much of them is to be ascribed to Aristotle's

own hand, how much is due to his successors in the Peripatetic School, is a question which has never been determined, and probably never can be, because the solution of it depends upon internal evidence only. To 'the height of this great argument' I do not propose to ascend. But one little fact, not irrelevant to the present discussion, will show how hopeless is the attempt to explain Plato out of the writings of Aristotle. In the chapter of the Metaphysics quoted by Dr. Jackson, about two octavo pages in length, there occur no less than seven or eight references to Plato, although nothing really corresponding to them can be found in his extant writings:—a small matter truly; but what a light does it throw on the character of the entire book in which they occur! We can hardly escape from the conclusion that they are not statements of Aristotle respecting Plato, but of a later generation of Aristotelians respecting a later generation of Platonists. (Compare the striking remark of the great Scaliger respecting the Magna Moralia:—Haec non sunt Aristotelis, tamen utitur auctor Aristotelis nomine tanquam suo.)

(2) There is no hint in Plato's own writings that he was conscious of having made any change in the Doctrine of Ideas such as Dr. Jackson attributes to him, although in the Republic the platonic Socrates speaks of 'a longer and a shorter way', and of a way in which his disciple Glaucon 'will be unable to follow him'; also of a way of Ideas, to which he still holds fast, although it has often deserted him (Philebus, Phaedo), and although in the later dialogues and in the Laws the reference to Ideas disappears, and Mind claims her own (Phil.; Laws). No hint is given of what Plato meant by the 'longer way' (Rep.), or 'the way in which Glaucon was unable to follow'; or of the relation of Mind to the Ideas. It might be said with truth that the conception of the Idea predominates in the first half of the Dialogues, which, according to the order adopted in this work, ends with the Republic, the 'conception of Mind' and a way of speaking more in agreement with modern terminology, in the latter half. But there is no reason to suppose that Plato's theory, or, rather, his various theories, of the Ideas underwent any definite change during his period of authorship. They are substantially the same in the twelfth Book of the Laws as in the Meno and Phaedo; and since the Laws were written in the last decade of his life, there is no time to which this change of opinions can be ascribed. It is true that the theory of Ideas takes several different forms, not merely an earlier and a later one, in the various Dialogues. They are personal and impersonal, ideals and ideas, existing by participation or by imitation, one and many, in different parts of his writings or even in the same passage. They are the universal definitions of Socrates, and at the same time 'of more than mortal knowledge' (Rep.). But they are always the negations of sense, of matter, of generation, of the particular: they are always the subjects of knowledge and not of opinion; and they tend, not to diversity, but to unity. Other entities or intelligences are akin to them, but not the same with them, such as mind, measure, limit, eternity, essence (Philebus; Timaeus): these and similar terms appear to express the same truths from a different point of view, and to belong to the same sphere with them. But we are not justified, therefore, in attempting to identify them, any more than in wholly opposing them. The great oppositions of the sensible and intellectual, the unchangeable and the transient, in whatever form of words expressed, are always maintained in Plato. But the lesser logical distinctions, as we should call them, whether of ontology or predication, which troubled the pre-Socratic philosophy and came to the front in Aristotle, are variously discussed and explained. Thus far we admit inconsistency in Plato, but no further. He lived in an age before logic and system had wholly permeated language, and therefore we must not always expect to find in him systematic arrangement or logical precision:—'poema magis putandum.' But he is always true to his own context, the careful study of which is of more value to the interpreter than all the commentators and scholiasts put together.

(3) The conclusions at which Dr. Jackson has arrived are such as might be expected to follow from his method of procedure. For he takes words without regard to their connection, and pieces together different parts of dialogues in a purely arbitrary manner, although there is no indication that the author intended the two passages to be so combined, or that when he appears to be experimenting on the different points of view from which a subject of philosophy may be regarded, he is secretly elaborating a system. By such a use of language any premises may be made to lead to any conclusion. I am not one of those who believe Plato to have been a mystic or to have had hidden meanings; nor do I agree with Dr. Jackson in thinking that 'when he is precise and dogmatic, he generally contrives to introduce an element of obscurity into the expostion' (J. of Philol.). The great master of language wrote as clearly as he could in an age when the minds of men were clouded by controversy, and philosophical terms had not yet acquired a fixed meaning. I have just said that Plato is to be interpreted by his context; and I do not deny that in some passages, especially in the Republic and Laws, the context is at a greater distance than would be allowable in a modern writer. But we are not therefore justified in connecting passages from different parts of his writings, or even from the same work, which he has not himself joined. We cannot argue from the Parmenides to the Philebus, or from either to the Sophist, or assume that the Parmenides, the Philebus, and the Timaeus were 'written simultaneously,' or 'were intended to be studied in the order in which they are here named (J. of Philol.) We have no right to connect statements which are only accidentally similar. Nor is it safe for the author of a theory about ancient philosophy to argue from what will happen if his statements are rejected. For those consequences may never have entered into the mind of the ancient writer himself; and they are very likely to be modern consequences which would not have been understood by him. 'I cannot think,' says Dr. Jackson, 'that Plato would have changed his opinions, but have nowhere explained the nature of the change.' But is it not much more improbable that he should have changed his opinions, and not stated in an unmistakable manner that the most essential principle of his philosophy had been reversed? It is true that a few of the dialogues, such as the Republic and the Timaeus, or the Theaetetus and the Sophist, or the Meno and the Apology, contain allusions to one another. But these allusions are superficial and, except in the case of the Republic and the Laws, have no philosophical importance. They do not affect the substance of the work. It may be remarked further that several of the dialogues, such as the Phaedrus, the Sophist, and the Parmenides, have more than one subject. But it does not therefore follow that Plato intended one dialogue to succeed another, or that he begins anew in one dialogue a subject which he has left unfinished in another, or that even in the same dialogue he always intended the two parts to be connected with each other. We cannot argue from a casual statement found in the Parmenides to other statements which occur in the Philebus. Much more truly is his own manner described by himself when he says that 'words are more plastic than wax' (Rep.), and 'whither the wind blows, the argument follows'. The dialogues of Plato are like poems, isolated and separate works, except where they are indicated by the author himself to have an intentional sequence.

It is this method of taking passages out of their context and placing them in a new connexion when they seem to confirm a preconceived theory, which is the defect of Dr. Jackson's procedure. It may be compared, though not wholly the same with it, to that method which the Fathers practised, sometimes called 'the mystical interpretation of Scripture,' in which isolated words are separated from their context, and receive any sense which the fancy of the interpreter may suggest. It is akin to the method employed by Schleiermacher of arranging the dialogues of Plato in chronological order according to what he deems the true arrangement of the ideas contained in them. (Dr. Jackson is also inclined, having constructed a theory, to make the chronology of Plato's writings dependent upon

it (See J. of Philol. and elsewhere.) It may likewise be illustrated by the ingenuity of those who employ symbols to find in Shakespeare a hidden meaning. In the three cases the error is nearly the same:—words are taken out of their natural context, and thus become destitute of any real meaning.

(4) According to Dr. Jackson's 'Later Theory,' Plato's Ideas, which were once regarded as the summa genera of all things, are now to be explained as Forms or Types of some things only,—that is to say, of natural objects: these we conceive imperfectly, but are always seeking in vain to have a more perfect notion of them. He says (J. of Philol.) that 'Plato hoped by the study of a series of hypothetical or provisional classifications to arrive at one in which nature's distribution of kinds is approximately represented, and so to attain approximately to the knowledge of the ideas. But whereas in the Republic, and even in the Phaedo, though less hopefully, he had sought to convert his provisional definitions into final ones by tracing their connexion with the summum genus, the (Greek), in the Parmenides his aspirations are less ambitious,' and so on. But where does Dr. Jackson find any such notion as this in Plato or anywhere in ancient philosophy? Is it not an anachronism, gracious to the modern physical philosopher, and the more acceptable because it seems to form a link between ancient and modern philosophy, and between physical and metaphysical science; but really unmeaning?

(5) To this 'Later Theory' of Plato's Ideas I oppose the authority of Professor Zeller, who affirms that none of the passages to which Dr. Jackson appeals (Theaet.; Phil.; Tim.; Parm.) 'in the smallest degree prove his point'; and that in the second class of dialogues, in which the 'Later Theory of Ideas' is supposed to be found, quite as clearly as in the first, are admitted Ideas, not only of natural objects, but of properties, relations, works of art, negative notions (Theaet.; Parm.; Soph.); and that what Dr. Jackson distinguishes as the first class of dialogues from the second equally assert or imply that the relation of things to the Ideas, is one of participation in them as well as of imitation of them (Prof. Zeller's summary of his own review of Dr. Jackson, Archiv fur Geschichte der Philosophie.)

In conclusion I may remark that in Plato's writings there is both unity, and also growth and development; but that we must not intrude upon him either a system or a technical language.

Balliol College, October, 1891.

NOTE

The chief additions to the Introductions in the Third Edition consist of Essays on the following subjects:—

1. Language.

2. The decline of Greek Literature.

3. The 'Ideas' of Plato and Modern Philosophy.

4. The myths of Plato.

5. The relation of the Republic, Statesman and Laws.

6. The legend of Atlantis.

7. Psychology.

8. Comparison of the Laws of Plato with Spartan and Athenian Laws and Institutions.

CHARMIDES.

INTRODUCTION.

The subject of the Charmides is Temperance or (Greek), a peculiarly Greek notion, which may also be rendered Moderation (Compare Cic. Tusc. '(Greek), quam soleo equidem tum temperantiam, tum moderationem appellare, nonnunquam etiam modestiam.'), Modesty, Discretion, Wisdom, without completely exhausting by all these terms the various associations of the word. It may be described as 'mens sana in corpore sano,' the harmony or due proportion of the higher and lower elements of human nature which 'makes a man his own master,' according to the definition of the Republic. In the accompanying translation the word has been rendered in different places either Temperance or Wisdom, as the connection seemed to require: for in the philosophy of Plato (Greek) still retains an intellectual element (as Socrates is also said to have identified (Greek) with (Greek): Xen. Mem.) and is not yet relegated to the sphere of moral virtue, as in the Nicomachean Ethics of Aristotle.

The beautiful youth, Charmides, who is also the most temperate of human beings, is asked by Socrates, 'What is Temperance?' He answers characteristically, (1) 'Quietness.' 'But Temperance is a fine and noble thing; and quietness in many or most cases is not so fine a thing as quickness.' He tries again and says (2) that temperance is modesty. But this again is set aside by a sophistical application of Homer: for temperance is good as well as noble, and Homer has declared that 'modesty is not good for a needy man.' (3) Once more Charmides makes the attempt. This time he gives a definition which he has heard, and of which Socrates conjectures that Critias must be the author: 'Temperance is doing one's own business.' But the artisan who makes another man's shoes may be temperate, and yet he is not doing his own business; and temperance defined thus would be opposed to the division of labour which exists in every temperate or well-ordered state. How is this riddle to be explained?

Critias, who takes the place of Charmides, distinguishes in his answer between 'making' and 'doing,' and with the help of a misapplied quotation from Hesiod assigns to the words 'doing' and 'work' an exclusively good sense: Temperance is doing one's own business;—(4) is doing good.

Still an element of knowledge is wanting which Critias is readily induced to admit at the suggestion of Socrates; and, in the spirit of Socrates and of Greek life generally, proposes as a fifth definition, (5) Temperance is self-knowledge. But all sciences have a subject: number is the subject of arithmetic, health of medicine—what is the subject of temperance or wisdom? The answer is that (6) Temperance is the knowledge of what a man knows and of what he does not know. But this is contrary to analogy; there is no vision of vision, but only of visible things; no love of loves, but only of beautiful things; how then can there be a knowledge of knowledge? That which is older, heavier, lighter, is older, heavier, and lighter than something else, not than itself, and this seems to be true of all relative notions—the object of relation is outside of them; at any rate they can only have relation to themselves in the form of that object. Whether there are any such cases of reflex relation or not, and whether that sort of knowledge which we term Temperance is of this reflex nature, has yet to be determined by the great metaphysician. But even if knowledge can know itself, how does the knowledge of what we know imply the knowledge of what we do not know? Besides, knowledge is an abstraction only, and will not inform us of any particular subject, such as medicine, building, and the like. It may tell us that we or other men know something, but can never tell us what we know.

Admitting that there is a knowledge of what we know and of what we do not know, which would supply a rule and measure of all things, still there would be no good in this; and the knowledge which temperance gives must be of a kind which will do us good; for temperance is a good. But this universal knowledge does not tend to our happiness and good: the only kind of knowledge which brings happiness is the knowledge of good and evil. To this Critias replies that the science or knowledge of good and evil, and all the other sciences, are regulated by the higher science or knowledge of knowledge. Socrates replies by again dividing the abstract from the concrete, and asks how this knowledge conduces to happiness in the same definite way in which medicine conduces to health.

And now, after making all these concessions, which are really inadmissible, we are still as far as ever from ascertaining the nature of temperance, which Charmides has already discovered, and had therefore better rest in the knowledge that the more temperate he is the happier he will be, and not trouble himself with the speculations of Socrates.

In this Dialogue may be noted (1) The Greek ideal of beauty and goodness, the vision of the fair soul in the fair body, realised in the beautiful Charmides; (2) The true conception of medicine as a science of the whole as well as the parts, and of the mind as well as the body, which is playfully intimated in the story of the Thracian; (3) The tendency of the age to verbal distinctions, which here, as in the Protagoras and Cratylus, are ascribed to the ingenuity of Prodicus; and to interpretations or rather parodies of Homer or Hesiod, which are eminently characteristic of Plato and his contemporaries; (4) The germ of an ethical principle contained in the notion that temperance is 'doing one's own business,' which in the Republic (such is the shifting character of the Platonic philosophy) is given as the definition, not of temperance, but of justice; (5) The impatience which is exhibited by Socrates of any definition of temperance in which an element of science or knowledge is not included; (6) The beginning of metaphysics and logic implied in the two questions: whether there can be a science of science, and whether the knowledge of what you know is the same as the knowledge of what you do not know; and also in the distinction between 'what you know' and 'that you know,' (Greek;) here too is the first conception of an absolute self-determined science (the claims of which, however, are disputed by Socrates, who asks cui bono?) as well as the first suggestion of the difficulty of the

abstract and concrete, and one of the earliest anticipations of the relation of subject and object, and of the subjective element in knowledge—a 'rich banquet' of metaphysical questions in which we 'taste of many things.' (7) And still the mind of Plato, having snatched for a moment at these shadows of the future, quickly rejects them: thus early has he reached the conclusion that there can be no science which is a 'science of nothing' (Parmen.). (8) The conception of a science of good and evil also first occurs here, an anticipation of the Philebus and Republic as well as of moral philosophy in later ages.

The dramatic interest of the Dialogue chiefly centres in the youth Charmides, with whom Socrates talks in the kindly spirit of an elder. His childlike simplicity and ingenuousness are contrasted with the dialectical and rhetorical arts of Critias, who is the grown-up man of the world, having a tincture of philosophy. No hint is given, either here or in the Timaeus, of the infamy which attaches to the name of the latter in Athenian history. He is simply a cultivated person who, like his kinsman Plato, is ennobled by the connection of his family with Solon (Tim.), and had been the follower, if not the disciple, both of Socrates and of the Sophists. In the argument he is not unfair, if allowance is made for a slight rhetorical tendency, and for a natural desire to save his reputation with the company; he is sometimes nearer the truth than Socrates. Nothing in his language or behaviour is unbecoming the guardian of the beautiful Charmides. His love of reputation is characteristically Greek, and contrasts with the humility of Socrates. Nor in Charmides himself do we find any resemblance to the Charmides of history, except, perhaps, the modest and retiring nature which, according to Xenophon, at one time of his life prevented him from speaking in the Assembly (Mem.); and we are surprised to hear that, like Critias, he afterwards became one of the thirty tyrants. In the Dialogue he is a pattern of virtue, and is therefore in no need of the charm which Socrates is unable to apply. With youthful naivete, keeping his secret and entering into the spirit of Socrates, he enjoys the detection of his elder and guardian Critias, who is easily seen to be the author of the definition which he has so great an interest in maintaining. The preceding definition, 'Temperance is doing one's own business,' is assumed to have been borrowed by Charmides from another; and when the enquiry becomes more abstract he is superseded by Critias (Theaet.; Euthyd.). Socrates preserves his accustomed irony to the end; he is in the neighbourhood of several great truths, which he views in various lights, but always either by bringing them to the test of common sense, or by demanding too great exactness in the use of words, turns aside from them and comes at last to no conclusion.

The definitions of temperance proceed in regular order from the popular to the philosophical. The first two are simple enough and partially true, like the first thoughts of an intelligent youth; the third, which is a real contribution to ethical philosophy, is perverted by the ingenuity of Socrates, and hardly rescued by an equal perversion on the part of Critias. The remaining definitions have a higher aim, which is to introduce the element of knowledge, and at last to unite good and truth in a single science. But the time has not yet arrived for the realization of this vision of metaphysical philosophy; and such a science when brought nearer to us in the Philebus and the Republic will not be called by the name of (Greek). Hence we see with surprise that Plato, who in his other writings identifies good and knowledge, here opposes them, and asks, almost in the spirit of Aristotle, how can there be a knowledge of knowledge, and even if attainable, how can such a knowledge be of any use?

The difficulty of the Charmides arises chiefly from the two senses of the word (Greek), or temperance. From the ethical notion of temperance, which is variously defined to be quietness, modesty, doing our own business, the doing of good actions, the dialogue passes onto the intellectual conception of (Greek), which is declared also to be the science of self-knowledge, or of the knowledge of what we

know and do not know, or of the knowledge of good and evil. The dialogue represents a stage in the history of philosophy in which knowledge and action were not yet distinguished. Hence the confusion between them, and the easy transition from one to the other. The definitions which are offered are all rejected, but it is to be observed that they all tend to throw a light on the nature of temperance, and that, unlike the distinction of Critias between (Greek), none of them are merely verbal quibbles, it is implied that this question, although it has not yet received a solution in theory, has been already answered by Charmides himself, who has learned to practise the virtue of self-knowledge which philosophers are vainly trying to define in words. In a similar spirit we might say to a young man who is disturbed by theological difficulties, 'Do not trouble yourself about such matters, but only lead a good life;' and yet in either case it is not to be denied that right ideas of truth may contribute greatly to the improvement of character.

The reasons why the Charmides, Lysis, Laches have been placed together and first in the series of Platonic dialogues, are: (i) Their shortness and simplicity. The Charmides and the Lysis, if not the Laches, are of the same 'quality' as the Phaedrus and Symposium: and it is probable, though far from certain, that the slighter effort preceded the greater one. (ii) Their eristic, or rather Socratic character; they belong to the class called dialogues of search (Greek), which have no conclusion. (iii) The absence in them of certain favourite notions of Plato, such as the doctrine of recollection and of the Platonic ideas; the questions, whether virtue can be taught; whether the virtues are one or many. (iv) They have a want of depth, when compared with the dialogues of the middle and later period; and a youthful beauty and grace which is wanting in the later ones. (v) Their resemblance to one another; in all the three boyhood has a great part. These reasons have various degrees of weight in determining their place in the catalogue of the Platonic writings, though they are not conclusive. No arrangement of the Platonic dialogues can be strictly chronological. The order which has been adopted is intended mainly for the convenience of the reader; at the same time, indications of the date supplied either by Plato himself or allusions found in the dialogues have not been lost sight of. Much may be said about this subject, but the results can only be probable; there are no materials which would enable us to attain to anything like certainty.

The relations of knowledge and virtue are again brought forward in the companion dialogues of the Lysis and Laches; and also in the Protagoras and Euthydemus. The opposition of abstract and particular knowledge in this dialogue may be compared with a similar opposition of ideas and phenomena which occurs in the Prologues to the Parmenides, but seems rather to belong to a later stage of the philosophy of Plato.

CHARMIDES,

OR TEMPERANCE

PERSONS OF THE DIALOGUE: Socrates, who is the narrator, Charmides, Chaerephon, Critias.

SCENE: The Palaestra of Taureas, which is near the Porch of the King Archon.

Yesterday evening I returned from the army at Potidaea, and having been a good while away, I thought that I should like to go and look at my old haunts. So I went into the palaestra of Taureas, which is over against the temple adjoining the porch of the King Archon, and there I found a number of persons, most of whom I knew, but not all. My visit was unexpected, and no sooner did they see me entering than they saluted me from afar on all sides; and Chaerephon, who is a kind of madman, started up and ran to me, seizing my hand, and saying, How did you escape, Socrates?—(I should explain that an engagement had taken place at Potidaea not long before we came away, of which the news had only just reached Athens.)

You see, I replied, that here I am.

There was a report, he said, that the engagement was very severe, and that many of our acquaintance had fallen.

That, I replied, was not far from the truth.

I suppose, he said, that you were present.

I was.

Then sit down, and tell us the whole story, which as yet we have only heard imperfectly.

I took the place which he assigned to me, by the side of Critias the son of Callaeschrus, and when I had saluted him and the rest of the company, I told them the news from the army, and answered their several enquiries.

Then, when there had been enough of this, I, in my turn, began to make enquiries about matters at home—about the present state of philosophy, and about the youth. I asked whether any of them were remarkable for wisdom or beauty, or both. Critias, glancing at the door, invited my attention to some youths who were coming in, and talking noisily to one another, followed by a crowd. Of the beauties, Socrates, he said, I fancy that you will soon be able to form a judgment. For those who are just entering are the advanced guard of the great beauty, as he is thought to be, of the day, and he is likely to be not far off himself.

Who is he, I said; and who is his father?

Charmides, he replied, is his name; he is my cousin, and the son of my uncle Glaucon: I rather think that you know him too, although he was not grown up at the time of your departure.

Certainly, I know him, I said, for he was remarkable even then when he was still a child, and I should imagine that by this time he must be almost a young man.

You will see, he said, in a moment what progress he has made and what he is like. He had scarcely said the word, when Charmides entered.

Now you know, my friend, that I cannot measure anything, and of the beautiful, I am simply such a measure as a white line is of chalk; for almost all young persons appear to be beautiful in my eyes. But at that moment, when I saw him coming in, I confess that I was quite astonished at his beauty and stature; all the world seemed to be enamoured of him; amazement and confusion reigned when he entered; and a troop of lovers followed him. That grown-up men like ourselves should have been affected in this way was not surprising, but I observed that there was the same feeling among the boys; all of them, down to the very least child, turned and looked at him, as if he had been a statue.

Chaerephon called me and said: What do you think of him, Socrates? Has he not a beautiful face?

Most beautiful, I said.

But you would think nothing of his face, he replied, if you could see his naked form: he is absolutely perfect.

And to this they all agreed.

By Heracles, I said, there never was such a paragon, if he has only one other slight addition.

What is that? said Critias.

If he has a noble soul; and being of your house, Critias, he may be expected to have this.

He is as fair and good within, as he is without, replied Critias.

Then, before we see his body, should we not ask him to show us his soul, naked and undisguised? he is just of an age at which he will like to talk.

That he will, said Critias, and I can tell you that he is a philosopher already, and also a considerable poet, not in his own opinion only, but in that of others.

That, my dear Critias, I replied, is a distinction which has long been in your family, and is inherited by you from Solon. But why do you not call him, and show him to us? for even if he were younger than he is, there could be no impropriety in his talking to us in the presence of you, who are his guardian and cousin.

Very well, he said; then I will call him; and turning to the attendant, he said, Call Charmides, and tell him that I want him to come and see a physician about the illness of which he spoke to me the day before yesterday. Then again addressing me, he added: He has been complaining lately of having a

headache when he rises in the morning: now why should you not make him believe that you know a cure for the headache?

Why not, I said; but will he come?

He will be sure to come, he replied.

He came as he was bidden, and sat down between Critias and me. Great amusement was occasioned by every one pushing with might and main at his neighbour in order to make a place for him next to themselves, until at the two ends of the row one had to get up and the other was rolled over sideways. Now I, my friend, was beginning to feel awkward; my former bold belief in my powers of conversing with him had vanished. And when Critias told him that I was the person who had the cure, he looked at me in such an indescribable manner, and was just going to ask a question. And at that moment all the people in the palaestra crowded about us, and, O rare! I caught a sight of the inwards of his garment, and took the flame. Then I could no longer contain myself. I thought how well Cydias understood the nature of love, when, in speaking of a fair youth, he warns some one 'not to bring the fawn in the sight of the lion to be devoured by him,' for I felt that I had been overcome by a sort of wild-beast appetite. But I controlled myself, and when he asked me if I knew the cure of the headache, I answered, but with an effort, that I did know.

And what is it? he said.

I replied that it was a kind of leaf, which required to be accompanied by a charm, and if a person would repeat the charm at the same time that he used the cure, he would be made whole; but that without the charm the leaf would be of no avail.

Then I will write out the charm from your dictation, he said.

With my consent? I said, or without my consent?

With your consent, Socrates, he said, laughing.

Very good, I said; and are you quite sure that you know my name?

I ought to know you, he replied, for there is a great deal said about you among my companions; and I remember when I was a child seeing you in company with my cousin Critias.

I am glad to find that you remember me, I said; for I shall now be more at home with you and shall be better able to explain the nature of the charm, about which I felt a difficulty before. For the charm will do more, Charmides, than only cure the headache. I dare say that you have heard eminent physicians say to a patient who comes to them with bad eyes, that they cannot cure his eyes by themselves, but that if his eyes are to be cured, his head must be treated; and then again they say that to think of curing the head alone, and not the rest of the body also, is the height of folly. And arguing in this way they apply their methods to the whole body, and try to treat and heal the whole and the part together. Did you ever observe that this is what they say?

Yes, he said.

And they are right, and you would agree with them?

Yes, he said, certainly I should.

His approving answers reassured me, and I began by degrees to regain confidence, and the vital heat returned. Such, Charmides, I said, is the nature of the charm, which I learned when serving with the army from one of the physicians of the Thracian king Zamolxis, who are said to be so skilful that they can even give immortality. This Thracian told me that in these notions of theirs, which I was just now mentioning, the Greek physicians are quite right as far as they go; but Zamolxis, he added, our king, who is also a god, says further, 'that as you ought not to attempt to cure the eyes without the head, or the head without the body, so neither ought you to attempt to cure the body without the soul; and this,' he said, 'is the reason why the cure of many diseases is unknown to the physicians of Hellas, because they are ignorant of the whole, which ought to be studied also; for the part can never be well unless the whole is well.' For all good and evil, whether in the body or in human nature, originates, as he declared, in the soul, and overflows from thence, as if from the head into the eyes. And therefore if the head and body are to be well, you must begin by curing the soul; that is the first thing. And the cure, my dear youth, has to be effected by the use of certain charms, and these charms are fair words; and by them temperance is implanted in the soul, and where temperance is, there health is speedily imparted, not only to the head, but to the whole body. And he who taught me the cure and the charm at the same time added a special direction: 'Let no one,' he said, 'persuade you to cure the head, until he has first given you his soul to be cured by the charm. For this,' he said, 'is the great error of our day in the treatment of the human body, that physicians separate the soul from the body.' And he added with emphasis, at the same time making me swear to his words, 'Let no one, however rich, or noble, or fair, persuade you to give him the cure, without the charm.' Now I have sworn, and I must keep my oath, and therefore if you will allow me to apply the Thracian charm first to your soul, as the stranger directed, I will afterwards proceed to apply the cure to your head. But if not, I do not know what I am to do with you, my dear Charmides.

Critias, when he heard this, said: The headache will be an unexpected gain to my young relation, if the pain in his head compels him to improve his mind: and I can tell you, Socrates, that Charmides is not only pre-eminent in beauty among his equals, but also in that quality which is given by the charm; and this, as you say, is temperance?

Yes, I said.

Then let me tell you that he is the most temperate of human beings, and for his age inferior to none in any quality.

Yes, I said, Charmides; and indeed I think that you ought to excel others in all good qualities; for if I am not mistaken there is no one present who could easily point out two Athenian houses, whose union would be likely to produce a better or nobler scion than the two from which you are sprung. There is your father's house, which is descended from Critias the son of Dropidas, whose family has been commemorated in the panegyrical verses of Anacreon, Solon, and many other poets, as famous for beauty and virtue and all other high fortune: and your mother's house is equally distinguished; for

your maternal uncle, Pyrilampes, is reputed never to have found his equal, in Persia at the court of the great king, or on the continent of Asia, in all the places to which he went as ambassador, for stature and beauty; that whole family is not a whit inferior to the other. Having such ancestors you ought to be first in all things, and, sweet son of Glaucon, your outward form is no dishonour to any of them. If to beauty you add temperance, and if in other respects you are what Critias declares you to be, then, dear Charmides, blessed art thou, in being the son of thy mother. And here lies the point; for if, as he declares, you have this gift of temperance already, and are temperate enough, in that case you have no need of any charms, whether of Zamolxis or of Abaris the Hyperborean, and I may as well let you have the cure of the head at once; but if you have not yet acquired this quality, I must use the charm before I give you the medicine. Please, therefore, to inform me whether you admit the truth of what Critias has been saying;—have you or have you not this quality of temperance?

Charmides blushed, and the blush heightened his beauty, for modesty is becoming in youth; he then said very ingenuously, that he really could not at once answer, either yes, or no, to the question which I had asked: For, said he, if I affirm that I am not temperate, that would be a strange thing for me to say of myself, and also I should give the lie to Critias, and many others who think as he tells you, that I am temperate: but, on the other hand, if I say that I am, I shall have to praise myself, which would be ill manners; and therefore I do not know how to answer you.

I said to him: That is a natural reply, Charmides, and I think that you and I ought together to enquire whether you have this quality about which I am asking or not; and then you will not be compelled to say what you do not like; neither shall I be a rash practitioner of medicine: therefore, if you please, I will share the enquiry with you, but I will not press you if you would rather not.

There is nothing which I should like better, he said; and as far as I am concerned you may proceed in the way which you think best.

I think, I said, that I had better begin by asking you a question; for if temperance abides in you, you must have an opinion about her; she must give some intimation of her nature and qualities, which may enable you to form a notion of her. Is not that true?

Yes, he said, that I think is true.

You know your native language, I said, and therefore you must be able to tell what you feel about this.

Certainly, he said.

In order, then, that I may form a conjecture whether you have temperance abiding in you or not, tell me, I said, what, in your opinion, is Temperance?

At first he hesitated, and was very unwilling to answer: then he said that he thought temperance was doing things orderly and quietly, such things for example as walking in the streets, and talking, or anything else of that nature. In a word, he said, I should answer that, in my opinion, temperance is quietness.

Are you right, Charmides? I said. No doubt some would affirm that the quiet are the temperate; but let us see whether these words have any meaning; and first tell me whether you would not acknowledge temperance to be of the class of the noble and good?

Yes.

But which is best when you are at the writing-master's, to write the same letters quickly or quietly?

Quickly.

And to read quickly or slowly?

Quickly again.

And in playing the lyre, or wrestling, quickness or sharpness are far better than quietness and slowness?

Yes.

And the same holds in boxing and in the pancratium?

Certainly.

And in leaping and running and in bodily exercises generally, quickness and agility are good; slowness, and inactivity, and quietness, are bad?

That is evident.

Then, I said, in all bodily actions, not quietness, but the greatest agility and quickness, is noblest and best?

Yes, certainly.

And is temperance a good?

Yes.

Then, in reference to the body, not quietness, but quickness will be the higher degree of temperance, if temperance is a good?

True, he said.

And which, I said, is better—facility in learning, or difficulty in learning?

Facility.

Yes, I said; and facility in learning is learning quickly, and difficulty in learning is learning quietly and slowly?

True.

And is it not better to teach another quickly and energetically, rather than quietly and slowly?

Yes.

And which is better, to call to mind, and to remember, quickly and readily, or quietly and slowly?

The former.

And is not shrewdness a quickness or cleverness of the soul, and not a quietness?

True.

And is it not best to understand what is said, whether at the writing-master's or the music-master's, or anywhere else, not as quietly as possible, but as quickly as possible?

Yes.

And in the searchings or deliberations of the soul, not the quietest, as I imagine, and he who with difficulty deliberates and discovers, is thought worthy of praise, but he who does so most easily and quickly?

Quite true, he said.

And in all that concerns either body or soul, swiftness and activity are clearly better than slowness and quietness?

Clearly they are.

Then temperance is not quietness, nor is the temperate life quiet,—certainly not upon this view; for the life which is temperate is supposed to be the good. And of two things, one is true,—either never, or very seldom, do the quiet actions in life appear to be better than the quick and energetic ones; or supposing that of the nobler actions, there are as many quiet, as quick and vehement: still, even if we grant this, temperance will not be acting quietly any more than acting quickly and energetically, either in walking or talking or in anything else; nor will the quiet life be more temperate than the unquiet, seeing that temperance is admitted by us to be a good and noble thing, and the quick have been shown to be as good as the quiet.

I think, he said, Socrates, that you are right.

Then once more, Charmides, I said, fix your attention, and look within; consider the effect which temperance has upon yourself, and the nature of that which has the effect. Think over all this, and, like a brave youth, tell me—What is temperance?

After a moment's pause, in which he made a real manly effort to think, he said: My opinion is, Socrates, that temperance makes a man ashamed or modest, and that temperance is the same as modesty.

Very good, I said; and did you not admit, just now, that temperance is noble?

Yes, certainly, he said.

And the temperate are also good?

Yes.

And can that be good which does not make men good?

Certainly not.

And you would infer that temperance is not only noble, but also good?

That is my opinion.

Well, I said; but surely you would agree with Homer when he says,

'Modesty is not good for a needy man'?

Yes, he said; I agree.

Then I suppose that modesty is and is not good?

Clearly.

But temperance, whose presence makes men only good, and not bad, is always good?

That appears to me to be as you say.

And the inference is that temperance cannot be modesty—if temperance is a good, and if modesty is as much an evil as a good?

All that, Socrates, appears to me to be true; but I should like to know what you think about another definition of temperance, which I just now remember to have heard from some one, who said, 'That temperance is doing our own business.' Was he right who affirmed that?

You monster! I said; this is what Critias, or some philosopher has told you.

Some one else, then, said Critias; for certainly I have not.

But what matter, said Charmides, from whom I heard this?

No matter at all, I replied; for the point is not who said the words, but whether they are true or not.

There you are in the right, Socrates, he replied.

To be sure, I said; yet I doubt whether we shall ever be able to discover their truth or falsehood; for they are a kind of riddle.

What makes you think so? he said.

Because, I said, he who uttered them seems to me to have meant one thing, and said another. Is the scribe, for example, to be regarded as doing nothing when he reads or writes?

I should rather think that he was doing something.

And does the scribe write or read, or teach you boys to write or read, your own names only, or did you write your enemies' names as well as your own and your friends'?

As much one as the other.

And was there anything meddling or intemperate in this?

Certainly not.

And yet if reading and writing are the same as doing, you were doing what was not your own business?

But they are the same as doing.

And the healing art, my friend, and building, and weaving, and doing anything whatever which is done by art,—these all clearly come under the head of doing?

Certainly.

And do you think that a state would be well ordered by a law which compelled every man to weave and wash his own coat, and make his own shoes, and his own flask and strigil, and other implements, on this principle of every one doing and performing his own, and abstaining from what is not his own?

I think not, he said.

But, I said, a temperate state will be a well-ordered state.

Of course, he replied.

Then temperance, I said, will not be doing one's own business; not at least in this way, or doing things of this sort?

Clearly not.

Then, as I was just now saying, he who declared that temperance is a man doing his own business had another and a hidden meaning; for I do not think that he could have been such a fool as to mean this. Was he a fool who told you, Charmides?

Nay, he replied, I certainly thought him a very wise man.

Then I am quite certain that he put forth his definition as a riddle, thinking that no one would know the meaning of the words 'doing his own business.'

I dare say, he replied.

And what is the meaning of a man doing his own business? Can you tell me?

Indeed, I cannot; and I should not wonder if the man himself who used this phrase did not understand what he was saying. Whereupon he laughed slyly, and looked at Critias.

Critias had long been showing uneasiness, for he felt that he had a reputation to maintain with Charmides and the rest of the company. He had, however, hitherto managed to restrain himself; but now he could no longer forbear, and I am convinced of the truth of the suspicion which I entertained at the time, that Charmides had heard this answer about temperance from Critias. And Charmides, who did not want to answer himself, but to make Critias answer, tried to stir him up. He went on pointing out that he had been refuted, at which Critias grew angry, and appeared, as I thought, inclined to quarrel with him; just as a poet might quarrel with an actor who spoiled his poems in repeating them; so he looked hard at him and said—

Do you imagine, Charmides, that the author of this definition of temperance did not understand the meaning of his own words, because you do not understand them?

Why, at his age, I said, most excellent Critias, he can hardly be expected to understand; but you, who are older, and have studied, may well be assumed to know the meaning of them; and therefore, if you agree with him, and accept his definition of temperance, I would much rather argue with you than with him about the truth or falsehood of the definition.

I entirely agree, said Critias, and accept the definition.

Very good, I said; and now let me repeat my question—Do you admit, as I was just now saying, that all craftsmen make or do something?

I do.

And do they make or do their own business only, or that of others also?

They make or do that of others also.

And are they temperate, seeing that they make not for themselves or their own business only?

Why not? he said.

No objection on my part, I said, but there may be a difficulty on his who proposes as a definition of temperance, 'doing one's own business,' and then says that there is no reason why those who do the business of others should not be temperate.

Nay (The English reader has to observe that the word 'make' (Greek), in Greek, has also the sense of 'do' (Greek).), said he; did I ever acknowledge that those who do the business of others are temperate? I said, those who make, not those who do.

What! I asked; do you mean to say that doing and making are not the same?

No more, he replied, than making or working are the same; thus much I have learned from Hesiod, who says that 'work is no disgrace.' Now do you imagine that if he had meant by working and doing such things as you were describing, he would have said that there was no disgrace in them—for example, in the manufacture of shoes, or in selling pickles, or sitting for hire in a house of ill-fame? That, Socrates, is not to be supposed: but I conceive him to have distinguished making from doing and work; and, while admitting that the making anything might sometimes become a disgrace, when the employment was not honourable, to have thought that work was never any disgrace at all. For things nobly and usefully made he called works; and such makings he called workings, and doings; and he must be supposed to have called such things only man's proper business, and what is hurtful, not his business: and in that sense Hesiod, and any other wise man, may be reasonably supposed to call him wise who does his own work.

O Critias, I said, no sooner had you opened your mouth, than I pretty well knew that you would call that which is proper to a man, and that which is his own, good; and that the makings (Greek) of the good you would call doings (Greek), for I am no stranger to the endless distinctions which Prodicus draws about names. Now I have no objection to your giving names any signification which you please, if you will only tell me what you mean by them. Please then to begin again, and be a little plainer. Do you mean that this doing or making, or whatever is the word which you would use, of good actions, is temperance?

I do, he said.

Then not he who does evil, but he who does good, is temperate?

Yes, he said; and you, friend, would agree.

No matter whether I should or not; just now, not what I think, but what you are saying, is the point at issue.

Well, he answered; I mean to say, that he who does evil, and not good, is not temperate; and that he is temperate who does good, and not evil: for temperance I define in plain words to be the doing of good actions.

And you may be very likely right in what you are saying; but I am curious to know whether you imagine that temperate men are ignorant of their own temperance?

I do not think so, he said.

And yet were you not saying, just now, that craftsmen might be temperate in doing another's work, as well as in doing their own?

I was, he replied; but what is your drift?

I have no particular drift, but I wish that you would tell me whether a physician who cures a patient may do good to himself and good to another also?

I think that he may.

And he who does so does his duty?

Yes.

And does not he who does his duty act temperately or wisely?

Yes, he acts wisely.

But must the physician necessarily know when his treatment is likely to prove beneficial, and when not? or must the craftsman necessarily know when he is likely to be benefited, and when not to be benefited, by the work which he is doing?

I suppose not.

Then, I said, he may sometimes do good or harm, and not know what he is himself doing, and yet, in doing good, as you say, he has done temperately or wisely. Was not that your statement?

Yes.

Then, as would seem, in doing good, he may act wisely or temperately, and be wise or temperate, but not know his own wisdom or temperance?

But that, Socrates, he said, is impossible; and therefore if this is, as you imply, the necessary consequence of any of my previous admissions, I will withdraw them, rather than admit that a man can be temperate or wise who does not know himself; and I am not ashamed to confess that I was in error. For self-knowledge would certainly be maintained by me to be the very essence of knowledge, and in this I agree with him who dedicated the inscription, 'Know thyself!' at Delphi. That word, if I am

not mistaken, is put there as a sort of salutation which the god addresses to those who enter the temple; as much as to say that the ordinary salutation of 'Hail!' is not right, and that the exhortation 'Be temperate!' would be a far better way of saluting one another. The notion of him who dedicated the inscription was, as I believe, that the god speaks to those who enter his temple, not as men speak; but, when a worshipper enters, the first word which he hears is 'Be temperate!' This, however, like a prophet he expresses in a sort of riddle, for 'Know thyself!' and 'Be temperate!' are the same, as I maintain, and as the letters imply (Greek), and yet they may be easily misunderstood; and succeeding sages who added 'Never too much,' or, 'Give a pledge, and evil is nigh at hand,' would appear to have so misunderstood them; for they imagined that 'Know thyself!' was a piece of advice which the god gave, and not his salutation of the worshippers at their first coming in; and they dedicated their own inscription under the idea that they too would give equally useful pieces of advice. Shall I tell you, Socrates, why I say all this? My object is to leave the previous discussion (in which I know not whether you or I are more right, but, at any rate, no clear result was attained), and to raise a new one in which I will attempt to prove, if you deny, that temperance is self-knowledge.

Yes, I said, Critias; but you come to me as though I professed to know about the questions which I ask, and as though I could, if I only would, agree with you. Whereas the fact is that I enquire with you into the truth of that which is advanced from time to time, just because I do not know; and when I have enquired, I will say whether I agree with you or not. Please then to allow me time to reflect.

Reflect, he said.

I am reflecting, I replied, and discover that temperance, or wisdom, if implying a knowledge of anything, must be a science, and a science of something.

Yes, he said; the science of itself.

Is not medicine, I said, the science of health?

True.

And suppose, I said, that I were asked by you what is the use or effect of medicine, which is this science of health, I should answer that medicine is of very great use in producing health, which, as you will admit, is an excellent effect.

Granted.

And if you were to ask me, what is the result or effect of architecture, which is the science of building, I should say houses, and so of other arts, which all have their different results. Now I want you, Critias, to answer a similar question about temperance, or wisdom, which, according to you, is the science of itself. Admitting this view, I ask of you, what good work, worthy of the name wise, does temperance or wisdom, which is the science of itself, effect? Answer me.

That is not the true way of pursuing the enquiry, Socrates, he said; for wisdom is not like the other sciences, any more than they are like one another: but you proceed as if they were alike. For tell me, he said, what result is there of computation or geometry, in the same sense as a house is the result of

building, or a garment of weaving, or any other work of any other art? Can you show me any such result of them? You cannot.

That is true, I said; but still each of these sciences has a subject which is different from the science. I can show you that the art of computation has to do with odd and even numbers in their numerical relations to themselves and to each other. Is not that true?

Yes, he said.

And the odd and even numbers are not the same with the art of computation?

They are not.

The art of weighing, again, has to do with lighter and heavier; but the art of weighing is one thing, and the heavy and the light another. Do you admit that?

Yes.

Now, I want to know, what is that which is not wisdom, and of which wisdom is the science?

You are just falling into the old error, Socrates, he said. You come asking in what wisdom or temperance differs from the other sciences, and then you try to discover some respect in which they are alike; but they are not, for all the other sciences are of something else, and not of themselves; wisdom alone is a science of other sciences, and of itself. And of this, as I believe, you are very well aware: and that you are only doing what you denied that you were doing just now, trying to refute me, instead of pursuing the argument.

And what if I am? How can you think that I have any other motive in refuting you but what I should have in examining into myself? which motive would be just a fear of my unconsciously fancying that I knew something of which I was ignorant. And at this moment I pursue the argument chiefly for my own sake, and perhaps in some degree also for the sake of my other friends. For is not the discovery of things as they truly are, a good common to all mankind?

Yes, certainly, Socrates, he said.

Then, I said, be cheerful, sweet sir, and give your opinion in answer to the question which I asked, never minding whether Critias or Socrates is the person refuted; attend only to the argument, and see what will come of the refutation.

I think that you are right, he replied; and I will do as you say.

Tell me, then, I said, what you mean to affirm about wisdom.

I mean to say that wisdom is the only science which is the science of itself as well as of the other sciences.

But the science of science, I said, will also be the science of the absence of science.

Very true, he said.

Then the wise or temperate man, and he only, will know himself, and be able to examine what he knows or does not know, and to see what others know and think that they know and do really know; and what they do not know, and fancy that they know, when they do not. No other person will be able to do this. And this is wisdom and temperance and self-knowledge—for a man to know what he knows, and what he does not know. That is your meaning?

Yes, he said.

Now then, I said, making an offering of the third or last argument to Zeus the Saviour, let us begin again, and ask, in the first place, whether it is or is not possible for a person to know that he knows and does not know what he knows and does not know; and in the second place, whether, if perfectly possible, such knowledge is of any use.

That is what we have to consider, he said.

And here, Critias, I said, I hope that you will find a way out of a difficulty into which I have got myself. Shall I tell you the nature of the difficulty?

By all means, he replied.

Does not what you have been saying, if true, amount to this: that there must be a single science which is wholly a science of itself and of other sciences, and that the same is also the science of the absence of science?

Yes.

But consider how monstrous this proposition is, my friend: in any parallel case, the impossibility will be transparent to you.

How is that? and in what cases do you mean?

In such cases as this: Suppose that there is a kind of vision which is not like ordinary vision, but a vision of itself and of other sorts of vision, and of the defect of them, which in seeing sees no colour, but only itself and other sorts of vision: Do you think that there is such a kind of vision?

Certainly not.

Or is there a kind of hearing which hears no sound at all, but only itself and other sorts of hearing, or the defects of them?

There is not.

Or take all the senses: can you imagine that there is any sense of itself and of other senses, but which is incapable of perceiving the objects of the senses?

I think not.

Could there be any desire which is not the desire of any pleasure, but of itself, and of all other desires?

Certainly not.

Or can you imagine a wish which wishes for no good, but only for itself and all other wishes?

I should answer, No.

Or would you say that there is a love which is not the love of beauty, but of itself and of other loves?

I should not.

Or did you ever know of a fear which fears itself or other fears, but has no object of fear?

I never did, he said.

Or of an opinion which is an opinion of itself and of other opinions, and which has no opinion on the subjects of opinion in general?

Certainly not.

But surely we are assuming a science of this kind, which, having no subject-matter, is a science of itself and of the other sciences?

Yes, that is what is affirmed.

But how strange is this, if it be indeed true: we must not however as yet absolutely deny the possibility of such a science; let us rather consider the matter.

You are quite right.

Well then, this science of which we are speaking is a science of something, and is of a nature to be a science of something?

Yes.

Just as that which is greater is of a nature to be greater than something else? (Socrates is intending to show that science differs from the object of science, as any other relative differs from the object of relation. But where there is comparison—greater, less, heavier, lighter, and the like—a relation to self as well as to other things involves an absolute contradiction; and in other cases, as in the case of the

senses, is hardly conceivable. The use of the genitive after the comparative in Greek, (Greek), creates an unavoidable obscurity in the translation.)

Yes.

Which is less, if the other is conceived to be greater?

To be sure.

And if we could find something which is at once greater than itself, and greater than other great things, but not greater than those things in comparison of which the others are greater, then that thing would have the property of being greater and also less than itself?

That, Socrates, he said, is the inevitable inference.

Or if there be a double which is double of itself and of other doubles, these will be halves; for the double is relative to the half?

That is true.

And that which is greater than itself will also be less, and that which is heavier will also be lighter, and that which is older will also be younger: and the same of other things; that which has a nature relative to self will retain also the nature of its object: I mean to say, for example, that hearing is, as we say, of sound or voice. Is that true?

Yes.

Then if hearing hears itself, it must hear a voice; for there is no other way of hearing.

Certainly.

And sight also, my excellent friend, if it sees itself must see a colour, for sight cannot see that which has no colour.

No.

Do you remark, Critias, that in several of the examples which have been recited the notion of a relation to self is altogether inadmissible, and in other cases hardly credible—inadmissible, for example, in the case of magnitudes, numbers, and the like?

Very true.

But in the case of hearing and sight, or in the power of self-motion, and the power of heat to burn, this relation to self will be regarded as incredible by some, but perhaps not by others. And some great man, my friend, is wanted, who will satisfactorily determine for us, whether there is nothing which has an inherent property of relation to self, or some things only and not others; and whether in this class

of self-related things, if there be such a class, that science which is called wisdom or temperance is included. I altogether distrust my own power of determining these matters: I am not certain whether there is such a science of science at all; and even if there be, I should not acknowledge this to be wisdom or temperance, until I can also see whether such a science would or would not do us any good; for I have an impression that temperance is a benefit and a good. And therefore, O son of Callaeschrus, as you maintain that temperance or wisdom is a science of science, and also of the absence of science, I will request you to show in the first place, as I was saying before, the possibility, and in the second place, the advantage, of such a science; and then perhaps you may satisfy me that you are right in your view of temperance.

Critias heard me say this, and saw that I was in a difficulty; and as one person when another yawns in his presence catches the infection of yawning from him, so did he seem to be driven into a difficulty by my difficulty. But as he had a reputation to maintain, he was ashamed to admit before the company that he could not answer my challenge or determine the question at issue; and he made an unintelligible attempt to hide his perplexity. In order that the argument might proceed, I said to him, Well then Critias, if you like, let us assume that there is this science of science; whether the assumption is right or wrong may hereafter be investigated. Admitting the existence of it, will you tell me how such a science enables us to distinguish what we know or do not know, which, as we were saying, is self-knowledge or wisdom: so we were saying?

Yes, Socrates, he said; and that I think is certainly true: for he who has this science or knowledge which knows itself will become like the knowledge which he has, in the same way that he who has swiftness will be swift, and he who has beauty will be beautiful, and he who has knowledge will know. In the same way he who has that knowledge which is self-knowing, will know himself.

I do not doubt, I said, that a man will know himself, when he possesses that which has self-knowledge: but what necessity is there that, having this, he should know what he knows and what he does not know?

Because, Socrates, they are the same.

Very likely, I said; but I remain as stupid as ever; for still I fail to comprehend how this knowing what you know and do not know is the same as the knowledge of self.

What do you mean? he said.

This is what I mean, I replied: I will admit that there is a science of science;—can this do more than determine that of two things one is and the other is not science or knowledge?

No, just that.

But is knowledge or want of knowledge of health the same as knowledge or want of knowledge of justice?

Certainly not.

The one is medicine, and the other is politics; whereas that of which we are speaking is knowledge pure and simple.

Very true.

And if a man knows only, and has only knowledge of knowledge, and has no further knowledge of health and justice, the probability is that he will only know that he knows something, and has a certain knowledge, whether concerning himself or other men.

True.

Then how will this knowledge or science teach him to know what he knows? Say that he knows health;—not wisdom or temperance, but the art of medicine has taught it to him;—and he has learned harmony from the art of music, and building from the art of building,—neither, from wisdom or temperance: and the same of other things.

That is evident.

How will wisdom, regarded only as a knowledge of knowledge or science of science, ever teach him that he knows health, or that he knows building?

It is impossible.

Then he who is ignorant of these things will only know that he knows, but not what he knows?

True.

Then wisdom or being wise appears to be not the knowledge of the things which we do or do not know, but only the knowledge that we know or do not know?

That is the inference.

Then he who has this knowledge will not be able to examine whether a pretender knows or does not know that which he says that he knows: he will only know that he has a knowledge of some kind; but wisdom will not show him of what the knowledge is?

Plainly not.

Neither will he be able to distinguish the pretender in medicine from the true physician, nor between any other true and false professor of knowledge. Let us consider the matter in this way: If the wise man or any other man wants to distinguish the true physician from the false, how will he proceed? He will not talk to him about medicine; and that, as we were saying, is the only thing which the physician understands.

True.

And, on the other hand, the physician knows nothing of science, for this has been assumed to be the province of wisdom.

True.

And further, since medicine is science, we must infer that he does not know anything of medicine.

Exactly.

Then the wise man may indeed know that the physician has some kind of science or knowledge; but when he wants to discover the nature of this he will ask, What is the subject-matter? For the several sciences are distinguished not by the mere fact that they are sciences, but by the nature of their subjects. Is not that true?

Quite true.

And medicine is distinguished from other sciences as having the subject-matter of health and disease?

Yes.

And he who would enquire into the nature of medicine must pursue the enquiry into health and disease, and not into what is extraneous?

True.

And he who judges rightly will judge of the physician as a physician in what relates to these?

He will.

He will consider whether what he says is true, and whether what he does is right, in relation to health and disease?

He will.

But can any one attain the knowledge of either unless he have a knowledge of medicine?

He cannot.

No one at all, it would seem, except the physician can have this knowledge; and therefore not the wise man; he would have to be a physician as well as a wise man.

Very true.

Then, assuredly, wisdom or temperance, if only a science of science, and of the absence of science or knowledge, will not be able to distinguish the physician who knows from one who does not know

but pretends or thinks that he knows, or any other professor of anything at all; like any other artist, he will only know his fellow in art or wisdom, and no one else.

That is evident, he said.

But then what profit, Critias, I said, is there any longer in wisdom or temperance which yet remains, if this is wisdom? If, indeed, as we were supposing at first, the wise man had been able to distinguish what he knew and did not know, and that he knew the one and did not know the other, and to recognize a similar faculty of discernment in others, there would certainly have been a great advantage in being wise; for then we should never have made a mistake, but have passed through life the unerring guides of ourselves and of those who are under us; and we should not have attempted to do what we did not know, but we should have found out those who knew, and have handed the business over to them and trusted in them; nor should we have allowed those who were under us to do anything which they were not likely to do well; and they would be likely to do well just that of which they had knowledge; and the house or state which was ordered or administered under the guidance of wisdom, and everything else of which wisdom was the lord, would have been well ordered; for truth guiding, and error having been eliminated, in all their doings, men would have done well, and would have been happy. Was not this, Critias, what we spoke of as the great advantage of wisdom—to know what is known and what is unknown to us?

Very true, he said.

And now you perceive, I said, that no such science is to be found anywhere.

I perceive, he said.

May we assume then, I said, that wisdom, viewed in this new light merely as a knowledge of knowledge and ignorance, has this advantage:—that he who possesses such knowledge will more easily learn anything which he learns; and that everything will be clearer to him, because, in addition to the knowledge of individuals, he sees the science, and this also will better enable him to test the knowledge which others have of what he knows himself; whereas the enquirer who is without this knowledge may be supposed to have a feebler and weaker insight? Are not these, my friend, the real advantages which are to be gained from wisdom? And are not we looking and seeking after something more than is to be found in her?

That is very likely, he said.

That is very likely, I said; and very likely, too, we have been enquiring to no purpose; as I am led to infer, because I observe that if this is wisdom, some strange consequences would follow. Let us, if you please, assume the possibility of this science of sciences, and further admit and allow, as was originally suggested, that wisdom is the knowledge of what we know and do not know. Assuming all this, still, upon further consideration, I am doubtful, Critias, whether wisdom, such as this, would do us much good. For we were wrong, I think, in supposing, as we were saying just now, that such wisdom ordering the government of house or state would be a great benefit.

How so? he said.

Why, I said, we were far too ready to admit the great benefits which mankind would obtain from their severally doing the things which they knew, and committing the things of which they are ignorant to those who were better acquainted with them.

Were we not right in making that admission?

I think not.

How very strange, Socrates!

By the dog of Egypt, I said, there I agree with you; and I was thinking as much just now when I said that strange consequences would follow, and that I was afraid we were on the wrong track; for however ready we may be to admit that this is wisdom, I certainly cannot make out what good this sort of thing does to us.

What do you mean? he said; I wish that you could make me understand what you mean.

I dare say that what I am saying is nonsense, I replied; and yet if a man has any feeling of what is due to himself, he cannot let the thought which comes into his mind pass away unheeded and unexamined.

I like that, he said.

Hear, then, I said, my own dream; whether coming through the horn or the ivory gate, I cannot tell. The dream is this: Let us suppose that wisdom is such as we are now defining, and that she has absolute sway over us; then each action will be done according to the arts or sciences, and no one professing to be a pilot when he is not, or any physician or general, or any one else pretending to know matters of which he is ignorant, will deceive or elude us; our health will be improved; our safety at sea, and also in battle, will be assured; our coats and shoes, and all other instruments and implements will be skilfully made, because the workmen will be good and true. Aye, and if you please, you may suppose that prophecy, which is the knowledge of the future, will be under the control of wisdom, and that she will deter deceivers and set up the true prophets in their place as the revealers of the future. Now I quite agree that mankind, thus provided, would live and act according to knowledge, for wisdom would watch and prevent ignorance from intruding on us. But whether by acting according to knowledge we shall act well and be happy, my dear Critias,—this is a point which we have not yet been able to determine.

Yet I think, he replied, that if you discard knowledge, you will hardly find the crown of happiness in anything else.

But of what is this knowledge? I said. Just answer me that small question. Do you mean a knowledge of shoemaking?

God forbid.

Or of working in brass?

Certainly not.

Or in wool, or wood, or anything of that sort?

No, I do not.

Then, I said, we are giving up the doctrine that he who lives according to knowledge is happy, for these live according to knowledge, and yet they are not allowed by you to be happy; but I think that you mean to confine happiness to particular individuals who live according to knowledge, such for example as the prophet, who, as I was saying, knows the future. Is it of him you are speaking or of some one else?

Yes, I mean him, but there are others as well.

Yes, I said, some one who knows the past and present as well as the future, and is ignorant of nothing. Let us suppose that there is such a person, and if there is, you will allow that he is the most knowing of all living men.

Certainly he is.

Yet I should like to know one thing more: which of the different kinds of knowledge makes him happy? or do all equally make him happy?

Not all equally, he replied.

But which most tends to make him happy? the knowledge of what past, present, or future thing? May I infer this to be the knowledge of the game of draughts?

Nonsense about the game of draughts.

Or of computation?

No.

Or of health?

That is nearer the truth, he said.

And that knowledge which is nearest of all, I said, is the knowledge of what?

The knowledge with which he discerns good and evil.

Monster! I said; you have been carrying me round in a circle, and all this time hiding from me the fact that the life according to knowledge is not that which makes men act rightly and be happy, not even if knowledge include all the sciences, but one science only, that of good and evil. For, let me ask you, Critias, whether, if you take away this, medicine will not equally give health, and shoemaking equally

produce shoes, and the art of the weaver clothes?—whether the art of the pilot will not equally save our lives at sea, and the art of the general in war?

Quite so.

And yet, my dear Critias, none of these things will be well or beneficially done, if the science of the good be wanting.

True.

But that science is not wisdom or temperance, but a science of human advantage; not a science of other sciences, or of ignorance, but of good and evil: and if this be of use, then wisdom or temperance will not be of use.

And why, he replied, will not wisdom be of use? For, however much we assume that wisdom is a science of sciences, and has a sway over other sciences, surely she will have this particular science of the good under her control, and in this way will benefit us.

And will wisdom give health? I said; is not this rather the effect of medicine? Or does wisdom do the work of any of the other arts,—do they not each of them do their own work? Have we not long ago asseverated that wisdom is only the knowledge of knowledge and of ignorance, and of nothing else?

That is obvious.

Then wisdom will not be the producer of health.

Certainly not.

The art of health is different.

Yes, different.

Nor does wisdom give advantage, my good friend; for that again we have just now been attributing to another art.

Very true.

How then can wisdom be advantageous, when giving no advantage?

That, Socrates, is certainly inconceivable.

You see then, Critias, that I was not far wrong in fearing that I could have no sound notion about wisdom; I was quite right in depreciating myself; for that which is admitted to be the best of all things would never have seemed to us useless, if I had been good for anything at an enquiry. But now I have been utterly defeated, and have failed to discover what that is to which the imposer of names gave this name of temperance or wisdom. And yet many more admissions were made by us than

could be fairly granted; for we admitted that there was a science of science, although the argument said No, and protested against us; and we admitted further, that this science knew the works of the other sciences (although this too was denied by the argument), because we wanted to show that the wise man had knowledge of what he knew and did not know; also we nobly disregarded, and never even considered, the impossibility of a man knowing in a sort of way that which he does not know at all; for our assumption was, that he knows that which he does not know; than which nothing, as I think, can be more irrational. And yet, after finding us so easy and good-natured, the enquiry is still unable to discover the truth; but mocks us to a degree, and has gone out of its way to prove the inutility of that which we admitted only by a sort of supposition and fiction to be the true definition of temperance or wisdom: which result, as far as I am concerned, is not so much to be lamented, I said. But for your sake, Charmides, I am very sorry—that you, having such beauty and such wisdom and temperance of soul, should have no profit or good in life from your wisdom and temperance. And still more am I grieved about the charm which I learned with so much pain, and to so little profit, from the Thracian, for the sake of a thing which is nothing worth. I think indeed that there is a mistake, and that I must be a bad enquirer, for wisdom or temperance I believe to be really a great good; and happy are you, Charmides, if you certainly possess it. Wherefore examine yourself, and see whether you have this gift and can do without the charm; for if you can, I would rather advise you to regard me simply as a fool who is never able to reason out anything; and to rest assured that the more wise and temperate you are, the happier you will be.

Charmides said: I am sure that I do not know, Socrates, whether I have or have not this gift of wisdom and temperance; for how can I know whether I have a thing, of which even you and Critias are, as you say, unable to discover the nature?—(not that I believe you.) And further, I am sure, Socrates, that I do need the charm, and as far as I am concerned, I shall be willing to be charmed by you daily, until you say that I have had enough.

Very good, Charmides, said Critias; if you do this I shall have a proof of your temperance, that is, if you allow yourself to be charmed by Socrates, and never desert him at all.

You may depend on my following and not deserting him, said Charmides: if you who are my guardian command me, I should be very wrong not to obey you.

And I do command you, he said.

Then I will do as you say, and begin this very day.

You sirs, I said, what are you conspiring about?

We are not conspiring, said Charmides, we have conspired already.

And are you about to use violence, without even going through the forms of justice?

Yes, I shall use violence, he replied, since he orders me; and therefore you had better consider well.

But the time for consideration has passed, I said, when violence is employed; and you, when you are determined on anything, and in the mood of violence, are irresistible.

Do not you resist me then, he said.

I will not resist you, I replied.

INTRODUCTION.

CRATYLUS

INTRODUCTION.

The Cratylus has always been a source of perplexity to the student of Plato. While in fancy and humour, and perfection of style and metaphysical originality, this dialogue may be ranked with the best of the Platonic writings, there has been an uncertainty about the motive of the piece, which interpreters have hitherto not succeeded in dispelling. We need not suppose that Plato used words in order to conceal his thoughts, or that he would have been unintelligible to an educated contemporary. In the Phaedrus and Euthydemus we also find a difficulty in determining the precise aim of the author. Plato wrote satires in the form of dialogues, and his meaning, like that of other satirical writers, has often slept in the ear of posterity. Two causes may be assigned for this obscurity: 1st, the subtlety and allusiveness of this species of composition; 2nd, the difficulty of reproducing a state of life and literature which has passed away. A satire is unmeaning unless we can place ourselves back among the persons and thoughts of the age in which it was written. Had the treatise of Antisthenes upon words, or the speculations of Cratylus, or some other Heracleitean of the fourth century B.C., on the nature of language been preserved to us; or if we had lived at the time, and been 'rich enough to attend the fifty-drachma course of Prodicus,' we should have understood Plato better, and many points which are now attributed to the extravagance of Socrates' humour would have been found, like the allusions of Aristophanes in the Clouds, to have gone home to the sophists and grammarians of the day.

For the age was very busy with philological speculation; and many questions were beginning to be asked about language which were parallel to other questions about justice, virtue, knowledge, and were illustrated in a similar manner by the analogy of the arts. Was there a correctness in words, and were they given by nature or convention? In the presocratic philosophy mankind had been striving to attain an expression of their ideas, and now they were beginning to ask themselves whether the expression might not be distinguished from the idea? They were also seeking to distinguish the parts of speech and to enquire into the relation of subject and predicate. Grammar and logic were moving about somewhere in the depths of the human soul, but they were not yet awakened into consciousness and had not found names for themselves, or terms by which they might be expressed. Of these beginnings of the study of language we know little, and there necessarily arises an obscurity when the surroundings of such a work as the Cratylus are taken away. Moreover, in this, as in most of the dialogues of Plato, allowance has to be made for the character of Socrates. For the theory of language can only be propounded by him in a manner which is consistent with his own profession of ignorance. Hence his ridicule of the new school of etymology is interspersed with many declarations 'that he knows nothing,' 'that he has learned from Euthyphro,' and the like. Even the truest things

which he says are depreciated by himself. He professes to be guessing, but the guesses of Plato are better than all the other theories of the ancients respecting language put together.

The dialogue hardly derives any light from Plato's other writings, and still less from Scholiasts and Neoplatonist writers. Socrates must be interpreted from himself, and on first reading we certainly have a difficulty in understanding his drift, or his relation to the two other interlocutors in the dialogue. Does he agree with Cratylus or with Hermogenes, and is he serious in those fanciful etymologies, extending over more than half the dialogue, which he seems so greatly to relish? Or is he serious in part only; and can we separate his jest from his earnest?—Sunt bona, sunt quaedum mediocria, sunt mala plura. Most of them are ridiculously bad, and yet among them are found, as if by accident, principles of philology which are unsurpassed in any ancient writer, and even in advance of any philologer of the last century. May we suppose that Plato, like Lucian, has been amusing his fancy by writing a comedy in the form of a prose dialogue? And what is the final result of the enquiry? Is Plato an upholder of the conventional theory of language, which he acknowledges to be imperfect? or does he mean to imply that a perfect language can only be based on his own theory of ideas? Or if this latter explanation is refuted by his silence, then in what relation does his account of language stand to the rest of his philosophy? Or may we be so bold as to deny the connexion between them? (For the allusion to the ideas at the end of the dialogue is merely intended to show that we must not put words in the place of things or realities, which is a thesis strongly insisted on by Plato in many other passages)...These are some of the first thoughts which arise in the mind of the reader of the Cratylus. And the consideration of them may form a convenient introduction to the general subject of the dialogue.

We must not expect all the parts of a dialogue of Plato to tend equally to some clearly-defined end. His idea of literary art is not the absolute proportion of the whole, such as we appear to find in a Greek temple or statue; nor should his works be tried by any such standard. They have often the beauty of poetry, but they have also the freedom of conversation. 'Words are more plastic than wax' (Rep.), and may be moulded into any form. He wanders on from one topic to another, careless of the unity of his work, not fearing any 'judge, or spectator, who may recall him to the point' (Theat.), 'whither the argument blows we follow' (Rep.). To have determined beforehand, as in a modern didactic treatise, the nature and limits of the subject, would have been fatal to the spirit of enquiry or discovery, which is the soul of the dialogue...These remarks are applicable to nearly all the works of Plato, but to the Cratylus and Phaedrus more than any others. See Phaedrus, Introduction.

There is another aspect under which some of the dialogues of Plato may be more truly viewed:—they are dramatic sketches of an argument. We have found that in the Lysis, Charmides, Laches, Protagoras, Meno, we arrived at no conclusion—the different sides of the argument were personified in the different speakers; but the victory was not distinctly attributed to any of them, nor the truth wholly the property of any. And in the Cratylus we have no reason to assume that Socrates is either wholly right or wholly wrong, or that Plato, though he evidently inclines to him, had any other aim than that of personifying, in the characters of Hermogenes, Socrates, and Cratylus, the three theories of language which are respectively maintained by them.

The two subordinate persons of the dialogue, Hermogenes and Cratylus, are at the opposite poles of the argument. But after a while the disciple of the Sophist and the follower of Heracleitus are found to be not so far removed from one another as at first sight appeared; and both show an inclination to

accept the third view which Socrates interposes between them. First, Hermogenes, the poor brother of the rich Callias, expounds the doctrine that names are conventional; like the names of slaves, they may be given and altered at pleasure. This is one of those principles which, whether applied to society or language, explains everything and nothing. For in all things there is an element of convention; but the admission of this does not help us to understand the rational ground or basis in human nature on which the convention proceeds. Socrates first of all intimates to Hermogenes that his view of language is only a part of a sophistical whole, and ultimately tends to abolish the distinction between truth and falsehood. Hermogenes is very ready to throw aside the sophistical tenet, and listens with a sort of half admiration, half belief, to the speculations of Socrates.

Cratylus is of opinion that a name is either a true name or not a name at all. He is unable to conceive of degrees of imitation; a word is either the perfect expression of a thing, or a mere inarticulate sound (a fallacy which is still prevalent among theorizers about the origin of language). He is at once a philosopher and a sophist; for while wanting to rest language on an immutable basis, he would deny the possibility of falsehood. He is inclined to derive all truth from language, and in language he sees reflected the philosophy of Heracleitus. His views are not like those of Hermogenes, hastily taken up, but are said to be the result of mature consideration, although he is described as still a young man. With a tenacity characteristic of the Heracleitean philosophers, he clings to the doctrine of the flux. (Compare Theaet.) Of the real Cratylus we know nothing, except that he is recorded by Aristotle to have been the friend or teacher of Plato; nor have we any proof that he resembled the likeness of him in Plato any more than the Critias of Plato is like the real Critias, or the Euthyphro in this dialogue like the other Euthyphro, the diviner, in the dialogue which is called after him.

Between these two extremes, which have both of them a sophistical character, the view of Socrates is introduced, which is in a manner the union of the two. Language is conventional and also natural, and the true conventional-natural is the rational. It is a work not of chance, but of art; the dialectician is the artificer of words, and the legislator gives authority to them. They are the expressions or imitations in sound of things. In a sense, Cratylus is right in saying that things have by nature names; for nature is not opposed either to art or to law. But vocal imitation, like any other copy, may be imperfectly executed; and in this way an element of chance or convention enters in. There is much which is accidental or exceptional in language. Some words have had their original meaning so obscured, that they require to be helped out by convention. But still the true name is that which has a natural meaning. Thus nature, art, chance, all combine in the formation of language. And the three views respectively propounded by Hermogenes, Socrates, Cratylus, may be described as the conventional, the artificial or rational, and the natural. The view of Socrates is the meeting-point of the other two, just as conceptualism is the meeting-point of nominalism and realism.

We can hardly say that Plato was aware of the truth, that 'languages are not made, but grow.' But still, when he says that 'the legislator made language with the dialectician standing on his right hand,' we need not infer from this that he conceived words, like coins, to be issued from the mint of the State. The creator of laws and of social life is naturally regarded as the creator of language, according to Hellenic notions, and the philosopher is his natural advisor. We are not to suppose that the legislator is performing any extraordinary function; he is merely the Eponymus of the State, who prescribes rules for the dialectician and for all other artists. According to a truly Platonic mode of approaching the subject, language, like virtue in the Republic, is examined by the analogy of the arts. Words are works of art which may be equally made in different materials, and are well made when they have a

meaning. Of the process which he thus describes, Plato had probably no very definite notion. But he means to express generally that language is the product of intelligence, and that languages belong to States and not to individuals.

A better conception of language could not have been formed in Plato's age, than that which he attributes to Socrates. Yet many persons have thought that the mind of Plato is more truly seen in the vague realism of Cratylus. This misconception has probably arisen from two causes: first, the desire to bring Plato's theory of language into accordance with the received doctrine of the Platonic ideas; secondly, the impression created by Socrates himself, that he is not in earnest, and is only indulging the fancy of the hour.

1. We shall have occasion to show more at length, in the Introduction to future dialogues, that the so-called Platonic ideas are only a semi-mythical form, in which he attempts to realize abstractions, and that they are replaced in his later writings by a rational theory of psychology. (See introductions to the Meno and the Sophist.) And in the Cratylus he gives a general account of the nature and origin of language, in which Adam Smith, Rousseau, and other writers of the last century, would have substantially agreed. At the end of the dialogue, he speaks as in the Symposium and Republic of absolute beauty and good; but he never supposed that they were capable of being embodied in words. Of the names of the ideas, he would have said, as he says of the names of the Gods, that we know nothing. Even the realism of Cratylus is not based upon the ideas of Plato, but upon the flux of Heracleitus. Here, as in the Sophist and Politicus, Plato expressly draws attention to the want of agreement in words and things. Hence we are led to infer, that the view of Socrates is not the less Plato's own, because not based upon the ideas; 2nd, that Plato's theory of language is not inconsistent with the rest of his philosophy.

2. We do not deny that Socrates is partly in jest and partly in earnest. He is discoursing in a high-flown vein, which may be compared to the 'dithyrambics of the Phaedrus.' They are mysteries of which he is speaking, and he professes a kind of ludicrous fear of his imaginary wisdom. When he is arguing out of Homer, about the names of Hector's son, or when he describes himself as inspired or maddened by Euthyphro, with whom he has been sitting from the early dawn (compare Phaedrus and Lysias; Phaedr.) and expresses his intention of yielding to the illusion to-day, and to-morrow he will go to a priest and be purified, we easily see that his words are not to be taken seriously. In this part of the dialogue his dread of committing impiety, the pretended derivation of his wisdom from another, the extravagance of some of his etymologies, and, in general, the manner in which the fun, fast and furious, vires acquirit eundo, remind us strongly of the Phaedrus. The jest is a long one, extending over more than half the dialogue. But then, we remember that the Euthydemus is a still longer jest, in which the irony is preserved to the very end. There he is parodying the ingenious follies of early logic; in the Cratylus he is ridiculing the fancies of a new school of sophists and grammarians. The fallacies of the Euthydemus are still retained at the end of our logic books; and the etymologies of the Cratylus have also found their way into later writers. Some of these are not much worse than the conjectures of Hemsterhuis, and other critics of the last century; but this does not prove that they are serious. For Plato is in advance of his age in his conception of language, as much as he is in his conception of mythology. (Compare Phaedrus.)

When the fervour of his etymological enthusiasm has abated, Socrates ends, as he has begun, with a rational explanation of language. Still he preserves his 'know nothing' disguise, and himself declares

his first notions about names to be reckless and ridiculous. Having explained compound words by resolving them into their original elements, he now proceeds to analyse simple words into the letters of which they are composed. The Socrates who 'knows nothing,' here passes into the teacher, the dialectician, the arranger of species. There is nothing in this part of the dialogue which is either weak or extravagant. Plato is a supporter of the Onomatopoetic theory of language; that is to say, he supposes words to be formed by the imitation of ideas in sounds; he also recognises the effect of time, the influence of foreign languages, the desire of euphony, to be formative principles; and he admits a certain element of chance. But he gives no imitation in all this that he is preparing the way for the construction of an ideal language. Or that he has any Eleatic speculation to oppose to the Heracleiteanism of Cratylus.

The theory of language which is propounded in the Cratylus is in accordance with the later phase of the philosophy of Plato, and would have been regarded by him as in the main true. The dialogue is also a satire on the philological fancies of the day. Socrates in pursuit of his vocation as a detector of false knowledge, lights by accident on the truth. He is guessing, he is dreaming; he has heard, as he says in the Phaedrus, from another: no one is more surprised than himself at his own discoveries. And yet some of his best remarks, as for example his view of the derivation of Greek words from other languages, or of the permutations of letters, or again, his observation that in speaking of the Gods we are only speaking of our names of them, occur among these flights of humour.

We can imagine a character having a profound insight into the nature of men and things, and yet hardly dwelling upon them seriously; blending inextricably sense and nonsense; sometimes enveloping in a blaze of jests the most serious matters, and then again allowing the truth to peer through; enjoying the flow of his own humour, and puzzling mankind by an ironical exaggeration of their absurdities. Such were Aristophanes and Rabelais; such, in a different style, were Sterne, Jean Paul, Hamann,—writers who sometimes become unintelligible through the extravagance of their fancies. Such is the character which Plato intends to depict in some of his dialogues as the Silenus Socrates; and through this medium we have to receive our theory of language.

There remains a difficulty which seems to demand a more exact answer: In what relation does the satirical or etymological portion of the dialogue stand to the serious? Granting all that can be said about the provoking irony of Socrates, about the parody of Euthyphro, or Prodicus, or Antisthenes, how does the long catalogue of etymologies furnish any answer to the question of Hermogenes, which is evidently the main thesis of the dialogue: What is the truth, or correctness, or principle of names?

After illustrating the nature of correctness by the analogy of the arts, and then, as in the Republic, ironically appealing to the authority of the Homeric poems, Socrates shows that the truth or correctness of names can only be ascertained by an appeal to etymology. The truth of names is to be found in the analysis of their elements. But why does he admit etymologies which are absurd, based on Heracleitean fancies, fourfold interpretations of words, impossible unions and separations of syllables and letters?

1. The answer to this difficulty has been already anticipated in part: Socrates is not a dogmatic teacher, and therefore he puts on this wild and fanciful disguise, in order that the truth may be permitted to appear: 2. as Benfey remarks, an erroneous example may illustrate a principle of

language as well as a true one: 3. many of these etymologies, as, for example, that of dikaion, are indicated, by the manner in which Socrates speaks of them, to have been current in his own age: 4. the philosophy of language had not made such progress as would have justified Plato in propounding real derivations. Like his master Socrates, he saw through the hollowness of the incipient sciences of the day, and tries to move in a circle apart from them, laying down the conditions under which they are to be pursued, but, as in the Timaeus, cautious and tentative, when he is speaking of actual phenomena. To have made etymologies seriously, would have seemed to him like the interpretation of the myths in the Phaedrus, the task 'of a not very fortunate individual, who had a great deal of time on his hands.' The irony of Socrates places him above and beyond the errors of his contemporaries.

The Cratylus is full of humour and satirical touches: the inspiration which comes from Euthyphro, and his prancing steeds, the light admixture of quotations from Homer, and the spurious dialectic which is applied to them; the jest about the fifty-drachma course of Prodicus, which is declared on the best authority, viz. his own, to be a complete education in grammar and rhetoric; the double explanation of the name Hermogenes, either as 'not being in luck,' or 'being no speaker;' the dearly-bought wisdom of Callias, the Lacedaemonian whose name was 'Rush,' and, above all, the pleasure which Socrates expresses in his own dangerous discoveries, which 'to-morrow he will purge away,' are truly humorous. While delivering a lecture on the philosophy of language, Socrates is also satirizing the endless fertility of the human mind in spinning arguments out of nothing, and employing the most trifling and fanciful analogies in support of a theory. Etymology in ancient as in modern times was a favourite recreation; and Socrates makes merry at the expense of the etymologists. The simplicity of Hermogenes, who is ready to believe anything that he is told, heightens the effect. Socrates in his genial and ironical mood hits right and left at his adversaries: Ouranos is so called apo tou oran ta ano, which, as some philosophers say, is the way to have a pure mind; the sophists are by a fanciful explanation converted into heroes; 'the givers of names were like some philosophers who fancy that the earth goes round because their heads are always going round.' There is a great deal of 'mischief' lurking in the following: 'I found myself in greater perplexity about justice than I was before I began to learn;' 'The rho in katoptron must be the addition of some one who cares nothing about truth, but thinks only of putting the mouth into shape;' 'Tales and falsehoods have generally to do with the Tragic and goatish life, and tragedy is the place of them.' Several philosophers and sophists are mentioned by name: first, Protagoras and Euthydemus are assailed; then the interpreters of Homer, oi palaioi Omerikoi (compare Arist. Met.) and the Orphic poets are alluded to by the way; then he discovers a hive of wisdom in the philosophy of Heracleitus;—the doctrine of the flux is contained in the word ousia (= osia the pushing principle), an anticipation of Anaxagoras is found in psuche and selene. Again, he ridicules the arbitrary methods of pulling out and putting in letters which were in vogue among the philologers of his time; or slightly scoffs at contemporary religious beliefs. Lastly, he is impatient of hearing from the half-converted Cratylus the doctrine that falsehood can neither be spoken, nor uttered, nor addressed; a piece of sophistry attributed to Gorgias, which reappears in the Sophist. And he proceeds to demolish, with no less delight than he had set up, the Heracleitean theory of language.

In the latter part of the dialogue Socrates becomes more serious, though he does not lay aside but rather aggravates his banter of the Heracleiteans, whom here, as in the Theaetetus, he delights to ridicule. What was the origin of this enmity we can hardly determine:—was it due to the natural dislike which may be supposed to exist between the 'patrons of the flux' and the 'friends of the ideas' (Soph.)? or is it to be attributed to the indignation which Plato felt at having wasted his time upon

'Cratylus and the doctrines of Heracleitus' in the days of his youth? Socrates, touching on some of the characteristic difficulties of early Greek philosophy, endeavours to show Cratylus that imitation may be partial or imperfect, that a knowledge of things is higher than a knowledge of names, and that there can be no knowledge if all things are in a state of transition. But Cratylus, who does not easily apprehend the argument from common sense, remains unconvinced, and on the whole inclines to his former opinion. Some profound philosophical remarks are scattered up and down, admitting of an application not only to language but to knowledge generally; such as the assertion that 'consistency is no test of truth:' or again, 'If we are over-precise about words, truth will say "too late" to us as to the belated traveller in Aegina.'

The place of the dialogue in the series cannot be determined with certainty. The style and subject, and the treatment of the character of Socrates, have a close resemblance to the earlier dialogues, especially to the Phaedrus and Euthydemus. The manner in which the ideas are spoken of at the end of the dialogue, also indicates a comparatively early date. The imaginative element is still in full vigour; the Socrates of the Cratylus is the Socrates of the Apology and Symposium, not yet Platonized; and he describes, as in the Theaetetus, the philosophy of Heracleitus by 'unsavoury' similes—he cannot believe that the world is like 'a leaky vessel,' or 'a man who has a running at the nose'; he attributes the flux of the world to the swimming in some folks' heads. On the other hand, the relation of thought to language is omitted here, but is treated of in the Sophist. These grounds are not sufficient to enable us to arrive at a precise conclusion. But we shall not be far wrong in placing the Cratylus about the middle, or at any rate in the first half, of the series.

Cratylus, the Heracleitean philosopher, and Hermogenes, the brother of Callias, have been arguing about names; the former maintaining that they are natural, the latter that they are conventional. Cratylus affirms that his own is a true name, but will not allow that the name of Hermogenes is equally true. Hermogenes asks Socrates to explain to him what Cratylus means; or, far rather, he would like to know, What Socrates himself thinks about the truth or correctness of names? Socrates replies, that hard is knowledge, and the nature of names is a considerable part of knowledge: he has never been to hear the fifty-drachma course of Prodicus; and having only attended the single-drachma course, he is not competent to give an opinion on such matters. When Cratylus denies that Hermogenes is a true name, he supposes him to mean that he is not a true son of Hermes, because he is never in luck. But he would like to have an open council and to hear both sides.

Hermogenes is of opinion that there is no principle in names; they may be changed, as we change the names of slaves, whenever we please, and the altered name is as good as the original one.

You mean to say, for instance, rejoins Socrates, that if I agree to call a man a horse, then a man will be rightly called a horse by me, and a man by the rest of the world? But, surely, there is in words a true and a false, as there are true and false propositions. If a whole proposition be true or false, then the parts of a proposition may be true or false, and the least parts as well as the greatest; and the least parts are names, and therefore names may be true or false. Would Hermogenes maintain that anybody may give a name to anything, and as many names as he pleases; and would all these names be always true at the time of giving them? Hermogenes replies that this is the only way in which he can conceive that names are correct; and he appeals to the practice of different nations, and of the different Hellenic tribes, in confirmation of his view. Socrates asks, whether the things differ as the words which represent them differ:—Are we to maintain with Protagoras, that what appears is?

Hermogenes has always been puzzled about this, but acknowledges, when he is pressed by Socrates, that there are a few very good men in the world, and a great many very bad; and the very good are the wise, and the very bad are the foolish; and this is not mere appearance but reality. Nor is he disposed to say with Euthydemus, that all things equally and always belong to all men; in that case, again, there would be no distinction between bad and good men. But then, the only remaining possibility is, that all things have their several distinct natures, and are independent of our notions about them. And not only things, but actions, have distinct natures, and are done by different processes. There is a natural way of cutting or burning, and a natural instrument with which men cut or burn, and any other way will fail;—this is true of all actions. And speaking is a kind of action, and naming is a kind of speaking, and we must name according to a natural process, and with a proper instrument. We cut with a knife, we pierce with an awl, we weave with a shuttle, we name with a name. And as a shuttle separates the warp from the woof, so a name distinguishes the natures of things. The weaver will use the shuttle well,—that is, like a weaver; and the teacher will use the name well,—that is, like a teacher. The shuttle will be made by the carpenter; the awl by the smith or skilled person. But who makes a name? Does not the law give names, and does not the teacher receive them from the legislator? He is the skilled person who makes them, and of all skilled workmen he is the rarest. But how does the carpenter make or repair the shuttle, and to what will he look? Will he not look at the ideal which he has in his mind? And as the different kinds of work differ, so ought the instruments which make them to differ. The several kinds of shuttles ought to answer in material and form to the several kinds of webs. And the legislator ought to know the different materials and forms of which names are made in Hellas and other countries. But who is to be the judge of the proper form? The judge of shuttles is the weaver who uses them; the judge of lyres is the player of the lyre; the judge of ships is the pilot. And will not the judge who is able to direct the legislator in his work of naming, be he who knows how to use the names—he who can ask and answer questions—in short, the dialectician? The pilot directs the carpenter how to make the rudder, and the dialectician directs the legislator how he is to impose names; for to express the ideal forms of things in syllables and letters is not the easy task, Hermogenes, which you imagine.

'I should be more readily persuaded, if you would show me this natural correctness of names.'

Indeed I cannot; but I see that you have advanced; for you now admit that there is a correctness of names, and that not every one can give a name. But what is the nature of this correctness or truth, you must learn from the Sophists, of whom your brother Callias has bought his reputation for wisdom rather dearly; and since they require to be paid, you, having no money, had better learn from him at second-hand. 'Well, but I have just given up Protagoras, and I should be inconsistent in going to learn of him.' Then if you reject him you may learn of the poets, and in particular of Homer, who distinguishes the names given by Gods and men to the same things, as in the verse about the river God who fought with Hephaestus, 'whom the Gods call Xanthus, and men call Scamander;' or in the lines in which he mentions the bird which the Gods call 'Chalcis,' and men 'Cymindis;' or the hill which men call 'Batieia,' and the Gods 'Myrinna's Tomb.' Here is an important lesson; for the Gods must of course be right in their use of names. And this is not the only truth about philology which may be learnt from Homer. Does he not say that Hector's son had two names—

'Hector called him Scamandrius, but the others Astyanax'?

Now, if the men called him Astyanax, is it not probable that the other name was conferred by the women? And which are more likely to be right—the wiser or the less wise, the men or the women? Homer evidently agreed with the men: and of the name given by them he offers an explanation;—the boy was called Astyanax ('king of the city'), because his father saved the city. The names Astyanax and Hector, moreover, are really the same,—the one means a king, and the other is 'a holder or possessor.' For as the lion's whelp may be called a lion, or the horse's foal a foal, so the son of a king may be called a king. But if the horse had produced a calf, then that would be called a calf. Whether the syllables of a name are the same or not makes no difference, provided the meaning is retained. For example; the names of letters, whether vowels or consonants, do not correspond to their sounds, with the exception of epsilon, upsilon, omicron, omega. The name Beta has three letters added to the sound—and yet this does not alter the sense of the word, or prevent the whole name having the value which the legislator intended. And the same may be said of a king and the son of a king, who like other animals resemble each other in the course of nature; the words by which they are signified may be disguised, and yet amid differences of sound the etymologist may recognise the same notion, just as the physician recognises the power of the same drugs under different disguises of colour and smell. Hector and Astyanax have only one letter alike, but they have the same meaning; and Agis (leader) is altogether different in sound from Polemarchus (chief in war), or Eupolemus (good warrior); but the two words present the same idea of leader or general, like the words Iatrocles and Acesimbrotus, which equally denote a physician. The son succeeds the father as the foal succeeds the horse, but when, out of the course of nature, a prodigy occurs, and the offspring no longer resembles the parent, then the names no longer agree. This may be illustrated by the case of Agamemnon and his son Orestes, of whom the former has a name significant of his patience at the siege of Troy; while the name of the latter indicates his savage, man-of-the-mountain nature. Atreus again, for his murder of Chrysippus, and his cruelty to Thyestes, is rightly named Atreus, which, to the eye of the etymologist, is ateros (destructive), ateires (stubborn), atreotos (fearless); and Pelops is o ta pelas oron (he who sees what is near only), because in his eagerness to win Hippodamia, he was unconscious of the remoter consequences which the murder of Myrtilus would entail upon his race. The name Tantalus, if slightly changed, offers two etymologies; either apo tes tou lithou talanteias, or apo tou talantaton einai, signifying at once the hanging of the stone over his head in the world below, and the misery which he brought upon his country. And the name of his father, Zeus, Dios, Zenos, has an excellent meaning, though hard to be understood, because really a sentence which is divided into two parts (Zeus, Dios). For he, being the lord and king of all, is the author of our being, and in him all live: this is implied in the double form, Dios, Zenos, which being put together and interpreted is di on ze panta. There may, at first sight, appear to be some irreverence in calling him the son of Cronos, who is a proverb for stupidity; but the meaning is that Zeus himself is the son of a mighty intellect; Kronos, quasi koros, not in the sense of a youth, but quasi to katharon kai akeraton tou nou—the pure and garnished mind, which in turn is begotten of Uranus, who is so called apo tou oran ta ano, from looking upwards; which, as philosophers say, is the way to have a pure mind. The earlier portion of Hesiod's genealogy has escaped my memory, or I would try more conclusions of the same sort. 'You talk like an oracle.' I caught the infection from Euthyphro, who gave me a long lecture which began at dawn, and has not only entered into my ears, but filled my soul, and my intention is to yield to the inspiration to-day; and to-morrow I will be exorcised by some priest or sophist. 'Go on; I am anxious to hear the rest.' Now that we have a general notion, how shall we proceed? What names will afford the most crucial test of natural fitness? Those of heroes and ordinary men are often deceptive, because they are patronymics or expressions of a wish; let us try gods and demi-gods. Gods are so called, apo tou thein, from the verb 'to run;' because the sun, moon, and stars run about the heaven;

and they being the original gods of the Hellenes, as they still are of the Barbarians, their name is given to all Gods. The demons are the golden race of Hesiod, and by golden he means not literally golden, but good; and they are called demons, quasi daemones, which in old Attic was used for daimones—good men are well said to become daimones when they die, because they are knowing. Eros (with an epsilon) is the same word as eros (with an eta): 'the sons of God saw the daughters of men that they were fair;' or perhaps they were a species of sophists or rhetoricians, and so called apo tou erotan, or eirein, from their habit of spinning questions; for eirein is equivalent to legein. I get all this from Euthyphro; and now a new and ingenious idea comes into my mind, and, if I am not careful, I shall be wiser than I ought to be by to-morrow's dawn. My idea is, that we may put in and pull out letters at pleasure and alter the accents (as, for example, Dii philos may be turned into Diphilos), and we may make words into sentences and sentences into words. The name anthrotos is a case in point, for a letter has been omitted and the accent changed; the original meaning being o anathron a opopen—he who looks up at what he sees. Psuche may be thought to be the reviving, or refreshing, or animating principle—e anapsuchousa to soma; but I am afraid that Euthyphro and his disciples will scorn this derivation, and I must find another: shall we identify the soul with the 'ordering mind' of Anaxagoras, and say that psuche, quasi phuseche = e phusin echei or ochei?—this might easily be refined into psyche. 'That is a more artistic etymology.'

After psuche follows soma; this, by a slight permutation, may be either = (1) the 'grave' of the soul, or (2) may mean 'that by which the soul signifies (semainei) her wishes.' But more probably, the word is Orphic, and simply denotes that the body is the place of ward in which the soul suffers the penalty of sin,—en o sozetai. 'I should like to hear some more explanations of the names of the Gods, like that excellent one of Zeus.' The truest names of the Gods are those which they give themselves; but these are unknown to us. Less true are those by which we propitiate them, as men say in prayers, 'May he graciously receive any name by which I call him.' And to avoid offence, I should like to let them know beforehand that we are not presuming to enquire about them, but only about the names which they usually bear. Let us begin with Hestia. What did he mean who gave the name Hestia? 'That is a very difficult question.' O, my dear Hermogenes, I believe that there was a power of philosophy and talk among the first inventors of names, both in our own and in other languages; for even in foreign words a principle is discernible. Hestia is the same with esia, which is an old form of ousia, and means the first principle of things: this agrees with the fact that to Hestia the first sacrifices are offered. There is also another reading—osia, which implies that 'pushing' (othoun) is the first principle of all things. And here I seem to discover a delicate allusion to the flux of Heracleitus—that antediluvian philosopher who cannot walk twice in the same stream; and this flux of his may accomplish yet greater marvels. For the names Cronos and Rhea cannot have been accidental; the giver of them must have known something about the doctrine of Heracleitus. Moreover, there is a remarkable coincidence in the words of Hesiod, when he speaks of Oceanus, 'the origin of Gods;' and in the verse of Orpheus, in which he describes Oceanus espousing his sister Tethys. Tethys is nothing more than the name of a spring—to diattomenon kai ethoumenon. Poseidon is posidesmos, the chain of the feet, because you cannot walk on the sea—the epsilon is inserted by way of ornament; or perhaps the name may have been originally polleidon, meaning, that the God knew many things (polla eidos): he may also be the shaker, apo tou seiein,—in this case, pi and delta have been added. Pluto is connected with ploutos, because wealth comes out of the earth; or the word may be a euphemism for Hades, which is usually derived apo tou aeidous, because the God is concerned with the invisible. But the name Hades was really given him from his knowing (eidenai) all good things. Men in general are foolishly afraid of him, and talk with horror of the world below from

which no one may return. The reason why his subjects never wish to come back, even if they could, is that the God enchains them by the strongest of spells, namely by the desire of virtue, which they hope to obtain by constant association with him. He is the perfect and accomplished Sophist and the great benefactor of the other world; for he has much more than he wants there, and hence he is called Pluto or the rich. He will have nothing to do with the souls of men while in the body, because he cannot work his will with them so long as they are confused and entangled by fleshly lusts. Demeter is the mother and giver of food—e didousa meter tes edodes. Here is erate tis, or perhaps the legislator may have been thinking of the weather, and has merely transposed the letters of the word aer. Pherephatta, that word of awe, is pheretapha, which is only an euphonious contraction of e tou pheromenou ephaptomene,—all things are in motion, and she in her wisdom moves with them, and the wise God Hades consorts with her—there is nothing very terrible in this, any more than in the her other appellation Persephone, which is also significant of her wisdom (sophe). Apollo is another name, which is supposed to have some dreadful meaning, but is susceptible of at least four perfectly innocent explanations. First, he is the purifier or purger or absolver (apolouon); secondly, he is the true diviner, Aplos, as he is called in the Thessalian dialect (aplos = aplous, sincere); thirdly, he is the archer (aei ballon), always shooting; or again, supposing alpha to mean ama or omou, Apollo becomes equivalent to ama polon, which points to both his musical and his heavenly attributes; for there is a 'moving together' alike in music and in the harmony of the spheres. The second lambda is inserted in order to avoid the ill-omened sound of destruction. The Muses are so called—apo tou mosthai. The gentle Leto or Letho is named from her willingness (ethelemon), or because she is ready to forgive and forget (lethe). Artemis is so called from her healthy well-balanced nature, dia to artemes, or as aretes istor; or as a lover of virginity, aroton misesasa. One of these explanations is probably true,—perhaps all of them. Dionysus is o didous ton oinon, and oinos is quasi oionous because wine makes those think (oiesthai) that they have a mind (nous) who have none. The established derivation of Aphrodite dia ten tou athrou genesin may be accepted on the authority of Hesiod. Again, there is the name of Pallas, or Athene, which we, who are Athenians, must not forget. Pallas is derived from armed dances—apo tou pallein ta opla. For Athene we must turn to the allegorical interpreters of Homer, who make the name equivalent to theonoe, or possibly the word was originally ethonoe and signified moral intelligence (en ethei noesis). Hephaestus, again, is the lord of light—o tou phaeos istor. This is a good notion; and, to prevent any other getting into our heads, let us go on to Ares. He is the manly one (arren), or the unchangeable one (arratos). Enough of the Gods; for, by the Gods, I am afraid of them; but if you suggest other words, you will see how the horses of Euthyphro prance. 'Only one more God; tell me about my godfather Hermes.' He is ermeneus, the messenger or cheater or thief or bargainer; or o eirein momenos, that is, eiremes or ermes—the speaker or contriver of speeches. 'Well said Cratylus, then, that I am no son of Hermes.' Pan, as the son of Hermes, is speech or the brother of speech, and is called Pan because speech indicates everything—o pan menuon. He has two forms, a true and a false; and is in the upper part smooth, and in the lower part shaggy. He is the goat of Tragedy, in which there are plenty of falsehoods.

'Will you go on to the elements—sun, moon, stars, earth, aether, air, fire, water, seasons, years?' Very good: and which shall I take first? Let us begin with elios, or the sun. The Doric form elios helps us to see that he is so called because at his rising he gathers (alizei) men together, or because he rolls about (eilei) the earth, or because he variegates (aiolei = poikillei) the earth. Selene is an anticipation of Anaxagoras, being a contraction of selaenoneoaeia, the light (selas) which is ever old and new, and which, as Anaxagoras says, is borrowed from the sun; the name was harmonized into

selanaia, a form which is still in use. 'That is a true dithyrambic name.' Meis is so called apo tou meiousthai, from suffering diminution, and astron is from astrape (lightning), which is an improvement of anastrope, that which turns the eyes inside out. 'How do you explain pur n udor?' I suspect that pur, which, like udor n kuon, is found in Phrygian, is a foreign word; for the Hellenes have borrowed much from the barbarians, and I always resort to this theory of a foreign origin when I am at a loss. Aer may be explained, oti airei ta apo tes ges; or, oti aei rei; or, oti pneuma ex autou ginetai (compare the poetic word aetai). So aither quasi aeitheer oti aei thei peri ton aera: ge, gaia quasi genneteira (compare the Homeric form gegaasi); ora (with an omega), or, according to the old Attic form ora (with an omicron), is derived apo tou orizein, because it divides the year; eniautos and etos are the same thought—o en eauto etazon, cut into two parts, en eauto and etazon, like di on ze into Dios and Zenos.

'You make surprising progress.' True; I am run away with, and am not even yet at my utmost speed. 'I should like very much to hear your account of the virtues. What principle of correctness is there in those charming words, wisdom, understanding, justice, and the rest?' To explain all that will be a serious business; still, as I have put on the lion's skin, appearances must be maintained. My opinion is, that primitive men were like some modern philosophers, who, by always going round in their search after the nature of things, become dizzy; and this phenomenon, which was really in themselves, they imagined to take place in the external world. You have no doubt remarked, that the doctrine of the universal flux, or generation of things, is indicated in names. 'No, I never did.' Phronesis is only phoras kai rou noesis, or perhaps phoras onesis, and in any case is connected with pheresthai; gnome is gones skepsis kai nomesis; noesis is neou or gignomenon esis; the word neos implies that creation is always going on—the original form was neoesis; sophrosune is soteria phroneseos; episteme is e epomene tois pragmasin—the faculty which keeps close, neither anticipating nor lagging behind; sunesis is equivalent to sunienai, sumporeuesthai ten psuche, and is a kind of conclusion—sullogismos tis, akin therefore in idea to episteme; sophia is very difficult, and has a foreign look—the meaning is, touching the motion or stream of things, and may be illustrated by the poetical esuthe and the Lacedaemonian proper name Sous, or Rush; agathon is ro agaston en te tachuteti,—for all things are in motion, and some are swifter than others: dikaiosune is clearly e tou dikaiou sunesis. The word dikaion is more troublesome, and appears to mean the subtle penetrating power which, as the lovers of motion say, preserves all things, and is the cause of all things, quasi diaion going through—the letter kappa being inserted for the sake of euphony. This is a great mystery which has been confided to me; but when I ask for an explanation I am thought obtrusive, and another derivation is proposed to me. Justice is said to be o kaion, or the sun; and when I joyfully repeat this beautiful notion, I am answered, 'What, is there no justice when the sun is down?' And when I entreat my questioner to tell me his own opinion, he replies, that justice is fire in the abstract, or heat in the abstract; which is not very intelligible. Others laugh at such notions, and say with Anaxagoras, that justice is the ordering mind. 'I think that some one must have told you this.' And not the rest? Let me proceed then, in the hope of proving to you my originality. Andreia is quasi anpeia quasi e ano roe, the stream which flows upwards, and is opposed to injustice, which clearly hinders the principle of penetration; arren and aner have a similar derivation; gune is the same as gone; thelu is derived apo tes theles, because the teat makes things flourish (tethelenai), and the word thallein itself implies increase of youth, which is swift and sudden ever (thein and allesthai). I am getting over the ground fast: but much has still to be explained. There is techne, for instance. This, by an aphaeresis of tau and an epenthesis of omicron in two places, may be identified with echonoe, and signifies 'that which has mind.'

'A very poor etymology.' Yes; but you must remember that all language is in process of change; letters are taken in and put out for the sake of euphony, and time is also a great alterer of words. For example, what business has the letter rho in the word katoptron, or the letter sigma in the word sphigx? The additions are often such that it is impossible to make out the original word; and yet, if you may put in and pull out, as you like, any name is equally good for any object. The fact is, that great dictators of literature like yourself should observe the rules of moderation. 'I will do my best.' But do not be too much of a precisian, or you will paralyze me. If you will let me add mechane, apo tou mekous, which means polu, and anein, I shall be at the summit of my powers, from which elevation I will examine the two words kakia and arete. The first is easily explained in accordance with what has preceded; for all things being in a flux, kakia is to kakos ion. This derivation is illustrated by the word deilia, which ought to have come after andreia, and may be regarded as o lian desmos tes psuches, just as aporia signifies an impediment to motion (from alpha not, and poreuesthai to go), and arete is euporia, which is the opposite of this—the everflowing (aei reousa or aeireite), or the eligible, quasi airete. You will think that I am inventing, but I say that if kakia is right, then arete is also right. But what is kakon? That is a very obscure word, to which I can only apply my old notion and declare that kakon is a foreign word. Next, let us proceed to kalon, aischron. The latter is doubtless contracted from aeischoroun, quasi aei ischon roun. The inventor of words being a patron of the flux, was a great enemy to stagnation. Kalon is to kaloun ta pragmata—this is mind (nous or dianoia); which is also the principle of beauty; and which doing the works of beauty, is therefore rightly called the beautiful. The meaning of sumpheron is explained by previous examples;—like episteme, signifying that the soul moves in harmony with the world (sumphora, sumpheronta). Kerdos is to pasi kerannumenon—that which mingles with all things: lusiteloun is equivalent to to tes phoras luon to telos, and is not to be taken in the vulgar sense of gainful, but rather in that of swift, being the principle which makes motion immortal and unceasing; ophelimon is apo tou ophellein—that which gives increase: this word, which is Homeric, is of foreign origin. Blaberon is to blamton or boulomenon aptein tou rou—that which injures or seeks to bind the stream. The proper word would be boulapteroun, but this is too much of a mouthful—like a prelude on the flute in honour of Athene. The word zemiodes is difficult; great changes, as I was saying, have been made in words, and even a small change will alter their meaning very much. The word deon is one of these disguised words. You know that according to the old pronunciation, which is especially affected by the women, who are great conservatives, iota and delta were used where we should now use eta and zeta: for example, what we now call emera was formerly called imera; and this shows the meaning of the word to have been 'the desired one coming after night,' and not, as is often supposed, 'that which makes things gentle' (emera). So again, zugon is duogon, quasi desis duein eis agogen—(the binding of two together for the purpose of drawing.) Deon, as ordinarily written, has an evil sense, signifying the chain (desmos) or hindrance of motion; but in its ancient form dion is expressive of good, quasi diion, that which penetrates or goes through all. Zemiodes is really demiodes, and means that which binds motion (dounti to ion): edone is e pros ten onrsin teinousa praxis—the delta is an insertion: lupe is derived apo tes dialuseos tou somatos: ania is from alpha and ienai, to go: algedon is a foreign word, and is so called apo tou algeinou: odune is apo tes enduseos tes lupes: achthedon is in its very sound a burden: chapa expresses the flow of soul: terpsis is apo tou terpnou, and terpnon is properly erpnon, because the sensation of pleasure is likened to a breath (pnoe) which creeps (erpei) through the soul: euphrosune is named from pheresthai, because the soul moves in harmony with nature: epithumia is e epi ton thumon iousa dunamis: thumos is apo tes thuseos tes psuches: imeros—oti eimenos pei e psuche: pothos, the desire which is in another place, allothi pou: eros was anciently esros, and so called because it flows into (esrei) the soul from without: doxa is e dioxis tou eidenai, or expresses the shooting from a bow

(toxon). The latter etymology is confirmed by the words boulesthai, boule, aboulia, which all have to do with shooting (bole): and similarly oiesis is nothing but the movement (oisis) of the soul towards essence. Ekousion is to eikon—the yielding—anagke is e an agke iousa, the passage through ravines which impede motion: aletheia is theia ale, divine motion. Pseudos is the opposite of this, implying the principle of constraint and forced repose, which is expressed under the figure of sleep, to eudon; the psi is an addition. Onoma, a name, affirms the real existence of that which is sought after—on ou masma estin. On and ousia are only ion with an iota broken off; and ouk on is ouk ion. 'And what are ion, reon, doun?' One way of explaining them has been already suggested—they may be of foreign origin; and possibly this is the true answer. But mere antiquity may often prevent our recognizing words, after all the complications which they have undergone; and we must remember that however far we carry back our analysis some ultimate elements or roots will remain which can be no further analyzed. For example; the word agathos was supposed by us to be a compound of agastos and thoos, and probably thoos may be further resolvable. But if we take a word of which no further resolution seems attainable, we may fairly conclude that we have reached one of these original elements, and the truth of such a word must be tested by some new method. Will you help me in the search?

All names, whether primary or secondary, are intended to show the nature of things; and the secondary, as I conceive, derive their significance from the primary. But then, how do the primary names indicate anything? And let me ask another question,—If we had no faculty of speech, how should we communicate with one another? Should we not use signs, like the deaf and dumb? The elevation of our hands would mean lightness—heaviness would be expressed by letting them drop. The running of any animal would be described by a similar movement of our own frames. The body can only express anything by imitation; and the tongue or mouth can imitate as well as the rest of the body. But this imitation of the tongue or voice is not yet a name, because people may imitate sheep or goats without naming them. What, then, is a name? In the first place, a name is not a musical, or, secondly, a pictorial imitation, but an imitation of that kind which expresses the nature of a thing; and is the invention not of a musician, or of a painter, but of a namer.

And now, I think that we may consider the names about which you were asking. The way to analyze them will be by going back to the letters, or primary elements of which they are composed. First, we separate the alphabet into classes of letters, distinguishing the consonants, mutes, vowels, and semivowels; and when we have learnt them singly, we shall learn to know them in their various combinations of two or more letters; just as the painter knows how to use either a single colour, or a combination of colours. And like the painter, we may apply letters to the expression of objects, and form them into syllables; and these again into words, until the picture or figure—that is, language—is completed. Not that I am literally speaking of ourselves, but I mean to say that this was the way in which the ancients framed language. And this leads me to consider whether the primary as well as the secondary elements are rightly given. I may remark, as I was saying about the Gods, that we can only attain to conjecture of them. But still we insist that ours is the true and only method of discovery; otherwise we must have recourse, like the tragic poets, to a Deus ex machina, and say that God gave the first names, and therefore they are right; or that the barbarians are older than we are, and that we learnt of them; or that antiquity has cast a veil over the truth. Yet all these are not reasons; they are only ingenious excuses for having no reasons.

I will freely impart to you my own notions, though they are somewhat crude:—the letter rho appears to me to be the general instrument which the legislator has employed to express all motion or kinesis. (I ought to explain that kinesis is just iesis (going), for the letter eta was unknown to the ancients; and the root, kiein, is a foreign form of ienai: of kinesis or eisis, the opposite is stasis). This use of rho is evident in the words tremble, break, crush, crumble, and the like; the imposer of names perceived that the tongue is most agitated in the pronunciation of this letter, just as he used iota to express the subtle power which penetrates through all things. The letters phi, psi, sigma, zeta, which require a great deal of wind, are employed in the imitation of such notions as shivering, seething, shaking, and in general of what is windy. The letters delta and tau convey the idea of binding and rest in a place: the lambda denotes smoothness, as in the words slip, sleek, sleep, and the like. But when the slipping tongue is detained by the heavier sound of gamma, then arises the notion of a glutinous clammy nature: nu is sounded from within, and has a notion of inwardness: alpha is the expression of size; eta of length; omicron of roundness, and therefore there is plenty of omicron in the word goggulon. That is my view, Hermogenes, of the correctness of names; and I should like to hear what Cratylus would say. 'But, Socrates, as I was telling you, Cratylus mystifies me; I should like to ask him, in your presence, what he means by the fitness of names?' To this appeal, Cratylus replies 'that he cannot explain so important a subject all in a moment.' 'No, but you may "add little to little," as Hesiod says.' Socrates here interposes his own request, that Cratylus will give some account of his theory. Hermogenes and himself are mere sciolists, but Cratylus has reflected on these matters, and has had teachers. Cratylus replies in the words of Achilles: '"Illustrious Ajax, you have spoken in all things much to my mind," whether Euthyphro, or some Muse inhabiting your own breast, was the inspirer.' Socrates replies, that he is afraid of being self-deceived, and therefore he must 'look fore and aft,' as Homer remarks. Does not Cratylus agree with him that names teach us the nature of things? 'Yes.' And naming is an art, and the artists are legislators, and like artists in general, some of them are better and some of them are worse than others, and give better or worse laws, and make better or worse names. Cratylus cannot admit that one name is better than another; they are either true names, or they are not names at all; and when he is asked about the name of Hermogenes, who is acknowledged to have no luck in him, he affirms this to be the name of somebody else. Socrates supposes him to mean that falsehood is impossible, to which his own answer would be, that there has never been a lack of liars. Cratylus presses him with the old sophistical argument, that falsehood is saying that which is not, and therefore saying nothing;—you cannot utter the word which is not. Socrates complains that this argument is too subtle for an old man to understand: Suppose a person addressing Cratylus were to say, Hail, Athenian Stranger, Hermogenes! would these words be true or false? 'I should say that they would be mere unmeaning sounds, like the hammering of a brass pot.' But you would acknowledge that names, as well as pictures, are imitations, and also that pictures may give a right or wrong representation of a man or woman:—why may not names then equally give a representation true and right or false and wrong? Cratylus admits that pictures may give a true or false representation, but denies that names can. Socrates argues, that he may go up to a man and say 'this is year picture,' and again, he may go and say to him 'this is your name'—in the one case appealing to his sense of sight, and in the other to his sense of hearing;—may he not? 'Yes.' Then you will admit that there is a right or a wrong assignment of names, and if of names, then of verbs and nouns; and if of verbs and nouns, then of the sentences which are made up of them; and comparing nouns to pictures, you may give them all the appropriate sounds, or only some of them. And as he who gives all the colours makes a good picture, and he who gives only some of them, a bad or imperfect one, but still a picture; so he who gives all the sounds makes a good name, and he who gives only some of them, a bad or imperfect one, but a name still. The artist of names, that is,

the legislator, may be a good or he may be a bad artist. 'Yes, Socrates, but the cases are not parallel; for if you subtract or misplace a letter, the name ceases to be a name.' Socrates admits that the number 10, if an unit is subtracted, would cease to be 10, but denies that names are of this purely quantitative nature. Suppose that there are two objects—Cratylus and the image of Cratylus; and let us imagine that some God makes them perfectly alike, both in their outward form and in their inner nature and qualities: then there will be two Cratyluses, and not merely Cratylus and the image of Cratylus. But an image in fact always falls short in some degree of the original, and if images are not exact counterparts, why should names be? if they were, they would be the doubles of their originals, and indistinguishable from them; and how ridiculous would this be! Cratylus admits the truth of Socrates' remark. But then Socrates rejoins, he should have the courage to acknowledge that letters may be wrongly inserted in a noun, or a noun in a sentence; and yet the noun or the sentence may retain a meaning. Better to admit this, that we may not be punished like the traveller in Egina who goes about at night, and that Truth herself may not say to us, 'Too late.' And, errors excepted, we may still affirm that a name to be correct must have proper letters, which bear a resemblance to the thing signified. I must remind you of what Hermogenes and I were saying about the letter rho accent, which was held to be expressive of motion and hardness, as lambda is of smoothness;—and this you will admit to be their natural meaning. But then, why do the Eritreans call that skleroter which we call sklerotes? We can understand one another, although the letter rho accent is not equivalent to the letter s: why is this? You reply, because the two letters are sufficiently alike for the purpose of expressing motion. Well, then, there is the letter lambda; what business has this in a word meaning hardness? 'Why, Socrates, I retort upon you, that we put in and pull out letters at pleasure.' And the explanation of this is custom or agreement: we have made a convention that the rho shall mean s and a convention may indicate by the unlike as well as by the like. How could there be names for all the numbers unless you allow that convention is used? Imitation is a poor thing, and has to be supplemented by convention, which is another poor thing; although I agree with you in thinking that the most perfect form of language is found only where there is a perfect correspondence of sound and meaning. But let me ask you what is the use and force of names? 'The use of names, Socrates, is to inform, and he who knows names knows things.' Do you mean that the discovery of names is the same as the discovery of things? 'Yes.' But do you not see that there is a degree of deception about names? He who first gave names, gave them according to his conception, and that may have been erroneous. 'But then, why, Socrates, is language so consistent? all words have the same laws.' Mere consistency is no test of truth. In geometrical problems, for example, there may be a flaw at the beginning, and yet the conclusion may follow consistently. And, therefore, a wise man will take especial care of first principles. But are words really consistent; are there not as many terms of praise which signify rest as which signify motion? There is episteme, which is connected with stasis, as mneme is with meno. Bebaion, again, is the expression of station and position; istoria is clearly descriptive of the stopping istanai of the stream; piston indicates the cessation of motion; and there are many words having a bad sense, which are connected with ideas of motion, such as sumphora, amartia, etc.: amathia, again, might be explained, as e ama theo iontos poreia, and akolasia as e akolouthia tois pragmasin. Thus the bad names are framed on the same principle as the good, and other examples might be given, which would favour a theory of rest rather than of motion. 'Yes; but the greater number of words express motion.' Are we to count them, Cratylus; and is correctness of names to be determined by the voice of a majority?

Here is another point: we were saying that the legislator gives names; and therefore we must suppose that he knows the things which he names: but how can he have learnt things from names

before there were any names? 'I believe, Socrates, that some power more than human first gave things their names, and that these were necessarily true names.' Then how came the giver of names to contradict himself, and to make some names expressive of rest, and others of motion? 'I do not suppose that he did make them both.' Then which did he make—those which are expressive of rest, or those which are expressive of motion?...But if some names are true and others false, we can only decide between them, not by counting words, but by appealing to things. And, if so, we must allow that things may be known without names; for names, as we have several times admitted, are the images of things; and the higher knowledge is of things, and is not to be derived from names; and though I do not doubt that the inventors of language gave names, under the idea that all things are in a state of motion and flux, I believe that they were mistaken; and that having fallen into a whirlpool themselves, they are trying to drag us after them. For is there not a true beauty and a true good, which is always beautiful and always good? Can the thing beauty be vanishing away from us while the words are yet in our mouths? And they could not be known by any one if they are always passing away—for if they are always passing away, the observer has no opportunity of observing their state. Whether the doctrine of the flux or of the eternal nature be the truer, is hard to determine. But no man of sense will put himself, or the education of his mind, in the power of names: he will not condemn himself to be an unreal thing, nor will he believe that everything is in a flux like the water in a leaky vessel, or that the world is a man who has a running at the nose. This doctrine may be true, Cratylus, but is also very likely to be untrue; and therefore I would have you reflect while you are young, and find out the truth, and when you know come and tell me. 'I have thought, Socrates, and after a good deal of thinking I incline to Heracleitus.' Then another day, my friend, you shall give me a lesson. 'Very good, Socrates, and I hope that you will continue to study these things yourself.'

We may now consider (I) how far Plato in the Cratylus has discovered the true principles of language, and then (II) proceed to compare modern speculations respecting the origin and nature of language with the anticipations of his genius.

I. (1) Plato is aware that language is not the work of chance; nor does he deny that there is a natural fitness in names. He only insists that this natural fitness shall be intelligibly explained. But he has no idea that language is a natural organism. He would have heard with surprise that languages are the common work of whole nations in a primitive or semi-barbarous age. How, he would probably have argued, could men devoid of art have contrived a structure of such complexity? No answer could have been given to this question, either in ancient or in modern times, until the nature of primitive antiquity had been thoroughly studied, and the instincts of man had been shown to exist in greater force, when his state approaches more nearly to that of children or animals. The philosophers of the last century, after their manner, would have vainly endeavoured to trace the process by which proper names were converted into common, and would have shown how the last effort of abstraction invented prepositions and auxiliaries. The theologian would have proved that language must have had a divine origin, because in childhood, while the organs are pliable, the intelligence is wanting, and when the intelligence is able to frame conceptions, the organs are no longer able to express them. Or, as others have said: Man is man because he has the gift of speech; and he could not have invented that which he is. But this would have been an 'argument too subtle' for Socrates, who rejects the theological account of the origin of language 'as an excuse for not giving a reason,' which he compares to the introduction of the 'Deus ex machina' by the tragic poets when they have to solve a

difficulty; thus anticipating many modern controversies in which the primary agency of the divine Being is confused with the secondary cause; and God is assumed to have worked a miracle in order to fill up a lacuna in human knowledge. (Compare Timaeus.)

Neither is Plato wrong in supposing that an element of design and art enters into language. The creative power abating is supplemented by a mechanical process. 'Languages are not made but grow,' but they are made as well as grow; bursting into life like a plant or a flower, they are also capable of being trained and improved and engrafted upon one another. The change in them is effected in earlier ages by musical and euphonic improvements, at a later stage by the influence of grammar and logic, and by the poetical and literary use of words. They develope rapidly in childhood, and when they are full grown and set they may still put forth intellectual powers, like the mind in the body, or rather we may say that the nobler use of language only begins when the frame-work is complete. The savage or primitive man, in whom the natural instinct is strongest, is also the greatest improver of the forms of language. He is the poet or maker of words, as in civilised ages the dialectician is the definer or distinguisher of them. The latter calls the second world of abstract terms into existence, as the former has created the picture sounds which represent natural objects or processes. Poetry and philosophy—these two, are the two great formative principles of language, when they have passed their first stage, of which, as of the first invention of the arts in general, we only entertain conjecture. And mythology is a link between them, connecting the visible and invisible, until at length the sensuous exterior falls away, and the severance of the inner and outer world, of the idea and the object of sense, becomes complete. At a later period, logic and grammar, sister arts, preserve and enlarge the decaying instinct of language, by rule and method, which they gather from analysis and observation.

(2) There is no trace in any of Plato's writings that he was acquainted with any language but Greek. Yet he has conceived very truly the relation of Greek to foreign languages, which he is led to consider, because he finds that many Greek words are incapable of explanation. Allowing a good deal for accident, and also for the fancies of the conditores linguae Graecae, there is an element of which he is unable to give an account. These unintelligible words he supposes to be of foreign origin, and to have been derived from a time when the Greeks were either barbarians, or in close relations to the barbarians. Socrates is aware that this principle is liable to great abuse; and, like the 'Deus ex machina,' explains nothing. Hence he excuses himself for the employment of such a device, and remarks that in foreign words there is still a principle of correctness, which applies equally both to Greeks and barbarians.

(3) But the greater number of primary words do not admit of derivation from foreign languages; they must be resolved into the letters out of which they are composed, and therefore the letters must have a meaning. The framers of language were aware of this; they observed that alpha was adapted to express size; eta length; omicron roundness; nu inwardness; rho accent rush or roar; lambda liquidity; gamma lambda the detention of the liquid or slippery element; delta and tau binding; phi, psi, sigma, xi, wind and cold, and so on. Plato's analysis of the letters of the alphabet shows a wonderful insight into the nature of language. He does not expressively distinguish between mere imitation and the symbolical use of sound to express thought, but he recognises in the examples which he gives both modes of imitation. Gesture is the mode which a deaf and dumb person would take of indicating his meaning. And language is the gesture of the tongue; in the use of the letter rho accent, to express a rushing or roaring, or of omicron to express roundness, there is a direct imitation; while in the use of

the letter alpha to express size, or of eta to express length, the imitation is symbolical. The use of analogous or similar sounds, in order to express similar analogous ideas, seems to have escaped him.

In passing from the gesture of the body to the movement of the tongue, Plato makes a great step in the physiology of language. He was probably the first who said that 'language is imitative sound,' which is the greatest and deepest truth of philology; although he is not aware of the laws of euphony and association by which imitation must be regulated. He was probably also the first who made a distinction between simple and compound words, a truth second only in importance to that which has just been mentioned. His great insight in one direction curiously contrasts with his blindness in another; for he appears to be wholly unaware (compare his derivation of agathos from agastos and thoos) of the difference between the root and termination. But we must recollect that he was necessarily more ignorant than any schoolboy of Greek grammar, and had no table of the inflexions of verbs and nouns before his eyes, which might have suggested to him the distinction.

(4) Plato distinctly affirms that language is not truth, or 'philosophie une langue bien faite.' At first, Socrates has delighted himself with discovering the flux of Heracleitus in language. But he is covertly satirising the pretence of that or any other age to find philosophy in words; and he afterwards corrects any erroneous inference which might be gathered from his experiment. For he finds as many, or almost as many, words expressive of rest, as he had previously found expressive of motion. And even if this had been otherwise, who would learn of words when he might learn of things? There is a great controversy and high argument between Heracleiteans and Eleatics, but no man of sense would commit his soul in such enquiries to the imposers of names...In this and other passages Plato shows that he is as completely emancipated from the influence of 'Idols of the tribe' as Bacon himself.

The lesson which may be gathered from words is not metaphysical or moral, but historical. They teach us the affinity of races, they tell us something about the association of ideas, they occasionally preserve the memory of a disused custom; but we cannot safely argue from them about right and wrong, matter and mind, freedom and necessity, or the other problems of moral and metaphysical philosophy. For the use of words on such subjects may often be metaphorical, accidental, derived from other languages, and may have no relation to the contemporary state of thought and feeling. Nor in any case is the invention of them the result of philosophical reflection; they have been commonly transferred from matter to mind, and their meaning is the very reverse of their etymology. Because there is or is not a name for a thing, we cannot argue that the thing has or has not an actual existence; or that the antitheses, parallels, conjugates, correlatives of language have anything corresponding to them in nature. There are too many words as well as too few; and they generalize the objects or ideas which they represent. The greatest lesson which the philosophical analysis of language teaches us is, that we should be above language, making words our servants, and not allowing them to be our masters.

Plato does not add the further observation, that the etymological meaning of words is in process of being lost. If at first framed on a principle of intelligibility, they would gradually cease to be intelligible, like those of a foreign language, he is willing to admit that they are subject to many changes, and put on many disguises. He acknowledges that the 'poor creature' imitation is supplemented by another 'poor creature,'—convention. But he does not see that 'habit and repute,' and their relation to other words, are always exercising an influence over them. Words appear to be isolated, but they are really

the parts of an organism which is always being reproduced. They are refined by civilization, harmonized by poetry, emphasized by literature, technically applied in philosophy and art; they are used as symbols on the border-ground of human knowledge; they receive a fresh impress from individual genius, and come with a new force and association to every lively-minded person. They are fixed by the simultaneous utterance of millions, and yet are always imperceptibly changing;—not the inventors of language, but writing and speaking, and particularly great writers, or works which pass into the hearts of nations, Homer, Shakespear, Dante, the German or English Bible, Kant and Hegel, are the makers of them in later ages. They carry with them the faded recollection of their own past history; the use of a word in a striking and familiar passage gives a complexion to its use everywhere else, and the new use of an old and familiar phrase has also a peculiar power over us. But these and other subtleties of language escaped the observation of Plato. He is not aware that the languages of the world are organic structures, and that every word in them is related to every other; nor does he conceive of language as the joint work of the speaker and the hearer, requiring in man a faculty not only of expressing his thoughts but of understanding those of others.

On the other hand, he cannot be justly charged with a desire to frame language on artificial principles. Philosophers have sometimes dreamed of a technical or scientific language, in words which should have fixed meanings, and stand in the same relation to one another as the substances which they denote. But there is no more trace of this in Plato than there is of a language corresponding to the ideas; nor, indeed, could the want of such a language be felt until the sciences were far more developed. Those who would extend the use of technical phraseology beyond the limits of science or of custom, seem to forget that freedom and suggestiveness and the play of association are essential characteristics of language. The great master has shown how he regarded pedantic distinctions of words or attempts to confine their meaning in the satire on Prodicus in the Protagoras.

(5) In addition to these anticipations of the general principles of philology, we may note also a few curious observations on words and sounds. 'The Eretrians say sklerotes for skleroter;' 'the Thessalians call Apollo Amlos;' 'The Phrygians have the words pur, udor, kunes slightly changed;' 'there is an old Homeric word emesato, meaning "he contrived";' 'our forefathers, and especially the women, who are most conservative of the ancient language, loved the letters iota and delta; but now iota is changed into eta and epsilon, and delta into zeta; this is supposed to increase the grandeur of the sound.' Plato was very willing to use inductive arguments, so far as they were within his reach; but he would also have assigned a large influence to chance. Nor indeed is induction applicable to philology in the same degree as to most of the physical sciences. For after we have pushed our researches to the furthest point, in language as in all the other creations of the human mind, there will always remain an element of exception or accident or free-will, which cannot be eliminated.

The question, 'whether falsehood is impossible,' which Socrates characteristically sets aside as too subtle for an old man (compare Euthyd.), could only have arisen in an age of imperfect consciousness, which had not yet learned to distinguish words from things. Socrates replies in effect that words have an independent existence; thus anticipating the solution of the mediaeval controversy of Nominalism and Realism. He is aware too that languages exist in various degrees of perfection, and that the analysis of them can only be carried to a certain point. 'If we could always, or almost always, use likenesses, which are the appropriate expressions, that would be the most perfect state of language.' These words suggest a question of deeper interest than the origin of language; viz. what is the ideal of language, how far by any correction of their usages existing languages might become

clearer and more expressive than they are, more poetical, and also more logical; or whether they are now finally fixed and have received their last impress from time and authority.

On the whole, the Cratylus seems to contain deeper truths about language than any other ancient writing. But feeling the uncertain ground upon which he is walking, and partly in order to preserve the character of Socrates, Plato envelopes the whole subject in a robe of fancy, and allows his principles to drop out as if by accident.

II. What is the result of recent speculations about the origin and nature of language? Like other modern metaphysical enquiries, they end at last in a statement of facts. But, in order to state or understand the facts, a metaphysical insight seems to be required. There are more things in language than the human mind easily conceives. And many fallacies have to be dispelled, as well as observations made. The true spirit of philosophy or metaphysics can alone charm away metaphysical illusions, which are always reappearing, formerly in the fancies of neoplatonist writers, now in the disguise of experience and common sense. An analogy, a figure of speech, an intelligible theory, a superficial observation of the individual, have often been mistaken for a true account of the origin of language.

Speaking is one of the simplest natural operations, and also the most complex. Nothing would seem to be easier or more trivial than a few words uttered by a child in any language. Yet into the formation of those words have entered causes which the human mind is not capable of calculating. They are a drop or two of the great stream or ocean of speech which has been flowing in all ages. They have been transmitted from one language to another; like the child himself, they go back to the beginnings of the human race. How they originated, who can tell? Nevertheless we can imagine a stage of human society in which the circle of men's minds was narrower and their sympathies and instincts stronger; in which their organs of speech were more flexible, and the sense of hearing finer and more discerning; in which they lived more in company, and after the manner of children were more given to express their feelings; in which 'they moved all together,' like a herd of wild animals, 'when they moved at all.' Among them, as in every society, a particular person would be more sensitive and intelligent than the rest. Suddenly, on some occasion of interest (at the approach of a wild beast, shall we say?), he first, they following him, utter a cry which resounds through the forest. The cry is almost or quite involuntary, and may be an imitation of the roar of the animal. Thus far we have not speech, but only the inarticulate expression of feeling or emotion in no respect differing from the cries of animals; for they too call to one another and are answered. But now suppose that some one at a distance not only hears the sound, but apprehends the meaning: or we may imagine that the cry is repeated to a member of the society who had been absent; the others act the scene over again when he returns home in the evening. And so the cry becomes a word. The hearer in turn gives back the word to the speaker, who is now aware that he has acquired a new power. Many thousand times he exercises this power; like a child learning to talk, he repeats the same cry again, and again he is answered; he tries experiments with a like result, and the speaker and the hearer rejoice together in their newly-discovered faculty. At first there would be few such cries, and little danger of mistaking or confusing them. For the mind of primitive man had a narrow range of perceptions and feelings; his senses were microscopic; twenty or thirty sounds or gestures would be enough for him, nor would he have any difficulty in finding them. Naturally he broke out into speech—like the young infant he laughed and babbled; but not until there were hearers as well as speakers did language begin. Not

the interjection or the vocal imitation of the object, but the interjection or the vocal imitation of the object understood, is the first rudiment of human speech.

After a while the word gathers associations, and has an independent existence. The imitation of the lion's roar calls up the fears and hopes of the chase, which are excited by his appearance. In the moment of hearing the sound, without any appreciable interval, these and other latent experiences wake up in the mind of the hearer. Not only does he receive an impression, but he brings previous knowledge to bear upon that impression. Necessarily the pictorial image becomes less vivid, while the association of the nature and habits of the animal is more distinctly perceived. The picture passes into a symbol, for there would be too many of them and they would crowd the mind; the vocal imitation, too, is always in process of being lost and being renewed, just as the picture is brought back again in the description of the poet. Words now can be used more freely because there are more of them. What was once an involuntary expression becomes voluntary. Not only can men utter a cry or call, but they can communicate and converse; they can not only use words, but they can even play with them. The word is separated both from the object and from the mind; and slowly nations and individuals attain to a fuller consciousness of themselves.

Parallel with this mental process the articulation of sounds is gradually becoming perfected. The finer sense detects the differences of them, and begins, first to agglomerate, then to distinguish them. Times, persons, places, relations of all kinds, are expressed by modifications of them. The earliest parts of speech, as we may call them by anticipation, like the first utterances of children, probably partook of the nature of interjections and nouns; then came verbs; at length the whole sentence appeared, and rhythm and metre followed. Each stage in the progress of language was accompanied by some corresponding stage in the mind and civilisation of man. In time, when the family became a nation, the wild growth of dialects passed into a language. Then arose poetry and literature. We can hardly realize to ourselves how much with each improvement of language the powers of the human mind were enlarged; how the inner world took the place of outer; how the pictorial or symbolical or analogical word was refined into a notion; how language, fair and large and free, was at last complete.

So we may imagine the speech of man to have begun as with the cries of animals, or the stammering lips of children, and to have attained by degrees the perfection of Homer and Plato. Yet we are far from saying that this or any other theory of language is proved by facts. It is not difficult to form an hypothesis which by a series of imaginary transitions will bridge over the chasm which separates man from the animals. Differences of kind may often be thus resolved into differences of degree. But we must not assume that we have in this way discovered the true account of them. Through what struggles the harmonious use of the organs of speech was acquired; to what extent the conditions of human life were different; how far the genius of individuals may have contributed to the discovery of this as of the other arts, we cannot say: Only we seem to see that language is as much the creation of the ear as of the tongue, and the expression of a movement stirring the hearts not of one man only but of many, 'as the trees of the wood are stirred by the wind.' The theory is consistent or not inconsistent with our own mental experience, and throws some degree of light upon a dark corner of the human mind.

In the later analysis of language, we trace the opposite and contrasted elements of the individual and nation, of the past and present, of the inward and outward, of the subject and object, of the notional

and relational, of the root or unchanging part of the word and of the changing inflexion, if such a distinction be admitted, of the vowel and the consonant, of quantity and accent, of speech and writing, of poetry and prose. We observe also the reciprocal influence of sounds and conceptions on each other, like the connexion of body and mind; and further remark that although the names of objects were originally proper names, as the grammarian or logician might call them, yet at a later stage they become universal notions, which combine into particulars and individuals, and are taken out of the first rude agglomeration of sounds that they may be replaced in a higher and more logical order. We see that in the simplest sentences are contained grammar and logic—the parts of speech, the Eleatic philosophy and the Kantian categories. So complex is language, and so expressive not only of the meanest wants of man, but of his highest thoughts; so various are the aspects in which it is regarded by us. Then again, when we follow the history of languages, we observe that they are always slowly moving, half dead, half alive, half solid, half fluid; the breath of a moment, yet like the air, continuous in all ages and countries,—like the glacier, too, containing within them a trickling stream which deposits debris of the rocks over which it passes. There were happy moments, as we may conjecture, in the lives of nations, at which they came to the birth—as in the golden age of literature, the man and the time seem to conspire; the eloquence of the bard or chief, as in later times the creations of the great writer who is the expression of his age, became impressed on the minds of their countrymen, perhaps in the hour of some crisis of national development—a migration, a conquest, or the like. The picture of the word which was beginning to be lost, is now revived; the sound again echoes to the sense; men find themselves capable not only of expressing more feelings, and describing more objects, but of expressing and describing them better. The world before the flood, that is to say, the world of ten, twenty, a hundred thousand years ago, has passed away and left no sign. But the best conception that we can form of it, though imperfect and uncertain, is gained from the analogy of causes still in action, some powerful and sudden, others working slowly in the course of infinite ages. Something too may be allowed to 'the persistency of the strongest,' to 'the survival of the fittest,' in this as in the other realms of nature.

These are some of the reflections which the modern philosophy of language suggests to us about the powers of the human mind and the forces and influences by which the efforts of men to utter articulate sounds were inspired. Yet in making these and similar generalizations we may note also dangers to which we are exposed. (1) There is the confusion of ideas with facts—of mere possibilities, and generalities, and modes of conception with actual and definite knowledge. The words 'evolution,' 'birth,' 'law,' development,' 'instinct,' 'implicit,' 'explicit,' and the like, have a false clearness or comprehensiveness, which adds nothing to our knowledge. The metaphor of a flower or a tree, or some other work of nature or art, is often in like manner only a pleasing picture. (2) There is the fallacy of resolving the languages which we know into their parts, and then imagining that we can discover the nature of language by reconstructing them. (3) There is the danger of identifying language, not with thoughts but with ideas. (4) There is the error of supposing that the analysis of grammar and logic has always existed, or that their distinctions were familiar to Socrates and Plato. (5) There is the fallacy of exaggerating, and also of diminishing the interval which separates articulate from inarticulate language—the cries of animals from the speech of man—the instincts of animals from the reason of man. (6) There is the danger which besets all enquiries into the early history of man—of interpreting the past by the present, and of substituting the definite and intelligible for the true but dim outline which is the horizon of human knowledge.

The greatest light is thrown upon the nature of language by analogy. We have the analogy of the cries of animals, of the songs of birds ('man, like the nightingale, is a singing bird, but is ever binding up thoughts with musical notes'), of music, of children learning to speak, of barbarous nations in which the linguistic instinct is still undecayed, of ourselves learning to think and speak a new language, of the deaf and dumb who have words without sounds, of the various disorders of speech; and we have the after-growth of mythology, which, like language, is an unconscious creation of the human mind. We can observe the social and collective instincts of animals, and may remark how, when domesticated, they have the power of understanding but not of speaking, while on the other hand, some birds which are comparatively devoid of intelligence, make a nearer approach to articulate speech. We may note how in the animals there is a want of that sympathy with one another which appears to be the soul of language. We can compare the use of speech with other mental and bodily operations; for speech too is a kind of gesture, and in the child or savage accompanied with gesture. We may observe that the child learns to speak, as he learns to walk or to eat, by a natural impulse; yet in either case not without a power of imitation which is also natural to him—he is taught to read, but he breaks forth spontaneously in speech. We can trace the impulse to bind together the world in ideas beginning in the first efforts to speak and culminating in philosophy. But there remains an element which cannot be explained, or even adequately described. We can understand how man creates or constructs consciously and by design; and see, if we do not understand, how nature, by a law, calls into being an organised structure. But the intermediate organism which stands between man and nature, which is the work of mind yet unconscious, and in which mind and matter seem to meet, and mind unperceived to herself is really limited by all other minds, is neither understood nor seen by us, and is with reluctance admitted to be a fact.

Language is an aspect of man, of nature, and of nations, the transfiguration of the world in thought, the meeting-point of the physical and mental sciences, and also the mirror in which they are reflected, present at every moment to the individual, and yet having a sort of eternal or universal nature. When we analyze our own mental processes, we find words everywhere in every degree of clearness and consistency, fading away in dreams and more like pictures, rapidly succeeding one another in our waking thoughts, attaining a greater distinctness and consecutiveness in speech, and a greater still in writing, taking the place of one another when we try to become emancipated from their influence. For in all processes of the mind which are conscious we are talking to ourselves; the attempt to think without words is a mere illusion,—they are always reappearing when we fix our thoughts. And speech is not a separate faculty, but the expression of all our faculties, to which all our other powers of expression, signs, looks, gestures, lend their aid, of which the instrument is not the tongue only, but more than half the human frame.

The minds of men are sometimes carried on to think of their lives and of their actions as links in a chain of causes and effects going back to the beginning of time. A few have seemed to lose the sense of their own individuality in the universal cause or nature. In like manner we might think of the words which we daily use, as derived from the first speech of man, and of all the languages in the world, as the expressions or varieties of a single force or life of language of which the thoughts of men are the accident. Such a conception enables us to grasp the power and wonder of languages, and is very natural to the scientific philologist. For he, like the metaphysician, believes in the reality of that which absorbs his own mind. Nor do we deny the enormous influence which language has exercised over thought. Fixed words, like fixed ideas, have often governed the world. But in such representations we attribute to language too much the nature of a cause, and too little of an effect,—

too much of an absolute, too little of a relative character,—too much of an ideal, too little of a matter-of-fact existence.

Or again, we may frame a single abstract notion of language of which all existent languages may be supposed to be the perversion. But we must not conceive that this logical figment had ever a real existence, or is anything more than an effort of the mind to give unity to infinitely various phenomena. There is no abstract language 'in rerum natura,' any more than there is an abstract tree, but only languages in various stages of growth, maturity, and decay. Nor do other logical distinctions or even grammatical exactly correspond to the facts of language; for they too are attempts to give unity and regularity to a subject which is partly irregular.

We find, however, that there are distinctions of another kind by which this vast field of language admits of being mapped out. There is the distinction between biliteral and triliteral roots, and the various inflexions which accompany them; between the mere mechanical cohesion of sounds or words, and the 'chemical' combination of them into a new word; there is the distinction between languages which have had a free and full development of their organisms, and languages which have been stunted in their growth,—lamed in their hands or feet, and never able to acquire afterwards the powers in which they are deficient; there is the distinction between synthetical languages like Greek and Latin, which have retained their inflexions, and analytical languages like English or French, which have lost them. Innumerable as are the languages and dialects of mankind, there are comparatively few classes to which they can be referred.

Another road through this chaos is provided by the physiology of speech. The organs of language are the same in all mankind, and are only capable of uttering a certain number of sounds. Every man has tongue, teeth, lips, palate, throat, mouth, which he may close or open, and adapt in various ways; making, first, vowels and consonants; and secondly, other classes of letters. The elements of all speech, like the elements of the musical scale, are few and simple, though admitting of infinite gradations and combinations. Whatever slight differences exist in the use or formation of these organs, owing to climate or the sense of euphony or other causes, they are as nothing compared with their agreement. Here then is a real basis of unity in the study of philology, unlike that imaginary abstract unity of which we were just now speaking.

Whether we regard language from the psychological, or historical, or physiological point of view, the materials of our knowledge are inexhaustible. The comparisons of children learning to speak, of barbarous nations, of musical notes, of the cries of animals, of the song of birds, increase our insight into the nature of human speech. Many observations which would otherwise have escaped us are suggested by them. But they do not explain why, in man and in man only, the speaker met with a response from the hearer, and the half articulate sound gradually developed into Sanscrit and Greek. They hardly enable us to approach any nearer the secret of the origin of language, which, like some of the other great secrets of nature,—the origin of birth and death, or of animal life,—remains inviolable. That problem is indissolubly bound up with the origin of man; and if we ever know more of the one, we may expect to know more of the other. (Compare W. Humboldt, 'Ueber die Verschiedenheit des menschlichen Sprachbaues;' M. Muller, 'Lectures on the Science of Language;' Steinthal, 'Einleitung in die Psychologie und Sprachwissenschaft.')

It is more than sixteen years since the preceding remarks were written, which with a few alterations have now been reprinted. During the interval the progress of philology has been very great. More languages have been compared; the inner structure of language has been laid bare; the relations of sounds have been more accurately discriminated; the manner in which dialects affect or are affected by the literary or principal form of a language is better understood. Many merely verbal questions have been eliminated; the remains of the old traditional methods have died away. The study has passed from the metaphysical into an historical stage. Grammar is no longer confused with language, nor the anatomy of words and sentences with their life and use. Figures of speech, by which the vagueness of theories is often concealed, have been stripped off; and we see language more as it truly was. The immensity of the subject is gradually revealed to us, and the reign of law becomes apparent. Yet the law is but partially seen; the traces of it are often lost in the distance. For languages have a natural but not a perfect growth; like other creations of nature into which the will of man enters, they are full of what we term accident and irregularity. And the difficulties of the subject become not less, but greater, as we proceed—it is one of those studies in which we seem to know less as we know more; partly because we are no longer satisfied with the vague and superficial ideas of it which prevailed fifty years ago; partly also because the remains of the languages with which we are acquainted always were, and if they are still living, are, in a state of transition; and thirdly, because there are lacunae in our knowledge of them which can never be filled up. Not a tenth, not a hundredth part of them has been preserved. Yet the materials at our disposal are far greater than any individual can use. Such are a few of the general reflections which the present state of philology calls up.

(1) Language seems to be composite, but into its first elements the philologer has never been able to penetrate. However far he goes back, he never arrives at the beginning; or rather, as in Geology or in Astronomy, there is no beginning. He is too apt to suppose that by breaking up the existing forms of language into their parts he will arrive at a previous stage of it, but he is merely analyzing what never existed, or is never known to have existed, except in a composite form. He may divide nouns and verbs into roots and inflexions, but he has no evidence which will show that the omega of tupto or the mu of tithemi, though analogous to ego, me, either became pronouns or were generated out of pronouns. To say that 'pronouns, like ripe fruit, dropped out of verbs,' is a misleading figure of speech. Although all languages have some common principles, there is no primitive form or forms of language known to us, or to be reasonably imagined, from which they are all descended. No inference can be drawn from language, either for or against the unity of the human race. Nor is there any proof that words were ever used without any relation to each other. Whatever may be the meaning of a sentence or a word when applied to primitive language, it is probable that the sentence is more akin to the original form than the word, and that the later stage of language is the result rather of analysis than of synthesis, or possibly is a combination of the two. Nor, again, are we sure that the original process of learning to speak was the same in different places or among different races of men. It may have been slower with some, quicker with others. Some tribes may have used shorter, others longer words or cries: they may have been more or less inclined to agglutinate or to decompose them: they may have modified them by the use of prefixes, suffixes, infixes; by the lengthening and strengthening of vowels or by the shortening and weakening of them, by the condensation or rarefaction of consonants. But who gave to language these primeval laws; or why one race has triliteral, another biliteral roots; or why in some members of a group of languages b becomes p, or d, t, or ch, k; or why two languages resemble one another in certain parts of their structure and differ in others; or why in one language there is a greater development of vowels, in

another of consonants, and the like—are questions of which we only 'entertain conjecture.' We must remember the length of time that has elapsed since man first walked upon the earth, and that in this vast but unknown period every variety of language may have been in process of formation and decay, many times over.

(Compare Plato, Laws):—

'ATHENIAN STRANGER: And what then is to be regarded as the origin of government? Will not a man be able to judge best from a point of view in which he may behold the progress of states and their transitions to good and evil?

CLEINIAS: What do you mean?

ATHENIAN STRANGER: I mean that he might watch them from the point of view of time, and observe the changes which take place in them during infinite ages.

CLEINIAS: How so?

ATHENIAN STRANGER: Why, do you think that you can reckon the time which has elapsed since cities first existed and men were citizens of them?

CLEINIAS: Hardly.

ATHENIAN STRANGER: But you are quite sure that it must be vast and incalculable?

CLEINIAS: No doubt.

ATHENIAN STRANGER: And have there not been thousands and thousands of cities which have come into being and perished during this period? And has not every place had endless forms of government, and been sometimes rising, and at other times falling, and again improving or waning?'

Aristot. Metaph.:—

'And if a person should conceive the tales of mythology to mean only that men thought the gods to be the first essences of things, he would deem the reflection to have been inspired and would consider that, whereas probably every art and part of wisdom had been DISCOVERED AND LOST MANY TIMES OVER, such notions were but a remnant of the past which has survived to our day.')

It can hardly be supposed that any traces of an original language still survive, any more than of the first huts or buildings which were constructed by man. Nor are we at all certain of the relation, if any, in which the greater families of languages stand to each other. The influence of individuals must always have been a disturbing element. Like great writers in later times, there may have been many a barbaric genius who taught the men of his tribe to sing or speak, showing them by example how to continue or divide their words, charming their souls with rhythm and accent and intonation, finding in familiar objects the expression of their confused fancies—to whom the whole of language might in truth be said to be a figure of speech. One person may have introduced a new custom into the

formation or pronunciation of a word; he may have been imitated by others, and the custom, or form, or accent, or quantity, or rhyme which he introduced in a single word may have become the type on which many other words or inflexions of words were framed, and may have quickly ran through a whole language. For like the other gifts which nature has bestowed upon man, that of speech has been conveyed to him through the medium, not of the many, but of the few, who were his 'law-givers'—'the legislator with the dialectician standing on his right hand,' in Plato's striking image, who formed the manners of men and gave them customs, whose voice and look and behaviour, whose gesticulations and other peculiarities were instinctively imitated by them,—the 'king of men' who was their priest, almost their God...But these are conjectures only: so little do we know of the origin of language that the real scholar is indisposed to touch the subject at all.

(2) There are other errors besides the figment of a primitive or original language which it is time to leave behind us. We no longer divide languages into synthetical and analytical, or suppose similarity of structure to be the safe or only guide to the affinities of them. We do not confuse the parts of speech with the categories of Logic. Nor do we conceive languages any more than civilisations to be in a state of dissolution; they do not easily pass away, but are far more tenacious of life than the tribes by whom they are spoken. 'Where two or three are gathered together,' they survive. As in the human frame, as in the state, there is a principle of renovation as well as of decay which is at work in all of them. Neither do we suppose them to be invented by the wit of man. With few exceptions, e.g. technical words or words newly imported from a foreign language, and the like, in which art has imitated nature, 'words are not made but grow.' Nor do we attribute to them a supernatural origin. The law which regulates them is like the law which governs the circulation of the blood, or the rising of the sap in trees; the action of it is uniform, but the result, which appears in the superficial forms of men and animals or in the leaves of trees, is an endless profusion and variety. The laws of vegetation are invariable, but no two plants, no two leaves of the forest are precisely the same. The laws of language are invariable, but no two languages are alike, no two words have exactly the same meaning. No two sounds are exactly of the same quality, or give precisely the same impression.

It would be well if there were a similar consensus about some other points which appear to be still in dispute. Is language conscious or unconscious? In speaking or writing have we present to our minds the meaning or the sound or the construction of the words which we are using?—No more than the separate drops of water with which we quench our thirst are present: the whole draught may be conscious, but not the minute particles of which it is made up: So the whole sentence may be conscious, but the several words, syllables, letters are not thought of separately when we are uttering them. Like other natural operations, the process of speech, when most perfect, is least observed by us. We do not pause at each mouthful to dwell upon the taste of it: nor has the speaker time to ask himself the comparative merits of different modes of expression while he is uttering them. There are many things in the use of language which may be observed from without, but which cannot be explained from within. Consciousness carries us but a little way in the investigation of the mind; it is not the faculty of internal observation, but only the dim light which makes such observation possible. What is supposed to be our consciousness of language is really only the analysis of it, and this analysis admits of innumerable degrees. But would it not be better if this term, which is so misleading, and yet has played so great a part in mental science, were either banished or used only with the distinct meaning of 'attention to our own minds,' such as is called forth, not by familiar mental processes, but by the interruption of them? Now in this sense we may truly say that we are not conscious of ordinary speech, though we are commonly roused to attention by the misuse or

mispronunciation of a word. Still less, even in schools and academies, do we ever attempt to invent new words or to alter the meaning of old ones, except in the case, mentioned above, of technical or borrowed words which are artificially made or imported because a need of them is felt. Neither in our own nor in any other age has the conscious effort of reflection in man contributed in an appreciable degree to the formation of language. 'Which of us by taking thought' can make new words or constructions? Reflection is the least of the causes by which language is affected, and is likely to have the least power, when the linguistic instinct is greatest, as in young children and in the infancy of nations.

A kindred error is the separation of the phonetic from the mental element of language; they are really inseparable—no definite line can be drawn between them, any more than in any other common act of mind and body. It is true that within certain limits we possess the power of varying sounds by opening and closing the mouth, by touching the palate or the teeth with the tongue, by lengthening or shortening the vocal instrument, by greater or less stress, by a higher or lower pitch of the voice, and we can substitute one note or accent for another. But behind the organs of speech and their action there remains the informing mind, which sets them in motion and works together with them. And behind the great structure of human speech and the lesser varieties of language which arise out of the many degrees and kinds of human intercourse, there is also the unknown or over-ruling law of God or nature which gives order to it in its infinite greatness, and variety in its infinitesimal minuteness—both equally inscrutable to us. We need no longer discuss whether philology is to be classed with the Natural or the Mental sciences, if we frankly recognize that, like all the sciences which are concerned with man, it has a double aspect,—inward and outward; and that the inward can only be known through the outward. Neither need we raise the question whether the laws of language, like the other laws of human action, admit of exceptions. The answer in all cases is the same—that the laws of nature are uniform, though the consistency or continuity of them is not always perceptible to us. The superficial appearances of language, as of nature, are irregular, but we do not therefore deny their deeper uniformity. The comparison of the growth of language in the individual and in the nation cannot be wholly discarded, for nations are made up of individuals. But in this, as in the other political sciences, we must distinguish between collective and individual actions or processes, and not attribute to the one what belongs to the other. Again, when we speak of the hereditary or paternity of a language, we must remember that the parents are alive as well as the children, and that all the preceding generations survive (after a manner) in the latest form of it. And when, for the purposes of comparison, we form into groups the roots or terminations of words, we should not forget how casual is the manner in which their resemblances have arisen—they were not first written down by a grammarian in the paradigms of a grammar and learned out of a book, but were due to many chance attractions of sound or of meaning, or of both combined. So many cautions have to be borne in mind, and so many first thoughts to be dismissed, before we can proceed safely in the path of philological enquiry. It might be well sometimes to lay aside figures of speech, such as the 'root' and the 'branches,' the 'stem,' the 'strata' of Geology, the 'compounds' of Chemistry, 'the ripe fruit of pronouns dropping from verbs' (see above), and the like, which are always interesting, but are apt to be delusive. Yet such figures of speech are far nearer the truth than the theories which attribute the invention and improvement of language to the conscious action of the human mind...Lastly, it is doubted by recent philologians whether climate can be supposed to have exercised any influence worth speaking of on a language: such a view is said to be unproven: it had better therefore not be silently assumed.

'Natural selection' and the 'survival of the fittest' have been applied in the field of philology, as well as in the other sciences which are concerned with animal and vegetable life. And a Darwinian school of philologists has sprung up, who are sometimes accused of putting words in the place of things. It seems to be true, that whether applied to language or to other branches of knowledge, the Darwinian theory, unless very precisely defined, hardly escapes from being a truism. If by 'the natural selection' of words or meanings of words or by the 'persistence and survival of the fittest' the maintainer of the theory intends to affirm nothing more than this—that the word 'fittest to survive' survives, he adds not much to the knowledge of language. But if he means that the word or the meaning of the word or some portion of the word which comes into use or drops out of use is selected or rejected on the ground of economy or parsimony or ease to the speaker or clearness or euphony or expressiveness, or greater or less demand for it, or anything of this sort, he is affirming a proposition which has several senses, and in none of these senses can be assisted to be uniformly true. For the laws of language are precarious, and can only act uniformly when there is such frequency of intercourse among neighbours as is sufficient to enforce them. And there are many reasons why a man should prefer his own way of speaking to that of others, unless by so doing he becomes unintelligible. The struggle for existence among words is not of that fierce and irresistible kind in which birds, beasts and fishes devour one another, but of a milder sort, allowing one usage to be substituted for another, not by force, but by the persuasion, or rather by the prevailing habit, of a majority. The favourite figure, in this, as in some other uses of it, has tended rather to obscure than explain the subject to which it has been applied. Nor in any case can the struggle for existence be deemed to be the sole or principal cause of changes in language, but only one among many, and one of which we cannot easily measure the importance. There is a further objection which may be urged equally against all applications of the Darwinian theory. As in animal life and likewise in vegetable, so in languages, the process of change is said to be insensible: sounds, like animals, are supposed to pass into one another by imperceptible gradation. But in both cases the newly-created forms soon become fixed; there are few if any vestiges of the intermediate links, and so the better half of the evidence of the change is wanting.

(3) Among the incumbrances or illusions of language may be reckoned many of the rules and traditions of grammar, whether ancient grammar or the corrections of it which modern philology has introduced. Grammar, like law, delights in definition: human speech, like human action, though very far from being a mere chaos, is indefinite, admits of degrees, and is always in a state of change or transition. Grammar gives an erroneous conception of language: for it reduces to a system that which is not a system. Its figures of speech, pleonasms, ellipses, anacolutha, pros to semainomenon, and the like have no reality; they do not either make conscious expressions more intelligible or show the way in which they have arisen; they are chiefly designed to bring an earlier use of language into conformity with the later. Often they seem intended only to remind us that great poets like Aeschylus or Sophocles or Pindar or a great prose writer like Thucydides are guilty of taking unwarrantable liberties with grammatical rules; it appears never to have occurred to the inventors of them that these real 'conditores linguae Graecae' lived in an age before grammar, when 'Greece also was living Greece.' It is the anatomy, not the physiology of language, which grammar seeks to describe: into the idiom and higher life of words it does not enter. The ordinary Greek grammar gives a complete paradigm of the verb, without suggesting that the double or treble forms of Perfects, Aorists, etc. are hardly ever contemporaneous. It distinguishes Moods and Tenses, without observing how much of the nature of one passes into the other. It makes three Voices, Active, Passive, and Middle, but takes no notice of the precarious existence and uncertain character of the last of the three. Language is a

thing of degrees and relations and associations and exceptions: grammar ties it up in fixed rules. Language has many varieties of usage: grammar tries to reduce them to a single one. Grammar divides verbs into regular and irregular: it does not recognize that the irregular, equally with the regular, are subject to law, and that a language which had no exceptions would not be a natural growth: for it could not have been subjected to the influences by which language is ordinarily affected. It is always wanting to describe ancient languages in the terms of a modern one. It has a favourite fiction that one word is put in the place of another; the truth is that no word is ever put for another. It has another fiction, that a word has been omitted: words are omitted because they are no longer needed; and the omission has ceased to be observed. The common explanation of kata or some other preposition 'being understood' in a Greek sentence is another fiction of the same kind, which tends to disguise the fact that under cases were comprehended originally many more relations, and that prepositions are used only to define the meaning of them with greater precision. These instances are sufficient to show the sort of errors which grammar introduces into language. We are not considering the question of its utility to the beginner in the study. Even to him the best grammar is the shortest and that in which he will have least to unlearn. It may be said that the explanations here referred to are already out of date, and that the study of Greek grammar has received a new character from comparative philology. This is true; but it is also true that the traditional grammar has still a great hold on the mind of the student.

Metaphysics are even more troublesome than the figments of grammar, because they wear the appearance of philosophy and there is no test to which they can be subjected. They are useful in so far as they give us an insight into the history of the human mind and the modes of thought which have existed in former ages; or in so far as they furnish wider conceptions of the different branches of knowledge and of their relation to one another. But they are worse than useless when they outrun experience and abstract the mind from the observation of facts, only to envelope it in a mist of words. Some philologers, like Schleicher, have been greatly influenced by the philosophy of Hegel; nearly all of them to a certain extent have fallen under the dominion of physical science. Even Kant himself thought that the first principles of philosophy could be elicited from the analysis of the proposition, in this respect falling short of Plato. Westphal holds that there are three stages of language: (1) in which things were characterized independently, (2) in which they were regarded in relation to human thought, and (3) in relation to one another. But are not such distinctions an anachronism? for they imply a growth of abstract ideas which never existed in early times. Language cannot be explained by Metaphysics; for it is prior to them and much more nearly allied to sense. It is not likely that the meaning of the cases is ultimately resolvable into relations of space and time. Nor can we suppose the conception of cause and effect or of the finite and infinite or of the same and other to be latent in language at a time when in their abstract form they had never entered into the mind of man...If the science of Comparative Philology had possessed 'enough of Metaphysics to get rid of Metaphysics,' it would have made far greater progress.

(4) Our knowledge of language is almost confined to languages which are fully developed. They are of several patterns; and these become altered by admixture in various degrees,—they may only borrow a few words from one another and retain their life comparatively unaltered, or they may meet in a struggle for existence until one of the two is overpowered and retires from the field. They attain the full rights and dignity of language when they acquire the use of writing and have a literature of their own; they pass into dialects and grow out of them, in proportion as men are isolated or united by locality or occupation. The common language sometimes reacts upon the dialects and imparts to

them also a literary character. The laws of language can be best discerned in the great crises of language, especially in the transitions from ancient to modern forms of them, whether in Europe or Asia. Such changes are the silent notes of the world's history; they mark periods of unknown length in which war and conquest were running riot over whole continents, times of suffering too great to be endured by the human race, in which the masters became subjects and the subject races masters, in which driven by necessity or impelled by some instinct, tribes or nations left their original homes and but slowly found a resting-place. Language would be the greatest of all historical monuments, if it could only tell us the history of itself.

(5) There are many ways in which we may approach this study. The simplest of all is to observe our own use of language in conversation or in writing, how we put words together, how we construct and connect sentences, what are the rules of accent and rhythm in verse or prose, the formation and composition of words, the laws of euphony and sound, the affinities of letters, the mistakes to which we are ourselves most liable of spelling or pronunciation. We may compare with our own language some other, even when we have only a slight knowledge of it, such as French or German. Even a little Latin will enable us to appreciate the grand difference between ancient and modern European languages. In the child learning to speak we may note the inherent strength of language, which like 'a mountain river' is always forcing its way out. We may witness the delight in imitation and repetition, and some of the laws by which sounds pass into one another. We may learn something also from the falterings of old age, the searching for words, and the confusion of them with one another, the forgetfulness of proper names (more commonly than of other words because they are more isolated), aphasia, and the like. There are philological lessons also to be gathered from nicknames, from provincialisms, from the slang of great cities, from the argot of Paris (that language of suffering and crime, so pathetically described by Victor Hugo), from the imperfect articulation of the deaf and dumb, from the jabbering of animals, from the analysis of sounds in relation to the organs of speech. The phonograph affords a visible evidence of the nature and divisions of sound; we may be truly said to know what we can manufacture. Artificial languages, such as that of Bishop Wilkins, are chiefly useful in showing what language is not. The study of any foreign language may be made also a study of Comparative Philology. There are several points, such as the nature of irregular verbs, of indeclinable parts of speech, the influence of euphony, the decay or loss of inflections, the elements of syntax, which may be examined as well in the history of our own language as of any other. A few well-selected questions may lead the student at once into the heart of the mystery: such as, Why are the pronouns and the verb of existence generally more irregular than any other parts of speech? Why is the number of words so small in which the sound is an echo of the sense? Why does the meaning of words depart so widely from their etymology? Why do substantives often differ in meaning from the verbs to which they are related, adverbs from adjectives? Why do words differing in origin coalesce in the same sound though retaining their differences of meaning? Why are some verbs impersonal? Why are there only so many parts of speech, and on what principle are they divided? These are a few crucial questions which give us an insight from different points of view into the true nature of language.

(6) Thus far we have been endeavouring to strip off from language the false appearances in which grammar and philology, or the love of system generally, have clothed it. We have also sought to indicate the sources of our knowledge of it and the spirit in which we should approach it, we may now proceed to consider some of the principles or natural laws which have created or modified it.

i. The first and simplest of all the principles of language, common also to the animals, is imitation. The lion roars, the wolf howls in the solitude of the forest: they are answered by similar cries heard from a distance. The bird, too, mimics the voice of man and makes answer to him. Man tells to man the secret place in which he is hiding himself; he remembers and repeats the sound which he has heard. The love of imitation becomes a passion and an instinct to him. Primitive men learnt to speak from one another, like a child from its mother or nurse. They learnt of course a rudimentary, half-articulate language, the cry or song or speech which was the expression of what we now call human thoughts and feelings. We may still remark how much greater and more natural the exercise of the power is in the use of language than in any other process or action of the human mind.

ii. Imitation provided the first material of language: but it was 'without form and void.' During how many years or hundreds or thousands of years the imitative or half-articulate stage continued there is no possibility of determining. But we may reasonably conjecture that there was a time when the vocal utterance of man was intermediate between what we now call language and the cry of a bird or animal. Speech before language was a rudis indigestaque materies, not yet distributed into words and sentences, in which the cry of fear or joy mingled with more definite sounds recognized by custom as the expressions of things or events. It was the principle of analogy which introduced into this 'indigesta moles' order and measure. It was Anaxagoras' omou panta chremata, eita nous elthon diekosmese: the light of reason lighted up all things and at once began to arrange them. In every sentence, in every word and every termination of a word, this power of forming relations to one another was contained. There was a proportion of sound to sound, of meaning to meaning, of meaning to sound. The cases and numbers of nouns, the persons, tenses, numbers of verbs, were generally on the same or nearly the same pattern and had the same meaning. The sounds by which they were expressed were rough-hewn at first; after a while they grew more refined—the natural laws of euphony began to affect them. The rules of syntax are likewise based upon analogy. Time has an analogy with space, arithmetic with geometry. Not only in musical notes, but in the quantity, quality, accent, rhythm of human speech, trivial or serious, there is a law of proportion. As in things of beauty, as in all nature, in the composition as well as in the motion of all things, there is a similarity of relations by which they are held together.

It would be a mistake to suppose that the analogies of language are always uniform: there may be often a choice between several, and sometimes one and sometimes another will prevail. In Greek there are three declensions of nouns; the forms of cases in one of them may intrude upon another. Similarly verbs in -omega and -mu iota interchange forms of tenses, and the completed paradigm of the verb is often made up of both. The same nouns may be partly declinable and partly indeclinable, and in some of their cases may have fallen out of use. Here are rules with exceptions; they are not however really exceptions, but contain in themselves indications of other rules. Many of these interruptions or variations of analogy occur in pronouns or in the verb of existence of which the forms were too common and therefore too deeply imbedded in language entirely to drop out. The same verbs in the same meaning may sometimes take one case, sometimes another. The participle may also have the character of an adjective, the adverb either of an adjective or of a preposition. These exceptions are as regular as the rules, but the causes of them are seldom known to us.

Language, like the animal and vegetable worlds, is everywhere intersected by the lines of analogy. Like number from which it seems to be derived, the principle of analogy opens the eyes of men to discern the similarities and differences of things, and their relations to one another. At first these are

such as lie on the surface only; after a time they are seen by men to reach farther down into the nature of things. Gradually in language they arrange themselves into a sort of imperfect system; groups of personal and case endings are placed side by side. The fertility of language produces many more than are wanted; and the superfluous ones are utilized by the assignment to them of new meanings. The vacuity and the superfluity are thus partially compensated by each other. It must be remembered that in all the languages which have a literature, certainly in Sanskrit, Greek, Latin, we are not at the beginning but almost at the end of the linguistic process; we have reached a time when the verb and the noun are nearly perfected, though in no language did they completely perfect themselves, because for some unknown reason the motive powers of languages seem to have ceased when they were on the eve of completion: they became fixed or crystallized in an imperfect form either from the influence of writing and literature, or because no further differentiation of them was required for the intelligibility of language. So not without admixture and confusion and displacement and contamination of sounds and the meanings of words, a lower stage of language passes into a higher. Thus far we can see and no further. When we ask the reason why this principle of analogy prevails in all the vast domain of language, there is no answer to the question; or no other answer but this, that there are innumerable ways in which, like number, analogy permeates, not only language, but the whole world, both visible and intellectual. We know from experience that it does not (a) arise from any conscious act of reflection that the accusative of a Latin noun in 'us' should end in 'um;' nor (b) from any necessity of being understood,—much less articulation would suffice for this; nor (c) from greater convenience or expressiveness of particular sounds. Such notions were certainly far enough away from the mind of primitive man. We may speak of a latent instinct, of a survival of the fittest, easiest, most euphonic, most economical of breath, in the case of one of two competing sounds; but these expressions do not add anything to our knowledge. We may try to grasp the infinity of language either under the figure of a limitless plain divided into countries and districts by natural boundaries, or of a vast river eternally flowing whose origin is concealed from us; we may apprehend partially the laws by which speech is regulated: but we do not know, and we seem as if we should never know, any more than in the parallel case of the origin of species, how vocal sounds received life and grew, and in the form of languages came to be distributed over the earth.

iii. Next in order to analogy in the formation of language or even prior to it comes the principle of onomatopea, which is itself a kind of analogy or similarity of sound and meaning. In by far the greater number of words it has become disguised and has disappeared; but in no stage of language is it entirely lost. It belongs chiefly to early language, in which words were few; and its influence grew less and less as time went on. To the ear which had a sense of harmony it became a barbarism which disturbed the flow and equilibrium of discourse; it was an excrescence which had to be cut out, a survival which needed to be got rid of, because it was out of keeping with the rest. It remained for the most part only as a formative principle, which used words and letters not as crude imitations of other natural sounds, but as symbols of ideas which were naturally associated with them. It received in another way a new character; it affected not so much single words, as larger portions of human speech. It regulated the juxtaposition of sounds and the cadence of sentences. It was the music, not of song, but of speech, in prose as well as verse. The old onomatopea of primitive language was refined into an onomatopea of a higher kind, in which it is no longer true to say that a particular sound corresponds to a motion or action of man or beast or movement of nature, but that in all the higher uses of language the sound is the echo of the sense, especially in poetry, in which beauty and expressiveness are given to human thoughts by the harmonious composition of the words, syllables, letters, accents, quantities, rhythms, rhymes, varieties and contrasts of all sorts. The poet with his

'Break, break, break' or his e pasin nekuessi kataphthimenoisin anassein or his 'longius ex altoque sinum trahit,' can produce a far finer music than any crude imitations of things or actions in sound, although a letter or two having this imitative power may be a lesser element of beauty in such passages. The same subtle sensibility, which adapts the word to the thing, adapts the sentence or cadence to the general meaning or spirit of the passage. This is the higher onomatopea which has banished the cruder sort as unworthy to have a place in great languages and literatures.

We can see clearly enough that letters or collocations of letters do by various degrees of strength or weakness, length or shortness, emphasis or pitch, become the natural expressions of the finer parts of human feeling or thought. And not only so, but letters themselves have a significance; as Plato observes that the letter rho accent is expressive of motion, the letters delta and tau of binding and rest, the letter lambda of smoothness, nu of inwardness, the letter eta of length, the letter omicron of roundness. These were often combined so as to form composite notions, as for example in tromos (trembling), trachus (rugged), thrauein (crush), krouein (strike), thruptein (break), pumbein (whirl),—in all which words we notice a parallel composition of sounds in their English equivalents. Plato also remarks, as we remark, that the onomatopoetic principle is far from prevailing uniformly, and further that no explanation of language consistently corresponds with any system of philosophy, however great may be the light which language throws upon the nature of the mind. Both in Greek and English we find groups of words such as string, swing, sling, spring, sting, which are parallel to one another and may be said to derive their vocal effect partly from contrast of letters, but in which it is impossible to assign a precise amount of meaning to each of the expressive and onomatopoetic letters. A few of them are directly imitative, as for example the omega in oon, which represents the round form of the egg by the figure of the mouth: or bronte (thunder), in which the fulness of the sound of the word corresponds to the thing signified by it; or bombos (buzzing), of which the first syllable, as in its English equivalent, has the meaning of a deep sound. We may observe also (as we see in the case of the poor stammerer) that speech has the co-operation of the whole body and may be often assisted or half expressed by gesticulation. A sound or word is not the work of the vocal organs only; nearly the whole of the upper part of the human frame, including head, chest, lungs, have a share in creating it; and it may be accompanied by a movement of the eyes, nose, fingers, hands, feet which contributes to the effect of it.

The principle of onomatopea has fallen into discredit, partly because it has been supposed to imply an actual manufacture of words out of syllables and letters, like a piece of joiner's work,—a theory of language which is more and more refuted by facts, and more and more going out of fashion with philologians; and partly also because the traces of onomatopea in separate words become almost obliterated in the course of ages. The poet of language cannot put in and pull out letters, as a painter might insert or blot out a shade of colour to give effect to his picture. It would be ridiculous for him to alter any received form of a word in order to render it more expressive of the sense. He can only select, perhaps out of some dialect, the form which is already best adapted to his purpose. The true onomatopea is not a creative, but a formative principle, which in the later stage of the history of language ceases to act upon individual words; but still works through the collocation of them in the sentence or paragraph, and the adaptation of every word, syllable, letter to one another and to the rhythm of the whole passage.

iv. Next, under a distinct head, although not separable from the preceding, may be considered the differentiation of languages, i.e. the manner in which differences of meaning and form have arisen in

them. Into their first creation we have ceased to enquire: it is their aftergrowth with which we are now concerned. How did the roots or substantial portions of words become modified or inflected? and how did they receive separate meanings? First we remark that words are attracted by the sounds and senses of other words, so that they form groups of nouns and verbs analogous in sound and sense to one another, each noun or verb putting forth inflexions, generally of two or three patterns, and with exceptions. We do not say that we know how sense became first allied to sound; but we have no difficulty in ascertaining how the sounds and meanings of words were in time parted off or differentiated. (1) The chief causes which regulate the variations of sound are (a) double or differing analogies, which lead sometimes to one form, sometimes to another (b) euphony, by which is meant chiefly the greater pleasure to the ear and the greater facility to the organs of speech which is given by a new formation or pronunciation of a word (c) the necessity of finding new expressions for new classes or processes of things. We are told that changes of sound take place by innumerable gradations until a whole tribe or community or society find themselves acquiescing in a new pronunciation or use of language. Yet no one observes the change, or is at all aware that in the course of a lifetime he and his contemporaries have appreciably varied their intonation or use of words. On the other hand, the necessities of language seem to require that the intermediate sounds or meanings of words should quickly become fixed or set and not continue in a state of transition. The process of settling down is aided by the organs of speech and by the use of writing and printing. (2) The meaning of words varies because ideas vary or the number of things which is included under them or with which they are associated is increased. A single word is thus made to do duty for many more things than were formerly expressed by it; and it parts into different senses when the classes of things or ideas which are represented by it are themselves different and distinct. A figurative use of a word may easily pass into a new sense: a new meaning caught up by association may become more important than all the rest. The good or neutral sense of a word, such as Jesuit, Puritan, Methodist, Heretic, has been often converted into a bad one by the malevolence of party spirit. Double forms suggest different meanings and are often used to express them; and the form or accent of a word has been not unfrequently altered when there is a difference of meaning. The difference of gender in nouns is utilized for the same reason. New meanings of words push themselves into the vacant spaces of language and retire when they are no longer needed. Language equally abhors vacancy and superfluity. But the remedial measures by which both are eliminated are not due to any conscious action of the human mind; nor is the force exerted by them constraining or necessary.

(7) We have shown that language, although subject to laws, is far from being of an exact and uniform nature. We may now speak briefly of the faults of language. They may be compared to the faults of Geology, in which different strata cross one another or meet at an angle, or mix with one another either by slow transitions or by violent convulsions, leaving many lacunae which can be no longer filled up, and often becoming so complex that no true explanation of them can be given. So in language there are the cross influences of meaning and sound, of logic and grammar, of differing analogies, of words and the inflexions of words, which often come into conflict with each other. The grammarian, if he were to form new words, would make them all of the same pattern according to what he conceives to be the rule, that is, the more common usage of language. The subtlety of nature goes far beyond art, and it is complicated by irregularity, so that often we can hardly say that there is a right or wrong in the formation of words. For almost any formation which is not at variance with the first principles of language is possible and may be defended.

The imperfection of language is really due to the formation and correlation of words by accident, that is to say, by principles which are unknown to us. Hence we see why Plato, like ourselves unable to comprehend the whole of language, was constrained to 'supplement the poor creature imitation by another poor creature convention.' But the poor creature convention in the end proves too much for all the rest: for we do not ask what is the origin of words or whether they are formed according to a correct analogy, but what is the usage of them; and we are compelled to admit with Hermogenes in Plato and with Horace that usage is the ruling principle, 'quem penes arbitrium est, et jus et norma loquendi.'

(8) There are two ways in which a language may attain permanence or fixity. First, it may have been embodied in poems or hymns or laws, which may be repeated for hundreds, perhaps for thousands of years with a religious accuracy, so that to the priests or rhapsodists of a nation the whole or the greater part of a language is literally preserved; secondly, it may be written down and in a written form distributed more or less widely among the whole nation. In either case the language which is familiarly spoken may have grown up wholly or in a great measure independently of them. (1) The first of these processes has been sometimes attended by the result that the sound of the words has been carefully preserved and that the meaning of them has either perished wholly, or is only doubtfully recovered by the efforts of modern philology. The verses have been repeated as a chant or part of a ritual, but they have had no relation to ordinary life or speech. (2) The invention of writing again is commonly attributed to a particular epoch, and we are apt to think that such an inestimable gift would have immediately been diffused over a whole country. But it may have taken a long time to perfect the art of writing, and another long period may have elapsed before it came into common use. Its influence on language has been increased ten, twenty or one hundred fold by the invention of printing.

Before the growth of poetry or the invention of writing, languages were only dialects. So they continued to be in parts of the country in which writing was not used or in which there was no diffusion of literature. In most of the counties of England there is still a provincial style, which has been sometimes made by a great poet the vehicle of his fancies. When a book sinks into the mind of a nation, such as Luther's Bible or the Authorized English Translation of the Bible, or again great classical works like Shakspere or Milton, not only have new powers of expression been diffused through a whole nation, but a great step towards uniformity has been made. The instinct of language demands regular grammar and correct spelling: these are imprinted deeply on the tablets of a nation's memory by a common use of classical and popular writers. In our own day we have attained to a point at which nearly every printed book is spelt correctly and written grammatically.

(9) Proceeding further to trace the influence of literature on language we note some other causes which have affected the higher use of it: such as (1) the necessity of clearness and connexion; (2) the fear of tautology; (3) the influence of metre, rhythm, rhyme, and of the language of prose and verse upon one another; (4) the power of idiom and quotation; (5) the relativeness of words to one another.

It has been usual to depreciate modern languages when compared with ancient. The latter are regarded as furnishing a type of excellence to which the former cannot attain. But the truth seems to be that modern languages, if through the loss of inflections and genders they lack some power or beauty or expressiveness or precision which is possessed by the ancient, are in many other respects superior to them: the thought is generally clearer, the connexion closer, the sentence and paragraph

are better distributed. The best modern languages, for example English or French, possess as great a power of self-improvement as the Latin, if not as the Greek. Nor does there seem to be any reason why they should ever decline or decay. It is a popular remark that our great writers are beginning to disappear: it may also be remarked that whenever a great writer appears in the future he will find the English language as perfect and as ready for use as in the days of Shakspere or Milton. There is no reason to suppose that English or French will ever be reduced to the low level of Modern Greek or of Mediaeval Latin. The wide diffusion of great authors would make such a decline impossible. Nor will modern languages be easily broken up by amalgamation with each other. The distance between them is too wide to be spanned, the differences are too great to be overcome, and the use of printing makes it impossible that one of them should ever be lost in another.

The structure of the English language differs greatly from that of either Latin or Greek. In the two latter, especially in Greek, sentences are joined together by connecting particles. They are distributed on the right hand and on the left by men, de, alla, kaitoi, kai de and the like, or deduced from one another by ara, de, oun, toinun and the like. In English the majority of sentences are independent and in apposition to one another; they are laid side by side or slightly connected by the copula. But within the sentence the expression of the logical relations of the clauses is closer and more exact: there is less of apposition and participial structure. The sentences thus laid side by side are also constructed into paragraphs; these again are less distinctly marked in Greek and Latin than in English. Generally French, German, and English have an advantage over the classical languages in point of accuracy. The three concords are more accurately observed in English than in either Greek or Latin. On the other hand, the extension of the familiar use of the masculine and feminine gender to objects of sense and abstract ideas as well as to men and animals no doubt lends a nameless grace to style which we have a difficulty in appreciating, and the possible variety in the order of words gives more flexibility and also a kind of dignity to the period. Of the comparative effect of accent and quantity and of the relation between them in ancient and modern languages we are not able to judge.

Another quality in which modern are superior to ancient languages is freedom from tautology. No English style is thought tolerable in which, except for the sake of emphasis, the same words are repeated at short intervals. Of course the length of the interval must depend on the character of the word. Striking words and expressions cannot be allowed to reappear, if at all, except at the distance of a page or more. Pronouns, prepositions, conjunctions may or rather must recur in successive lines. It seems to be a kind of impertinence to the reader and strikes unpleasantly both on the mind and on the ear that the same sounds should be used twice over, when another word or turn of expression would have given a new shade of meaning to the thought and would have added a pleasing variety to the sound. And the mind equally rejects the repetition of the word and the use of a mere synonym for it,—e.g. felicity and happiness. The cultivated mind desires something more, which a skilful writer is easily able to supply out of his treasure-house.

The fear of tautology has doubtless led to the multiplications of words and the meanings of words, and generally to an enlargement of the vocabulary. It is a very early instinct of language; for ancient poetry is almost as free from tautology as the best modern writings. The speech of young children, except in so far as they are compelled to repeat themselves by the fewness of their words, also escapes from it. When they grow up and have ideas which are beyond their powers of expression, especially in writing, tautology begins to appear. In like manner when language is 'contaminated' by philosophy it is apt to become awkward, to stammer and repeat itself, to lose its flow and freedom. No

philosophical writer with the exception of Plato, who is himself not free from tautology, and perhaps Bacon, has attained to any high degree of literary excellence.

To poetry the form and polish of language is chiefly to be attributed; and the most critical period in the history of language is the transition from verse to prose. At first mankind were contented to express their thoughts in a set form of words having a kind of rhythm; to which regularity was given by accent and quantity. But after a time they demanded a greater degree of freedom, and to those who had all their life been hearing poetry the first introduction of prose had the charm of novelty. The prose romances into which the Homeric Poems were converted, for a while probably gave more delight to the hearers or readers of them than the Poems themselves, and in time the relation of the two was reversed: the poems which had once been a necessity of the human mind became a luxury: they were now superseded by prose, which in all succeeding ages became the natural vehicle of expression to all mankind. Henceforward prose and poetry formed each other. A comparatively slender link between them was also furnished by proverbs. We may trace in poetry how the simple succession of lines, not without monotony, has passed into a complicated period, and how in prose, rhythm and accent and the order of words and the balance of clauses, sometimes not without a slight admixture of rhyme, make up a new kind of harmony, swelling into strains not less majestic than those of Homer, Virgil, or Dante.

One of the most curious and characteristic features of language, affecting both syntax and style, is idiom. The meaning of the word 'idiom' is that which is peculiar, that which is familiar, the word or expression which strikes us or comes home to us, which is more readily understood or more easily remembered. It is a quality which really exists in infinite degrees, which we turn into differences of kind by applying the term only to conspicuous and striking examples of words or phrases which have this quality. It often supersedes the laws of language or the rules of grammar, or rather is to be regarded as another law of language which is natural and necessary. The word or phrase which has been repeated many times over is more intelligible and familiar to us than one which is rare, and our familiarity with it more than compensates for incorrectness or inaccuracy in the use of it. Striking expressions also which have moved the hearts of nations or are the precious stones and jewels of great authors partake of the nature of idioms: they are taken out of the sphere of grammar and are exempt from the proprieties of language. Every one knows that we often put words together in a manner which would be intolerable if it were not idiomatic. We cannot argue either about the meaning of words or the use of constructions that because they are used in one connexion they will be legitimate in another, unless we allow for this principle. We can bear to have words and sentences used in new senses or in a new order or even a little perverted in meaning when we are quite familiar with them. Quotations are as often applied in a sense which the author did not intend as in that which he did. The parody of the words of Shakspere or of the Bible, which has in it something of the nature of a lie, is far from unpleasing to us. The better known words, even if their meaning be perverted, are more agreeable to us and have a greater power over us. Most of us have experienced a sort of delight and feeling of curiosity when we first came across or when we first used for ourselves a new word or phrase or figure of speech.

There are associations of sound and of sense by which every word is linked to every other. One letter harmonizes with another; every verb or noun derives its meaning, not only from itself, but from the words with which it is associated. Some reflection of them near or distant is embodied in it. In any new use of a word all the existing uses of it have to be considered. Upon these depends the question

whether it will bear the proposed extension of meaning or not. According to the famous expression of Luther, 'Words are living creatures, having hands and feet.' When they cease to retain this living power of adaptation, when they are only put together like the parts of a piece of furniture, language becomes unpoetical, in expressive, dead.

Grammars would lead us to suppose that words have a fixed form and sound. Lexicons assign to each word a definite meaning or meanings. They both tend to obscure the fact that the sentence precedes the word and that all language is relative. (1) It is relative to its own context. Its meaning is modified by what has been said before and after in the same or in some other passage: without comparing the context we are not sure whether it is used in the same sense even in two successive sentences. (2) It is relative to facts, to time, place, and occasion: when they are already known to the hearer or reader, they may be presupposed; there is no need to allude to them further. (3) It is relative to the knowledge of the writer and reader or of the speaker and hearer. Except for the sake of order and consecutiveness nothing ought to be expressed which is already commonly or universally known. A word or two may be sufficient to give an intimation to a friend; a long or elaborate speech or composition is required to explain some new idea to a popular audience or to the ordinary reader or to a young pupil. Grammars and dictionaries are not to be despised; for in teaching we need clearness rather than subtlety. But we must not therefore forget that there is also a higher ideal of language in which all is relative—sounds to sounds, words to words, the parts to the whole—in which besides the lesser context of the book or speech, there is also the larger context of history and circumstances.

The study of Comparative Philology has introduced into the world a new science which more than any other binds up man with nature, and distant ages and countries with one another. It may be said to have thrown a light upon all other sciences and upon the nature of the human mind itself. The true conception of it dispels many errors, not only of metaphysics and theology, but also of natural knowledge. Yet it is far from certain that this newly-found science will continue to progress in the same surprising manner as heretofore; or that even if our materials are largely increased, we shall arrive at much more definite conclusions than at present. Like some other branches of knowledge, it may be approaching a point at which it can no longer be profitably studied. But at any rate it has brought back the philosophy of language from theory to fact; it has passed out of the region of guesses and hypotheses, and has attained the dignity of an Inductive Science. And it is not without practical and political importance. It gives a new interest to distant and subject countries; it brings back the dawning light from one end of the earth to the other. Nations, like individuals, are better understood by us when we know something of their early life; and when they are better understood by us, we feel more kindly towards them. Lastly, we may remember that all knowledge is valuable for its own sake; and we may also hope that a deeper insight into the nature of human speech will give us a greater command of it and enable us to make a nobler use of it. (Compare again W. Humboldt, 'Ueber die Verschiedenheit des menschlichen Sprachbaues;' M. Muller, 'Lectures on the Science of Language;' Steinthal, 'Einleitung in die Psychologie und Sprachwissenschaft:' and for the latter part of the Essay, Delbruck, 'Study of Language;' Paul's 'Principles of the History of Language:' to the latter work the author of this Essay is largely indebted.)

CRATYLUS

By Plato

Translated by Benjamin Jowett

PERSONS OF THE DIALOGUE: Socrates, Hermogenes, Cratylus.

HERMOGENES: Suppose that we make Socrates a party to the argument?

CRATYLUS: If you please.

HERMOGENES: I should explain to you, Socrates, that our friend Cratylus has been arguing about names; he says that they are natural and not conventional; not a portion of the human voice which men agree to use; but that there is a truth or correctness in them, which is the same for Hellenes as for barbarians. Whereupon I ask him, whether his own name of Cratylus is a true name or not, and he answers 'Yes.' And Socrates? 'Yes.' Then every man's name, as I tell him, is that which he is called. To this he replies—'If all the world were to call you Hermogenes, that would not be your name.' And when I am anxious to have a further explanation he is ironical and mysterious, and seems to imply that he has a notion of his own about the matter, if he would only tell, and could entirely convince me, if he chose to be intelligible. Tell me, Socrates, what this oracle means; or rather tell me, if you will be so good, what is your own view of the truth or correctness of names, which I would far sooner hear.

SOCRATES: Son of Hipponicus, there is an ancient saying, that 'hard is the knowledge of the good.' And the knowledge of names is a great part of knowledge. If I had not been poor, I might have heard the fifty-drachma course of the great Prodicus, which is a complete education in grammar and language—these are his own words—and then I should have been at once able to answer your question about the correctness of names. But, indeed, I have only heard the single-drachma course, and therefore, I do not know the truth about such matters; I will, however, gladly assist you and Cratylus in the investigation of them. When he declares that your name is not really Hermogenes, I suspect that he is only making fun of you;—he means to say that you are no true son of Hermes, because you are always looking after a fortune and never in luck. But, as I was saying, there is a good deal of difficulty in this sort of knowledge, and therefore we had better leave the question open until we have heard both sides.

HERMOGENES: I have often talked over this matter, both with Cratylus and others, and cannot convince myself that there is any principle of correctness in names other than convention and agreement; any name which you give, in my opinion, is the right one, and if you change that and give another, the new name is as correct as the old—we frequently change the names of our slaves, and

the newly-imposed name is as good as the old: for there is no name given to anything by nature; all is convention and habit of the users;—such is my view. But if I am mistaken I shall be happy to hear and learn of Cratylus, or of any one else.

SOCRATES: I dare say that you may be right, Hermogenes: let us see;—Your meaning is, that the name of each thing is only that which anybody agrees to call it?

HERMOGENES: That is my notion.

SOCRATES: Whether the giver of the name be an individual or a city?

HERMOGENES: Yes.

SOCRATES: Well, now, let me take an instance;—suppose that I call a man a horse or a horse a man, you mean to say that a man will be rightly called a horse by me individually, and rightly called a man by the rest of the world; and a horse again would be rightly called a man by me and a horse by the world:—that is your meaning?

HERMOGENES: He would, according to my view.

SOCRATES: But how about truth, then? you would acknowledge that there is in words a true and a false?

HERMOGENES: Certainly.

SOCRATES: And there are true and false propositions?

HERMOGENES: To be sure.

SOCRATES: And a true proposition says that which is, and a false proposition says that which is not?

HERMOGENES: Yes; what other answer is possible?

SOCRATES: Then in a proposition there is a true and false?

HERMOGENES: Certainly.

SOCRATES: But is a proposition true as a whole only, and are the parts untrue?

HERMOGENES: No; the parts are true as well as the whole.

SOCRATES: Would you say the large parts and not the smaller ones, or every part?

HERMOGENES: I should say that every part is true.

SOCRATES: Is a proposition resolvable into any part smaller than a name?

HERMOGENES: No; that is the smallest.

SOCRATES: Then the name is a part of the true proposition?

HERMOGENES: Yes.

SOCRATES: Yes, and a true part, as you say.

HERMOGENES: Yes.

SOCRATES: And is not the part of a falsehood also a falsehood?

HERMOGENES: Yes.

SOCRATES: Then, if propositions may be true and false, names may be true and false?

HERMOGENES: So we must infer.

SOCRATES: And the name of anything is that which any one affirms to be the name?

HERMOGENES: Yes.

SOCRATES: And will there be so many names of each thing as everybody says that there are? and will they be true names at the time of uttering them?

HERMOGENES: Yes, Socrates, I can conceive no correctness of names other than this; you give one name, and I another; and in different cities and countries there are different names for the same things; Hellenes differ from barbarians in their use of names, and the several Hellenic tribes from one another.

SOCRATES: But would you say, Hermogenes, that the things differ as the names differ? and are they relative to individuals, as Protagoras tells us? For he says that man is the measure of all things, and that things are to me as they appear to me, and that they are to you as they appear to you. Do you agree with him, or would you say that things have a permanent essence of their own?

HERMOGENES: There have been times, Socrates, when I have been driven in my perplexity to take refuge with Protagoras; not that I agree with him at all.

SOCRATES: What! have you ever been driven to admit that there was no such thing as a bad man?

HERMOGENES: No, indeed; but I have often had reason to think that there are very bad men, and a good many of them.

SOCRATES: Well, and have you ever found any very good ones?

HERMOGENES: Not many.

SOCRATES: Still you have found them?

HERMOGENES: Yes.

SOCRATES: And would you hold that the very good were the very wise, and the very evil very foolish? Would that be your view?

HERMOGENES: It would.

SOCRATES: But if Protagoras is right, and the truth is that things are as they appear to any one, how can some of us be wise and some of us foolish?

HERMOGENES: Impossible.

SOCRATES: And if, on the other hand, wisdom and folly are really distinguishable, you will allow, I think, that the assertion of Protagoras can hardly be correct. For if what appears to each man is true to him, one man cannot in reality be wiser than another.

HERMOGENES: He cannot.

SOCRATES: Nor will you be disposed to say with Euthydemus, that all things equally belong to all men at the same moment and always; for neither on his view can there be some good and others bad, if virtue and vice are always equally to be attributed to all.

HERMOGENES: There cannot.

SOCRATES: But if neither is right, and things are not relative to individuals, and all things do not equally belong to all at the same moment and always, they must be supposed to have their own proper and permanent essence: they are not in relation to us, or influenced by us, fluctuating according to our fancy, but they are independent, and maintain to their own essence the relation prescribed by nature.

HERMOGENES: I think, Socrates, that you have said the truth.

SOCRATES: Does what I am saying apply only to the things themselves, or equally to the actions which proceed from them? Are not actions also a class of being?

HERMOGENES: Yes, the actions are real as well as the things.

SOCRATES: Then the actions also are done according to their proper nature, and not according to our opinion of them? In cutting, for example, we do not cut as we please, and with any chance instrument; but we cut with the proper instrument only, and according to the natural process of cutting; and the natural process is right and will succeed, but any other will fail and be of no use at all.

HERMOGENES: I should say that the natural way is the right way.

SOCRATES: Again, in burning, not every way is the right way; but the right way is the natural way, and the right instrument the natural instrument.

HERMOGENES: True.

SOCRATES: And this holds good of all actions?

HERMOGENES: Yes.

SOCRATES: And speech is a kind of action?

HERMOGENES: True.

SOCRATES: And will a man speak correctly who speaks as he pleases? Will not the successful speaker rather be he who speaks in the natural way of speaking, and as things ought to be spoken, and with the natural instrument? Any other mode of speaking will result in error and failure.

HERMOGENES: I quite agree with you.

SOCRATES: And is not naming a part of speaking? for in giving names men speak.

HERMOGENES: That is true.

SOCRATES: And if speaking is a sort of action and has a relation to acts, is not naming also a sort of action?

HERMOGENES: True.

SOCRATES: And we saw that actions were not relative to ourselves, but had a special nature of their own?

HERMOGENES: Precisely.

SOCRATES: Then the argument would lead us to infer that names ought to be given according to a natural process, and with a proper instrument, and not at our pleasure: in this and no other way shall we name with success.

HERMOGENES: I agree.

SOCRATES: But again, that which has to be cut has to be cut with something?

HERMOGENES: Yes.

SOCRATES: And that which has to be woven or pierced has to be woven or pierced with something?

HERMOGENES: Certainly.

SOCRATES: And that which has to be named has to be named with something?

HERMOGENES: True.

SOCRATES: What is that with which we pierce?

HERMOGENES: An awl.

SOCRATES: And with which we weave?

HERMOGENES: A shuttle.

SOCRATES: And with which we name?

HERMOGENES: A name.

SOCRATES: Very good: then a name is an instrument?

HERMOGENES: Certainly.

SOCRATES: Suppose that I ask, 'What sort of instrument is a shuttle?' And you answer, 'A weaving instrument.'

HERMOGENES: Well.

SOCRATES: And I ask again, 'What do we do when we weave?'—The answer is, that we separate or disengage the warp from the woof.

HERMOGENES: Very true.

SOCRATES: And may not a similar description be given of an awl, and of instruments in general?

HERMOGENES: To be sure.

SOCRATES: And now suppose that I ask a similar question about names: will you answer me? Regarding the name as an instrument, what do we do when we name?

HERMOGENES: I cannot say.

SOCRATES: Do we not give information to one another, and distinguish things according to their natures?

HERMOGENES: Certainly we do.

SOCRATES: Then a name is an instrument of teaching and of distinguishing natures, as the shuttle is of distinguishing the threads of the web.

HERMOGENES: Yes.

SOCRATES: And the shuttle is the instrument of the weaver?

HERMOGENES: Assuredly.

SOCRATES: Then the weaver will use the shuttle well—and well means like a weaver? and the teacher will use the name well—and well means like a teacher?

HERMOGENES: Yes.

SOCRATES: And when the weaver uses the shuttle, whose work will he be using well?

HERMOGENES: That of the carpenter.

SOCRATES: And is every man a carpenter, or the skilled only?

HERMOGENES: Only the skilled.

SOCRATES: And when the piercer uses the awl, whose work will he be using well?

HERMOGENES: That of the smith.

SOCRATES: And is every man a smith, or only the skilled?

HERMOGENES: The skilled only.

SOCRATES: And when the teacher uses the name, whose work will he be using?

HERMOGENES: There again I am puzzled.

SOCRATES: Cannot you at least say who gives us the names which we use?

HERMOGENES: Indeed I cannot.

SOCRATES: Does not the law seem to you to give us them?

HERMOGENES: Yes, I suppose so.

SOCRATES: Then the teacher, when he gives us a name, uses the work of the legislator?

HERMOGENES: I agree.

SOCRATES: And is every man a legislator, or the skilled only?

HERMOGENES: The skilled only.

SOCRATES: Then, Hermogenes, not every man is able to give a name, but only a maker of names; and this is the legislator, who of all skilled artisans in the world is the rarest.

HERMOGENES: True.

SOCRATES: And how does the legislator make names? and to what does he look? Consider this in the light of the previous instances: to what does the carpenter look in making the shuttle? Does he not look to that which is naturally fitted to act as a shuttle?

HERMOGENES: Certainly.

SOCRATES: And suppose the shuttle to be broken in making, will he make another, looking to the broken one? or will he look to the form according to which he made the other?

HERMOGENES: To the latter, I should imagine.

SOCRATES: Might not that be justly called the true or ideal shuttle?

HERMOGENES: I think so.

SOCRATES: And whatever shuttles are wanted, for the manufacture of garments, thin or thick, of flaxen, woollen, or other material, ought all of them to have the true form of the shuttle; and whatever is the shuttle best adapted to each kind of work, that ought to be the form which the maker produces in each case.

HERMOGENES: Yes.

SOCRATES: And the same holds of other instruments: when a man has discovered the instrument which is naturally adapted to each work, he must express this natural form, and not others which he fancies, in the material, whatever it may be, which he employs; for example, he ought to know how to put into iron the forms of awls adapted by nature to their several uses?

HERMOGENES: Certainly.

SOCRATES: And how to put into wood forms of shuttles adapted by nature to their uses?

HERMOGENES: True.

SOCRATES: For the several forms of shuttles naturally answer to the several kinds of webs; and this is true of instruments in general.

HERMOGENES: Yes.

SOCRATES: Then, as to names: ought not our legislator also to know how to put the true natural name of each thing into sounds and syllables, and to make and give all names with a view to the ideal name, if he is to be a namer in any true sense? And we must remember that different legislators will

not use the same syllables. For neither does every smith, although he may be making the same instrument for the same purpose, make them all of the same iron. The form must be the same, but the material may vary, and still the instrument may be equally good of whatever iron made, whether in Hellas or in a foreign country;—there is no difference.

HERMOGENES: Very true.

SOCRATES: And the legislator, whether he be Hellene or barbarian, is not therefore to be deemed by you a worse legislator, provided he gives the true and proper form of the name in whatever syllables; this or that country makes no matter.

HERMOGENES: Quite true.

SOCRATES: But who then is to determine whether the proper form is given to the shuttle, whatever sort of wood may be used? the carpenter who makes, or the weaver who is to use them?

HERMOGENES: I should say, he who is to use them, Socrates.

SOCRATES: And who uses the work of the lyre-maker? Will not he be the man who knows how to direct what is being done, and who will know also whether the work is being well done or not?

HERMOGENES: Certainly.

SOCRATES: And who is he?

HERMOGENES: The player of the lyre.

SOCRATES: And who will direct the shipwright?

HERMOGENES: The pilot.

SOCRATES: And who will be best able to direct the legislator in his work, and will know whether the work is well done, in this or any other country? Will not the user be the man?

HERMOGENES: Yes.

SOCRATES: And this is he who knows how to ask questions?

HERMOGENES: Yes.

SOCRATES: And how to answer them?

HERMOGENES: Yes.

SOCRATES: And him who knows how to ask and answer you would call a dialectician?

HERMOGENES: Yes; that would be his name.

SOCRATES: Then the work of the carpenter is to make a rudder, and the pilot has to direct him, if the rudder is to be well made.

HERMOGENES: True.

SOCRATES: And the work of the legislator is to give names, and the dialectician must be his director if the names are to be rightly given?

HERMOGENES: That is true.

SOCRATES: Then, Hermogenes, I should say that this giving of names can be no such light matter as you fancy, or the work of light or chance persons; and Cratylus is right in saying that things have names by nature, and that not every man is an artificer of names, but he only who looks to the name which each thing by nature has, and is able to express the true forms of things in letters and syllables.

HERMOGENES: I cannot answer you, Socrates; but I find a difficulty in changing my opinion all in a moment, and I think that I should be more readily persuaded, if you would show me what this is which you term the natural fitness of names.

SOCRATES: My good Hermogenes, I have none to show. Was I not telling you just now (but you have forgotten), that I knew nothing, and proposing to share the enquiry with you? But now that you and I have talked over the matter, a step has been gained; for we have discovered that names have by nature a truth, and that not every man knows how to give a thing a name.

HERMOGENES: Very good.

SOCRATES: And what is the nature of this truth or correctness of names? That, if you care to know, is the next question.

HERMOGENES: Certainly, I care to know.

SOCRATES: Then reflect.

HERMOGENES: How shall I reflect?

SOCRATES: The true way is to have the assistance of those who know, and you must pay them well both in money and in thanks; these are the Sophists, of whom your brother, Callias, has—rather dearly—bought the reputation of wisdom. But you have not yet come into your inheritance, and therefore you had better go to him, and beg and entreat him to tell you what he has learnt from Protagoras about the fitness of names.

HERMOGENES: But how inconsistent should I be, if, whilst repudiating Protagoras and his truth ('Truth' was the title of the book of Protagoras; compare Theaet.), I were to attach any value to what he and his book affirm!

SOCRATES: Then if you despise him, you must learn of Homer and the poets.

HERMOGENES: And where does Homer say anything about names, and what does he say?

SOCRATES: He often speaks of them; notably and nobly in the places where he distinguishes the different names which Gods and men give to the same things. Does he not in these passages make a remarkable statement about the correctness of names? For the Gods must clearly be supposed to call things by their right and natural names; do you not think so?

HERMOGENES: Why, of course they call them rightly, if they call them at all. But to what are you referring?

SOCRATES: Do you not know what he says about the river in Troy who had a single combat with Hephaestus?

'Whom,' as he says, 'the Gods call Xanthus, and men call Scamander.'

HERMOGENES: I remember.

SOCRATES: Well, and about this river—to know that he ought to be called Xanthus and not Scamander—is not that a solemn lesson? Or about the bird which, as he says,

'The Gods call Chalcis, and men Cymindis:'

to be taught how much more correct the name Chalcis is than the name Cymindis—do you deem that a light matter? Or about Batieia and Myrina? (Compare Il. 'The hill which men call Batieia and the immortals the tomb of the sportive Myrina.') And there are many other observations of the same kind in Homer and other poets. Now, I think that this is beyond the understanding of you and me; but the names of Scamandrius and Astyanax, which he affirms to have been the names of Hector's son, are more within the range of human faculties, as I am disposed to think; and what the poet means by correctness may be more readily apprehended in that instance: you will remember I dare say the lines to which I refer? (Il.)

HERMOGENES: I do.

SOCRATES: Let me ask you, then, which did Homer think the more correct of the names given to Hector's son—Astyanax or Scamandrius?

HERMOGENES: I do not know.

SOCRATES: How would you answer, if you were asked whether the wise or the unwise are more likely to give correct names?

HERMOGENES: I should say the wise, of course.

SOCRATES: And are the men or the women of a city, taken as a class, the wiser?

HERMOGENES: I should say, the men.

SOCRATES: And Homer, as you know, says that the Trojan men called him Astyanax (king of the city); but if the men called him Astyanax, the other name of Scamandrius could only have been given to him by the women.

HERMOGENES: That may be inferred.

SOCRATES: And must not Homer have imagined the Trojans to be wiser than their wives?

HERMOGENES: To be sure.

SOCRATES: Then he must have thought Astyanax to be a more correct name for the boy than Scamandrius?

HERMOGENES: Clearly.

SOCRATES: And what is the reason of this? Let us consider:—does he not himself suggest a very good reason, when he says,

'For he alone defended their city and long walls'?

This appears to be a good reason for calling the son of the saviour king of the city which his father was saving, as Homer observes.

HERMOGENES: I see.

SOCRATES: Why, Hermogenes, I do not as yet see myself; and do you?

HERMOGENES: No, indeed; not I.

SOCRATES: But tell me, friend, did not Homer himself also give Hector his name?

HERMOGENES: What of that?

SOCRATES: The name appears to me to be very nearly the same as the name of Astyanax—both are Hellenic; and a king (anax) and a holder (ektor) have nearly the same meaning, and are both descriptive of a king; for a man is clearly the holder of that of which he is king; he rules, and owns, and holds it. But, perhaps, you may think that I am talking nonsense; and indeed I believe that I myself did not know what I meant when I imagined that I had found some indication of the opinion of Homer about the correctness of names.

HERMOGENES: I assure you that I think otherwise, and I believe you to be on the right track.

SOCRATES: There is reason, I think, in calling the lion's whelp a lion, and the foal of a horse a horse; I am speaking only of the ordinary course of nature, when an animal produces after his kind, and not

of extraordinary births;—if contrary to nature a horse have a calf, then I should not call that a foal but a calf; nor do I call any inhuman birth a man, but only a natural birth. And the same may be said of trees and other things. Do you agree with me?

HERMOGENES: Yes, I agree.

SOCRATES: Very good. But you had better watch me and see that I do not play tricks with you. For on the same principle the son of a king is to be called a king. And whether the syllables of the name are the same or not the same, makes no difference, provided the meaning is retained; nor does the addition or subtraction of a letter make any difference so long as the essence of the thing remains in possession of the name and appears in it.

HERMOGENES: What do you mean?

SOCRATES: A very simple matter. I may illustrate my meaning by the names of letters, which you know are not the same as the letters themselves with the exception of the four epsilon, upsilon, omicron, omega; the names of the rest, whether vowels or consonants, are made up of other letters which we add to them; but so long as we introduce the meaning, and there can be no mistake, the name of the letter is quite correct. Take, for example, the letter beta—the addition of eta, tau, alpha, gives no offence, and does not prevent the whole name from having the value which the legislator intended—so well did he know how to give the letters names.

HERMOGENES: I believe you are right.

SOCRATES: And may not the same be said of a king? a king will often be the son of a king, the good son or the noble son of a good or noble sire; and similarly the offspring of every kind, in the regular course of nature, is like the parent, and therefore has the same name. Yet the syllables may be disguised until they appear different to the ignorant person, and he may not recognize them, although they are the same, just as any one of us would not recognize the same drugs under different disguises of colour and smell, although to the physician, who regards the power of them, they are the same, and he is not put out by the addition; and in like manner the etymologist is not put out by the addition or transposition or subtraction of a letter or two, or indeed by the change of all the letters, for this need not interfere with the meaning. As was just now said, the names of Hector and Astyanax have only one letter alike, which is tau, and yet they have the same meaning. And how little in common with the letters of their names has Archepolis (ruler of the city)—and yet the meaning is the same. And there are many other names which just mean 'king.' Again, there are several names for a general, as, for example, Agis (leader) and Polemarchus (chief in war) and Eupolemus (good warrior); and others which denote a physician, as Iatrocles (famous healer) and Acesimbrotus (curer of mortals); and there are many others which might be cited, differing in their syllables and letters, but having the same meaning. Would you not say so?

HERMOGENES: Yes.

SOCRATES: The same names, then, ought to be assigned to those who follow in the course of nature?

HERMOGENES: Yes.

SOCRATES: And what of those who follow out of the course of nature, and are prodigies? for example, when a good and religious man has an irreligious son, he ought to bear the name not of his father, but of the class to which he belongs, just as in the case which was before supposed of a horse foaling a calf.

HERMOGENES: Quite true.

SOCRATES: Then the irreligious son of a religious father should be called irreligious?

HERMOGENES: Certainly.

SOCRATES: He should not be called Theophilus (beloved of God) or Mnesitheus (mindful of God), or any of these names: if names are correctly given, his should have an opposite meaning.

HERMOGENES: Certainly, Socrates.

SOCRATES: Again, Hermogenes, there is Orestes (the man of the mountains) who appears to be rightly called; whether chance gave the name, or perhaps some poet who meant to express the brutality and fierceness and mountain wildness of his hero's nature.

HERMOGENES: That is very likely, Socrates.

SOCRATES: And his father's name is also according to nature.

HERMOGENES: Clearly.

SOCRATES: Yes, for as his name, so also is his nature; Agamemnon (admirable for remaining) is one who is patient and persevering in the accomplishment of his resolves, and by his virtue crowns them; and his continuance at Troy with all the vast army is a proof of that admirable endurance in him which is signified by the name Agamemnon. I also think that Atreus is rightly called; for his murder of Chrysippus and his exceeding cruelty to Thyestes are damaging and destructive to his reputation—the name is a little altered and disguised so as not to be intelligible to every one, but to the etymologist there is no difficulty in seeing the meaning, for whether you think of him as ateires the stubborn, or as atrestos the fearless, or as ateros the destructive one, the name is perfectly correct in every point of view. And I think that Pelops is also named appropriately; for, as the name implies, he is rightly called Pelops who sees what is near only (o ta pelas oron).

HERMOGENES: How so?

SOCRATES: Because, according to the tradition, he had no forethought or foresight of all the evil which the murder of Myrtilus would entail upon his whole race in remote ages; he saw only what was at hand and immediate,—or in other words, pelas (near), in his eagerness to win Hippodamia by all means for his bride. Every one would agree that the name of Tantalus is rightly given and in accordance with nature, if the traditions about him are true.

HERMOGENES: And what are the traditions?

SOCRATES: Many terrible misfortunes are said to have happened to him in his life—last of all, came the utter ruin of his country; and after his death he had the stone suspended (talanteia) over his head in the world below—all this agrees wonderfully well with his name. You might imagine that some person who wanted to call him Talantatos (the most weighted down by misfortune), disguised the name by altering it into Tantalus; and into this form, by some accident of tradition, it has actually been transmuted. The name of Zeus, who is his alleged father, has also an excellent meaning, although hard to be understood, because really like a sentence, which is divided into two parts, for some call him Zena, and use the one half, and others who use the other half call him Dia; the two together signify the nature of the God, and the business of a name, as we were saying, is to express the nature. For there is none who is more the author of life to us and to all, than the lord and king of all. Wherefore we are right in calling him Zena and Dia, which are one name, although divided, meaning the God through whom all creatures always have life (di on zen aei pasi tois zosin uparchei). There is an irreverence, at first sight, in calling him son of Cronos (who is a proverb for stupidity), and we might rather expect Zeus to be the child of a mighty intellect. Which is the fact; for this is the meaning of his father's name: Kronos quasi Koros (Choreo, to sweep), not in the sense of a youth, but signifying to chatharon chai acheraton tou nou, the pure and garnished mind (sc. apo tou chorein). He, as we are informed by tradition, was begotten of Uranus, rightly so called (apo tou oran ta ano) from looking upwards; which, as philosophers tell us, is the way to have a pure mind, and the name Uranus is therefore correct. If I could remember the genealogy of Hesiod, I would have gone on and tried more conclusions of the same sort on the remoter ancestors of the Gods,—then I might have seen whether this wisdom, which has come to me all in an instant, I know not whence, will or will not hold good to the end.

HERMOGENES: You seem to me, Socrates, to be quite like a prophet newly inspired, and to be uttering oracles.

SOCRATES: Yes, Hermogenes, and I believe that I caught the inspiration from the great Euthyphro of the Prospaltian deme, who gave me a long lecture which commenced at dawn: he talked and I listened, and his wisdom and enchanting ravishment has not only filled my ears but taken possession of my soul, and to-day I shall let his superhuman power work and finish the investigation of names—that will be the way; but to-morrow, if you are so disposed, we will conjure him away, and make a purgation of him, if we can only find some priest or sophist who is skilled in purifications of this sort.

HERMOGENES: With all my heart; for am very curious to hear the rest of the enquiry about names.

SOCRATES: Then let us proceed; and where would you have us begin, now that we have got a sort of outline of the enquiry? Are there any names which witness of themselves that they are not given arbitrarily, but have a natural fitness? The names of heroes and of men in general are apt to be deceptive because they are often called after ancestors with whose names, as we were saying, they may have no business; or they are the expression of a wish like Eutychides (the son of good fortune), or Sosias (the Saviour), or Theophilus (the beloved of God), and others. But I think that we had better leave these, for there will be more chance of finding correctness in the names of immutable essences;—there ought to have been more care taken about them when they were named, and

perhaps there may have been some more than human power at work occasionally in giving them names.

HERMOGENES: I think so, Socrates.

SOCRATES: Ought we not to begin with the consideration of the Gods, and show that they are rightly named Gods?

HERMOGENES: Yes, that will be well.

SOCRATES: My notion would be something of this sort:—I suspect that the sun, moon, earth, stars, and heaven, which are still the Gods of many barbarians, were the only Gods known to the aboriginal Hellenes. Seeing that they were always moving and running, from their running nature they were called Gods or runners (Theous, Theontas); and when men became acquainted with the other Gods, they proceeded to apply the same name to them all. Do you think that likely?

HERMOGENES: I think it very likely indeed.

SOCRATES: What shall follow the Gods?

HERMOGENES: Must not demons and heroes and men come next?

SOCRATES: Demons! And what do you consider to be the meaning of this word? Tell me if my view is right.

HERMOGENES: Let me hear.

SOCRATES: You know how Hesiod uses the word?

HERMOGENES: I do not.

SOCRATES: Do you not remember that he speaks of a golden race of men who came first?

HERMOGENES: Yes, I do.

SOCRATES: He says of them—

'But now that fate has closed over this race They are holy demons upon the earth, Beneficent, averters of ills, guardians of mortal men.' (Hesiod, Works and Days.)

HERMOGENES: What is the inference?

SOCRATES: What is the inference! Why, I suppose that he means by the golden men, not men literally made of gold, but good and noble; and I am convinced of this, because he further says that we are the iron race.

HERMOGENES: That is true.

SOCRATES: And do you not suppose that good men of our own day would by him be said to be of golden race?

HERMOGENES: Very likely.

SOCRATES: And are not the good wise?

HERMOGENES: Yes, they are wise.

SOCRATES: And therefore I have the most entire conviction that he called them demons, because they were daemones (knowing or wise), and in our older Attic dialect the word itself occurs. Now he and other poets say truly, that when a good man dies he has honour and a mighty portion among the dead, and becomes a demon; which is a name given to him signifying wisdom. And I say too, that every wise man who happens to be a good man is more than human (daimonion) both in life and death, and is rightly called a demon.

HERMOGENES: Then I rather think that I am of one mind with you; but what is the meaning of the word 'hero'? (Eros with an eta, in the old writing eros with an epsilon.)

SOCRATES: I think that there is no difficulty in explaining, for the name is not much altered, and signifies that they were born of love.

HERMOGENES: What do you mean?

SOCRATES: Do you not know that the heroes are demigods?

HERMOGENES: What then?

SOCRATES: All of them sprang either from the love of a God for a mortal woman, or of a mortal man for a Goddess; think of the word in the old Attic, and you will see better that the name heros is only a slight alteration of Eros, from whom the heroes sprang: either this is the meaning, or, if not this, then they must have been skilful as rhetoricians and dialecticians, and able to put the question (erotan), for eirein is equivalent to legein. And therefore, as I was saying, in the Attic dialect the heroes turn out to be rhetoricians and questioners. All this is easy enough; the noble breed of heroes are a tribe of sophists and rhetors. But can you tell me why men are called anthropoi?—that is more difficult.

HERMOGENES: No, I cannot; and I would not try even if I could, because I think that you are the more likely to succeed.

SOCRATES: That is to say, you trust to the inspiration of Euthyphro.

HERMOGENES: Of course.

SOCRATES: Your faith is not vain; for at this very moment a new and ingenious thought strikes me, and, if I am not careful, before to-morrow's dawn I shall be wiser than I ought to be. Now, attend to me; and first, remember that we often put in and pull out letters in words, and give names as we please and change the accents. Take, for example, the word Dii Philos; in order to convert this from a sentence into a noun, we omit one of the iotas and sound the middle syllable grave instead of acute; as, on the other hand, letters are sometimes inserted in words instead of being omitted, and the acute takes the place of the grave.

HERMOGENES: That is true.

SOCRATES: The name anthropos, which was once a sentence, and is now a noun, appears to be a case just of this sort, for one letter, which is the alpha, has been omitted, and the acute on the last syllable has been changed to a grave.

HERMOGENES: What do you mean?

SOCRATES: I mean to say that the word 'man' implies that other animals never examine, or consider, or look up at what they see, but that man not only sees (opope) but considers and looks up at that which he sees, and hence he alone of all animals is rightly anthropos, meaning anathron a opopen.

HERMOGENES: May I ask you to examine another word about which I am curious?

SOCRATES: Certainly.

HERMOGENES: I will take that which appears to me to follow next in order. You know the distinction of soul and body?

SOCRATES: Of course.

HERMOGENES: Let us endeavour to analyze them like the previous words.

SOCRATES: You want me first of all to examine the natural fitness of the word psuche (soul), and then of the word soma (body)?

HERMOGENES: Yes.

SOCRATES: If I am to say what occurs to me at the moment, I should imagine that those who first used the name psuche meant to express that the soul when in the body is the source of life, and gives the power of breath and revival (anapsuchon), and when this reviving power fails then the body perishes and dies, and this, if I am not mistaken, they called psyche. But please stay a moment; I fancy that I can discover something which will be more acceptable to the disciples of Euthyphro, for I am afraid that they will scorn this explanation. What do you say to another?

HERMOGENES: Let me hear.

SOCRATES: What is that which holds and carries and gives life and motion to the entire nature of the body? What else but the soul?

HERMOGENES: Just that.

SOCRATES: And do you not believe with Anaxagoras, that mind or soul is the ordering and containing principle of all things?

HERMOGENES: Yes; I do.

SOCRATES: Then you may well call that power phuseche which carries and holds nature (e phusin okei, kai ekei), and this may be refined away into psuche.

HERMOGENES: Certainly; and this derivation is, I think, more scientific than the other.

SOCRATES: It is so; but I cannot help laughing, if I am to suppose that this was the true meaning of the name.

HERMOGENES: But what shall we say of the next word?

SOCRATES: You mean soma (the body).

HERMOGENES: Yes.

SOCRATES: That may be variously interpreted; and yet more variously if a little permutation is allowed. For some say that the body is the grave (sema) of the soul which may be thought to be buried in our present life; or again the index of the soul, because the soul gives indications to (semainei) the body; probably the Orphic poets were the inventors of the name, and they were under the impression that the soul is suffering the punishment of sin, and that the body is an enclosure or prison in which the soul is incarcerated, kept safe (soma, sozetai), as the name soma implies, until the penalty is paid; according to this view, not even a letter of the word need be changed.

HERMOGENES: I think, Socrates, that we have said enough of this class of words. But have we any more explanations of the names of the Gods, like that which you were giving of Zeus? I should like to know whether any similar principle of correctness is to be applied to them.

SOCRATES: Yes, indeed, Hermogenes; and there is one excellent principle which, as men of sense, we must acknowledge,—that of the Gods we know nothing, either of their natures or of the names which they give themselves; but we are sure that the names by which they call themselves, whatever they may be, are true. And this is the best of all principles; and the next best is to say, as in prayers, that we will call them by any sort or kind of names or patronymics which they like, because we do not know of any other. That also, I think, is a very good custom, and one which I should much wish to observe. Let us, then, if you please, in the first place announce to them that we are not enquiring about them; we do not presume that we are able to do so; but we are enquiring about the meaning of men in giving them these names,—in this there can be small blame.

HERMOGENES: I think, Socrates, that you are quite right, and I would like to do as you say.

SOCRATES: Shall we begin, then, with Hestia, according to custom?

HERMOGENES: Yes, that will be very proper.

SOCRATES: What may we suppose him to have meant who gave the name Hestia?

HERMOGENES: That is another and certainly a most difficult question.

SOCRATES: My dear Hermogenes, the first imposers of names must surely have been considerable persons; they were philosophers, and had a good deal to say.

HERMOGENES: Well, and what of them?

SOCRATES: They are the men to whom I should attribute the imposition of names. Even in foreign names, if you analyze them, a meaning is still discernible. For example, that which we term ousia is by some called esia, and by others again osia. Now that the essence of things should be called estia, which is akin to the first of these (esia = estia), is rational enough. And there is reason in the Athenians calling that estia which participates in ousia. For in ancient times we too seem to have said esia for ousia, and this you may note to have been the idea of those who appointed that sacrifices should be first offered to estia, which was natural enough if they meant that estia was the essence of things. Those again who read osia seem to have inclined to the opinion of Heracleitus, that all things flow and nothing stands; with them the pushing principle (othoun) is the cause and ruling power of all things, and is therefore rightly called osia. Enough of this, which is all that we who know nothing can affirm. Next in order after Hestia we ought to consider Rhea and Cronos, although the name of Cronos has been already discussed. But I dare say that I am talking great nonsense.

HERMOGENES: Why, Socrates?

SOCRATES: My good friend, I have discovered a hive of wisdom.

HERMOGENES: Of what nature?

SOCRATES: Well, rather ridiculous, and yet plausible.

HERMOGENES: How plausible?

SOCRATES: I fancy to myself Heracleitus repeating wise traditions of antiquity as old as the days of Cronos and Rhea, and of which Homer also spoke.

HERMOGENES: How do you mean?

SOCRATES: Heracleitus is supposed to say that all things are in motion and nothing at rest; he compares them to the stream of a river, and says that you cannot go into the same water twice.

HERMOGENES: That is true.

SOCRATES: Well, then, how can we avoid inferring that he who gave the names of Cronos and Rhea to the ancestors of the Gods, agreed pretty much in the doctrine of Heracleitus? Is the giving of the names of streams to both of them purely accidental? Compare the line in which Homer, and, as I believe, Hesiod also, tells of

'Ocean, the origin of Gods, and mother Tethys (Il.—the line is not found in the extant works of Hesiod.).'

And again, Orpheus says, that

'The fair river of Ocean was the first to marry, and he espoused his sister Tethys, who was his mother's daughter.'

You see that this is a remarkable coincidence, and all in the direction of Heracleitus.

HERMOGENES: I think that there is something in what you say, Socrates; but I do not understand the meaning of the name Tethys.

SOCRATES: Well, that is almost self-explained, being only the name of a spring, a little disguised; for that which is strained and filtered (diattomenon, ethoumenon) may be likened to a spring, and the name Tethys is made up of these two words.

HERMOGENES: The idea is ingenious, Socrates.

SOCRATES: To be sure. But what comes next?—of Zeus we have spoken.

HERMOGENES: Yes.

SOCRATES: Then let us next take his two brothers, Poseidon and Pluto, whether the latter is called by that or by his other name.

HERMOGENES: By all means.

SOCRATES: Poseidon is Posidesmos, the chain of the feet; the original inventor of the name had been stopped by the watery element in his walks, and not allowed to go on, and therefore he called the ruler of this element Poseidon; the epsilon was probably inserted as an ornament. Yet, perhaps, not so; but the name may have been originally written with a double lamda and not with a sigma, meaning that the God knew many things (Polla eidos). And perhaps also he being the shaker of the earth, has been named from shaking (seiein), and then pi and delta have been added. Pluto gives wealth (Ploutos), and his name means the giver of wealth, which comes out of the earth beneath. People in general appear to imagine that the term Hades is connected with the invisible (aeides) and so they are led by their fears to call the God Pluto instead.

HERMOGENES: And what is the true derivation?

SOCRATES: In spite of the mistakes which are made about the power of this deity, and the foolish fears which people have of him, such as the fear of always being with him after death, and of the soul denuded of the body going to him (compare Rep.), my belief is that all is quite consistent, and that the office and name of the God really correspond.

HERMOGENES: Why, how is that?

SOCRATES: I will tell you my own opinion; but first, I should like to ask you which chain does any animal feel to be the stronger? and which confines him more to the same spot,—desire or necessity?

HERMOGENES: Desire, Socrates, is stronger far.

SOCRATES: And do you not think that many a one would escape from Hades, if he did not bind those who depart to him by the strongest of chains?

HERMOGENES: Assuredly they would.

SOCRATES: And if by the greatest of chains, then by some desire, as I should certainly infer, and not by necessity?

HERMOGENES: That is clear.

SOCRATES: And there are many desires?

HERMOGENES: Yes.

SOCRATES: And therefore by the greatest desire, if the chain is to be the greatest?

HERMOGENES: Yes.

SOCRATES: And is any desire stronger than the thought that you will be made better by associating with another?

HERMOGENES: Certainly not.

SOCRATES: And is not that the reason, Hermogenes, why no one, who has been to him, is willing to come back to us? Even the Sirens, like all the rest of the world, have been laid under his spells. Such a charm, as I imagine, is the God able to infuse into his words. And, according to this view, he is the perfect and accomplished Sophist, and the great benefactor of the inhabitants of the other world; and even to us who are upon earth he sends from below exceeding blessings. For he has much more than he wants down there; wherefore he is called Pluto (or the rich). Note also, that he will have nothing to do with men while they are in the body, but only when the soul is liberated from the desires and evils of the body. Now there is a great deal of philosophy and reflection in that; for in their liberated state he can bind them with the desire of virtue, but while they are flustered and maddened by the body, not even father Cronos himself would suffice to keep them with him in his own far-famed chains.

HERMOGENES: There is a deal of truth in what you say.

SOCRATES: Yes, Hermogenes, and the legislator called him Hades, not from the unseen (aeides)—far otherwise, but from his knowledge (eidenai) of all noble things.

HERMOGENES: Very good; and what do we say of Demeter, and Here, and Apollo, and Athene, and Hephaestus, and Ares, and the other deities?

SOCRATES: Demeter is e didousa meter, who gives food like a mother; Here is the lovely one (erate)—for Zeus, according to tradition, loved and married her; possibly also the name may have been given when the legislator was thinking of the heavens, and may be only a disguise of the air (aer), putting the end in the place of the beginning. You will recognize the truth of this if you repeat the letters of Here several times over. People dread the name of Pherephatta as they dread the name of Apollo,—and with as little reason; the fear, if I am not mistaken, only arises from their ignorance of the nature of names. But they go changing the name into Phersephone, and they are terrified at this; whereas the new name means only that the Goddess is wise (sophe); for seeing that all things in the world are in motion (pheromenon), that principle which embraces and touches and is able to follow them, is wisdom. And therefore the Goddess may be truly called Pherepaphe (Pherepapha), or some name like it, because she touches that which is in motion (tou pheromenon ephaptomene), herein showing her wisdom. And Hades, who is wise, consorts with her, because she is wise. They alter her name into Pherephatta now-a-days, because the present generation care for euphony more than truth. There is the other name, Apollo, which, as I was saying, is generally supposed to have some terrible signification. Have you remarked this fact?

HERMOGENES: To be sure I have, and what you say is true.

SOCRATES: But the name, in my opinion, is really most expressive of the power of the God.

HERMOGENES: How so?

SOCRATES: I will endeavour to explain, for I do not believe that any single name could have been better adapted to express the attributes of the God, embracing and in a manner signifying all four of them,—music, and prophecy, and medicine, and archery.

HERMOGENES: That must be a strange name, and I should like to hear the explanation.

SOCRATES: Say rather an harmonious name, as beseems the God of Harmony. In the first place, the purgations and purifications which doctors and diviners use, and their fumigations with drugs magical or medicinal, as well as their washings and lustral sprinklings, have all one and the same object, which is to make a man pure both in body and soul.

HERMOGENES: Very true.

SOCRATES: And is not Apollo the purifier, and the washer, and the absolver from all impurities?

HERMOGENES: Very true.

SOCRATES: Then in reference to his ablutions and absolutions, as being the physician who orders them, he may be rightly called Apolouon (purifier); or in respect of his powers of divination, and his truth and sincerity, which is the same as truth, he may be most fitly called Aplos, from aplous (sincere), as in the Thessalian dialect, for all the Thessalians call him Aplos; also he is aei Ballon (always shooting), because he is a master archer who never misses; or again, the name may refer to his musical attributes, and then, as in akolouthos, and akoitis, and in many other words the alpha is supposed to mean 'together,' so the meaning of the name Apollo will be 'moving together,' whether in the poles of heaven as they are called, or in the harmony of song, which is termed concord, because he moves all together by an harmonious power, as astronomers and musicians ingeniously declare. And he is the God who presides over harmony, and makes all things move together, both among Gods and among men. And as in the words akolouthos and akoitis the alpha is substituted for an omicron, so the name Apollon is equivalent to omopolon; only the second lambda is added in order to avoid the ill-omened sound of destruction (apolon). Now the suspicion of this destructive power still haunts the minds of some who do not consider the true value of the name, which, as I was saying just now, has reference to all the powers of the God, who is the single one, the everdarting, the purifier, the mover together (aplous, aei Ballon, apolouon, omopolon). The name of the Muses and of music would seem to be derived from their making philosophical enquiries (mosthai); and Leto is called by this name, because she is such a gentle Goddess, and so willing (ethelemon) to grant our requests; or her name may be Letho, as she is often called by strangers—they seem to imply by it her amiability, and her smooth and easy-going way of behaving. Artemis is named from her healthy (artemes), well-ordered nature, and because of her love of virginity, perhaps because she is a proficient in virtue (arete), and perhaps also as hating intercourse of the sexes (ton aroton misesasa). He who gave the Goddess her name may have had any or all of these reasons.

HERMOGENES: What is the meaning of Dionysus and Aphrodite?

SOCRATES: Son of Hipponicus, you ask a solemn question; there is a serious and also a facetious explanation of both these names; the serious explanation is not to be had from me, but there is no objection to your hearing the facetious one; for the Gods too love a joke. Dionusos is simply didous oinon (giver of wine), Didoinusos, as he might be called in fun,—and oinos is properly oionous, because wine makes those who drink, think (oiesthai) that they have a mind (noun) when they have none. The derivation of Aphrodite, born of the foam (aphros), may be fairly accepted on the authority of Hesiod.

HERMOGENES: Still there remains Athene, whom you, Socrates, as an Athenian, will surely not forget; there are also Hephaestus and Ares.

SOCRATES: I am not likely to forget them.

HERMOGENES: No, indeed.

SOCRATES: There is no difficulty in explaining the other appellation of Athene.

HERMOGENES: What other appellation?

SOCRATES: We call her Pallas.

HERMOGENES: To be sure.

SOCRATES: And we cannot be wrong in supposing that this is derived from armed dances. For the elevation of oneself or anything else above the earth, or by the use of the hands, we call shaking (pallein), or dancing.

HERMOGENES: That is quite true.

SOCRATES: Then that is the explanation of the name Pallas?

HERMOGENES: Yes; but what do you say of the other name?

SOCRATES: Athene?

HERMOGENES: Yes.

SOCRATES: That is a graver matter, and there, my friend, the modern interpreters of Homer may, I think, assist in explaining the view of the ancients. For most of these in their explanations of the poet, assert that he meant by Athene 'mind' (nous) and 'intelligence' (dianoia), and the maker of names appears to have had a singular notion about her; and indeed calls her by a still higher title, 'divine intelligence' (Thou noesis), as though he would say: This is she who has the mind of God (Theonoa);—using alpha as a dialectical variety for eta, and taking away iota and sigma (There seems to be some error in the MSS. The meaning is that the word theonoa = theounoa is a curtailed form of theou noesis, but the omitted letters do not agree.). Perhaps, however, the name Theonoe may mean 'she who knows divine things' (Theia noousa) better than others. Nor shall we be far wrong in supposing that the author of it wished to identify this Goddess with moral intelligence (en ethei noesin), and therefore gave her the name ethonoe; which, however, either he or his successors have altered into what they thought a nicer form, and called her Athene.

HERMOGENES: But what do you say of Hephaestus?

SOCRATES: Speak you of the princely lord of light (Phaeos istora)?

HERMOGENES: Surely.

SOCRATES: Ephaistos is Phaistos, and has added the eta by attraction; that is obvious to anybody.

HERMOGENES: That is very probable, until some more probable notion gets into your head.

SOCRATES: To prevent that, you had better ask what is the derivation of Ares.

HERMOGENES: What is Ares?

SOCRATES: Ares may be called, if you will, from his manhood (arren) and manliness, or if you please, from his hard and unchangeable nature, which is the meaning of arratos: the latter is a derivation in every way appropriate to the God of war.

HERMOGENES: Very true.

SOCRATES: And now, by the Gods, let us have no more of the Gods, for I am afraid of them; ask about anything but them, and thou shalt see how the steeds of Euthyphro can prance.

HERMOGENES: Only one more God! I should like to know about Hermes, of whom I am said not to be a true son. Let us make him out, and then I shall know whether there is any meaning in what Cratylus says.

SOCRATES: I should imagine that the name Hermes has to do with speech, and signifies that he is the interpreter (ermeneus), or messenger, or thief, or liar, or bargainer; all that sort of thing has a great deal to do with language; as I was telling you, the word eirein is expressive of the use of speech, and there is an often-recurring Homeric word emesato, which means 'he contrived'—out of these two words, eirein and mesasthai, the legislator formed the name of the God who invented language and speech; and we may imagine him dictating to us the use of this name: 'O my friends,' says he to us, 'seeing that he is the contriver of tales or speeches, you may rightly call him Eirhemes.' And this has been improved by us, as we think, into Hermes. Iris also appears to have been called from the verb 'to tell' (eirein), because she was a messenger.

HERMOGENES: Then I am very sure that Cratylus was quite right in saying that I was no true son of Hermes (Ermogenes), for I am not a good hand at speeches.

SOCRATES: There is also reason, my friend, in Pan being the double-formed son of Hermes.

HERMOGENES: How do you make that out?

SOCRATES: You are aware that speech signifies all things (pan), and is always turning them round and round, and has two forms, true and false?

HERMOGENES: Certainly.

SOCRATES: Is not the truth that is in him the smooth or sacred form which dwells above among the Gods, whereas falsehood dwells among men below, and is rough like the goat of tragedy; for tales and falsehoods have generally to do with the tragic or goatish life, and tragedy is the place of them?

HERMOGENES: Very true.

SOCRATES: Then surely Pan, who is the declarer of all things (pan) and the perpetual mover (aei polon) of all things, is rightly called aipolos (goat-herd), he being the two-formed son of Hermes, smooth in his upper part, and rough and goatlike in his lower regions. And, as the son of Hermes, he is speech or the brother of speech, and that brother should be like brother is no marvel. But, as I was saying, my dear Hermogenes, let us get away from the Gods.

HERMOGENES: From these sort of Gods, by all means, Socrates. But why should we not discuss another kind of Gods—the sun, moon, stars, earth, aether, air, fire, water, the seasons, and the year?

SOCRATES: You impose a great many tasks upon me. Still, if you wish, I will not refuse.

HERMOGENES: You will oblige me.

SOCRATES: How would you have me begin? Shall I take first of all him whom you mentioned first—the sun?

HERMOGENES: Very good.

SOCRATES: The origin of the sun will probably be clearer in the Doric form, for the Dorians call him alios, and this name is given to him because when he rises he gathers (alizoi) men together or because he is always rolling in his course (aei eilein ion) about the earth; or from aiolein, of which the meaning is the same as poikillein (to variegate), because he variegates the productions of the earth.

HERMOGENES: But what is selene (the moon)?

SOCRATES: That name is rather unfortunate for Anaxagoras.

HERMOGENES: How so?

SOCRATES: The word seems to forestall his recent discovery, that the moon receives her light from the sun.

HERMOGENES: Why do you say so?

SOCRATES: The two words selas (brightness) and phos (light) have much the same meaning?

HERMOGENES: Yes.

SOCRATES: This light about the moon is always new (neon) and always old (enon), if the disciples of Anaxagoras say truly. For the sun in his revolution always adds new light, and there is the old light of the previous month.

HERMOGENES: Very true.

SOCRATES: The moon is not unfrequently called selanaia.

HERMOGENES: True.

SOCRATES: And as she has a light which is always old and always new (enon neon aei) she may very properly have the name selaenoneoaeia; and this when hammered into shape becomes selanaia.

HERMOGENES: A real dithyrambic sort of name that, Socrates. But what do you say of the month and the stars?

SOCRATES: Meis (month) is called from meiousthai (to lessen), because suffering diminution; the name of astra (stars) seems to be derived from astrape, which is an improvement on anastrope, signifying the upsetting of the eyes (anastrephein opa).

HERMOGENES: What do you say of pur (fire) and udor (water)?

SOCRATES: I am at a loss how to explain pur; either the muse of Euthyphro has deserted me, or there is some very great difficulty in the word. Please, however, to note the contrivance which I adopt whenever I am in a difficulty of this sort.

HERMOGENES: What is it?

SOCRATES: I will tell you; but I should like to know first whether you can tell me what is the meaning of the pur?

HERMOGENES: Indeed I cannot.

SOCRATES: Shall I tell you what I suspect to be the true explanation of this and several other words?—My belief is that they are of foreign origin. For the Hellenes, especially those who were under the dominion of the barbarians, often borrowed from them.

HERMOGENES: What is the inference?

SOCRATES: Why, you know that any one who seeks to demonstrate the fitness of these names according to the Hellenic language, and not according to the language from which the words are derived, is rather likely to be at fault.

HERMOGENES: Yes, certainly.

SOCRATES: Well then, consider whether this pur is not foreign; for the word is not easily brought into relation with the Hellenic tongue, and the Phrygians may be observed to have the same word slightly changed, just as they have udor (water) and kunes (dogs), and many other words.

HERMOGENES: That is true.

SOCRATES: Any violent interpretations of the words should be avoided; for something to say about them may easily be found. And thus I get rid of pur and udor. Aer (air), Hermogenes, may be explained as the element which raises (airei) things from the earth, or as ever flowing (aei rei), or because the flux of the air is wind, and the poets call the winds 'air-blasts,' (aetai); he who uses the term may mean, so to speak, air-flux (aetorroun), in the sense of wind-flux (pneumatorroun); and because this moving wind may be expressed by either term he employs the word air (aer = aetes rheo). Aither (aether) I should interpret as aeitheer; this may be correctly said, because this element is always running in a flux about the air (aei thei peri tou aera reon). The meaning of the word ge (earth) comes out better when in the form of gaia, for the earth may be truly called 'mother' (gaia, genneteira), as in the language of Homer (Od.) gegaasi means gegennesthai.

HERMOGENES: Good.

SOCRATES: What shall we take next?

HERMOGENES: There are orai (the seasons), and the two names of the year, eniautos and etos.

SOCRATES: The orai should be spelt in the old Attic way, if you desire to know the probable truth about them; they are rightly called the orai because they divide (orizousin) the summers and winters and winds and the fruits of the earth. The words eniautos and etos appear to be the same,—'that which brings to light the plants and growths of the earth in their turn, and passes them in review within itself (en eauto exetazei)': this is broken up into two words, eniautos from en eauto, and etos from etazei, just as the original name of Zeus was divided into Zena and Dia; and the whole proposition means that his power of reviewing from within is one, but has two names, two words etos and eniautos being thus formed out of a single proposition.

HERMOGENES: Indeed, Socrates, you make surprising progress.

SOCRATES: I am run away with.

HERMOGENES: Very true.

SOCRATES: But am not yet at my utmost speed.

HERMOGENES: I should like very much to know, in the next place, how you would explain the virtues. What principle of correctness is there in those charming words—wisdom, understanding, justice, and the rest of them?

SOCRATES: That is a tremendous class of names which you are disinterring; still, as I have put on the lion's skin, I must not be faint of heart; and I suppose that I must consider the meaning of wisdom (phronesis) and understanding (sunesis), and judgment (gnome), and knowledge (episteme), and all those other charming words, as you call them?

HERMOGENES: Surely, we must not leave off until we find out their meaning.

SOCRATES: By the dog of Egypt I have a not bad notion which came into my head only this moment: I believe that the primeval givers of names were undoubtedly like too many of our modern philosophers, who, in their search after the nature of things, are always getting dizzy from constantly going round and round, and then they imagine that the world is going round and round and moving in all directions; and this appearance, which arises out of their own internal condition, they suppose to be a reality of nature; they think that there is nothing stable or permanent, but only flux and motion, and that the world is always full of every sort of motion and change. The consideration of the names which I mentioned has led me into making this reflection.

HERMOGENES: How is that, Socrates?

SOCRATES: Perhaps you did not observe that in the names which have been just cited, the motion or flux or generation of things is most surely indicated.

HERMOGENES: No, indeed, I never thought of it.

SOCRATES: Take the first of those which you mentioned; clearly that is a name indicative of motion.

HERMOGENES: What was the name?

SOCRATES: Phronesis (wisdom), which may signify phoras kai rhou noesis (perception of motion and flux), or perhaps phoras onesis (the blessing of motion), but is at any rate connected with pheresthai (motion); gnome (judgment), again, certainly implies the ponderation or consideration (nomesis) of generation, for to ponder is the same as to consider; or, if you would rather, here is noesis, the very word just now mentioned, which is neou esis (the desire of the new); the word neos implies that the world is always in process of creation. The giver of the name wanted to express this longing of the soul, for the original name was neoesis, and not noesis; but eta took the place of a double epsilon. The word sophrosune is the salvation (soteria) of that wisdom (phronesis) which we were just now considering. Epioteme (knowledge) is akin to this, and indicates that the soul which is good for anything follows (epetai) the motion of things, neither anticipating them nor falling behind them; wherefore the word should rather be read as epistemene, inserting epsilon nu. Sunesis (understanding) may be regarded in like manner as a kind of conclusion; the word is derived from sunienai (to go along with), and, like epistasthai (to know), implies the progression of the soul in company with the nature of things. Sophia (wisdom) is very dark, and appears not to be of native growth; the meaning is, touching the motion or stream of things. You must remember that the poets, when they speak of the commencement of any rapid motion, often use the word esuthe (he rushed); and there was a famous Lacedaemonian who was named Sous (Rush), for by this word the Lacedaemonians signify rapid motion, and the touching (epaphe) of motion is expressed by sophia, for all things are supposed to be in motion. Good (agathon) is the name which is given to the admirable (agasto) in nature; for, although all things move, still there are degrees of motion; some are swifter, some slower; but there are some things which are admirable for their swiftness, and this admirable part of nature is called agathon. Dikaiosune (justice) is clearly dikaiou sunesis (understanding of the just); but the actual word dikaion is more difficult: men are only agreed to a certain extent about justice, and then they begin to disagree. For those who suppose all things to be in motion conceive the greater part of nature to be a mere receptacle; and they say that there is a penetrating power which passes through all this, and is the instrument of creation in all, and is the subtlest and swiftest element; for if it were not the subtlest, and a power which none can keep out, and also the swiftest, passing by other things as if they were standing still, it could not penetrate through the moving universe. And this element, which superintends all things and pierces (diaion) all, is rightly called dikaion; the letter k is only added for the sake of euphony. Thus far, as I was saying, there is a general agreement about the nature of justice; but I, Hermogenes, being an enthusiastic disciple, have been told in a mystery that the justice of which I am speaking is also the cause of the world: now a cause is that because of which anything is created; and some one comes and whispers in my ear that justice is rightly so called because partaking of the nature of the cause, and I begin, after hearing what he has said, to interrogate him gently: 'Well, my excellent friend,' say I, 'but if all this be true, I still want to know what is justice.' Thereupon they think that I ask tiresome questions, and am leaping over the barriers, and have been already sufficiently answered, and they try to satisfy

me with one derivation after another, and at length they quarrel. For one of them says that justice is the sun, and that he only is the piercing (diaionta) and burning (kaonta) element which is the guardian of nature. And when I joyfully repeat this beautiful notion, I am answered by the satirical remark, 'What, is there no justice in the world when the sun is down?' And when I earnestly beg my questioner to tell me his own honest opinion, he says, 'Fire in the abstract'; but this is not very intelligible. Another says, 'No, not fire in the abstract, but the abstraction of heat in the fire.' Another man professes to laugh at all this, and says, as Anaxagoras says, that justice is mind, for mind, as they say, has absolute power, and mixes with nothing, and orders all things, and passes through all things. At last, my friend, I find myself in far greater perplexity about the nature of justice than I was before I began to learn. But still I am of opinion that the name, which has led me into this digression, was given to justice for the reasons which I have mentioned.

HERMOGENES: I think, Socrates, that you are not improvising now; you must have heard this from some one else.

SOCRATES: And not the rest?

HERMOGENES: Hardly.

SOCRATES: Well, then, let me go on in the hope of making you believe in the originality of the rest. What remains after justice? I do not think that we have as yet discussed courage (andreia),—injustice (adikia), which is obviously nothing more than a hindrance to the penetrating principle (diaiontos), need not be considered. Well, then, the name of andreia seems to imply a battle;—this battle is in the world of existence, and according to the doctrine of flux is only the counterflux (enantia rhon): if you extract the delta from andreia, the name at once signifies the thing, and you may clearly understand that andreia is not the stream opposed to every stream, but only to that which is contrary to justice, for otherwise courage would not have been praised. The words arren (male) and aner (man) also contain a similar allusion to the same principle of the upward flux (te ano rhon). Gune (woman) I suspect to be the same word as goun (birth): thelu (female) appears to be partly derived from thele (the teat), because the teat is like rain, and makes things flourish (tethelenai).

HERMOGENES: That is surely probable.

SOCRATES: Yes; and the very word thallein (to flourish) seems to figure the growth of youth, which is swift and sudden ever. And this is expressed by the legislator in the name, which is a compound of thein (running), and allesthai (leaping). Pray observe how I gallop away when I get on smooth ground. There are a good many names generally thought to be of importance, which have still to be explained.

HERMOGENES: True.

SOCRATES: There is the meaning of the word techne (art), for example.

HERMOGENES: Very true.

SOCRATES: That may be identified with echonoe, and expresses the possession of mind: you have only to take away the tau and insert two omichrons, one between the chi and nu, and another between the nu and eta.

HERMOGENES: That is a very shabby etymology.

SOCRATES: Yes, my dear friend; but then you know that the original names have been long ago buried and disguised by people sticking on and stripping off letters for the sake of euphony, and twisting and bedizening them in all sorts of ways: and time too may have had a share in the change. Take, for example, the word katoptron; why is the letter rho inserted? This must surely be the addition of some one who cares nothing about the truth, but thinks only of putting the mouth into shape. And the additions are often such that at last no human being can possibly make out the original meaning of the word. Another example is the word sphigx, sphiggos, which ought properly to be phigx, phiggos, and there are other examples.

HERMOGENES: That is quite true, Socrates.

SOCRATES: And yet, if you are permitted to put in and pull out any letters which you please, names will be too easily made, and any name may be adapted to any object.

HERMOGENES: True.

SOCRATES: Yes, that is true. And therefore a wise dictator, like yourself, should observe the laws of moderation and probability.

HERMOGENES: Such is my desire.

SOCRATES: And mine, too, Hermogenes. But do not be too much of a precisian, or 'you will unnerve me of my strength (Iliad.).' When you have allowed me to add mechane (contrivance) to techne (art) I shall be at the top of my bent, for I conceive mechane to be a sign of great accomplishment—anein; for mekos has the meaning of greatness, and these two, mekos and anein, make up the word mechane. But, as I was saying, being now at the top of my bent, I should like to consider the meaning of the two words arete (virtue) and kakia (vice); arete I do not as yet understand, but kakia is transparent, and agrees with the principles which preceded, for all things being in a flux (ionton), kakia is kakos ion (going badly); and this evil motion when existing in the soul has the general name of kakia, or vice, specially appropriated to it. The meaning of kakos ienai may be further illustrated by the use of deilia (cowardice), which ought to have come after andreia, but was forgotten, and, as I fear, is not the only word which has been passed over. Deilia signifies that the soul is bound with a strong chain (desmos), for lian means strength, and therefore deilia expresses the greatest and strongest bond of the soul; and aporia (difficulty) is an evil of the same nature (from a (alpha) not, and poreuesthai to go), like anything else which is an impediment to motion and movement. Then the word kakia appears to mean kakos ienai, or going badly, or limping and halting; of which the consequence is, that the soul becomes filled with vice. And if kakia is the name of this sort of thing, arete will be the opposite of it, signifying in the first place ease of motion, then that the stream of the good soul is unimpeded, and has therefore the attribute of ever flowing without let or hindrance, and is therefore called arete, or, more correctly, aeireite (ever-flowing), and may perhaps have had

another form, airete (eligible), indicating that nothing is more eligible than virtue, and this has been hammered into arete. I daresay that you will deem this to be another invention of mine, but I think that if the previous word kakia was right, then arete is also right.

HERMOGENES: But what is the meaning of kakon, which has played so great a part in your previous discourse?

SOCRATES: That is a very singular word about which I can hardly form an opinion, and therefore I must have recourse to my ingenious device.

HERMOGENES: What device?

SOCRATES: The device of a foreign origin, which I shall give to this word also.

HERMOGENES: Very likely you are right; but suppose that we leave these words and endeavour to see the rationale of kalon and aischron.

SOCRATES: The meaning of aischron is evident, being only aei ischon roes (always preventing from flowing), and this is in accordance with our former derivations. For the name-giver was a great enemy to stagnation of all sorts, and hence he gave the name aeischoroun to that which hindered the flux (aei ischon roun), and that is now beaten together into aischron.

HERMOGENES: But what do you say of kalon?

SOCRATES: That is more obscure; yet the form is only due to the quantity, and has been changed by altering omicron upsilon into omicron.

HERMOGENES: What do you mean?

SOCRATES: This name appears to denote mind.

HERMOGENES: How so?

SOCRATES: Let me ask you what is the cause why anything has a name; is not the principle which imposes the name the cause?

HERMOGENES: Certainly.

SOCRATES: And must not this be the mind of Gods, or of men, or of both?

HERMOGENES: Yes.

SOCRATES: Is not mind that which called (kalesan) things by their names, and is not mind the beautiful (kalon)?

HERMOGENES: That is evident.

SOCRATES: And are not the works of intelligence and mind worthy of praise, and are not other works worthy of blame?

HERMOGENES: Certainly.

SOCRATES: Physic does the work of a physician, and carpentering does the works of a carpenter?

HERMOGENES: Exactly.

SOCRATES: And the principle of beauty does the works of beauty?

HERMOGENES: Of course.

SOCRATES: And that principle we affirm to be mind?

HERMOGENES: Very true.

SOCRATES: Then mind is rightly called beauty because she does the works which we recognize and speak of as the beautiful?

HERMOGENES: That is evident.

SOCRATES: What more names remain to us?

HERMOGENES: There are the words which are connected with agathon and kalon, such as sumpheron and lusiteloun, ophelimon, kerdaleon, and their opposites.

SOCRATES: The meaning of sumpheron (expedient) I think that you may discover for yourself by the light of the previous examples,—for it is a sister word to episteme, meaning just the motion (pora) of the soul accompanying the world, and things which are done upon this principle are called sumphora or sumpheronta, because they are carried round with the world.

HERMOGENES: That is probable.

SOCRATES: Again, cherdaleon (gainful) is called from cherdos (gain), but you must alter the delta into nu if you want to get at the meaning; for this word also signifies good, but in another way; he who gave the name intended to express the power of admixture (kerannumenon) and universal penetration in the good; in forming the word, however, he inserted a delta instead of a nu, and so made kerdos.

HERMOGENES: Well, but what is lusiteloun (profitable)?

SOCRATES: I suppose, Hermogenes, that people do not mean by the profitable the gainful or that which pays (luei) the retailer, but they use the word in the sense of swift. You regard the profitable (lusiteloun), as that which being the swiftest thing in existence, allows of no stay in things and no pause or end of motion, but always, if there begins to be any end, lets things go again (luei), and

makes motion immortal and unceasing: and in this point of view, as appears to me, the good is happily denominated lusiteloun—being that which looses (luon) the end (telos) of motion. Ophelimon (the advantageous) is derived from ophellein, meaning that which creates and increases; this latter is a common Homeric word, and has a foreign character.

HERMOGENES: And what do you say of their opposites?

SOCRATES: Of such as are mere negatives I hardly think that I need speak.

HERMOGENES: Which are they?

SOCRATES: The words axumphoron (inexpedient), anopheles (unprofitable), alusiteles (unadvantageous), akerdes (ungainful).

HERMOGENES: True.

SOCRATES: I would rather take the words blaberon (harmful), zemiodes (hurtful).

HERMOGENES: Good.

SOCRATES: The word blaberon is that which is said to hinder or harm (blaptein) the stream (roun); blapton is boulomenon aptein (seeking to hold or bind); for aptein is the same as dein, and dein is always a term of censure; boulomenon aptein roun (wanting to bind the stream) would properly be boulapteroun, and this, as I imagine, is improved into blaberon.

HERMOGENES: You bring out curious results, Socrates, in the use of names; and when I hear the word boulapteroun I cannot help imagining that you are making your mouth into a flute, and puffing away at some prelude to Athene.

SOCRATES: That is the fault of the makers of the name, Hermogenes; not mine.

HERMOGENES: Very true; but what is the derivation of zemiodes?

SOCRATES: What is the meaning of zemiodes?—let me remark, Hermogenes, how right I was in saying that great changes are made in the meaning of words by putting in and pulling out letters; even a very slight permutation will sometimes give an entirely opposite sense; I may instance the word deon, which occurs to me at the moment, and reminds me of what I was going to say to you, that the fine fashionable language of modern times has twisted and disguised and entirely altered the original meaning both of deon, and also of zemiodes, which in the old language is clearly indicated.

HERMOGENES: What do you mean?

SOCRATES: I will try to explain. You are aware that our forefathers loved the sounds iota and delta, especially the women, who are most conservative of the ancient language, but now they change iota into eta or epsilon, and delta into zeta; this is supposed to increase the grandeur of the sound.

HERMOGENES: How do you mean?

SOCRATES: For example, in very ancient times they called the day either imera or emera (short e), which is called by us emera (long e).

HERMOGENES: That is true.

SOCRATES: Do you observe that only the ancient form shows the intention of the giver of the name? of which the reason is, that men long for (imeirousi) and love the light which comes after the darkness, and is therefore called imera, from imeros, desire.

HERMOGENES: Clearly.

SOCRATES: But now the name is so travestied that you cannot tell the meaning, although there are some who imagine the day to be called emera because it makes things gentle (emera different accents).

HERMOGENES: Such is my view.

SOCRATES: And do you know that the ancients said duogon and not zugon?

HERMOGENES: They did so.

SOCRATES: And zugon (yoke) has no meaning,—it ought to be duogon, which word expresses the binding of two together (duein agoge) for the purpose of drawing;—this has been changed into zugon, and there are many other examples of similar changes.

HERMOGENES: There are.

SOCRATES: Proceeding in the same train of thought I may remark that the word deon (obligation) has a meaning which is the opposite of all the other appellations of good; for deon is here a species of good, and is, nevertheless, the chain (desmos) or hinderer of motion, and therefore own brother of blaberon.

HERMOGENES: Yes, Socrates; that is quite plain.

SOCRATES: Not if you restore the ancient form, which is more likely to be the correct one, and read dion instead of deon; if you convert the epsilon into an iota after the old fashion, this word will then agree with other words meaning good; for dion, not deon, signifies the good, and is a term of praise; and the author of names has not contradicted himself, but in all these various appellations, deon (obligatory), ophelimon (advantageous), lusiteloun (profitable), kerdaleon (gainful), agathon (good), sumpheron (expedient), euporon (plenteous), the same conception is implied of the ordering or all-pervading principle which is praised, and the restraining and binding principle which is censured. And this is further illustrated by the word zemiodes (hurtful), which if the zeta is only changed into delta as in the ancient language, becomes demiodes; and this name, as you will perceive, is given to that which binds motion (dounti ion).

HERMOGENES: What do you say of edone (pleasure), lupe (pain), epithumia (desire), and the like, Socrates?

SOCRATES: I do not think, Hermogenes, that there is any great difficulty about them—edone is e (eta) onesis, the action which tends to advantage; and the original form may be supposed to have been eone, but this has been altered by the insertion of the delta. Lupe appears to be derived from the relaxation (luein) which the body feels when in sorrow; ania (trouble) is the hindrance of motion (alpha and ienai); algedon (distress), if I am not mistaken, is a foreign word, which is derived from aleinos (grievous); odune (grief) is called from the putting on (endusis) sorrow; in achthedon (vexation) 'the word too labours,' as any one may see; chara (joy) is the very expression of the fluency and diffusion of the soul (cheo); terpsis (delight) is so called from the pleasure creeping (erpon) through the soul, which may be likened to a breath (pnoe) and is properly erpnoun, but has been altered by time into terpnon; eupherosune (cheerfulness) and epithumia explain themselves; the former, which ought to be eupherosune and has been changed euphrosune, is named, as every one may see, from the soul moving (pheresthai) in harmony with nature; epithumia is really e epi ton thumon iousa dunamis, the power which enters into the soul; thumos (passion) is called from the rushing (thuseos) and boiling of the soul; imeros (desire) denotes the stream (rous) which most draws the soul dia ten esin tes roes—because flowing with desire (iemenos), and expresses a longing after things and violent attraction of the soul to them, and is termed imeros from possessing this power; pothos (longing) is expressive of the desire of that which is not present but absent, and in another place (pou); this is the reason why the name pothos is applied to things absent, as imeros is to things present; eros (love) is so called because flowing in (esron) from without; the stream is not inherent, but is an influence introduced through the eyes, and from flowing in was called esros (influx) in the old time when they used omicron for omega, and is called eros, now that omega is substituted for omicron. But why do you not give me another word?

HERMOGENES: What do you think of doxa (opinion), and that class of words?

SOCRATES: Doxa is either derived from dioxis (pursuit), and expresses the march of the soul in the pursuit of knowledge, or from the shooting of a bow (toxon); the latter is more likely, and is confirmed by oiesis (thinking), which is only oisis (moving), and implies the movement of the soul to the essential nature of each thing—just as boule (counsel) has to do with shooting (bole); and boulesthai (to wish) combines the notion of aiming and deliberating—all these words seem to follow doxa, and all involve the idea of shooting, just as aboulia, absence of counsel, on the other hand, is a mishap, or missing, or mistaking of the mark, or aim, or proposal, or object.

HERMOGENES: You are quickening your pace now, Socrates.

SOCRATES: Why yes, the end I now dedicate to God, not, however, until I have explained anagke (necessity), which ought to come next, and ekousion (the voluntary). Ekousion is certainly the yielding (eikon) and unresisting—the notion implied is yielding and not opposing, yielding, as I was just now saying, to that motion which is in accordance with our will; but the necessary and resistant being contrary to our will, implies error and ignorance; the idea is taken from walking through a ravine which is impassable, and rugged, and overgrown, and impedes motion—and this is the derivation of the word anagkaion (necessary) an agke ion, going through a ravine. But while my strength lasts let us persevere, and I hope that you will persevere with your questions.

HERMOGENES: Well, then, let me ask about the greatest and noblest, such as aletheia (truth) and pseudos (falsehood) and on (being), not forgetting to enquire why the word onoma (name), which is the theme of our discussion, has this name of onoma.

SOCRATES: You know the word maiesthai (to seek)?

HERMOGENES: Yes;—meaning the same as zetein (to enquire).

SOCRATES: The word onoma seems to be a compressed sentence, signifying on ou zetema (being for which there is a search); as is still more obvious in onomaston (notable), which states in so many words that real existence is that for which there is a seeking (on ou masma); aletheia is also an agglomeration of theia ale (divine wandering), implying the divine motion of existence; pseudos (falsehood) is the opposite of motion; here is another ill name given by the legislator to stagnation and forced inaction, which he compares to sleep (eudein); but the original meaning of the word is disguised by the addition of psi; on and ousia are ion with an iota broken off; this agrees with the true principle, for being (on) is also moving (ion), and the same may be said of not being, which is likewise called not going (oukion or ouki on = ouk ion).

HERMOGENES: You have hammered away at them manfully; but suppose that some one were to say to you, what is the word ion, and what are reon and doun?—show me their fitness.

SOCRATES: You mean to say, how should I answer him?

HERMOGENES: Yes.

SOCRATES: One way of giving the appearance of an answer has been already suggested.

HERMOGENES: What way?

SOCRATES: To say that names which we do not understand are of foreign origin; and this is very likely the right answer, and something of this kind may be true of them; but also the original forms of words may have been lost in the lapse of ages; names have been so twisted in all manner of ways, that I should not be surprised if the old language when compared with that now in use would appear to us to be a barbarous tongue.

HERMOGENES: Very likely.

SOCRATES: Yes, very likely. But still the enquiry demands our earnest attention and we must not flinch. For we should remember, that if a person go on analysing names into words, and enquiring also into the elements out of which the words are formed, and keeps on always repeating this process, he who has to answer him must at last give up the enquiry in despair.

HERMOGENES: Very true.

SOCRATES: And at what point ought he to lose heart and give up the enquiry? Must he not stop when he comes to the names which are the elements of all other names and sentences; for these

cannot be supposed to be made up of other names? The word agathon (good), for example, is, as we were saying, a compound of agastos (admirable) and thoos (swift). And probably thoos is made up of other elements, and these again of others. But if we take a word which is incapable of further resolution, then we shall be right in saying that we have at last reached a primary element, which need not be resolved any further.

HERMOGENES: I believe you to be in the right.

SOCRATES: And suppose the names about which you are now asking should turn out to be primary elements, must not their truth or law be examined according to some new method?

HERMOGENES: Very likely.

SOCRATES: Quite so, Hermogenes; all that has preceded would lead to this conclusion. And if, as I think, the conclusion is true, then I shall again say to you, come and help me, that I may not fall into some absurdity in stating the principle of primary names.

HERMOGENES: Let me hear, and I will do my best to assist you.

SOCRATES: I think that you will acknowledge with me, that one principle is applicable to all names, primary as well as secondary—when they are regarded simply as names, there is no difference in them.

HERMOGENES: Certainly not.

SOCRATES: All the names that we have been explaining were intended to indicate the nature of things.

HERMOGENES: Of course.

SOCRATES: And that this is true of the primary quite as much as of the secondary names, is implied in their being names.

HERMOGENES: Surely.

SOCRATES: But the secondary, as I conceive, derive their significance from the primary.

HERMOGENES: That is evident.

SOCRATES: Very good; but then how do the primary names which precede analysis show the natures of things, as far as they can be shown; which they must do, if they are to be real names? And here I will ask you a question: Suppose that we had no voice or tongue, and wanted to communicate with one another, should we not, like the deaf and dumb, make signs with the hands and head and the rest of the body?

HERMOGENES: There would be no choice, Socrates.

SOCRATES: We should imitate the nature of the thing; the elevation of our hands to heaven would mean lightness and upwardness; heaviness and downwardness would be expressed by letting them drop to the ground; if we were describing the running of a horse, or any other animal, we should make our bodies and their gestures as like as we could to them.

HERMOGENES: I do not see that we could do anything else.

SOCRATES: We could not; for by bodily imitation only can the body ever express anything.

HERMOGENES: Very true.

SOCRATES: And when we want to express ourselves, either with the voice, or tongue, or mouth, the expression is simply their imitation of that which we want to express.

HERMOGENES: It must be so, I think.

SOCRATES: Then a name is a vocal imitation of that which the vocal imitator names or imitates?

HERMOGENES: I think so.

SOCRATES: Nay, my friend, I am disposed to think that we have not reached the truth as yet.

HERMOGENES: Why not?

SOCRATES: Because if we have we shall be obliged to admit that the people who imitate sheep, or cocks, or other animals, name that which they imitate.

HERMOGENES: Quite true.

SOCRATES: Then could I have been right in what I was saying?

HERMOGENES: In my opinion, no. But I wish that you would tell me, Socrates, what sort of an imitation is a name?

SOCRATES: In the first place, I should reply, not a musical imitation, although that is also vocal; nor, again, an imitation of what music imitates; these, in my judgment, would not be naming. Let me put the matter as follows: All objects have sound and figure, and many have colour?

HERMOGENES: Certainly.

SOCRATES: But the art of naming appears not to be concerned with imitations of this kind; the arts which have to do with them are music and drawing?

HERMOGENES: True.

SOCRATES: Again, is there not an essence of each thing, just as there is a colour, or sound? And is there not an essence of colour and sound as well as of anything else which may be said to have an essence?

HERMOGENES: I should think so.

SOCRATES: Well, and if any one could express the essence of each thing in letters and syllables, would he not express the nature of each thing?

HERMOGENES: Quite so.

SOCRATES: The musician and the painter were the two names which you gave to the two other imitators. What will this imitator be called?

HERMOGENES: I imagine, Socrates, that he must be the namer, or name-giver, of whom we are in search.

SOCRATES: If this is true, then I think that we are in a condition to consider the names ron (stream), ienai (to go), schesis (retention), about which you were asking; and we may see whether the namer has grasped the nature of them in letters and syllables in such a manner as to imitate the essence or not.

HERMOGENES: Very good.

SOCRATES: But are these the only primary names, or are there others?

HERMOGENES: There must be others.

SOCRATES: So I should expect. But how shall we further analyse them, and where does the imitator begin? Imitation of the essence is made by syllables and letters; ought we not, therefore, first to separate the letters, just as those who are beginning rhythm first distinguish the powers of elementary, and then of compound sounds, and when they have done so, but not before, they proceed to the consideration of rhythms?

HERMOGENES: Yes.

SOCRATES: Must we not begin in the same way with letters; first separating the vowels, and then the consonants and mutes (letters which are neither vowels nor semivowels), into classes, according to the received distinctions of the learned; also the semivowels, which are neither vowels, nor yet mutes; and distinguishing into classes the vowels themselves? And when we have perfected the classification of things, we shall give them names, and see whether, as in the case of letters, there are any classes to which they may be all referred (cf. Phaedrus); and hence we shall see their natures, and see, too, whether they have in them classes as there are in the letters; and when we have well considered all this, we shall know how to apply them to what they resemble—whether one letter is used to denote one thing, or whether there is to be an admixture of several of them; just, as in painting, the painter who wants to depict anything sometimes uses purple only, or any other colour,

and sometimes mixes up several colours, as his method is when he has to paint flesh colour or anything of that kind—he uses his colours as his figures appear to require them; and so, too, we shall apply letters to the expression of objects, either single letters when required, or several letters; and so we shall form syllables, as they are called, and from syllables make nouns and verbs; and thus, at last, from the combinations of nouns and verbs arrive at language, large and fair and whole; and as the painter made a figure, even so shall we make speech by the art of the namer or the rhetorician, or by some other art. Not that I am literally speaking of ourselves, but I was carried away—meaning to say that this was the way in which (not we but) the ancients formed language, and what they put together we must take to pieces in like manner, if we are to attain a scientific view of the whole subject, and we must see whether the primary, and also whether the secondary elements are rightly given or not, for if they are not, the composition of them, my dear Hermogenes, will be a sorry piece of work, and in the wrong direction.

HERMOGENES: That, Socrates, I can quite believe.

SOCRATES: Well, but do you suppose that you will be able to analyse them in this way? for I am certain that I should not.

HERMOGENES: Much less am I likely to be able.

SOCRATES: Shall we leave them, then? or shall we seek to discover, if we can, something about them, according to the measure of our ability, saying by way of preface, as I said before of the Gods, that of the truth about them we know nothing, and do but entertain human notions of them. And in this present enquiry, let us say to ourselves, before we proceed, that the higher method is the one which we or others who would analyse language to any good purpose must follow; but under the circumstances, as men say, we must do as well as we can. What do you think?

HERMOGENES: I very much approve.

SOCRATES: That objects should be imitated in letters and syllables, and so find expression, may appear ridiculous, Hermogenes, but it cannot be avoided—there is no better principle to which we can look for the truth of first names. Deprived of this, we must have recourse to divine help, like the tragic poets, who in any perplexity have their gods waiting in the air; and must get out of our difficulty in like fashion, by saying that 'the Gods gave the first names, and therefore they are right.' This will be the best contrivance, or perhaps that other notion may be even better still, of deriving them from some barbarous people, for the barbarians are older than we are; or we may say that antiquity has cast a veil over them, which is the same sort of excuse as the last; for all these are not reasons but only ingenious excuses for having no reasons concerning the truth of words. And yet any sort of ignorance of first or primitive names involves an ignorance of secondary words; for they can only be explained by the primary. Clearly then the professor of languages should be able to give a very lucid explanation of first names, or let him be assured he will only talk nonsense about the rest. Do you not suppose this to be true?

HERMOGENES: Certainly, Socrates.

SOCRATES: My first notions of original names are truly wild and ridiculous, though I have no objection to impart them to you if you desire, and I hope that you will communicate to me in return anything better which you may have.

HERMOGENES: Fear not; I will do my best.

SOCRATES: In the first place, the letter rho appears to me to be the general instrument expressing all motion (kinesis). But I have not yet explained the meaning of this latter word, which is just iesis (going); for the letter eta was not in use among the ancients, who only employed epsilon; and the root is kiein, which is a foreign form, the same as ienai. And the old word kinesis will be correctly given as iesis in corresponding modern letters. Assuming this foreign root kiein, and allowing for the change of the eta and the insertion of the nu, we have kinesis, which should have been kieinsis or eisis; and stasis is the negative of ienai (or eisis), and has been improved into stasis. Now the letter rho, as I was saying, appeared to the imposer of names an excellent instrument for the expression of motion; and he frequently uses the letter for this purpose: for example, in the actual words rein and roe he represents motion by rho; also in the words tromos (trembling), trachus (rugged); and again, in words such as krouein (strike), thrauein (crush), ereikein (bruise), thruptein (break), kermatixein (crumble), rumbein (whirl): of all these sorts of movements he generally finds an expression in the letter R, because, as I imagine, he had observed that the tongue was most agitated and least at rest in the pronunciation of this letter, which he therefore used in order to express motion, just as by the letter iota he expresses the subtle elements which pass through all things. This is why he uses the letter iota as imitative of motion, ienai, iesthai. And there is another class of letters, phi, psi, sigma, and xi, of which the pronunciation is accompanied by great expenditure of breath; these are used in the imitation of such notions as psuchron (shivering), xeon (seething), seiesthai, (to be shaken), seismos (shock), and are always introduced by the giver of names when he wants to imitate what is phusodes (windy). He seems to have thought that the closing and pressure of the tongue in the utterance of delta and tau was expressive of binding and rest in a place: he further observed the liquid movement of lambda, in the pronunciation of which the tongue slips, and in this he found the expression of smoothness, as in leios (level), and in the word oliothanein (to slip) itself, liparon (sleek), in the word kollodes (gluey), and the like: the heavier sound of gamma detained the slipping tongue, and the union of the two gave the notion of a glutinous clammy nature, as in glischros, glukus, gloiodes. The nu he observed to be sounded from within, and therefore to have a notion of inwardness; hence he introduced the sound in endos and entos: alpha he assigned to the expression of size, and nu of length, because they are great letters: omicron was the sign of roundness, and therefore there is plenty of omicron mixed up in the word goggulon (round). Thus did the legislator, reducing all things into letters and syllables, and impressing on them names and signs, and out of them by imitation compounding other signs. That is my view, Hermogenes, of the truth of names; but I should like to hear what Cratylus has more to say.

HERMOGENES: But, Socrates, as I was telling you before, Cratylus mystifies me; he says that there is a fitness of names, but he never explains what is this fitness, so that I cannot tell whether his obscurity is intended or not. Tell me now, Cratylus, here in the presence of Socrates, do you agree in what Socrates has been saying about names, or have you something better of your own? and if you have, tell me what your view is, and then you will either learn of Socrates, or Socrates and I will learn of you.

CRATYLUS: Well, but surely, Hermogenes, you do not suppose that you can learn, or I explain, any subject of importance all in a moment; at any rate, not such a subject as language, which is, perhaps, the very greatest of all.

HERMOGENES: No, indeed; but, as Hesiod says, and I agree with him, 'to add little to little' is worth while. And, therefore, if you think that you can add anything at all, however small, to our knowledge, take a little trouble and oblige Socrates, and me too, who certainly have a claim upon you.

SOCRATES: I am by no means positive, Cratylus, in the view which Hermogenes and myself have worked out; and therefore do not hesitate to say what you think, which if it be better than my own view I shall gladly accept. And I should not be at all surprized to find that you have found some better notion. For you have evidently reflected on these matters and have had teachers, and if you have really a better theory of the truth of names, you may count me in the number of your disciples.

CRATYLUS: You are right, Socrates, in saying that I have made a study of these matters, and I might possibly convert you into a disciple. But I fear that the opposite is more probable, and I already find myself moved to say to you what Achilles in the 'Prayers' says to Ajax,—

'Illustrious Ajax, son of Telamon, lord of the people, You appear to have spoken in all things much to my mind.'

And you, Socrates, appear to me to be an oracle, and to give answers much to my mind, whether you are inspired by Euthyphro, or whether some Muse may have long been an inhabitant of your breast, unconsciously to yourself.

SOCRATES: Excellent Cratylus, I have long been wondering at my own wisdom; I cannot trust myself. And I think that I ought to stop and ask myself What am I saying? for there is nothing worse than self-deception—when the deceiver is always at home and always with you—it is quite terrible, and therefore I ought often to retrace my steps and endeavour to 'look fore and aft,' in the words of the aforesaid Homer. And now let me see; where are we? Have we not been saying that the correct name indicates the nature of the thing:—has this proposition been sufficiently proven?

CRATYLUS: Yes, Socrates, what you say, as I am disposed to think, is quite true.

SOCRATES: Names, then, are given in order to instruct?

CRATYLUS: Certainly.

SOCRATES: And naming is an art, and has artificers?

CRATYLUS: Yes.

SOCRATES: And who are they?

CRATYLUS: The legislators, of whom you spoke at first.

SOCRATES: And does this art grow up among men like other arts? Let me explain what I mean: of painters, some are better and some worse?

CRATYLUS: Yes.

SOCRATES: The better painters execute their works, I mean their figures, better, and the worse execute them worse; and of builders also, the better sort build fairer houses, and the worse build them worse.

CRATYLUS: True.

SOCRATES: And among legislators, there are some who do their work better and some worse?

CRATYLUS: No; there I do not agree with you.

SOCRATES: Then you do not think that some laws are better and others worse?

CRATYLUS: No, indeed.

SOCRATES: Or that one name is better than another?

CRATYLUS: Certainly not.

SOCRATES: Then all names are rightly imposed?

CRATYLUS: Yes, if they are names at all.

SOCRATES: Well, what do you say to the name of our friend Hermogenes, which was mentioned before:—assuming that he has nothing of the nature of Hermes in him, shall we say that this is a wrong name, or not his name at all?

CRATYLUS: I should reply that Hermogenes is not his name at all, but only appears to be his, and is really the name of somebody else, who has the nature which corresponds to it.

SOCRATES: And if a man were to call him Hermogenes, would he not be even speaking falsely? For there may be a doubt whether you can call him Hermogenes, if he is not.

CRATYLUS: What do you mean?

SOCRATES: Are you maintaining that falsehood is impossible? For if this is your meaning I should answer, that there have been plenty of liars in all ages.

CRATYLUS: Why, Socrates, how can a man say that which is not?—say something and yet say nothing? For is not falsehood saying the thing which is not?

SOCRATES: Your argument, friend, is too subtle for a man of my age. But I should like to know whether you are one of those philosophers who think that falsehood may be spoken but not said?

CRATYLUS: Neither spoken nor said.

SOCRATES: Nor uttered nor addressed? For example: If a person, saluting you in a foreign country, were to take your hand and say: 'Hail, Athenian stranger, Hermogenes, son of Smicrion'—these words, whether spoken, said, uttered, or addressed, would have no application to you but only to our friend Hermogenes, or perhaps to nobody at all?

CRATYLUS: In my opinion, Socrates, the speaker would only be talking nonsense.

SOCRATES: Well, but that will be quite enough for me, if you will tell me whether the nonsense would be true or false, or partly true and partly false:—which is all that I want to know.

CRATYLUS: I should say that he would be putting himself in motion to no purpose; and that his words would be an unmeaning sound like the noise of hammering at a brazen pot.

SOCRATES: But let us see, Cratylus, whether we cannot find a meeting-point, for you would admit that the name is not the same with the thing named?

CRATYLUS: I should.

SOCRATES: And would you further acknowledge that the name is an imitation of the thing?

CRATYLUS: Certainly.

SOCRATES: And you would say that pictures are also imitations of things, but in another way?

CRATYLUS: Yes.

SOCRATES: I believe you may be right, but I do not rightly understand you. Please to say, then, whether both sorts of imitation (I mean both pictures or words) are not equally attributable and applicable to the things of which they are the imitation.

CRATYLUS: They are.

SOCRATES: First look at the matter thus: you may attribute the likeness of the man to the man, and of the woman to the woman; and so on?

CRATYLUS: Certainly.

SOCRATES: And conversely you may attribute the likeness of the man to the woman, and of the woman to the man?

CRATYLUS: Very true.

SOCRATES: And are both modes of assigning them right, or only the first?

CRATYLUS: Only the first.

SOCRATES: That is to say, the mode of assignment which attributes to each that which belongs to them and is like them?

CRATYLUS: That is my view.

SOCRATES: Now then, as I am desirous that we being friends should have a good understanding about the argument, let me state my view to you: the first mode of assignment, whether applied to figures or to names, I call right, and when applied to names only, true as well as right; and the other mode of giving and assigning the name which is unlike, I call wrong, and in the case of names, false as well as wrong.

CRATYLUS: That may be true, Socrates, in the case of pictures; they may be wrongly assigned; but not in the case of names—they must be always right.

SOCRATES: Why, what is the difference? May I not go to a man and say to him, 'This is your picture,' showing him his own likeness, or perhaps the likeness of a woman; and when I say 'show,' I mean bring before the sense of sight.

CRATYLUS: Certainly.

SOCRATES: And may I not go to him again, and say, 'This is your name'?—for the name, like the picture, is an imitation. May I not say to him—'This is your name'? and may I not then bring to his sense of hearing the imitation of himself, when I say, 'This is a man'; or of a female of the human species, when I say, 'This is a woman,' as the case may be? Is not all that quite possible?

CRATYLUS: I would fain agree with you, Socrates; and therefore I say, Granted.

SOCRATES: That is very good of you, if I am right, which need hardly be disputed at present. But if I can assign names as well as pictures to objects, the right assignment of them we may call truth, and the wrong assignment of them falsehood. Now if there be such a wrong assignment of names, there may also be a wrong or inappropriate assignment of verbs; and if of names and verbs then of the sentences, which are made up of them. What do you say, Cratylus?

CRATYLUS: I agree; and think that what you say is very true.

SOCRATES: And further, primitive nouns may be compared to pictures, and in pictures you may either give all the appropriate colours and figures, or you may not give them all—some may be wanting; or there may be too many or too much of them—may there not?

CRATYLUS: Very true.

SOCRATES: And he who gives all gives a perfect picture or figure; and he who takes away or adds also gives a picture or figure, but not a good one.

CRATYLUS: Yes.

SOCRATES: In like manner, he who by syllables and letters imitates the nature of things, if he gives all that is appropriate will produce a good image, or in other words a name; but if he subtracts or perhaps adds a little, he will make an image but not a good one; whence I infer that some names are well and others ill made.

CRATYLUS: That is true.

SOCRATES: Then the artist of names may be sometimes good, or he may be bad?

CRATYLUS: Yes.

SOCRATES: And this artist of names is called the legislator?

CRATYLUS: Yes.

SOCRATES: Then like other artists the legislator may be good or he may be bad; it must surely be so if our former admissions hold good?

CRATYLUS: Very true, Socrates; but the case of language, you see, is different; for when by the help of grammar we assign the letters alpha or beta, or any other letters to a certain name, then, if we add, or subtract, or misplace a letter, the name which is written is not only written wrongly, but not written at all; and in any of these cases becomes other than a name.

SOCRATES: But I doubt whether your view is altogether correct, Cratylus.

CRATYLUS: How so?

SOCRATES: I believe that what you say may be true about numbers, which must be just what they are, or not be at all; for example, the number ten at once becomes other than ten if a unit be added or subtracted, and so of any other number: but this does not apply to that which is qualitative or to anything which is represented under an image. I should say rather that the image, if expressing in every point the entire reality, would no longer be an image. Let us suppose the existence of two objects: one of them shall be Cratylus, and the other the image of Cratylus; and we will suppose, further, that some God makes not only a representation such as a painter would make of your outward form and colour, but also creates an inward organization like yours, having the same warmth and softness; and into this infuses motion, and soul, and mind, such as you have, and in a word copies all your qualities, and places them by you in another form; would you say that this was Cratylus and the image of Cratylus, or that there were two Cratyluses?

CRATYLUS: I should say that there were two Cratyluses.

SOCRATES: Then you see, my friend, that we must find some other principle of truth in images, and also in names; and not insist that an image is no longer an image when something is added or subtracted. Do you not perceive that images are very far from having qualities which are the exact counterpart of the realities which they represent?

CRATYLUS: Yes, I see.

SOCRATES: But then how ridiculous would be the effect of names on things, if they were exactly the same with them! For they would be the doubles of them, and no one would be able to determine which were the names and which were the realities.

CRATYLUS: Quite true.

SOCRATES: Then fear not, but have the courage to admit that one name may be correctly and another incorrectly given; and do not insist that the name shall be exactly the same with the thing; but allow the occasional substitution of a wrong letter, and if of a letter also of a noun in a sentence, and if of a noun in a sentence also of a sentence which is not appropriate to the matter, and acknowledge that the thing may be named, and described, so long as the general character of the thing which you are describing is retained; and this, as you will remember, was remarked by Hermogenes and myself in the particular instance of the names of the letters.

CRATYLUS: Yes, I remember.

SOCRATES: Good; and when the general character is preserved, even if some of the proper letters are wanting, still the thing is signified;—well, if all the letters are given; not well, when only a few of them are given. I think that we had better admit this, lest we be punished like travellers in Aegina who wander about the street late at night: and be likewise told by truth herself that we have arrived too late; or if not, you must find out some new notion of correctness of names, and no longer maintain that a name is the expression of a thing in letters or syllables; for if you say both, you will be inconsistent with yourself.

CRATYLUS: I quite acknowledge, Socrates, what you say to be very reasonable.

SOCRATES: Then as we are agreed thus far, let us ask ourselves whether a name rightly imposed ought not to have the proper letters.

CRATYLUS: Yes.

SOCRATES: And the proper letters are those which are like the things?

CRATYLUS: Yes.

SOCRATES: Enough then of names which are rightly given. And in names which are incorrectly given, the greater part may be supposed to be made up of proper and similar letters, or there would be no likeness; but there will be likewise a part which is improper and spoils the beauty and formation of the word: you would admit that?

CRATYLUS: There would be no use, Socrates, in my quarrelling with you, since I cannot be satisfied that a name which is incorrectly given is a name at all.

SOCRATES: Do you admit a name to be the representation of a thing?

CRATYLUS: Yes, I do.

SOCRATES: But do you not allow that some nouns are primitive, and some derived?

CRATYLUS: Yes, I do.

SOCRATES: Then if you admit that primitive or first nouns are representations of things, is there any better way of framing representations than by assimilating them to the objects as much as you can; or do you prefer the notion of Hermogenes and of many others, who say that names are conventional, and have a meaning to those who have agreed about them, and who have previous knowledge of the things intended by them, and that convention is the only principle; and whether you abide by our present convention, or make a new and opposite one, according to which you call small great and great small—that, they would say, makes no difference, if you are only agreed. Which of these two notions do you prefer?

CRATYLUS: Representation by likeness, Socrates, is infinitely better than representation by any chance sign.

SOCRATES: Very good: but if the name is to be like the thing, the letters out of which the first names are composed must also be like things. Returning to the image of the picture, I would ask, How could any one ever compose a picture which would be like anything at all, if there were not pigments in nature which resembled the things imitated, and out of which the picture is composed?

CRATYLUS: Impossible.

SOCRATES: No more could names ever resemble any actually existing thing, unless the original elements of which they are compounded bore some degree of resemblance to the objects of which the names are the imitation: And the original elements are letters?

CRATYLUS: Yes.

SOCRATES: Let me now invite you to consider what Hermogenes and I were saying about sounds. Do you agree with me that the letter rho is expressive of rapidity, motion, and hardness? Were we right or wrong in saying so?

CRATYLUS: I should say that you were right.

SOCRATES: And that lamda was expressive of smoothness, and softness, and the like?

CRATYLUS: There again you were right.

SOCRATES: And yet, as you are aware, that which is called by us sklerotes, is by the Eretrians called skleroter.

CRATYLUS: Very true.

SOCRATES: But are the letters rho and sigma equivalents; and is there the same significance to them in the termination rho, which there is to us in sigma, or is there no significance to one of us?

CRATYLUS: Nay, surely there is a significance to both of us.

SOCRATES: In as far as they are like, or in as far as they are unlike?

CRATYLUS: In as far as they are like.

SOCRATES: Are they altogether alike?

CRATYLUS: Yes; for the purpose of expressing motion.

SOCRATES: And what do you say of the insertion of the lamda? for that is expressive not of hardness but of softness.

CRATYLUS: Why, perhaps the letter lamda is wrongly inserted, Socrates, and should be altered into rho, as you were saying to Hermogenes and in my opinion rightly, when you spoke of adding and subtracting letters upon occasion.

SOCRATES: Good. But still the word is intelligible to both of us; when I say skleros (hard), you know what I mean.

CRATYLUS: Yes, my dear friend, and the explanation of that is custom.

SOCRATES: And what is custom but convention? I utter a sound which I understand, and you know that I understand the meaning of the sound: this is what you are saying?

CRATYLUS: Yes.

SOCRATES: And if when I speak you know my meaning, there is an indication given by me to you?

CRATYLUS: Yes.

SOCRATES: This indication of my meaning may proceed from unlike as well as from like, for example in the lamda of sklerotes. But if this is true, then you have made a convention with yourself, and the correctness of a name turns out to be convention, since letters which are unlike are indicative equally with those which are like, if they are sanctioned by custom and convention. And even supposing that you distinguish custom from convention ever so much, still you must say that the signification of words is given by custom and not by likeness, for custom may indicate by the unlike as well as by the like. But as we are agreed thus far, Cratylus (for I shall assume that your silence gives

consent), then custom and convention must be supposed to contribute to the indication of our thoughts; for suppose we take the instance of number, how can you ever imagine, my good friend, that you will find names resembling every individual number, unless you allow that which you term convention and agreement to have authority in determining the correctness of names? I quite agree with you that words should as far as possible resemble things; but I fear that this dragging in of resemblance, as Hermogenes says, is a shabby thing, which has to be supplemented by the mechanical aid of convention with a view to correctness; for I believe that if we could always, or almost always, use likenesses, which are perfectly appropriate, this would be the most perfect state of language; as the opposite is the most imperfect. But let me ask you, what is the force of names, and what is the use of them?

CRATYLUS: The use of names, Socrates, as I should imagine, is to inform: the simple truth is, that he who knows names knows also the things which are expressed by them.

SOCRATES: I suppose you mean to say, Cratylus, that as the name is, so also is the thing; and that he who knows the one will also know the other, because they are similars, and all similars fall under the same art or science; and therefore you would say that he who knows names will also know things.

CRATYLUS: That is precisely what I mean.

SOCRATES: But let us consider what is the nature of this information about things which, according to you, is given us by names. Is it the best sort of information? or is there any other? What do you say?

CRATYLUS: I believe that to be both the only and the best sort of information about them; there can be no other.

SOCRATES: But do you believe that in the discovery of them, he who discovers the names discovers also the things; or is this only the method of instruction, and is there some other method of enquiry and discovery.

CRATYLUS: I certainly believe that the methods of enquiry and discovery are of the same nature as instruction.

SOCRATES: Well, but do you not see, Cratylus, that he who follows names in the search after things, and analyses their meaning, is in great danger of being deceived?

CRATYLUS: How so?

SOCRATES: Why clearly he who first gave names gave them according to his conception of the things which they signified—did he not?

CRATYLUS: True.

SOCRATES: And if his conception was erroneous, and he gave names according to his conception, in what position shall we who are his followers find ourselves? Shall we not be deceived by him?

CRATYLUS: But, Socrates, am I not right in thinking that he must surely have known; or else, as I was saying, his names would not be names at all? And you have a clear proof that he has not missed the truth, and the proof is—that he is perfectly consistent. Did you ever observe in speaking that all the words which you utter have a common character and purpose?

SOCRATES: But that, friend Cratylus, is no answer. For if he did begin in error, he may have forced the remainder into agreement with the original error and with himself; there would be nothing strange in this, any more than in geometrical diagrams, which have often a slight and invisible flaw in the first part of the process, and are consistently mistaken in the long deductions which follow. And this is the reason why every man should expend his chief thought and attention on the consideration of his first principles:—are they or are they not rightly laid down? and when he has duly sifted them, all the rest will follow. Now I should be astonished to find that names are really consistent. And here let us revert to our former discussion: Were we not saying that all things are in motion and progress and flux, and that this idea of motion is expressed by names? Do you not conceive that to be the meaning of them?

CRATYLUS: Yes; that is assuredly their meaning, and the true meaning.

SOCRATES: Let us revert to episteme (knowledge) and observe how ambiguous this word is, seeming rather to signify stopping the soul at things than going round with them; and therefore we should leave the beginning as at present, and not reject the epsilon, but make an insertion of an iota instead of an epsilon (not pioteme, but epiisteme). Take another example: bebaion (sure) is clearly the expression of station and position, and not of motion. Again, the word istoria (enquiry) bears upon the face of it the stopping (istanai) of the stream; and the word piston (faithful) certainly indicates cessation of motion; then, again, mneme (memory), as any one may see, expresses rest in the soul, and not motion. Moreover, words such as amartia and sumphora, which have a bad sense, viewed in the light of their etymologies will be the same as sunesis and episteme and other words which have a good sense (compare omartein, sunienai, epesthai, sumpheresthai); and much the same may be said of amathia and akolasia, for amathia may be explained as e ama theo iontos poreia, and akolasia as e akolouthia tois pragmasin. Thus the names which in these instances we find to have the worst sense, will turn out to be framed on the same principle as those which have the best. And any one I believe who would take the trouble might find many other examples in which the giver of names indicates, not that things are in motion or progress, but that they are at rest; which is the opposite of motion.

CRATYLUS: Yes, Socrates, but observe; the greater number express motion.

SOCRATES: What of that, Cratylus? Are we to count them like votes? and is correctness of names the voice of the majority? Are we to say of whichever sort there are most, those are the true ones?

CRATYLUS: No; that is not reasonable.

SOCRATES: Certainly not. But let us have done with this question and proceed to another, about which I should like to know whether you think with me. Were we not lately acknowledging that the first givers of names in states, both Hellenic and barbarous, were the legislators, and that the art which gave names was the art of the legislator?

CRATYLUS: Quite true.

SOCRATES: Tell me, then, did the first legislators, who were the givers of the first names, know or not know the things which they named?

CRATYLUS: They must have known, Socrates.

SOCRATES: Why, yes, friend Cratylus, they could hardly have been ignorant.

CRATYLUS: I should say not.

SOCRATES: Let us return to the point from which we digressed. You were saying, if you remember, that he who gave names must have known the things which he named; are you still of that opinion?

CRATYLUS: I am.

SOCRATES: And would you say that the giver of the first names had also a knowledge of the things which he named?

CRATYLUS: I should.

SOCRATES: But how could he have learned or discovered things from names if the primitive names were not yet given? For, if we are correct in our view, the only way of learning and discovering things, is either to discover names for ourselves or to learn them from others.

CRATYLUS: I think that there is a good deal in what you say, Socrates.

SOCRATES: But if things are only to be known through names, how can we suppose that the givers of names had knowledge, or were legislators before there were names at all, and therefore before they could have known them?

CRATYLUS: I believe, Socrates, the true account of the matter to be, that a power more than human gave things their first names, and that the names which are thus given are necessarily their true names.

SOCRATES: Then how came the giver of the names, if he was an inspired being or God, to contradict himself? For were we not saying just now that he made some names expressive of rest and others of motion? Were we mistaken?

CRATYLUS: But I suppose one of the two not to be names at all.

SOCRATES: And which, then, did he make, my good friend; those which are expressive of rest, or those which are expressive of motion? This is a point which, as I said before, cannot be determined by counting them.

CRATYLUS: No; not in that way, Socrates.

SOCRATES: But if this is a battle of names, some of them asserting that they are like the truth, others contending that THEY are, how or by what criterion are we to decide between them? For there are no other names to which appeal can be made, but obviously recourse must be had to another standard which, without employing names, will make clear which of the two are right; and this must be a standard which shows the truth of things.

CRATYLUS: I agree.

SOCRATES: But if that is true, Cratylus, then I suppose that things may be known without names?

CRATYLUS: Clearly.

SOCRATES: But how would you expect to know them? What other way can there be of knowing them, except the true and natural way, through their affinities, when they are akin to each other, and through themselves? For that which is other and different from them must signify something other and different from them.

CRATYLUS: What you are saying is, I think, true.

SOCRATES: Well, but reflect; have we not several times acknowledged that names rightly given are the likenesses and images of the things which they name?

CRATYLUS: Yes.

SOCRATES: Let us suppose that to any extent you please you can learn things through the medium of names, and suppose also that you can learn them from the things themselves—which is likely to be the nobler and clearer way; to learn of the image, whether the image and the truth of which the image is the expression have been rightly conceived, or to learn of the truth whether the truth and the image of it have been duly executed?

CRATYLUS: I should say that we must learn of the truth.

SOCRATES: How real existence is to be studied or discovered is, I suspect, beyond you and me. But we may admit so much, that the knowledge of things is not to be derived from names. No; they must be studied and investigated in themselves.

CRATYLUS: Clearly, Socrates.

SOCRATES: There is another point. I should not like us to be imposed upon by the appearance of such a multitude of names, all tending in the same direction. I myself do not deny that the givers of names did really give them under the idea that all things were in motion and flux; which was their sincere but, I think, mistaken opinion. And having fallen into a kind of whirlpool themselves, they are carried round, and want to drag us in after them. There is a matter, master Cratylus, about which I often dream, and should like to ask your opinion: Tell me, whether there is or is not any absolute beauty or good, or any other absolute existence?

CRATYLUS: Certainly, Socrates, I think so.

SOCRATES: Then let us seek the true beauty: not asking whether a face is fair, or anything of that sort, for all such things appear to be in a flux; but let us ask whether the true beauty is not always beautiful.

CRATYLUS: Certainly.

SOCRATES: And can we rightly speak of a beauty which is always passing away, and is first this and then that; must not the same thing be born and retire and vanish while the word is in our mouths?

CRATYLUS: Undoubtedly.

SOCRATES: Then how can that be a real thing which is never in the same state? for obviously things which are the same cannot change while they remain the same; and if they are always the same and in the same state, and never depart from their original form, they can never change or be moved.

CRATYLUS: Certainly they cannot.

SOCRATES: Nor yet can they be known by any one; for at the moment that the observer approaches, then they become other and of another nature, so that you cannot get any further in knowing their nature or state, for you cannot know that which has no state.

CRATYLUS: True.

SOCRATES: Nor can we reasonably say, Cratylus, that there is knowledge at all, if everything is in a state of transition and there is nothing abiding; for knowledge too cannot continue to be knowledge unless continuing always to abide and exist. But if the very nature of knowledge changes, at the time when the change occurs there will be no knowledge; and if the transition is always going on, there will always be no knowledge, and, according to this view, there will be no one to know and nothing to be known: but if that which knows and that which is known exists ever, and the beautiful and the good and every other thing also exist, then I do not think that they can resemble a process or flux, as we were just now supposing. Whether there is this eternal nature in things, or whether the truth is what Heracleitus and his followers and many others say, is a question hard to determine; and no man of sense will like to put himself or the education of his mind in the power of names: neither will he so far trust names or the givers of names as to be confident in any knowledge which condemns himself and other existences to an unhealthy state of unreality; he will not believe that all things leak like a pot, or imagine that the world is a man who has a running at the nose. This may be true, Cratylus, but is also very likely to be untrue; and therefore I would not have you be too easily persuaded of it. Reflect well and like a man, and do not easily accept such a doctrine; for you are young and of an age to learn. And when you have found the truth, come and tell me.

CRATYLUS: I will do as you say, though I can assure you, Socrates, that I have been considering the matter already, and the result of a great deal of trouble and consideration is that I incline to Heracleitus.

SOCRATES: Then, another day, my friend, when you come back, you shall give me a lesson; but at present, go into the country, as you are intending, and Hermogenes shall set you on your way.

CRATYLUS: Very good, Socrates; I hope, however, that you will continue to think about these things yourself.

CRITIAS

by Plato

Translated by Benjamin Jowett

INTRODUCTION AND ANALYSIS.

The Critias is a fragment which breaks off in the middle of a sentence. It was designed to be the second part of a trilogy, which, like the other great Platonic trilogy of the Sophist, Statesman, Philosopher, was never completed. Timaeus had brought down the origin of the world to the creation of man, and the dawn of history was now to succeed the philosophy of nature. The Critias is also connected with the Republic. Plato, as he has already told us (Tim.), intended to represent the ideal state engaged in a patriotic conflict. This mythical conflict is prophetic or symbolical of the struggle of Athens and Persia, perhaps in some degree also of the wars of the Greeks and Carthaginians, in the same way that the Persian is prefigured by the Trojan war to the mind of Herodotus, or as the narrative of the first part of the Aeneid is intended by Virgil to foreshadow the wars of Carthage and Rome. The small number of the primitive Athenian citizens (20,000), 'which is about their present number' (Crit.), is evidently designed to contrast with the myriads and barbaric array of the Atlantic hosts. The passing remark in the Timaeus that Athens was left alone in the struggle, in which she conquered and became the liberator of Greece, is also an allusion to the later history. Hence we may safely conclude that the entire narrative is due to the imagination of Plato, who has used the name of Solon and introduced the Egyptian priests to give verisimilitude to his story. To the Greek such a tale, like that of the earth-born men, would have seemed perfectly accordant with the character of his mythology, and not more marvellous than the wonders of the East narrated by Herodotus and others: he might have been deceived into believing it. But it appears strange that later ages should have been imposed upon by the fiction. As many attempts have been made to find the great island of Atlantis, as to discover the country of the lost tribes. Without regard to the description of Plato, and without a suspicion that the whole narrative is a fabrication, interpreters have looked for the spot in every part of the globe, America, Arabia Felix, Ceylon, Palestine, Sardinia, Sweden.

Timaeus concludes with a prayer that his words may be acceptable to the God whom he has revealed, and Critias, whose turn follows, begs that a larger measure of indulgence may be conceded to him, because he has to speak of men whom we know and not of gods whom we do not know. Socrates readily grants his request, and anticipating that Hermocrates will make a similar petition, extends by anticipation a like indulgence to him.

Critias returns to his story, professing only to repeat what Solon was told by the priests. The war of which he was about to speak had occurred 9000 years ago. One of the combatants was the city of Athens, the other was the great island of Atlantis. Critias proposes to speak of these rival powers first of all, giving to Athens the precedence; the various tribes of Greeks and barbarians who took part in the war will be dealt with as they successively appear on the scene.

In the beginning the gods agreed to divide the earth by lot in a friendly manner, and when they had made the allotment they settled their several countries, and were the shepherds or rather the pilots of mankind, whom they guided by persuasion, and not by force. Hephaestus and Athena, brother and sister deities, in mind and art united, obtained as their lot the land of Attica, a land suited to the growth of virtue and wisdom; and there they settled a brave race of children of the soil, and taught them how to order the state. Some of their names, such as Cecrops, Erechtheus, Erichthonius, and Erysichthon, were preserved and adopted in later times, but the memory of their deeds has passed away; for there have since been many deluges, and the remnant who survived in the mountains were ignorant of the art of writing, and during many generations were wholly devoted to acquiring the

means of life...And the armed image of the goddess which was dedicated by the ancient Athenians is an evidence to other ages that men and women had in those days, as they ought always to have, common virtues and pursuits. There were various classes of citizens, including handicraftsmen and husbandmen and a superior class of warriors who dwelt apart, and were educated, and had all things in common, like our guardians. Attica in those days extended southwards to the Isthmus, and inland to the heights of Parnes and Cithaeron, and between them and the sea included the district of Oropus. The country was then, as what remains of it still is, the most fertile in the world, and abounded in rich plains and pastures. But in the course of ages much of the soil was washed away and disappeared in the deep sea. And the inhabitants of this fair land were endowed with intelligence and the love of beauty.

The Acropolis of the ancient Athens extended to the Ilissus and Eridanus, and included the Pnyx, and the Lycabettus on the opposite side to the Pnyx, having a level surface and deep soil. The side of the hill was inhabited by craftsmen and husbandmen; and the warriors dwelt by themselves on the summit, around the temples of Hephaestus and Athene, in an enclosure which was like the garden of a single house. In winter they retired into houses on the north of the hill, in which they held their syssitia. These were modest dwellings, which they bequeathed unaltered to their children's children. In summer time the south side was inhabited by them, and then they left their gardens and dining-halls. In the midst of the Acropolis was a fountain, which gave an abundant supply of cool water in summer and warm in winter; of this there are still some traces. They were careful to preserve the number of fighting men and women at 20,000, which is equal to that of the present military force. And so they passed their lives as guardians of the citizens and leaders of the Hellenes. They were a just and famous race, celebrated for their beauty and virtue all over Europe and Asia.

And now I will speak to you of their adversaries, but first I ought to explain that the Greek names were given to Solon in an Egyptian form, and he enquired their meaning and translated them. His manuscript was left with my grandfather Dropides, and is now in my possession...In the division of the earth Poseidon obtained as his portion the island of Atlantis, and there he begat children whose mother was a mortal. Towards the sea and in the centre of the island there was a very fair and fertile plain, and near the centre, about fifty stadia from the plain, there was a low mountain in which dwelt a man named Evenor and his wife Leucippe, and their daughter Cleito, of whom Poseidon became enamoured. He to secure his love enclosed the mountain with rings or zones varying in size, two of land and three of sea, which his divine power readily enabled him to excavate and fashion, and, as there was no shipping in those days, no man could get into the place. To the interior island he conveyed under the earth springs of water hot and cold, and supplied the land with all things needed for the life of man. Here he begat a family consisting of five pairs of twin male children. The eldest was Atlas, and him he made king of the centre island, while to his twin brother, Eumelus, or Gadeirus, he assigned that part of the country which was nearest the Straits. The other brothers he made chiefs over the rest of the island. And their kingdom extended as far as Egypt and Tyrrhenia. Now Atlas had a fair posterity, and great treasures derived from mines—among them that precious metal orichalcum; and there was abundance of wood, and herds of elephants, and pastures for animals of all kinds, and fragrant herbs, and grasses, and trees bearing fruit. These they used, and employed themselves in constructing their temples, and palaces, and harbours, and docks, in the following manner:—First, they bridged over the zones of sea, and made a way to and from the royal palace which they built in the centre island. This ancient palace was ornamented by successive generations; and they dug a canal which passed through the zones of land from the island to the sea. The zones of earth were

surrounded by walls made of stone of divers colours, black and white and red, which they sometimes intermingled for the sake of ornament; and as they quarried they hollowed out beneath the edges of the zones double docks having roofs of rock. The outermost of the walls was coated with brass, the second with tin, and the third, which was the wall of the citadel, flashed with the red light of orichalcum. In the interior of the citadel was a holy temple, dedicated to Cleito and Poseidon, and surrounded by an enclosure of gold, and there was Poseidon's own temple, which was covered with silver, and the pinnacles with gold. The roof was of ivory, adorned with gold and silver and orichalcum, and the rest of the interior was lined with orichalcum. Within was an image of the god standing in a chariot drawn by six winged horses, and touching the roof with his head; around him were a hundred Nereids, riding on dolphins. Outside the temple were placed golden statues of all the descendants of the ten kings and of their wives; there was an altar too, and there were palaces, corresponding to the greatness and glory both of the kingdom and of the temple.

Also there were fountains of hot and cold water, and suitable buildings surrounding them, and trees, and there were baths both of the kings and of private individuals, and separate baths for women, and also for cattle. The water from the baths was carried to the grove of Poseidon, and by aqueducts over the bridges to the outer circles. And there were temples in the zones, and in the larger of the two there was a racecourse for horses, which ran all round the island. The guards were distributed in the zones according to the trust reposed in them; the most trusted of them were stationed in the citadel. The docks were full of triremes and stores. The land between the harbour and the sea was surrounded by a wall, and was crowded with dwellings, and the harbour and canal resounded with the din of human voices.

The plain around the city was highly cultivated and sheltered from the north by mountains; it was oblong, and where falling out of the straight line followed the circular ditch, which was of an incredible depth. This depth received the streams which came down from the mountains, as well as the canals of the interior, and found a way to the sea. The entire country was divided into sixty thousand lots, each of which was a square of ten stadia; and the owner of a lot was bound to furnish the sixth part of a war-chariot, so as to make up ten thousand chariots, two horses and riders upon them, a pair of chariot-horses without a seat, and an attendant and charioteer, two hoplites, two archers, two slingers, three stone-shooters, three javelin-men, and four sailors to make up the complement of twelve hundred ships.

Each of the ten kings was absolute in his own city and kingdom. The relations of the different governments to one another were determined by the injunctions of Poseidon, which had been inscribed by the first kings on a column of orichalcum in the temple of Poseidon, at which the kings and princes gathered together and held a festival every fifth and every sixth year alternately. Around the temple ranged the bulls of Poseidon, one of which the ten kings caught and sacrificed, shedding the blood of the victim over the inscription, and vowing not to transgress the laws of their father Poseidon. When night came, they put on azure robes and gave judgment against offenders. The most important of their laws related to their dealings with one another. They were not to take up arms against one another, and were to come to the rescue if any of their brethren were attacked. They were to deliberate in common about war, and the king was not to have the power of life and death over his kinsmen, unless he had the assent of the majority.

For many generations, as tradition tells, the people of Atlantis were obedient to the laws and to the gods, and practised gentleness and wisdom in their intercourse with one another. They knew that they could only have the true use of riches by not caring about them. But gradually the divine portion of their souls became diluted with too much of the mortal admixture, and they began to degenerate, though to the outward eye they appeared glorious as ever at the very time when they were filled with all iniquity. The all-seeing Zeus, wanting to punish them, held a council of the gods, and when he had called them together, he spoke as follows:—

No one knew better than Plato how to invent 'a noble lie.' Observe (1) the innocent declaration of Socrates, that the truth of the story is a great advantage: (2) the manner in which traditional names and indications of geography are intermingled ('Why, here be truths!'): (3) the extreme minuteness with which the numbers are given, as in the Old Epic poetry: (4) the ingenious reason assigned for the Greek names occurring in the Egyptian tale: (5) the remark that the armed statue of Athena indicated the common warrior life of men and women: (6) the particularity with which the third deluge before that of Deucalion is affirmed to have been the great destruction: (7) the happy guess that great geological changes have been effected by water: (8) the indulgence of the prejudice against sailing beyond the Columns, and the popular belief of the shallowness of the ocean in that part: (9) the confession that the depth of the ditch in the Island of Atlantis was not to be believed, and 'yet he could only repeat what he had heard', compared with the statement made in an earlier passage that Poseidon, being a God, found no difficulty in contriving the water-supply of the centre island: (10) the mention of the old rivalry of Poseidon and Athene, and the creation of the first inhabitants out of the soil. Plato here, as elsewhere, ingeniously gives the impression that he is telling the truth which mythology had corrupted.

The world, like a child, has readily, and for the most part unhesitatingly, accepted the tale of the Island of Atlantis. In modern times we hardly seek for traces of the submerged continent; but even Mr. Grote is inclined to believe in the Egyptian poem of Solon of which there is no evidence in antiquity; while others, like Martin, discuss the Egyptian origin of the legend, or like M. de Humboldt, whom he quotes, are disposed to find in it a vestige of a widely-spread tradition. Others, adopting a different vein of reflection, regard the Island of Atlantis as the anticipation of a still greater island—the Continent of America. 'The tale,' says M. Martin, 'rests upon the authority of the Egyptian priests; and the Egyptian priests took a pleasure in deceiving the Greeks.' He never appears to suspect that there is a greater deceiver or magician than the Egyptian priests, that is to say, Plato himself, from the dominion of whose genius the critic and natural philosopher of modern times are not wholly emancipated. Although worthless in respect of any result which can be attained by them, discussions like those of M. Martin (Timee) have an interest of their own, and may be compared to the similar discussions regarding the Lost Tribes (2 Esdras), as showing how the chance word of some poet or philosopher has given birth to endless religious or historical enquiries. (See Introduction to the Timaeus.)

In contrasting the small Greek city numbering about twenty thousand inhabitants with the barbaric greatness of the island of Atlantis, Plato probably intended to show that a state, such as the ideal Athens, was invincible, though matched against any number of opponents (cp. Rep.). Even in a great empire there might be a degree of virtue and justice, such as the Greeks believed to have existed under the sway of the first Persian kings. But all such empires were liable to degenerate, and soon incurred the anger of the gods. Their Oriental wealth, and splendour of gold and silver, and variety of

colours, seemed also to be at variance with the simplicity of Greek notions. In the island of Atlantis, Plato is describing a sort of Babylonian or Egyptian city, to which he opposes the frugal life of the true Hellenic citizen. It is remarkable that in his brief sketch of them, he idealizes the husbandmen 'who are lovers of honour and true husbandmen,' as well as the warriors who are his sole concern in the Republic; and that though he speaks of the common pursuits of men and women, he says nothing of the community of wives and children.

It is singular that Plato should have prefixed the most detested of Athenian names to this dialogue, and even more singular that he should have put into the mouth of Socrates a panegyric on him (Tim.). Yet we know that his character was accounted infamous by Xenophon, and that the mere acquaintance with him was made a subject of accusation against Socrates. We can only infer that in this, and perhaps in some other cases, Plato's characters have no reference to the actual facts. The desire to do honour to his own family, and the connection with Solon, may have suggested the introduction of his name. Why the Critias was never completed, whether from accident, or from advancing age, or from a sense of the artistic difficulty of the design, cannot be determined.

CRITIAS.

PERSONS OF THE DIALOGUE: Critias, Hermocrates, Timaeus, Socrates.

TIMAEUS: How thankful I am, Socrates, that I have arrived at last, and, like a weary traveller after a long journey, may be at rest! And I pray the being who always was of old, and has now been by me revealed, to grant that my words may endure in so far as they have been spoken truly and acceptably to him; but if unintentionally I have said anything wrong, I pray that he will impose upon me a just retribution, and the just retribution of him who errs is that he should be set right. Wishing, then, to speak truly in future concerning the generation of the gods, I pray him to give me knowledge, which of all medicines is the most perfect and best. And now having offered my prayer I deliver up the argument to Critias, who is to speak next according to our agreement. (Tim.)

CRITIAS: And I, Timaeus, accept the trust, and as you at first said that you were going to speak of high matters, and begged that some forbearance might be shown to you, I too ask the same or

greater forbearance for what I am about to say. And although I very well know that my request may appear to be somewhat ambitious and discourteous, I must make it nevertheless. For will any man of sense deny that you have spoken well? I can only attempt to show that I ought to have more indulgence than you, because my theme is more difficult; and I shall argue that to seem to speak well of the gods to men is far easier than to speak well of men to men: for the inexperience and utter ignorance of his hearers about any subject is a great assistance to him who has to speak of it, and we know how ignorant we are concerning the gods. But I should like to make my meaning clearer, if you will follow me. All that is said by any of us can only be imitation and representation. For if we consider the likenesses which painters make of bodies divine and heavenly, and the different degrees of gratification with which the eye of the spectator receives them, we shall see that we are satisfied with the artist who is able in any degree to imitate the earth and its mountains, and the rivers, and the woods, and the universe, and the things that are and move therein, and further, that knowing nothing precise about such matters, we do not examine or analyze the painting; all that is required is a sort of indistinct and deceptive mode of shadowing them forth. But when a person endeavours to paint the human form we are quick at finding out defects, and our familiar knowledge makes us severe judges of any one who does not render every point of similarity. And we may observe the same thing to happen in discourse; we are satisfied with a picture of divine and heavenly things which has very little likeness to them; but we are more precise in our criticism of mortal and human things. Wherefore if at the moment of speaking I cannot suitably express my meaning, you must excuse me, considering that to form approved likenesses of human things is the reverse of easy. This is what I want to suggest to you, and at the same time to beg, Socrates, that I may have not less, but more indulgence conceded to me in what I am about to say. Which favour, if I am right in asking, I hope that you will be ready to grant.

SOCRATES: Certainly, Critias, we will grant your request, and we will grant the same by anticipation to Hermocrates, as well as to you and Timaeus; for I have no doubt that when his turn comes a little while hence, he will make the same request which you have made. In order, then, that he may provide himself with a fresh beginning, and not be compelled to say the same things over again, let him understand that the indulgence is already extended by anticipation to him. And now, friend Critias, I will announce to you the judgment of the theatre. They are of opinion that the last performer was wonderfully successful, and that you will need a great deal of indulgence before you will be able to take his place.

HERMOCRATES: The warning, Socrates, which you have addressed to him, I must also take to myself. But remember, Critias, that faint heart never yet raised a trophy; and therefore you must go and attack the argument like a man. First invoke Apollo and the Muses, and then let us hear you sound the praises and show forth the virtues of your ancient citizens.

CRITIAS: Friend Hermocrates, you, who are stationed last and have another in front of you, have not lost heart as yet; the gravity of the situation will soon be revealed to you; meanwhile I accept your exhortations and encouragements. But besides the gods and goddesses whom you have mentioned, I would specially invoke Mnemosyne; for all the important part of my discourse is dependent on her favour, and if I can recollect and recite enough of what was said by the priests and brought hither by Solon, I doubt not that I shall satisfy the requirements of this theatre. And now, making no more excuses, I will proceed.

Let me begin by observing first of all, that nine thousand was the sum of years which had elapsed since the war which was said to have taken place between those who dwelt outside the pillars of Heracles and all who dwelt within them; this war I am going to describe. Of the combatants on the one side, the city of Athens was reported to have been the leader and to have fought out the war; the combatants on the other side were commanded by the kings of Atlantis, which, as I was saying, was an island greater in extent than Libya and Asia, and when afterwards sunk by an earthquake, became an impassable barrier of mud to voyagers sailing from hence to any part of the ocean. The progress of the history will unfold the various nations of barbarians and families of Hellenes which then existed, as they successively appear on the scene; but I must describe first of all the Athenians of that day, and their enemies who fought with them, and then the respective powers and governments of the two kingdoms. Let us give the precedence to Athens.

In the days of old, the gods had the whole earth distributed among them by allotment (Cp. Polit.) There was no quarrelling; for you cannot rightly suppose that the gods did not know what was proper for each of them to have, or, knowing this, that they would seek to procure for themselves by contention that which more properly belonged to others. They all of them by just apportionment obtained what they wanted, and peopled their own districts; and when they had peopled them they tended us, their nurselings and possessions, as shepherds tend their flocks, excepting only that they did not use blows or bodily force, as shepherds do, but governed us like pilots from the stern of the vessel, which is an easy way of guiding animals, holding our souls by the rudder of persuasion according to their own pleasure;—thus did they guide all mortal creatures. Now different gods had their allotments in different places which they set in order. Hephaestus and Athene, who were brother and sister, and sprang from the same father, having a common nature, and being united also in the love of philosophy and art, both obtained as their common portion this land, which was naturally adapted for wisdom and virtue; and there they implanted brave children of the soil, and put into their minds the order of government; their names are preserved, but their actions have disappeared by reason of the destruction of those who received the tradition, and the lapse of ages. For when there were any survivors, as I have already said, they were men who dwelt in the mountains; and they were ignorant of the art of writing, and had heard only the names of the chiefs of the land, but very little about their actions. The names they were willing enough to give to their children; but the virtues and the laws of their predecessors, they knew only by obscure traditions; and as they themselves and their children lacked for many generations the necessaries of life, they directed their attention to the supply of their wants, and of them they conversed, to the neglect of events that had happened in times long past; for mythology and the enquiry into antiquity are first introduced into cities when they begin to have leisure (Cp. Arist. Metaphys.), and when they see that the necessaries of life have already been provided, but not before. And this is the reason why the names of the ancients have been preserved to us and not their actions. This I infer because Solon said that the priests in their narrative of that war mentioned most of the names which are recorded prior to the time of Theseus, such as Cecrops, and Erechtheus, and Erichthonius, and Erysichthon, and the names of the women in like manner. Moreover, since military pursuits were then common to men and women, the men of those days in accordance with the custom of the time set up a figure and image of the goddess in full armour, to be a testimony that all animals which associate together, male as well as female, may, if they please, practise in common the virtue which belongs to them without distinction of sex.

Now the country was inhabited in those days by various classes of citizens;—there were artisans, and there were husbandmen, and there was also a warrior class originally set apart by divine men. The

latter dwelt by themselves, and had all things suitable for nurture and education; neither had any of them anything of their own, but they regarded all that they had as common property; nor did they claim to receive of the other citizens anything more than their necessary food. And they practised all the pursuits which we yesterday described as those of our imaginary guardians. Concerning the country the Egyptian priests said what is not only probable but manifestly true, that the boundaries were in those days fixed by the Isthmus, and that in the direction of the continent they extended as far as the heights of Cithaeron and Parnes; the boundary line came down in the direction of the sea, having the district of Oropus on the right, and with the river Asopus as the limit on the left. The land was the best in the world, and was therefore able in those days to support a vast army, raised from the surrounding people. Even the remnant of Attica which now exists may compare with any region in the world for the variety and excellence of its fruits and the suitableness of its pastures to every sort of animal, which proves what I am saying; but in those days the country was fair as now and yielded far more abundant produce. How shall I establish my words? and what part of it can be truly called a remnant of the land that then was? The whole country is only a long promontory extending far into the sea away from the rest of the continent, while the surrounding basin of the sea is everywhere deep in the neighbourhood of the shore. Many great deluges have taken place during the nine thousand years, for that is the number of years which have elapsed since the time of which I am speaking; and during all this time and through so many changes, there has never been any considerable accumulation of the soil coming down from the mountains, as in other places, but the earth has fallen away all round and sunk out of sight. The consequence is, that in comparison of what then was, there are remaining only the bones of the wasted body, as they may be called, as in the case of small islands, all the richer and softer parts of the soil having fallen away, and the mere skeleton of the land being left. But in the primitive state of the country, its mountains were high hills covered with soil, and the plains, as they are termed by us, of Phelleus were full of rich earth, and there was abundance of wood in the mountains. Of this last the traces still remain, for although some of the mountains now only afford sustenance to bees, not so very long ago there were still to be seen roofs of timber cut from trees growing there, which were of a size sufficient to cover the largest houses; and there were many other high trees, cultivated by man and bearing abundance of food for cattle. Moreover, the land reaped the benefit of the annual rainfall, not as now losing the water which flows off the bare earth into the sea, but, having an abundant supply in all places, and receiving it into herself and treasuring it up in the close clay soil, it let off into the hollows the streams which it absorbed from the heights, providing everywhere abundant fountains and rivers, of which there may still be observed sacred memorials in places where fountains once existed; and this proves the truth of what I am saying.

Such was the natural state of the country, which was cultivated, as we may well believe, by true husbandmen, who made husbandry their business, and were lovers of honour, and of a noble nature, and had a soil the best in the world, and abundance of water, and in the heaven above an excellently attempered climate. Now the city in those days was arranged on this wise. In the first place the Acropolis was not as now. For the fact is that a single night of excessive rain washed away the earth and laid bare the rock; at the same time there were earthquakes, and then occurred the extraordinary inundation, which was the third before the great destruction of Deucalion. But in primitive times the hill of the Acropolis extended to the Eridanus and Ilissus, and included the Pnyx on one side, and the Lycabettus as a boundary on the opposite side to the Pnyx, and was all well covered with soil, and level at the top, except in one or two places. Outside the Acropolis and under the sides of the hill there dwelt artisans, and such of the husbandmen as were tilling the ground near; the warrior class

dwelt by themselves around the temples of Athene and Hephaestus at the summit, which moreover they had enclosed with a single fence like the garden of a single house. On the north side they had dwellings in common and had erected halls for dining in winter, and had all the buildings which they needed for their common life, besides temples, but there was no adorning of them with gold and silver, for they made no use of these for any purpose; they took a middle course between meanness and ostentation, and built modest houses in which they and their children's children grew old, and they handed them down to others who were like themselves, always the same. But in summer-time they left their gardens and gymnasia and dining halls, and then the southern side of the hill was made use of by them for the same purpose. Where the Acropolis now is there was a fountain, which was choked by the earthquake, and has left only the few small streams which still exist in the vicinity, but in those days the fountain gave an abundant supply of water for all and of suitable temperature in summer and in winter. This is how they dwelt, being the guardians of their own citizens and the leaders of the Hellenes, who were their willing followers. And they took care to preserve the same number of men and women through all time, being so many as were required for warlike purposes, then as now—that is to say, about twenty thousand. Such were the ancient Athenians, and after this manner they righteously administered their own land and the rest of Hellas; they were renowned all over Europe and Asia for the beauty of their persons and for the many virtues of their souls, and of all men who lived in those days they were the most illustrious. And next, if I have not forgotten what I heard when I was a child, I will impart to you the character and origin of their adversaries. For friends should not keep their stories to themselves, but have them in common.

Yet, before proceeding further in the narrative, I ought to warn you, that you must not be surprised if you should perhaps hear Hellenic names given to foreigners. I will tell you the reason of this: Solon, who was intending to use the tale for his poem, enquired into the meaning of the names, and found that the early Egyptians in writing them down had translated them into their own language, and he recovered the meaning of the several names and when copying them out again translated them into our language. My great-grandfather, Dropides, had the original writing, which is still in my possession, and was carefully studied by me when I was a child. Therefore if you hear names such as are used in this country, you must not be surprised, for I have told how they came to be introduced. The tale, which was of great length, began as follows:—

I have before remarked in speaking of the allotments of the gods, that they distributed the whole earth into portions differing in extent, and made for themselves temples and instituted sacrifices. And Poseidon, receiving for his lot the island of Atlantis, begat children by a mortal woman, and settled them in a part of the island, which I will describe. Looking towards the sea, but in the centre of the whole island, there was a plain which is said to have been the fairest of all plains and very fertile. Near the plain again, and also in the centre of the island at a distance of about fifty stadia, there was a mountain not very high on any side. In this mountain there dwelt one of the earth-born primeval men of that country, whose name was Evenor, and he had a wife named Leucippe, and they had an only daughter who was called Cleito. The maiden had already reached womanhood, when her father and mother died; Poseidon fell in love with her and had intercourse with her, and breaking the ground, inclosed the hill in which she dwelt all round, making alternate zones of sea and land larger and smaller, encircling one another; there were two of land and three of water, which he turned as with a lathe, each having its circumference equidistant every way from the centre, so that no man could get to the island, for ships and voyages were not as yet. He himself, being a god, found no difficulty in making special arrangements for the centre island, bringing up two springs of water from

beneath the earth, one of warm water and the other of cold, and making every variety of food to spring up abundantly from the soil. He also begat and brought up five pairs of twin male children; and dividing the island of Atlantis into ten portions, he gave to the first-born of the eldest pair his mother's dwelling and the surrounding allotment, which was the largest and best, and made him king over the rest; the others he made princes, and gave them rule over many men, and a large territory. And he named them all; the eldest, who was the first king, he named Atlas, and after him the whole island and the ocean were called Atlantic. To his twin brother, who was born after him, and obtained as his lot the extremity of the island towards the pillars of Heracles, facing the country which is now called the region of Gades in that part of the world, he gave the name which in the Hellenic language is Eumelus, in the language of the country which is named after him, Gadeirus. Of the second pair of twins he called one Ampheres, and the other Evaemon. To the elder of the third pair of twins he gave the name Mneseus, and Autochthon to the one who followed him. Of the fourth pair of twins he called the elder Elasippus, and the younger Mestor. And of the fifth pair he gave to the elder the name of Azaes, and to the younger that of Diaprepes. All these and their descendants for many generations were the inhabitants and rulers of divers islands in the open sea; and also, as has been already said, they held sway in our direction over the country within the pillars as far as Egypt and Tyrrhenia. Now Atlas had a numerous and honourable family, and they retained the kingdom, the eldest son handing it on to his eldest for many generations; and they had such an amount of wealth as was never before possessed by kings and potentates, and is not likely ever to be again, and they were furnished with everything which they needed, both in the city and country. For because of the greatness of their empire many things were brought to them from foreign countries, and the island itself provided most of what was required by them for the uses of life. In the first place, they dug out of the earth whatever was to be found there, solid as well as fusile, and that which is now only a name and was then something more than a name, orichalcum, was dug out of the earth in many parts of the island, being more precious in those days than anything except gold. There was an abundance of wood for carpenter's work, and sufficient maintenance for tame and wild animals. Moreover, there were a great number of elephants in the island; for as there was provision for all other sorts of animals, both for those which live in lakes and marshes and rivers, and also for those which live in mountains and on plains, so there was for the animal which is the largest and most voracious of all. Also whatever fragrant things there now are in the earth, whether roots, or herbage, or woods, or essences which distil from fruit and flower, grew and thrived in that land; also the fruit which admits of cultivation, both the dry sort, which is given us for nourishment and any other which we use for food—we call them all by the common name of pulse, and the fruits having a hard rind, affording drinks and meats and ointments, and good store of chestnuts and the like, which furnish pleasure and amusement, and are fruits which spoil with keeping, and the pleasant kinds of dessert, with which we console ourselves after dinner, when we are tired of eating—all these that sacred island which then beheld the light of the sun, brought forth fair and wondrous and in infinite abundance. With such blessings the earth freely furnished them; meanwhile they went on constructing their temples and palaces and harbours and docks. And they arranged the whole country in the following manner:—

First of all they bridged over the zones of sea which surrounded the ancient metropolis, making a road to and from the royal palace. And at the very beginning they built the palace in the habitation of the god and of their ancestors, which they continued to ornament in successive generations, every king surpassing the one who went before him to the utmost of his power, until they made the building a marvel to behold for size and for beauty. And beginning from the sea they bored a canal of three hundred feet in width and one hundred feet in depth and fifty stadia in length, which they carried

through to the outermost zone, making a passage from the sea up to this, which became a harbour, and leaving an opening sufficient to enable the largest vessels to find ingress. Moreover, they divided at the bridges the zones of land which parted the zones of sea, leaving room for a single trireme to pass out of one zone into another, and they covered over the channels so as to leave a way underneath for the ships; for the banks were raised considerably above the water. Now the largest of the zones into which a passage was cut from the sea was three stadia in breadth, and the zone of land which came next of equal breadth; but the next two zones, the one of water, the other of land, were two stadia, and the one which surrounded the central island was a stadium only in width. The island in which the palace was situated had a diameter of five stadia. All this including the zones and the bridge, which was the sixth part of a stadium in width, they surrounded by a stone wall on every side, placing towers and gates on the bridges where the sea passed in. The stone which was used in the work they quarried from underneath the centre island, and from underneath the zones, on the outer as well as the inner side. One kind was white, another black, and a third red, and as they quarried, they at the same time hollowed out double docks, having roofs formed out of the native rock. Some of their buildings were simple, but in others they put together different stones, varying the colour to please the eye, and to be a natural source of delight. The entire circuit of the wall, which went round the outermost zone, they covered with a coating of brass, and the circuit of the next wall they coated with tin, and the third, which encompassed the citadel, flashed with the red light of orichalcum. The palaces in the interior of the citadel were constructed on this wise:—In the centre was a holy temple dedicated to Cleito and Poseidon, which remained inaccessible, and was surrounded by an enclosure of gold; this was the spot where the family of the ten princes first saw the light, and thither the people annually brought the fruits of the earth in their season from all the ten portions, to be an offering to each of the ten. Here was Poseidon's own temple which was a stadium in length, and half a stadium in width, and of a proportionate height, having a strange barbaric appearance. All the outside of the temple, with the exception of the pinnacles, they covered with silver, and the pinnacles with gold. In the interior of the temple the roof was of ivory, curiously wrought everywhere with gold and silver and orichalcum; and all the other parts, the walls and pillars and floor, they coated with orichalcum. In the temple they placed statues of gold: there was the god himself standing in a chariot—the charioteer of six winged horses—and of such a size that he touched the roof of the building with his head; around him there were a hundred Nereids riding on dolphins, for such was thought to be the number of them by the men of those days. There were also in the interior of the temple other images which had been dedicated by private persons. And around the temple on the outside were placed statues of gold of all the descendants of the ten kings and of their wives, and there were many other great offerings of kings and of private persons, coming both from the city itself and from the foreign cities over which they held sway. There was an altar too, which in size and workmanship corresponded to this magnificence, and the palaces, in like manner, answered to the greatness of the kingdom and the glory of the temple.

In the next place, they had fountains, one of cold and another of hot water, in gracious plenty flowing; and they were wonderfully adapted for use by reason of the pleasantness and excellence of their waters. They constructed buildings about them and planted suitable trees, also they made cisterns, some open to the heaven, others roofed over, to be used in winter as warm baths; there were the kings' baths, and the baths of private persons, which were kept apart; and there were separate baths for women, and for horses and cattle, and to each of them they gave as much adornment as was suitable. Of the water which ran off they carried some to the grove of Poseidon, where were growing all manner of trees of wonderful height and beauty, owing to the excellence of the soil, while the

remainder was conveyed by aqueducts along the bridges to the outer circles; and there were many temples built and dedicated to many gods; also gardens and places of exercise, some for men, and others for horses in both of the two islands formed by the zones; and in the centre of the larger of the two there was set apart a race-course of a stadium in width, and in length allowed to extend all round the island, for horses to race in. Also there were guard-houses at intervals for the guards, the more trusted of whom were appointed to keep watch in the lesser zone, which was nearer the Acropolis; while the most trusted of all had houses given them within the citadel, near the persons of the kings. The docks were full of triremes and naval stores, and all things were quite ready for use. Enough of the plan of the royal palace.

Leaving the palace and passing out across the three harbours, you came to a wall which began at the sea and went all round: this was everywhere distant fifty stadia from the largest zone or harbour, and enclosed the whole, the ends meeting at the mouth of the channel which led to the sea. The entire area was densely crowded with habitations; and the canal and the largest of the harbours were full of vessels and merchants coming from all parts, who, from their numbers, kept up a multitudinous sound of human voices, and din and clatter of all sorts night and day.

I have described the city and the environs of the ancient palace nearly in the words of Solon, and now I must endeavour to represent to you the nature and arrangement of the rest of the land. The whole country was said by him to be very lofty and precipitous on the side of the sea, but the country immediately about and surrounding the city was a level plain, itself surrounded by mountains which descended towards the sea; it was smooth and even, and of an oblong shape, extending in one direction three thousand stadia, but across the centre inland it was two thousand stadia. This part of the island looked towards the south, and was sheltered from the north. The surrounding mountains were celebrated for their number and size and beauty, far beyond any which still exist, having in them also many wealthy villages of country folk, and rivers, and lakes, and meadows supplying food enough for every animal, wild or tame, and much wood of various sorts, abundant for each and every kind of work.

I will now describe the plain, as it was fashioned by nature and by the labours of many generations of kings through long ages. It was for the most part rectangular and oblong, and where falling out of the straight line followed the circular ditch. The depth, and width, and length of this ditch were incredible, and gave the impression that a work of such extent, in addition to so many others, could never have been artificial. Nevertheless I must say what I was told. It was excavated to the depth of a hundred feet, and its breadth was a stadium everywhere; it was carried round the whole of the plain, and was ten thousand stadia in length. It received the streams which came down from the mountains, and winding round the plain and meeting at the city, was there let off into the sea. Further inland, likewise, straight canals of a hundred feet in width were cut from it through the plain, and again let off into the ditch leading to the sea: these canals were at intervals of a hundred stadia, and by them they brought down the wood from the mountains to the city, and conveyed the fruits of the earth in ships, cutting transverse passages from one canal into another, and to the city. Twice in the year they gathered the fruits of the earth—in winter having the benefit of the rains of heaven, and in summer the water which the land supplied by introducing streams from the canals.

As to the population, each of the lots in the plain had to find a leader for the men who were fit for military service, and the size of a lot was a square of ten stadia each way, and the total number of all

the lots was sixty thousand. And of the inhabitants of the mountains and of the rest of the country there was also a vast multitude, which was distributed among the lots and had leaders assigned to them according to their districts and villages. The leader was required to furnish for the war the sixth portion of a war-chariot, so as to make up a total of ten thousand chariots; also two horses and riders for them, and a pair of chariot-horses without a seat, accompanied by a horseman who could fight on foot carrying a small shield, and having a charioteer who stood behind the man-at-arms to guide the two horses; also, he was bound to furnish two heavy-armed soldiers, two archers, two slingers, three stone-shooters and three javelin-men, who were light-armed, and four sailors to make up the complement of twelve hundred ships. Such was the military order of the royal city—the order of the other nine governments varied, and it would be wearisome to recount their several differences.

As to offices and honours, the following was the arrangement from the first. Each of the ten kings in his own division and in his own city had the absolute control of the citizens, and, in most cases, of the laws, punishing and slaying whomsoever he would. Now the order of precedence among them and their mutual relations were regulated by the commands of Poseidon which the law had handed down. These were inscribed by the first kings on a pillar of orichalcum, which was situated in the middle of the island, at the temple of Poseidon, whither the kings were gathered together every fifth and every sixth year alternately, thus giving equal honour to the odd and to the even number. And when they were gathered together they consulted about their common interests, and enquired if any one had transgressed in anything, and passed judgment, and before they passed judgment they gave their pledges to one another on this wise:—There were bulls who had the range of the temple of Poseidon; and the ten kings, being left alone in the temple, after they had offered prayers to the god that they might capture the victim which was acceptable to him, hunted the bulls, without weapons, but with staves and nooses; and the bull which they caught they led up to the pillar and cut its throat over the top of it so that the blood fell upon the sacred inscription. Now on the pillar, besides the laws, there was inscribed an oath invoking mighty curses on the disobedient. When therefore, after slaying the bull in the accustomed manner, they had burnt its limbs, they filled a bowl of wine and cast in a clot of blood for each of them; the rest of the victim they put in the fire, after having purified the column all round. Then they drew from the bowl in golden cups, and pouring a libation on the fire, they swore that they would judge according to the laws on the pillar, and would punish him who in any point had already transgressed them, and that for the future they would not, if they could help, offend against the writing on the pillar, and would neither command others, nor obey any ruler who commanded them, to act otherwise than according to the laws of their father Poseidon. This was the prayer which each of them offered up for himself and for his descendants, at the same time drinking and dedicating the cup out of which he drank in the temple of the god; and after they had supped and satisfied their needs, when darkness came on, and the fire about the sacrifice was cool, all of them put on most beautiful azure robes, and, sitting on the ground, at night, over the embers of the sacrifices by which they had sworn, and extinguishing all the fire about the temple, they received and gave judgment, if any of them had an accusation to bring against any one; and when they had given judgment, at daybreak they wrote down their sentences on a golden tablet, and dedicated it together with their robes to be a memorial.

There were many special laws affecting the several kings inscribed about the temples, but the most important was the following: They were not to take up arms against one another, and they were all to come to the rescue if any one in any of their cities attempted to overthrow the royal house; like their ancestors, they were to deliberate in common about war and other matters, giving the supremacy to

the descendants of Atlas. And the king was not to have the power of life and death over any of his kinsmen unless he had the assent of the majority of the ten.

Such was the vast power which the god settled in the lost island of Atlantis; and this he afterwards directed against our land for the following reasons, as tradition tells: For many generations, as long as the divine nature lasted in them, they were obedient to the laws, and well-affectioned towards the god, whose seed they were; for they possessed true and in every way great spirits, uniting gentleness with wisdom in the various chances of life, and in their intercourse with one another. They despised everything but virtue, caring little for their present state of life, and thinking lightly of the possession of gold and other property, which seemed only a burden to them; neither were they intoxicated by luxury; nor did wealth deprive them of their self-control; but they were sober, and saw clearly that all these goods are increased by virtue and friendship with one another, whereas by too great regard and respect for them, they are lost and friendship with them. By such reflections and by the continuance in them of a divine nature, the qualities which we have described grew and increased among them; but when the divine portion began to fade away, and became diluted too often and too much with the mortal admixture, and the human nature got the upper hand, they then, being unable to bear their fortune, behaved unseemly, and to him who had an eye to see grew visibly debased, for they were losing the fairest of their precious gifts; but to those who had no eye to see the true happiness, they appeared glorious and blessed at the very time when they were full of avarice and unrighteous power. Zeus, the god of gods, who rules according to law, and is able to see into such things, perceiving that an honourable race was in a woeful plight, and wanting to inflict punishment on them, that they might be chastened and improve, collected all the gods into their most holy habitation, which, being placed in the centre of the world, beholds all created things. And when he had called them together, he spake as follows—[*]

CRITO

BY

PLATO

TRANSLATED BY BENJAMIN JOWETT

INTRODUCTION

The *Crito* seems intended to exhibit the character of Socrates in one light only, not as the philosopher, fulfilling a divine mission and trusting in the will of heaven, but simply as the good citizen, who having been unjustly condemned is willing to give up his life in obedience to the laws of the state . . .

The days of Socrates are drawing to a close; the fatal ship has been seen off Sunium, as he is informed by his aged friend and contemporary Crito, who visits him before the dawn has broken; he himself has been warned in a dream that on the third day he must depart. Time is precious, and Crito has come early in order to gain his consent to a plan of escape. This can be easily accomplished by his friends, who will incur no danger in making the attempt to save him, but will be disgraced for ever if they allow him to perish. He should think of his duty to his children, and not play into the hands of his enemies. Money is already provided by Crito as well as by Simmias and others, and he will have no difficulty in finding friends in Thessaly and other places.

Socrates is afraid that Crito is but pressing upon him the opinions of the many; whereas, all his life long he has followed the dictates of reason only and the opinion of the one wise or skilled man. There was a time when Crito himself had allowed the propriety of this. And although someone will say ‘the many can kill us,’ that makes no difference; but a good life, in other words, a just and honourable life, is alone to be valued. All considerations of loss of reputation or injury to his children should be dismissed: the only question is whether he would be right in attempting to escape. Crito, who is a disinterested person not having the fear of death before his eyes, shall answer this for him. Before he was condemned they had often held discussions, in which they agreed that no man should either do

evil, or return evil for evil, or betray the right. Are these principles to be altered because the circumstances of Socrates are altered? Crito admits that they remain the same. Then is his escape consistent with the maintenance of them? To this Crito is unable or unwilling to reply.

Socrates proceeds:—Suppose the Laws of Athens to come and remonstrate with him: they will ask, 'Why does he seek to overturn them?' and if he replies, 'They have injured him,' will not the Laws answer, 'Yes, but was that the agreement? Has he any objection to make to them which would justify him in overturning them? Was he not brought into the world and educated by their help, and are they not his parents? He might have left Athens and gone where he pleased, but he has lived there for seventy years more constantly than any other citizen.' Thus he has clearly shown that he acknowledged the agreement, which he cannot now break without dishonour to himself and danger to his friends. Even in the course of the trial he might have proposed exile as the penalty, but then he declared that he preferred death to exile. And whither will he direct his footsteps? In any well-ordered state the Laws will consider him as an enemy. Possibly in a land of misrule like Thessaly he may be welcomed at first, and the unseemly narrative of his escape will be regarded by the inhabitants as an amusing tale. But if he offends them he will have to learn another sort of lesson. Will he continue to give lectures in virtue? That would hardly be decent. And how will his children be the gainers if he takes them into Thessaly, and deprives them of Athenian citizenship? Or if he leaves them behind, does he expect that they will be better taken care of by his friends because he is in Thessaly? Will not true friends care for them equally whether he is alive or dead?

Finally, they exhort him to think of justice first, and of life and children afterwards. He may now depart in peace and innocence, a sufferer and not a doer of evil. But if he breaks agreements, and returns evil for evil, they will be angry with him while he lives; and their brethren the Laws of the world below will receive him as an enemy. Such is the mystic voice which is always murmuring in his ears.

That Socrates was not a good citizen was a charge made against him during his lifetime, which has been often repeated in later ages. The crimes of Alcibiades, Critias, and Charmides, who had been his pupils, were still recent in the memory of the now restored democracy. The fact that he had been neutral in the death-struggle of Athens was not likely to conciliate popular good-will. Plato, writing probably in the next generation, undertakes the defence of his friend and master in this particular, not to the Athenians of his day, but to posterity and the world at large.

Whether such an incident ever really occurred as the visit of Crito and the proposal of escape is uncertain; Plato could easily have invented far more than that; [1] and in the selection of Crito, the aged friend, as the fittest person to make the proposal to Socrates, we seem to recognize the hand of the artist. Whether anyone who has been subjected by the laws of his country to an unjust judgment is right in attempting to escape, is a thesis about which casuists might disagree. Shelley [2] is of opinion that Socrates 'did well to die,' but not for the 'sophistical' reasons which Plato has put into his mouth. And there would be no difficulty in arguing that Socrates should have lived and preferred to a glorious death the good which he might still be able to perform. 'A rhetorician would have had much to say upon that point.' It may be observed however that Plato never intended to answer the question of casuistry, but only to exhibit the ideal of patient virtue which refuses to do the least evil in order to avoid the greatest, and to show his master maintaining in death the opinions which he had professed in his life. Not 'the world,' but the 'one wise man,' is still the paradox of Socrates in his last hours. He must be guided by reason, although her conclusions may be fatal to him. The remarkable sentiment

that the wicked can do neither good nor evil is true, if taken in the sense, which he means, of moral evil; in his own words, ‘they cannot make a man wise or foolish.’

This little dialogue is a perfect piece of dialectic, in which granting the ‘common principle,’ there is no escaping from the conclusion. It is anticipated at the beginning by the dream of Socrates and the parody of Homer. The personification of the Laws, and of their brethren the Laws in the world below, is one of the noblest and boldest figures of speech which occur in Plato.

CRITO

PERSONS OF THE DIALOGUE:
Socrates, Crito.

SCENE: *The Prison of Socrates*.

SOCRATES: Why have you come at this hour, Crito? it must be quite early?

CRITO: Yes, certainly.

SOCRATES: What is the exact time?

CRITO: The dawn is breaking.

SOCRATES: I wonder that the keeper of the prison would let you in.

CRITO: He knows me, because I often come, Socrates; moreover, I have done him a kindness.

SOCRATES: And are you only just arrived?

CRITO: No, I came some time ago.

SOCRATES: Then why did you sit and say nothing, instead of at once awakening me?

CRITO: I should not have liked myself, Socrates, to be in such great trouble and unrest as you are—indeed I should not: I have been watching with amazement your peaceful slumbers; and for that reason I did not awake you, because I wished to minimize the pain. I have always thought you to be of a happy disposition; but never did I see anything like the easy, tranquil manner in which you bear this calamity.

SOCRATES: Why, Crito, when a man has reached my age he ought not to be repining at the approach of death.

CRITO: And yet other old men find themselves in similar misfortunes, and age does not prevent them from repining.

SOCRATES: That is true. But you have not told me why you come at this early hour.

CRITO: I come to bring you a message which is sad and painful; not, as I believe, to yourself, but to all of us who are your friends, and saddest of all to me.

SOCRATES: What? Has the ship come from Delos, on the arrival of which I am to die?

CRITO: No, the ship has not actually arrived, but she will probably be here to-day, as persons who have come from Sunium tell me that they have left her there; and therefore to-morrow, Socrates, will be the last day of your life.

SOCRATES: Very well, Crito; if such is the will of God, I am willing; but my belief is that there will be a delay of a day.

CRITO: Why do you think so?

SOCRATES: I will tell you. I am to die on the day after the arrival of the ship?

CRITO: Yes; that is what the authorities say.

SOCRATES: But I do not think that the ship will be here until to-morrow; this I infer from a vision which I had last night, or rather only just now, when you fortunately allowed me to sleep.

CRITO: And what was the nature of the vision?

SOCRATES: There appeared to me the likeness of a woman, fair and comely, clothed in bright raiment, who called to me and said: O Socrates,

‘The third day hence to fertile Phthia shalt thou go.’ [3]

CRITO: What a singular dream, Socrates!

SOCRATES: There can be no doubt about the meaning, Crito, I think.

CRITO: Yes; the meaning is only too clear. But, oh! my beloved Socrates, let me entreat you once more to take my advice and escape. For if you die I shall not only lose a friend who can never be replaced, but there is another evil: people who do not know you and me will believe that I might have saved you if I had been willing to give money, but that I did not care. Now, can there be a worse

disgrace than this—that I should be thought to value money more than the life of a friend? For the many will not be persuaded that I wanted you to escape, and that you refused.

SOCRATES: But why, my dear Crito, should we care about the opinion of the many? Good men, and they are the only persons who are worth considering, will think of these things truly as they occurred.

CRITO: But you see, Socrates, that the opinion of the many must be regarded, for what is now happening shows that they can do the greatest evil to anyone who has lost their good opinion.

SOCRATES: I only wish it were so, Crito; and that the many could do the greatest evil; for then they would also be able to do the greatest good—and what a fine thing this would be! But in reality they can do neither; for they cannot make a man either wise or foolish; and whatever they do is the result of chance.

CRITO: Well, I will not dispute with you; but please to tell me, Socrates, whether you are not acting out of regard to me and your other friends: are you not afraid that if you escape from prison we may get into trouble with the informers for having stolen you away, and lose either the whole or a great part of our property; or that even a worse evil may happen to us? Now, if you fear on our account, be at ease; for in order to save you, we ought surely to run this, or even a greater risk; be persuaded, then, and do as I say.

SOCRATES: Yes, Crito, that is one fear which you mention, but by no means the only one.

CRITO: Fear not—there are persons who are willing to get you out of prison at no great cost; and as for the informers, they are far from being exorbitant in their demands—a little money will satisfy them. My means, which are certainly ample, are at your service, and if you have a scruple about spending all mine, here are strangers who will give you the use of theirs; and one of them, Simmias the Theban, has brought a large sum of money for this very purpose; and Cebes and many others are prepared to spend their money in helping you to escape. I say, therefore, do not hesitate on our account, and do not say, as you did in the court [4] that you will have a difficulty in knowing what to do with yourself anywhere else. For men will love you in other places to which you may go, and not in Athens only; there are friends of mine in Thessaly, if you like to go to them, who will value and protect you, and no Thessalian will give you any trouble. Nor can I think that you are at all justified, Socrates, in betraying your own life when you might be saved; in acting thus you are playing into the hands of your enemies, who are hurrying on your destruction. And further I should say that you are deserting your own children; for you might bring them up and educate them; instead of which you go away and leave them, and they will have to take their chance; and if they do not meet with the usual fate of orphans, there will be small thanks to you. No man should bring children into the world who is unwilling to persevere to the end in their nurture and education. But you appear to be choosing the easier part, not the better and manlier, which would have been more becoming in one who professes to care for virtue in all his actions, like yourself. And indeed, I am ashamed not only of you, but of us who are your friends, when I reflect that the whole business will be attributed entirely to our want of courage. The trial need never have come on, or might have been managed differently; and this last act, or crowning folly, will seem to have occurred through our negligence and cowardice, who might have saved you, if we had been good for anything; and you might have saved yourself, for there was no difficulty at all. See now, Socrates, how sad and discreditable are the consequences, both to us

and you. Make up your mind then, or rather have your mind already made up, for the time of deliberation is over, and there is only one thing to be done, which must be done this very night, and, if we delay at all, will be no longer practicable or possible; I beseech you therefore, Socrates, be persuaded by me, and do as I say.

SOCRATES: Dear Crito, your zeal is invaluable, if a right one; but if wrong, the greater the zeal the greater the danger; and therefore we ought to consider whether I shall or shall not do as you say. For I am and always have been one of those natures who must be guided by reason, whatever the reason may be which upon reflection appears to me to be the best; and now that this chance has befallen me, I cannot repudiate my own words: the principles which I have hitherto honoured and revered I still honour, and unless we can at once find other and better principles, I am certain not to agree with you; no, not even if the power of the multitude could inflict many more imprisonments, confiscations, deaths, frightening us like children with hobgoblin terrors. [5] What will be the fairest way of considering the question? Shall I return to your old argument about the opinions of men?—we were saying that some of them are to be regarded, and others not. Now were we right in maintaining this before I was condemned? And has the argument which was once good now proved to be talk for the sake of talking—mere childish nonsense? That is what I want to consider with your help, Crito:—whether, under my present circumstances, the argument appears to be in any way different or not; and is to be allowed by me or disallowed. That argument, which, as I believe, is maintained by many persons of authority, was to the effect, as I was saying, that the opinions of some men are to be regarded, and of other men not to be regarded. Now you, Crito, are not going to die to-morrow—at least, there is no human probability of this—and therefore you are disinterested and not liable to be deceived by the circumstances in which you are placed. Tell me then, whether I am right in saying that some opinions, and the opinions of some men only, are to be valued, and that other opinions, and the opinions of other men, are not to be valued. I ask you whether I was right in maintaining this?

CRITO: Certainly.

SOCRATES: The good are to be regarded, and not the bad?

CRITO: Yes.

SOCRATES: And the opinions of the wise are good, and the opinions of the unwise are evil?

CRITO: Certainly.

SOCRATES: And what was said about another matter? Is the pupil who devotes himself to the practice of gymnastics supposed to attend to the praise and blame and opinion of every man, or of one man only—his physician or trainer, whoever he may be?

CRITO: Of one man only.

SOCRATES: And he ought to fear the censure and welcome the praise of that one only, and not of the many?

CRITO: Clearly so.

SOCRATES: And he ought to act and train, and eat and drink in the way which seems good to his single master who has understanding, rather than according to the opinion of all other men put together?

CRITO: True.

SOCRATES: And if he disobeys and disregards the opinion and approval of the one, and regards the opinion of the many who have no understanding, will he not suffer evil?

CRITO: Certainly he will.

SOCRATES: And what will the evil be, whither tending and what affecting, in the disobedient person?

CRITO: Clearly, affecting the body; that is what is destroyed by the evil.

SOCRATES: Very good; and is not this true, Crito, of other things which we need not separately enumerate? In questions of just and unjust, fair and foul, good and evil, which are the subjects of our present consultation, ought we to follow the opinion of the many and to fear them; or the opinion of the one man who has understanding? ought we not to fear and reverence him more than all the rest of the world: and if we desert him shall we not destroy and injure that principle in us which may be assumed to be improved by justice and deteriorated by injustice—there is such a principle?

CRITO: Certainly there is, Socrates.

SOCRATES: Take a parallel instance:—if, acting under the advice of those who have no understanding, we destroy that which is improved by health and is deteriorated by disease, would life be worth having? And that which has been destroyed is—the body?

CRITO: Yes.

SOCRATES: Could we live, having an evil and corrupted body?

CRITO: Certainly not.

SOCRATES: And will life be worth having, if that higher part of man be destroyed, which is improved by justice and depraved by injustice? Do we suppose that principle, whatever it may be in man, which has to do with justice and injustice, to be inferior to the body?

CRITO: Certainly not.

SOCRATES: More honourable than the body?

CRITO: Far more.

SOCRATES: Then, my friend, we must not regard what the many say of us; but what he, the one man who has understanding of just and unjust, will say, and what the truth will say. And therefore you

begin in error when you advise that we should regard the opinion of the many about just and unjust, good and evil, honourable and dishonourable.—'Well,' someone will say, 'but the many can kill us.'

CRITO: Yes, Socrates; that will clearly be the answer.

SOCRATES: And it is true; but still I find with surprise that the old argument is unshaken as ever. And I should like to know whether I may say the same of another proposition—that not life, but a good life, is to be chiefly valued?

CRITO: Yes, that also remains unshaken.

SOCRATES: And a good life is equivalent to a just and honourable one—that holds also?

CRITO: Yes, it does.

SOCRATES: From these premises I proceed to argue the question whether I ought or ought not to try and escape without the consent of the Athenians: and if I am clearly right in escaping, then I will make the attempt; but if not, I will abstain. The other considerations which you mention, of money and loss of character and the duty of educating one's children, are, I fear, only the doctrines of the multitude, who would be as ready to restore people to life, if they were able, as they are to put them to death—and with as little reason. But now, since the argument has thus far prevailed, the only question which remains to be considered is whether we shall do rightly either in escaping or in suffering others to aid in our escape and paying them in money and thanks, or whether in reality we shall not do rightly; and if the latter, then death or any other calamity which may ensue on my remaining here must not be allowed to enter into the calculation.

CRITO: I think that you are right, Socrates; how then shall we proceed?

SOCRATES: Let us consider the matter together, and do you either refute me if you can, and I will be convinced; or else cease, my dear friend, from repeating to me that I ought to escape against the wishes of the Athenians: for I highly value your attempts to persuade me to do so, but I may not be persuaded against my own better judgment. And now please to consider my first position, and try how you can best answer me.

CRITO: I will.

SOCRATES: Are we to say that we are never intentionally to do wrong, or that in one way we ought and in another way we ought not to do wrong, or is doing wrong always evil and dishonourable, as I was just now saying, and as has been already acknowledged by us? Are all our former admissions which were made within a few days to be thrown away? And have we, at our age, been earnestly discoursing with one another all our life long only to discover that we are no better than children? Or, in spite of the opinion of the many, and in spite of consequences whether better or worse, shall we insist on the truth of what was then said, that injustice is always an evil and dishonour to him who acts unjustly? Shall we say so or not?

CRITO: Yes.

SOCRATES: Then we must do no wrong?

CRITO: Certainly not.

SOCRATES: Nor, when injured, injure in return, as the many imagine; for we must injure no one at all? [6]

CRITO: Clearly not.

SOCRATES: Again, Crito, may we do evil?

CRITO: Surely not, Socrates.

SOCRATES: And what of doing evil in return for evil, which is the morality of the many—is that just or not?

CRITO: Not just.

SOCRATES: For doing evil to another is the same as injuring him?

CRITO: Very true.

SOCRATES: Then we ought not to retaliate or render evil for evil to anyone, whatever evil we may have suffered from him. But I would have you consider, Crito, whether you really mean what you are saying. For this opinion has never been held, and never will be held, by any considerable number of persons; and those who are agreed and those who are not agreed upon this point have no common ground, and can only despise one another when they see how widely they differ. Tell me, then, whether you agree with and assent to my first principle, that neither injury nor retaliation nor warding off evil by evil is ever right. And shall that be the premise of our argument? Or do you decline and dissent from this? For so I have ever thought, and continue to think; but, if you are of another opinion, let me hear what you have to say. If, however, you remain of the same mind as formerly, I will proceed to the next step.

CRITO: You may proceed, for I have not changed my mind.

SOCRATES: Then I will go on to the next point, which may be put in the form of a question:—Ought a man to do what he admits to be right, or ought he to betray the right?

CRITO: He ought to do what he thinks right.

SOCRATES: But if this is true, what is the application? In leaving the prison against the will of the Athenians, do I wrong any? or rather do I not wrong those whom I ought least to wrong? Do I not desert the principles which were acknowledged by us to be just—what do you say?

CRITO: I cannot tell, Socrates; for I do not know.

SOCRATES: Then consider the matter in this way:—Imagine that I am about to play truant (you may call the proceeding by any name which you like), and the laws and the government come and interrogate me: 'Tell us, Socrates,' they say; 'what are you about? are you not going by an act of yours to overturn us—the laws, and the whole state, as far as in you lies? Do you imagine that a state can subsist and not be overthrown, in which the decisions of law have no power, but are set aside and trampled upon by individuals?' What will be our answer, Crito, to these and the like words? Anyone, and especially a rhetorician, will have a good deal to say on behalf of the law which requires a sentence to be carried out. He will argue that this law should not be set aside; and shall we reply, 'Yes; but the state has injured us and given an unjust sentence.' Suppose I say that?

CRITO: Very good, Socrates.

SOCRATES: 'And was that our agreement with you?' the law would answer; 'or were you to abide by the sentence of the state?' And if I were to express my astonishment at their words, the law would probably add: 'Answer, Socrates, instead of opening your eyes—you are in the habit of asking and answering questions. Tell us,—What complaint have you to make against us which justifies you in attempting to destroy us and the state? In the first place did we not bring you into existence? Your father married your mother by our aid and begat you. Say whether you have any objection to urge against those of us who regulate marriage?' None, I should reply. 'Or against those of us who after birth regulate the nurture and education of children, in which you also were trained? Were not the laws, which have the charge of education, right in commanding your father to train you in music and gymnastic?' Right, I should reply. 'Well then, since you were brought into the world and nurtured and educated by us, can you deny in the first place that you are our child and slave, as your fathers were before you? And if this is true you are not on equal terms with us; nor can you think that you have a right to do to us what we are doing to you. Would you have any right to strike or revile or do any other evil to your father or your master, if you had one, because you have been struck or reviled by him, or received some other evil at his hands? You would not say this. And because we think right to destroy you, do you think that you have any right to destroy us in return, and your country as far as in you lies? Will you, O professor of true virtue, pretend that you are justified in this? Has a philosopher like you failed to discover that our country is more to be valued and higher and holier far than mother or father or any ancestor, and more to be regarded in the eyes of the gods and of men of understanding? also to be soothed, and gently and reverently entreated when angry, even more than a father, and either to be persuaded, or if not persuaded, to be obeyed? And when we are punished by her, whether with imprisonment or stripes, the punishment is to be endured in silence; and if she lead us to wounds or death in battle, thither we follow as is right; neither may anyone yield or retreat or leave his rank, but whether in battle or in a court of law, or in any other place, he must do what his city and his country order him; or he must change their view of what is just: and if he may do no violence to his father or mother, much less may he do violence to his country.' What answer shall we make to this, Crito? Do the laws speak truly, or do they not?

CRITO: I think that they do.

SOCRATES: Then the laws will say: 'Consider, Socrates, if we are speaking truly that in your present attempt you are going to do us an injury. For, having brought you into the world, and nurtured and educated you, and given you and every other citizen a share in every good which we had to give, we further proclaim to any Athenian by the liberty which we allow him, that if he does not like us when he

has become of age and has seen the ways of the city, and made our acquaintance, he may go where he pleases and take his goods with him. None of us laws will forbid him or interfere with him. Anyone who does not like us and the city, and who wants to emigrate to a colony or to any other city, may go where he likes, retaining his property. But he who has experience of the manner in which we order justice and administer the state, and still remains, has entered into an implied contract that he will do as we command him. And he who disobeys us is, as we maintain, thrice wrong; first, because in disobeying us he is disobeying his parents; secondly, because we are the authors of his education; thirdly, because he has made an agreement with us that he will duly obey our commands; and he neither obeys them nor convinces us that our commands are unjust; and we do not rudely impose them, but give him the alternative of obeying or convincing us;—that is what we offer, and he does neither. These are the sort of accusations to which, as we were saying, you, Socrates, will be exposed if you accomplish your intentions; you, above all other Athenians.'

Suppose now I ask, why I rather than anybody else? they will justly retort upon me that I above all other men have acknowledged the agreement. 'There is clear proof,' they will say, 'Socrates, that we and the city were not displeasing to you. Of all Athenians you have been the most constant resident in the city, which, as you never leave, you may be supposed to love. [7] For you never went out of the city either to see the games, except once when you went to the Isthmus, or to any other place unless when you were on military service; nor did you travel as other men do. Nor had you any curiosity to know other states or their laws: your affections did not go beyond us and our state; we were your especial favourites, and you acquiesced in our government of you; and here in this city you begat your children, which is a proof of your satisfaction. Moreover, you might in the course of the trial, if you had liked, have fixed the penalty at banishment; the state which refuses to let you go now would have let you go then. But you pretended that you preferred death to exile, [8] and that you were not unwilling to die. And now you have forgotten these fine sentiments, and pay no respect to us the laws, of whom you are the destroyer; and are doing what only a miserable slave would do, running away and turning your back upon the compacts and agreements which you made as a citizen. And first of all answer this very question: Are we right in saying that you agreed to be governed according to us in deed, and not in word only? Is that true or not?' How shall we answer, Crito? Must we not assent?

CRITO: We cannot help it, Socrates.

SOCRATES: Then will they not say: 'You, Socrates, are breaking the covenants and agreements which you made with us at your leisure, not in any haste or under any compulsion or deception, but after you have had seventy years to think of them, during which time you were at liberty to leave the city, if we were not to your mind, or if our covenants appeared to you to be unfair. You had your choice, and might have gone either to Lacedaemon or Crete, both which states are often praised by you for their good government, or to some other Hellenic or foreign state. Whereas you, above all other Athenians, seemed to be so fond of the state, or, in other words, of us, her laws (and who would care about a state which has no laws?), that you never stirred out of her; the halt, the blind, the maimed were not more stationary in her than you were. And now you run away and forsake your agreements. Not so, Socrates, if you will take our advice; do not make yourself ridiculous by escaping out of the city.

‘For just consider, if you transgress and err in this sort of way, what good will you do either to yourself or to your friends? That your friends will be driven into exile and deprived of citizenship, or will lose their property, is tolerably certain; and you yourself, if you fly to one of the neighbouring cities, as, for example, Thebes or Megara, both of which are well governed, will come to them as an enemy, Socrates, and their government will be against you, and all patriotic citizens will cast an evil eye upon you as a subverter of the laws, and you will confirm in the minds of the judges the justice of their own condemnation of you. For he who is a corrupter of the laws is more than likely to be a corrupter of the young and foolish portion of mankind. Will you then flee from well-ordered cities and virtuous men? and is existence worth having on these terms? Or will you go to them without shame, and talk to them, Socrates? And what will you say to them? What you say here about virtue and justice and institutions and laws being the best things among men? Would that be decent of you? Surely not. But if you go away from well-governed states to Crito’s friends in Thessaly, where there is great disorder and licence, they will be charmed to hear the tale of your escape from prison, set off with ludicrous particulars of the manner in which you were wrapped in a goatskin or some other disguise, and metamorphosed as the manner is of runaways; but will there be no one to remind you that in your old age you were not ashamed to violate the most sacred laws from a miserable desire of a little more life? Perhaps not, if you keep them in a good temper; but if they are out of temper you will hear many degrading things; you will live, but how?—as the flatterer of all men, and the servant of all men; and doing what?—eating and drinking in Thessaly, having gone abroad in order that you may get a dinner. And where will be your fine sentiments about justice and virtue? Say that you wish to live for the sake of your children—you want to bring them up and educate them—will you take them into Thessaly and deprive them of Athenian citizenship? Is this the benefit which you will confer upon them? Or are you under the impression that they will be better cared for and educated here if you are still alive, although absent from them; for your friends will take care of them? Do you fancy that if you are an inhabitant of Thessaly they will take care of them, and if you are an inhabitant of the other world that they will not take care of them? Nay; but if they who call themselves friends are good for anything, they will—to be sure they will.

‘Listen, then, Socrates, to us who have brought you up. Think not of life and children first, and of justice afterwards, but of justice first, that you may be justified before the princes of the world below. For neither will you nor any that belong to you be happier or holier or juster in this life, or happier in another, if you do as Crito bids. Now you depart in innocence, a sufferer and not a doer of evil; a victim, not of the laws, but of men. But if you go forth, returning evil for evil, and injury for injury, breaking the covenants and agreements which you have made with us, and wronging those whom you ought least of all to wrong, that is to say, yourself, your friends, your country, and us, we shall be angry with you while you live, and our brethren, the laws in the world below, will receive you as an enemy; for they will know that you have done your best to destroy us. Listen, then, to us and not to Crito.’

This, dear Crito, is the voice which I seem to hear murmuring in my ears, like the sound of the flute in the ears of the mystic; that voice, I say, is humming in my ears, and prevents me from hearing any other. And I know that anything more which you may say will be vain. Yet speak, if you have anything to say.

CRITO: I have nothing to say, Socrates.

SOCRATES: Leave me then, Crito, to fulfil the will of God, and to follow whither he leads.

EUTHYDEMUS

by Plato

Translated by Benjamin Jowett

INTRODUCTION.

The Euthydemus, though apt to be regarded by us only as an elaborate jest, has also a very serious purpose. It may fairly claim to be the oldest treatise on logic; for that science originates in the misunderstandings which necessarily accompany the first efforts of speculation. Several of the fallacies which are satirized in it reappear in the Sophistici Elenchi of Aristotle and are retained at the end of our manuals of logic. But if the order of history were followed, they should be placed not at the end but at the beginning of them; for they belong to the age in which the human mind was first making the attempt to distinguish thought from sense, and to separate the universal from the particular or individual. How to put together words or ideas, how to escape ambiguities in the meaning of terms or in the structure of propositions, how to resist the fixed impression of an 'eternal being' or 'perpetual flux,' how to distinguish between words and things—these were problems not easy of solution in the infancy of philosophy. They presented the same kind of difficulty to the half-educated man which spelling or arithmetic do to the mind of a child. It was long before the new world of ideas which had been sought after with such passionate yearning was set in order and made ready for use. To us the fallacies which arise in the pre-Socratic philosophy are trivial and obsolete because we are no longer liable to fall into the errors which are expressed by them. The intellectual world has become better assured to us, and we are less likely to be imposed upon by illusions of words.

The logic of Aristotle is for the most part latent in the dialogues of Plato. The nature of definition is explained not by rules but by examples in the Charmides, Lysis, Laches, Protagoras, Meno, Euthyphro, Theaetetus, Gorgias, Republic; the nature of division is likewise illustrated by examples in the Sophist and Statesman; a scheme of categories is found in the Philebus; the true doctrine of contradiction is taught, and the fallacy of arguing in a circle is exposed in the Republic; the nature of synthesis and analysis is graphically described in the Phaedrus; the nature of words is analysed in the Cratylus; the form of the syllogism is indicated in the genealogical trees of the Sophist and Statesman; a true doctrine of predication and an analysis of the sentence are given in the Sophist; the different meanings of one and being are worked out in the Parmenides. Here we have most of the important elements of logic, not yet systematized or reduced to an art or science, but scattered up and down as they would naturally occur in ordinary discourse. They are of little or no use or significance to us; but because we have grown out of the need of them we should not therefore despise them. They are still interesting and instructive for the light which they shed on the history of the human mind.

There are indeed many old fallacies which linger among us, and new ones are constantly springing up. But they are not of the kind to which ancient logic can be usefully applied. The weapons of common sense, not the analytics of Aristotle, are needed for their overthrow. Nor is the use of the Aristotelian logic any longer natural to us. We no longer put arguments into the form of syllogisms like the schoolmen; the simple use of language has been, happily, restored to us. Neither do we discuss the nature of the proposition, nor extract hidden truths from the copula, nor dispute any longer about nominalism and realism. We do not confuse the form with the matter of knowledge, or invent laws of thought, or imagine that any single science furnishes a principle of reasoning to all the rest. Neither do we require categories or heads of argument to be invented for our use. Those who have no

knowledge of logic, like some of our great physical philosophers, seem to be quite as good reasoners as those who have. Most of the ancient puzzles have been settled on the basis of usage and common sense; there is no need to reopen them. No science should raise problems or invent forms of thought which add nothing to knowledge and are of no use in assisting the acquisition of it. This seems to be the natural limit of logic and metaphysics; if they give us a more comprehensive or a more definite view of the different spheres of knowledge they are to be studied; if not, not. The better part of ancient logic appears hardly in our own day to have a separate existence; it is absorbed in two other sciences: (1) rhetoric, if indeed this ancient art be not also fading away into literary criticism; (2) the science of language, under which all questions relating to words and propositions and the combinations of them may properly be included.

To continue dead or imaginary sciences, which make no signs of progress and have no definite sphere, tends to interfere with the prosecution of living ones. The study of them is apt to blind the judgment and to render men incapable of seeing the value of evidence, and even of appreciating the nature of truth. Nor should we allow the living science to become confused with the dead by an ambiguity of language. The term logic has two different meanings, an ancient and a modern one, and we vainly try to bridge the gulf between them. Many perplexities are avoided by keeping them apart. There might certainly be a new science of logic; it would not however be built up out of the fragments of the old, but would be distinct from them—relative to the state of knowledge which exists at the present time, and based chiefly on the methods of Modern Inductive philosophy. Such a science might have two legitimate fields: first, the refutation and explanation of false philosophies still hovering in the air as they appear from the point of view of later experience or are comprehended in the history of the human mind, as in a larger horizon: secondly, it might furnish new forms of thought more adequate to the expression of all the diversities and oppositions of knowledge which have grown up in these latter days; it might also suggest new methods of enquiry derived from the comparison of the sciences. Few will deny that the introduction of the words 'subject' and 'object' and the Hegelian reconciliation of opposites have been 'most gracious aids' to psychology, or that the methods of Bacon and Mill have shed a light far and wide on the realms of knowledge. These two great studies, the one destructive and corrective of error, the other conservative and constructive of truth, might be a first and second part of logic. Ancient logic would be the propaedeutic or gate of approach to logical science,—nothing more. But to pursue such speculations further, though not irrelevant, might lead us too far away from the argument of the dialogue.

The Euthydemus is, of all the Dialogues of Plato, that in which he approaches most nearly to the comic poet. The mirth is broader, the irony more sustained, the contrast between Socrates and the two Sophists, although veiled, penetrates deeper than in any other of his writings. Even Thrasymachus, in the Republic, is at last pacified, and becomes a friendly and interested auditor of the great discourse. But in the Euthydemus the mask is never dropped; the accustomed irony of Socrates continues to the end...

Socrates narrates to Crito a remarkable scene in which he has himself taken part, and in which the two brothers, Dionysodorus and Euthydemus, are the chief performers. They are natives of Chios, who had settled at Thurii, but were driven out, and in former days had been known at Athens as professors of rhetoric and of the art of fighting in armour. To this they have now added a new accomplishment—the art of Eristic, or fighting with words, which they are likewise willing to teach 'for a consideration.' But they can also teach virtue in a very short time and in the very best manner.

Socrates, who is always on the look-out for teachers of virtue, is interested in the youth Cleinias, the grandson of the great Alcibiades, and is desirous that he should have the benefit of their instructions. He is ready to fall down and worship them; although the greatness of their professions does arouse in his mind a temporary incredulity.

A circle gathers round them, in the midst of which are Socrates, the two brothers, the youth Cleinias, who is watched by the eager eyes of his lover Ctesippus, and others. The performance begins; and such a performance as might well seem to require an invocation of Memory and the Muses. It is agreed that the brothers shall question Cleinias. 'Cleinias,' says Euthydemus, 'who learn, the wise or the unwise?' 'The wise,' is the reply; given with blushing and hesitation. 'And yet when you learned you did not know and were not wise.' Then Dionysodorus takes up the ball: 'Who are they who learn dictation of the grammar-master; the wise or the foolish boys?' 'The wise.' 'Then, after all, the wise learn.' 'And do they learn,' said Euthydemus, 'what they know or what they do not know?' 'The latter.' 'And dictation is a dictation of letters?' 'Yes.' 'And you know letters?' 'Yes.' 'Then you learn what you know.' 'But,' retorts Dionysodorus, 'is not learning acquiring knowledge?' 'Yes.' 'And you acquire that which you have not got already?' 'Yes.' 'Then you learn that which you do not know.'

Socrates is afraid that the youth Cleinias may be discouraged at these repeated overthrows. He therefore explains to him the nature of the process to which he is being subjected. The two strangers are not serious; there are jests at the mysteries which precede the enthronement, and he is being initiated into the mysteries of the sophistical ritual. This is all a sort of horse-play, which is now ended. The exhortation to virtue will follow, and Socrates himself (if the wise men will not laugh at him) is desirous of showing the way in which such an exhortation should be carried on, according to his own poor notion. He proceeds to question Cleinias. The result of the investigation may be summed up as follows:—

All men desire good; and good means the possession of goods, such as wealth, health, beauty, birth, power, honour; not forgetting the virtues and wisdom. And yet in this enumeration the greatest good of all is omitted. What is that? Good fortune. But what need is there of good fortune when we have wisdom already:—in every art and business are not the wise also the fortunate? This is admitted. And again, the possession of goods is not enough; there must also be a right use of them which can only be given by knowledge: in themselves they are neither good nor evil—knowledge and wisdom are the only good, and ignorance and folly the only evil. The conclusion is that we must get 'wisdom.' But can wisdom be taught? 'Yes,' says Cleinias. The ingenuousness of the youth delights Socrates, who is at once relieved from the necessity of discussing one of his great puzzles. 'Since wisdom is the only good, he must become a philosopher, or lover of wisdom.' 'That I will,' says Cleinias.

After Socrates has given this specimen of his own mode of instruction, the two brothers recommence their exhortation to virtue, which is of quite another sort.

'You want Cleinias to be wise?' 'Yes.' 'And he is not wise yet?' 'No.' 'Then you want him to be what he is not, and not to be what he is?—not to be—that is, to perish. Pretty lovers and friends you must all be!'

Here Ctesippus, the lover of Cleinias, interposes in great excitement, thinking that he will teach the two Sophists a lesson of good manners. But he is quickly entangled in the meshes of their sophistry;

and as a storm seems to be gathering Socrates pacifies him with a joke, and Ctesippus then says that he is not reviling the two Sophists, he is only contradicting them. 'But,' says Dionysodorus, 'there is no such thing as contradiction. When you and I describe the same thing, or you describe one thing and I describe another, how can there be a contradiction?' Ctesippus is unable to reply.

Socrates has already heard of the denial of contradiction, and would like to be informed by the great master of the art, 'What is the meaning of this paradox? Is there no such thing as error, ignorance, falsehood? Then what are they professing to teach?' The two Sophists complain that Socrates is ready to answer what they said a year ago, but is 'non-plussed' at what they are saying now. 'What does the word "non-plussed" mean?' Socrates is informed, in reply, that words are lifeless things, and lifeless things have no sense or meaning. Ctesippus again breaks out, and again has to be pacified by Socrates, who renews the conversation with Cleinias. The two Sophists are like Proteus in the variety of their transformations, and he, like Menelaus in the Odyssey, hopes to restore them to their natural form.

He had arrived at the conclusion that Cleinias must become a philosopher. And philosophy is the possession of knowledge; and knowledge must be of a kind which is profitable and may be used. What knowledge is there which has such a nature? Not the knowledge which is required in any particular art; nor again the art of the composer of speeches, who knows how to write them, but cannot speak them, although he too must be admitted to be a kind of enchanter of wild animals. Neither is the knowledge which we are seeking the knowledge of the general. For the general makes over his prey to the statesman, as the huntsman does to the cook, or the taker of quails to the keeper of quails; he has not the use of that which he acquires. The two enquirers, Cleinias and Socrates, are described as wandering about in a wilderness, vainly searching after the art of life and happiness. At last they fix upon the kingly art, as having the desired sort of knowledge. But the kingly art only gives men those goods which are neither good nor evil: and if we say further that it makes us wise, in what does it make us wise? Not in special arts, such as cobbling or carpentering, but only in itself: or say again that it makes us good, there is no answer to the question, 'good in what?' At length in despair Cleinias and Socrates turn to the 'Dioscuri' and request their aid.

Euthydemus argues that Socrates knows something; and as he cannot know and not know, he cannot know some things and not know others, and therefore he knows all things: he and Dionysodorus and all other men know all things. 'Do they know shoemaking, etc?' 'Yes.' The sceptical Ctesippus would like to have some evidence of this extraordinary statement: he will believe if Euthydemus will tell him how many teeth Dionysodorus has, and if Dionysodorus will give him a like piece of information about Euthydemus. Even Socrates is incredulous, and indulges in a little raillery at the expense of the brothers. But he restrains himself, remembering that if the men who are to be his teachers think him stupid they will take no pains with him. Another fallacy is produced which turns on the absoluteness of the verb 'to know.' And here Dionysodorus is caught 'napping,' and is induced by Socrates to confess that 'he does not know the good to be unjust.' Socrates appeals to his brother Euthydemus; at the same time he acknowledges that he cannot, like Heracles, fight against a Hydra, and even Heracles, on the approach of a second monster, called upon his nephew Iolaus to help. Dionysodorus rejoins that Iolaus was no more the nephew of Heracles than of Socrates. For a nephew is a nephew, and a brother is a brother, and a father is a father, not of one man only, but of all; nor of men only, but of dogs and sea-monsters. Ctesippus makes merry with the consequences which follow: 'Much good has your father got out of the wisdom of his puppies.'

'But,' says Euthydemus, unabashed, 'nobody wants much good.' Medicine is a good, arms are a good, money is a good, and yet there may be too much of them in wrong places. 'No,' says Ctesippus, 'there cannot be too much gold.' And would you be happy if you had three talents of gold in your belly, a talent in your pate, and a stater in either eye?' Ctesippus, imitating the new wisdom, replies, 'And do not the Scythians reckon those to be the happiest of men who have their skulls gilded and see the inside of them?' 'Do you see,' retorts Euthydemus, 'what has the quality of vision or what has not the quality of vision?' 'What has the quality of vision.' 'And you see our garments?' 'Yes.' 'Then our garments have the quality of vision.' A similar play of words follows, which is successfully retorted by Ctesippus, to the great delight of Cleinias, who is rebuked by Socrates for laughing at such solemn and beautiful things.

'But are there any beautiful things? And if there are such, are they the same or not the same as absolute beauty?' Socrates replies that they are not the same, but each of them has some beauty present with it. 'And are you an ox because you have an ox present with you?' After a few more amphiboliae, in which Socrates, like Ctesippus, in self-defence borrows the weapons of the brothers, they both confess that the two heroes are invincible; and the scene concludes with a grand chorus of shouting and laughing, and a panegyrical oration from Socrates:—

First, he praises the indifference of Dionysodorus and Euthydemus to public opinion; for most persons would rather be refuted by such arguments than use them in the refutation of others. Secondly, he remarks upon their impartiality; for they stop their own mouths, as well as those of other people. Thirdly, he notes their liberality, which makes them give away their secret to all the world: they should be more reserved, and let no one be present at this exhibition who does not pay them a handsome fee; or better still they might practise on one another only. He concludes with a respectful request that they will receive him and Cleinias among their disciples.

Crito tells Socrates that he has heard one of the audience criticise severely this wisdom,—not sparing Socrates himself for countenancing such an exhibition. Socrates asks what manner of man was this censorious critic. 'Not an orator, but a great composer of speeches.' Socrates understands that he is an amphibious animal, half philosopher, half politician; one of a class who have the highest opinion of themselves and a spite against philosophers, whom they imagine to be their rivals. They are a class who are very likely to get mauled by Euthydemus and his friends, and have a great notion of their own wisdom; for they imagine themselves to have all the advantages and none of the drawbacks both of politics and of philosophy. They do not understand the principles of combination, and hence are ignorant that the union of two good things which have different ends produces a compound inferior to either of them taken separately.

Crito is anxious about the education of his children, one of whom is growing up. The description of Dionysodorus and Euthydemus suggests to him the reflection that the professors of education are strange beings. Socrates consoles him with the remark that the good in all professions are few, and recommends that 'he and his house' should continue to serve philosophy, and not mind about its professors.

...

There is a stage in the history of philosophy in which the old is dying out, and the new has not yet come into full life. Great philosophies like the Eleatic or Heraclitean, which have enlarged the boundaries of the human mind, begin to pass away in words. They subsist only as forms which have rooted themselves in language—as troublesome elements of thought which cannot be either used or explained away. The same absoluteness which was once attributed to abstractions is now attached to the words which are the signs of them. The philosophy which in the first and second generation was a great and inspiring effort of reflection, in the third becomes sophistical, verbal, eristic.

It is this stage of philosophy which Plato satirises in the Euthydemus. The fallacies which are noted by him appear trifling to us now, but they were not trifling in the age before logic, in the decline of the earlier Greek philosophies, at a time when language was first beginning to perplex human thought. Besides he is caricaturing them; they probably received more subtle forms at the hands of those who seriously maintained them. They are patent to us in Plato, and we are inclined to wonder how any one could ever have been deceived by them; but we must remember also that there was a time when the human mind was only with great difficulty disentangled from such fallacies.

To appreciate fully the drift of the Euthydemus, we should imagine a mental state in which not individuals only, but whole schools during more than one generation, were animated by the desire to exclude the conception of rest, and therefore the very word 'this' (Theaet.) from language; in which the ideas of space, time, matter, motion, were proved to be contradictory and imaginary; in which the nature of qualitative change was a puzzle, and even differences of degree, when applied to abstract notions, were not understood; in which there was no analysis of grammar, and mere puns or plays of words received serious attention; in which contradiction itself was denied, and, on the one hand, every predicate was affirmed to be true of every subject, and on the other, it was held that no predicate was true of any subject, and that nothing was, or was known, or could be spoken. Let us imagine disputes carried on with religious earnestness and more than scholastic subtlety, in which the catchwords of philosophy are completely detached from their context. (Compare Theaet.) To such disputes the humour, whether of Plato in the ancient, or of Pope and Swift in the modern world, is the natural enemy. Nor must we forget that in modern times also there is no fallacy so gross, no trick of language so transparent, no abstraction so barren and unmeaning, no form of thought so contradictory to experience, which has not been found to satisfy the minds of philosophical enquirers at a certain stage, or when regarded from a certain point of view only. The peculiarity of the fallacies of our own age is that we live within them, and are therefore generally unconscious of them.

Aristotle has analysed several of the same fallacies in his book 'De Sophisticis Elenchis,' which Plato, with equal command of their true nature, has preferred to bring to the test of ridicule. At first we are only struck with the broad humour of this 'reductio ad absurdum:' gradually we perceive that some important questions begin to emerge. Here, as everywhere else, Plato is making war against the philosophers who put words in the place of things, who tear arguments to tatters, who deny predication, and thus make knowledge impossible, to whom ideas and objects of sense have no fixedness, but are in a state of perpetual oscillation and transition. Two great truths seem to be indirectly taught through these fallacies: (1) The uncertainty of language, which allows the same words to be used in different meanings, or with different degrees of meaning: (2) The necessary limitation or relative nature of all phenomena. Plato is aware that his own doctrine of ideas, as well as the Eleatic Being and Not-being, alike admit of being regarded as verbal fallacies. The sophism advanced in the Meno, 'that you cannot enquire either into what you know or do not know,' is lightly

touched upon at the commencement of the Dialogue; the thesis of Protagoras, that everything is true to him to whom it seems to be true, is satirized. In contrast with these fallacies is maintained the Socratic doctrine that happiness is gained by knowledge. The grammatical puzzles with which the Dialogue concludes probably contain allusions to tricks of language which may have been practised by the disciples of Prodicus or Antisthenes. They would have had more point, if we were acquainted with the writings against which Plato's humour is directed. Most of the jests appear to have a serious meaning; but we have lost the clue to some of them, and cannot determine whether, as in the Cratylus, Plato has or has not mixed up purely unmeaning fun with his satire.

The two discourses of Socrates may be contrasted in several respects with the exhibition of the Sophists: (1) In their perfect relevancy to the subject of discussion, whereas the Sophistical discourses are wholly irrelevant: (2) In their enquiring sympathetic tone, which encourages the youth, instead of 'knocking him down,' after the manner of the two Sophists: (3) In the absence of any definite conclusion—for while Socrates and the youth are agreed that philosophy is to be studied, they are not able to arrive at any certain result about the art which is to teach it. This is a question which will hereafter be answered in the Republic; as the conception of the kingly art is more fully developed in the Politicus, and the caricature of rhetoric in the Gorgias.

The characters of the Dialogue are easily intelligible. There is Socrates once more in the character of an old man; and his equal in years, Crito, the father of Critobulus, like Lysimachus in the Laches, his fellow demesman (Apol.), to whom the scene is narrated, and who once or twice interrupts with a remark after the manner of the interlocutor in the Phaedo, and adds his commentary at the end; Socrates makes a playful allusion to his money-getting habits. There is the youth Cleinias, the grandson of Alcibiades, who may be compared with Lysis, Charmides, Menexenus, and other ingenuous youths out of whose mouths Socrates draws his own lessons, and to whom he always seems to stand in a kindly and sympathetic relation. Crito will not believe that Socrates has not improved or perhaps invented the answers of Cleinias (compare Phaedrus). The name of the grandson of Alcibiades, who is described as long dead, (Greek), and who died at the age of forty-four, in the year 404 B.C., suggests not only that the intended scene of the Euthydemus could not have been earlier than 404, but that as a fact this Dialogue could not have been composed before 390 at the soonest. Ctesippus, who is the lover of Cleinias, has been already introduced to us in the Lysis, and seems there too to deserve the character which is here given him, of a somewhat uproarious young man. But the chief study of all is the picture of the two brothers, who are unapproachable in their effrontery, equally careless of what they say to others and of what is said to them, and never at a loss. They are 'Arcades ambo et cantare pares et respondere parati.' Some superior degree of wit or subtlety is attributed to Euthydemus, who sees the trap in which Socrates catches Dionysodorus.

The epilogue or conclusion of the Dialogue has been criticised as inconsistent with the general scheme. Such a criticism is like similar criticisms on Shakespeare, and proceeds upon a narrow notion of the variety which the Dialogue, like the drama, seems to admit. Plato in the abundance of his dramatic power has chosen to write a play upon a play, just as he often gives us an argument within an argument. At the same time he takes the opportunity of assailing another class of persons who are as alien from the spirit of philosophy as Euthydemus and Dionysodorus. The Eclectic, the Syncretist, the Doctrinaire, have been apt to have a bad name both in ancient and modern times. The persons whom Plato ridicules in the epilogue to the Euthydemus are of this class. They occupy a border-ground between philosophy and politics; they keep out of the dangers of politics, and at the

same time use philosophy as a means of serving their own interests. Plato quaintly describes them as making two good things, philosophy and politics, a little worse by perverting the objects of both. Men like Antiphon or Lysias would be types of the class. Out of a regard to the respectabilities of life, they are disposed to censure the interest which Socrates takes in the exhibition of the two brothers. They do not understand, any more than Crito, that he is pursuing his vocation of detecting the follies of mankind, which he finds 'not unpleasant.' (Compare Apol.)

Education is the common subject of all Plato's earlier Dialogues. The concluding remark of Crito, that he has a difficulty in educating his two sons, and the advice of Socrates to him that he should not give up philosophy because he has no faith in philosophers, seems to be a preparation for the more peremptory declaration of the Meno that 'Virtue cannot be taught because there are no teachers.'

The reasons for placing the Euthydemus early in the series are: (1) the similarity in plan and style to the Protagoras, Charmides, and Lysis;—the relation of Socrates to the Sophists is still that of humorous antagonism, not, as in the later Dialogues of Plato, of embittered hatred; and the places and persons have a considerable family likeness; (2) the Euthydemus belongs to the Socratic period in which Socrates is represented as willing to learn, but unable to teach; and in the spirit of Xenophon's Memorabilia, philosophy is defined as 'the knowledge which will make us happy;' (3) we seem to have passed the stage arrived at in the Protagoras, for Socrates is no longer discussing whether virtue can be taught—from this question he is relieved by the ingenuous declaration of the youth Cleinias; and (4) not yet to have reached the point at which he asserts 'that there are no teachers.' Such grounds are precarious, as arguments from style and plan are apt to be (Greek). But no arguments equally strong can be urged in favour of assigning to the Euthydemus any other position in the series.

EUTHYDEMUS

PERSONS OF THE DIALOGUE: Socrates, who is the narrator of the Dialogue. Crito, Cleinias, Euthydemus, Dionysodorus, Ctesippus.

SCENE: The Lyceum.

CRITO: Who was the person, Socrates, with whom you were talking yesterday at the Lyceum? There was such a crowd around you that I could not get within hearing, but I caught a sight of him over their heads, and I made out, as I thought, that he was a stranger with whom you were talking: who was he?

SOCRATES: There were two, Crito; which of them do you mean?

CRITO: The one whom I mean was seated second from you on the right-hand side. In the middle was Cleinias the young son of Axiochus, who has wonderfully grown; he is only about the age of my own

Critobulus, but he is much forwarder and very good-looking: the other is thin and looks younger than he is.

SOCRATES: He whom you mean, Crito, is Euthydemus; and on my left hand there was his brother Dionysodorus, who also took part in the conversation.

CRITO: Neither of them are known to me, Socrates; they are a new importation of Sophists, as I should imagine. Of what country are they, and what is their line of wisdom?

SOCRATES: As to their origin, I believe that they are natives of this part of the world, and have migrated from Chios to Thurii; they were driven out of Thurii, and have been living for many years past in these regions. As to their wisdom, about which you ask, Crito, they are wonderful—consummate! I never knew what the true pancratiast was before; they are simply made up of fighting, not like the two Acarnanian brothers who fight with their bodies only, but this pair of heroes, besides being perfect in the use of their bodies, are invincible in every sort of warfare; for they are capital at fighting in armour, and will teach the art to any one who pays them; and also they are most skilful in legal warfare; they will plead themselves and teach others to speak and to compose speeches which will have an effect upon the courts. And this was only the beginning of their wisdom, but they have at last carried out the pancratiastic art to the very end, and have mastered the only mode of fighting which had been hitherto neglected by them; and now no one dares even to stand up against them: such is their skill in the war of words, that they can refute any proposition whether true or false. Now I am thinking, Crito, of placing myself in their hands; for they say that in a short time they can impart their skill to any one.

CRITO: But, Socrates, are you not too old? there may be reason to fear that.

SOCRATES: Certainly not, Crito; as I will prove to you, for I have the consolation of knowing that they began this art of disputation which I covet, quite, as I may say, in old age; last year, or the year before, they had none of their new wisdom. I am only apprehensive that I may bring the two strangers into disrepute, as I have done Connus the son of Metrobius, the harp-player, who is still my music-master; for when the boys who go to him see me going with them, they laugh at me and call him grandpapa's master. Now I should not like the strangers to experience similar treatment; the fear of ridicule may make them unwilling to receive me; and therefore, Crito, I shall try and persuade some old men to accompany me to them, as I persuaded them to go with me to Connus, and I hope that you will make one: and perhaps we had better take your sons as a bait; they will want to have them as pupils, and for the sake of them willing to receive us.

CRITO: I see no objection, Socrates, if you like; but first I wish that you would give me a description of their wisdom, that I may know beforehand what we are going to learn.

SOCRATES: In less than no time you shall hear; for I cannot say that I did not attend—I paid great attention to them, and I remember and will endeavour to repeat the whole story. Providentially I was sitting alone in the dressing-room of the Lyceum where you saw me, and was about to depart; when I was getting up I recognized the familiar divine sign: so I sat down again, and in a little while the two brothers Euthydemus and Dionysodorus came in, and several others with them, whom I believe to be their disciples, and they walked about in the covered court; they had not taken more than two or three

turns when Cleinias entered, who, as you truly say, is very much improved: he was followed by a host of lovers, one of whom was Ctesippus the Paeanian, a well-bred youth, but also having the wildness of youth. Cleinias saw me from the entrance as I was sitting alone, and at once came and sat down on the right hand of me, as you describe; and Dionysodorus and Euthydemus, when they saw him, at first stopped and talked with one another, now and then glancing at us, for I particularly watched them; and then Euthydemus came and sat down by the youth, and the other by me on the left hand; the rest anywhere. I saluted the brothers, whom I had not seen for a long time; and then I said to Cleinias: Here are two wise men, Euthydemus and Dionysodorus, Cleinias, wise not in a small but in a large way of wisdom, for they know all about war,—all that a good general ought to know about the array and command of an army, and the whole art of fighting in armour: and they know about law too, and can teach a man how to use the weapons of the courts when he is injured.

They heard me say this, but only despised me. I observed that they looked at one another, and both of them laughed; and then Euthydemus said: Those, Socrates, are matters which we no longer pursue seriously; to us they are secondary occupations.

Indeed, I said, if such occupations are regarded by you as secondary, what must the principal one be; tell me, I beseech you, what that noble study is?

The teaching of virtue, Socrates, he replied, is our principal occupation; and we believe that we can impart it better and quicker than any man.

My God! I said, and where did you learn that? I always thought, as I was saying just now, that your chief accomplishment was the art of fighting in armour; and I used to say as much of you, for I remember that you professed this when you were here before. But now if you really have the other knowledge, O forgive me: I address you as I would superior beings, and ask you to pardon the impiety of my former expressions. But are you quite sure about this, Dionysodorus and Euthydemus? the promise is so vast, that a feeling of incredulity steals over me.

You may take our word, Socrates, for the fact.

Then I think you happier in having such a treasure than the great king is in the possession of his kingdom. And please to tell me whether you intend to exhibit your wisdom; or what will you do?

That is why we have come hither, Socrates; and our purpose is not only to exhibit, but also to teach any one who likes to learn.

But I can promise you, I said, that every unvirtuous person will want to learn. I shall be the first; and there is the youth Cleinias, and Ctesippus: and here are several others, I said, pointing to the lovers of Cleinias, who were beginning to gather round us. Now Ctesippus was sitting at some distance from Cleinias; and when Euthydemus leaned forward in talking with me, he was prevented from seeing Cleinias, who was between us; and so, partly because he wanted to look at his love, and also because he was interested, he jumped up and stood opposite to us: and all the other admirers of Cleinias, as well as the disciples of Euthydemus and Dionysodorus, followed his example. And these were the persons whom I showed to Euthydemus, telling him that they were all eager to learn: to which Ctesippus and all of them with one voice vehemently assented, and bid him exhibit the power

of his wisdom. Then I said: O Euthydemus and Dionysodorus, I earnestly request you to do myself and the company the favour to exhibit. There may be some trouble in giving the whole exhibition; but tell me one thing,—can you make a good man of him only who is already convinced that he ought to learn of you, or of him also who is not convinced, either because he imagines that virtue is a thing which cannot be taught at all, or that you are not the teachers of it? Has your art power to persuade him, who is of the latter temper of mind, that virtue can be taught; and that you are the men from whom he will best learn it?

Certainly, Socrates, said Dionysodorus; our art will do both.

And you and your brother, Dionysodorus, I said, of all men who are now living are the most likely to stimulate him to philosophy and to the study of virtue?

Yes, Socrates, I rather think that we are.

Then I wish that you would be so good as to defer the other part of the exhibition, and only try to persuade the youth whom you see here that he ought to be a philosopher and study virtue. Exhibit that, and you will confer a great favour on me and on every one present; for the fact is I and all of us are extremely anxious that he should become truly good. His name is Cleinias, and he is the son of Axiochus, and grandson of the old Alcibiades, cousin of the Alcibiades that now is. He is quite young, and we are naturally afraid that some one may get the start of us, and turn his mind in a wrong direction, and he may be ruined. Your visit, therefore, is most happily timed; and I hope that you will make a trial of the young man, and converse with him in our presence, if you have no objection.

These were pretty nearly the expressions which I used; and Euthydemus, in a manly and at the same time encouraging tone, replied: There can be no objection, Socrates, if the young man is only willing to answer questions.

He is quite accustomed to do so, I replied; for his friends often come and ask him questions and argue with him; and therefore he is quite at home in answering.

What followed, Crito, how can I rightly narrate? For not slight is the task of rehearsing infinite wisdom, and therefore, like the poets, I ought to commence my relation with an invocation to Memory and the Muses. Now Euthydemus, if I remember rightly, began nearly as follows: O Cleinias, are those who learn the wise or the ignorant?

The youth, overpowered by the question blushed, and in his perplexity looked at me for help; and I, knowing that he was disconcerted, said: Take courage, Cleinias, and answer like a man whichever you think; for my belief is that you will derive the greatest benefit from their questions.

Whichever he answers, said Dionysodorus, leaning forward so as to catch my ear, his face beaming with laughter, I prophesy that he will be refuted, Socrates.

While he was speaking to me, Cleinias gave his answer: and therefore I had no time to warn him of the predicament in which he was placed, and he answered that those who learned were the wise.

Euthydemus proceeded: There are some whom you would call teachers, are there not?

The boy assented.

And they are the teachers of those who learn—the grammar-master and the lyre-master used to teach you and other boys; and you were the learners?

Yes.

And when you were learners you did not as yet know the things which you were learning?

No, he said.

And were you wise then?

No, indeed, he said.

But if you were not wise you were unlearned?

Certainly.

You then, learning what you did not know, were unlearned when you were learning?

The youth nodded assent.

Then the unlearned learn, and not the wise, Cleinias, as you imagine.

At these words the followers of Euthydemus, of whom I spoke, like a chorus at the bidding of their director, laughed and cheered. Then, before the youth had time to recover his breath, Dionysodorus cleverly took him in hand, and said: Yes, Cleinias; and when the grammar-master dictated anything to you, were they the wise boys or the unlearned who learned the dictation?

The wise, replied Cleinias.

Then after all the wise are the learners and not the unlearned; and your last answer to Euthydemus was wrong.

Then once more the admirers of the two heroes, in an ecstasy at their wisdom, gave vent to another peal of laughter, while the rest of us were silent and amazed. Euthydemus, observing this, determined to persevere with the youth; and in order to heighten the effect went on asking another similar question, which might be compared to the double turn of an expert dancer. Do those, said he, who learn, learn what they know, or what they do not know?

Again Dionysodorus whispered to me: That, Socrates, is just another of the same sort.

Good heavens, I said; and your last question was so good!

Like all our other questions, Socrates, he replied—inevitable.

I see the reason, I said, why you are in such reputation among your disciples.

Meanwhile Cleinias had answered Euthydemus that those who learned learn what they do not know; and he put him through a series of questions the same as before.

Do you not know letters?

He assented.

All letters?

Yes.

But when the teacher dictates to you, does he not dictate letters?

To this also he assented.

Then if you know all letters, he dictates that which you know?

This again was admitted by him.

Then, said the other, you do not learn that which he dictates; but he only who does not know letters learns?

Nay, said Cleinias; but I do learn.

Then, said he, you learn what you know, if you know all the letters?

He admitted that.

Then, he said, you were wrong in your answer.

The word was hardly out of his mouth when Dionysodorus took up the argument, like a ball which he caught, and had another throw at the youth. Cleinias, he said, Euthydemus is deceiving you. For tell me now, is not learning acquiring knowledge of that which one learns?

Cleinias assented.

And knowing is having knowledge at the time?

He agreed.

And not knowing is not having knowledge at the time?

He admitted that.

And are those who acquire those who have or have not a thing?

Those who have not.

And have you not admitted that those who do not know are of the number of those who have not?

He nodded assent.

Then those who learn are of the class of those who acquire, and not of those who have?

He agreed.

Then, Cleinias, he said, those who do not know learn, and not those who know.

Euthydemus was proceeding to give the youth a third fall; but I knew that he was in deep water, and therefore, as I wanted to give him a respite lest he should be disheartened, I said to him consolingly: You must not be surprised, Cleinias, at the singularity of their mode of speech: this I say because you may not understand what the two strangers are doing with you; they are only initiating you after the manner of the Corybantes in the mysteries; and this answers to the enthronement, which, if you have ever been initiated, is, as you will know, accompanied by dancing and sport; and now they are just prancing and dancing about you, and will next proceed to initiate you; imagine then that you have gone through the first part of the sophistical ritual, which, as Prodicus says, begins with initiation into the correct use of terms. The two foreign gentlemen, perceiving that you did not know, wanted to explain to you that the word 'to learn' has two meanings, and is used, first, in the sense of acquiring knowledge of some matter of which you previously have no knowledge, and also, when you have the knowledge, in the sense of reviewing this matter, whether something done or spoken by the light of this newly-acquired knowledge; the latter is generally called 'knowing' rather than 'learning,' but the word 'learning' is also used; and you did not see, as they explained to you, that the term is employed of two opposite sorts of men, of those who know, and of those who do not know. There was a similar trick in the second question, when they asked you whether men learn what they know or what they do not know. These parts of learning are not serious, and therefore I say that the gentlemen are not serious, but are only playing with you. For if a man had all that sort of knowledge that ever was, he would not be at all the wiser; he would only be able to play with men, tripping them up and oversetting them with distinctions of words. He would be like a person who pulls away a stool from some one when he is about to sit down, and then laughs and makes merry at the sight of his friend overturned and laid on his back. And you must regard all that has hitherto passed between you and them as merely play. But in what is to follow I am certain that they will exhibit to you their serious purpose, and keep their promise (I will show them how); for they promised to give me a sample of the hortatory philosophy, but I suppose that they wanted to have a game with you first. And now, Euthydemus and Dionysodorus, I think that we have had enough of this. Will you let me see you explaining to the young man how he is to apply himself to the study of virtue and wisdom? And I will first show you what I conceive to be the nature of the task, and what sort of a discourse I desire to hear; and if I do this in a very inartistic and ridiculous manner, do not laugh at me, for I only venture to improvise before you because I am eager to hear your wisdom: and I must therefore ask you and your disciples

to refrain from laughing. And now, O son of Axiochus, let me put a question to you: Do not all men desire happiness? And yet, perhaps, this is one of those ridiculous questions which I am afraid to ask, and which ought not to be asked by a sensible man: for what human being is there who does not desire happiness?

There is no one, said Cleinias, who does not.

Well, then, I said, since we all of us desire happiness, how can we be happy?—that is the next question. Shall we not be happy if we have many good things? And this, perhaps, is even a more simple question than the first, for there can be no doubt of the answer.

He assented.

And what things do we esteem good? No solemn sage is required to tell us this, which may be easily answered; for every one will say that wealth is a good.

Certainly, he said.

And are not health and beauty goods, and other personal gifts?

He agreed.

Can there be any doubt that good birth, and power, and honours in one's own land, are goods?

He assented.

And what other goods are there? I said. What do you say of temperance, justice, courage: do you not verily and indeed think, Cleinias, that we shall be more right in ranking them as goods than in not ranking them as goods? For a dispute might possibly arise about this. What then do you say?

They are goods, said Cleinias.

Very well, I said; and where in the company shall we find a place for wisdom—among the goods or not?

Among the goods.

And now, I said, think whether we have left out any considerable goods.

I do not think that we have, said Cleinias.

Upon recollection, I said, indeed I am afraid that we have left out the greatest of them all.

What is that? he asked.

Fortune, Cleinias, I replied; which all, even the most foolish, admit to be the greatest of goods.

True, he said.

On second thoughts, I added, how narrowly, O son of Axiochus, have you and I escaped making a laughing-stock of ourselves to the strangers.

Why do you say so?

Why, because we have already spoken of good-fortune, and are but repeating ourselves.

What do you mean?

I mean that there is something ridiculous in again putting forward good-fortune, which has a place in the list already, and saying the same thing twice over.

He asked what was the meaning of this, and I replied: Surely wisdom is good-fortune; even a child may know that.

The simple-minded youth was amazed; and, observing his surprise, I said to him: Do you not know, Cleinias, that flute-players are most fortunate and successful in performing on the flute?

He assented.

And are not the scribes most fortunate in writing and reading letters?

Certainly.

Amid the dangers of the sea, again, are any more fortunate on the whole than wise pilots?

None, certainly.

And if you were engaged in war, in whose company would you rather take the risk—in company with a wise general, or with a foolish one?

With a wise one.

And if you were ill, whom would you rather have as a companion in a dangerous illness—a wise physician, or an ignorant one?

A wise one.

You think, I said, that to act with a wise man is more fortunate than to act with an ignorant one?

He assented.

Then wisdom always makes men fortunate: for by wisdom no man would ever err, and therefore he must act rightly and succeed, or his wisdom would be wisdom no longer.

We contrived at last, somehow or other, to agree in a general conclusion, that he who had wisdom had no need of fortune. I then recalled to his mind the previous state of the question. You remember, I said, our making the admission that we should be happy and fortunate if many good things were present with us?

He assented.

And should we be happy by reason of the presence of good things, if they profited us not, or if they profited us?

If they profited us, he said.

And would they profit us, if we only had them and did not use them? For example, if we had a great deal of food and did not eat, or a great deal of drink and did not drink, should we be profited?

Certainly not, he said.

Or would an artisan, who had all the implements necessary for his work, and did not use them, be any the better for the possession of them? For example, would a carpenter be any the better for having all his tools and plenty of wood, if he never worked?

Certainly not, he said.

And if a person had wealth and all the goods of which we were just now speaking, and did not use them, would he be happy because he possessed them?

No indeed, Socrates.

Then, I said, a man who would be happy must not only have the good things, but he must also use them; there is no advantage in merely having them?

True.

Well, Cleinias, but if you have the use as well as the possession of good things, is that sufficient to confer happiness?

Yes, in my opinion.

And may a person use them either rightly or wrongly?

He must use them rightly.

That is quite true, I said. And the wrong use of a thing is far worse than the non-use; for the one is an evil, and the other is neither a good nor an evil. You admit that?

He assented.

Now in the working and use of wood, is not that which gives the right use simply the knowledge of the carpenter?

Nothing else, he said.

And surely, in the manufacture of vessels, knowledge is that which gives the right way of making them?

He agreed.

And in the use of the goods of which we spoke at first—wealth and health and beauty, is not knowledge that which directs us to the right use of them, and regulates our practice about them?

He assented.

Then in every possession and every use of a thing, knowledge is that which gives a man not only good-fortune but success?

He again assented.

And tell me, I said, O tell me, what do possessions profit a man, if he have neither good sense nor wisdom? Would a man be better off, having and doing many things without wisdom, or a few things with wisdom? Look at the matter thus: If he did fewer things would he not make fewer mistakes? if he made fewer mistakes would he not have fewer misfortunes? and if he had fewer misfortunes would he not be less miserable?

Certainly, he said.

And who would do least—a poor man or a rich man?

A poor man.

A weak man or a strong man?

A weak man.

A noble man or a mean man?

A mean man.

And a coward would do less than a courageous and temperate man?

Yes.

And an indolent man less than an active man?

He assented.

And a slow man less than a quick; and one who had dull perceptions of seeing and hearing less than one who had keen ones?

All this was mutually allowed by us.

Then, I said, Cleinias, the sum of the matter appears to be that the goods of which we spoke before are not to be regarded as goods in themselves, but the degree of good and evil in them depends on whether they are or are not under the guidance of knowledge: under the guidance of ignorance, they are greater evils than their opposites, inasmuch as they are more able to minister to the evil principle which rules them; and when under the guidance of wisdom and prudence, they are greater goods: but in themselves they are nothing?

That, he replied, is obvious.

What then is the result of what has been said? Is not this the result—that other things are indifferent, and that wisdom is the only good, and ignorance the only evil?

He assented.

Let us consider a further point, I said: Seeing that all men desire happiness, and happiness, as has been shown, is gained by a use, and a right use, of the things of life, and the right use of them, and good-fortune in the use of them, is given by knowledge,—the inference is that everybody ought by all means to try and make himself as wise as he can?

Yes, he said.

And when a man thinks that he ought to obtain this treasure, far more than money, from a father or a guardian or a friend or a suitor, whether citizen or stranger—the eager desire and prayer to them that they would impart wisdom to you, is not at all dishonourable, Cleinias; nor is any one to be blamed for doing any honourable service or ministration to any man, whether a lover or not, if his aim is to get wisdom. Do you agree? I said.

Yes, he said, I quite agree, and think that you are right.

Yes, I said, Cleinias, if only wisdom can be taught, and does not come to man spontaneously; for this is a point which has still to be considered, and is not yet agreed upon by you and me—

But I think, Socrates, that wisdom can be taught, he said.

Best of men, I said, I am delighted to hear you say so; and I am also grateful to you for having saved me from a long and tiresome investigation as to whether wisdom can be taught or not. But now, as you think that wisdom can be taught, and that wisdom only can make a man happy and fortunate, will you not acknowledge that all of us ought to love wisdom, and you individually will try to love her?

Certainly, Socrates, he said; I will do my best.

I was pleased at hearing this; and I turned to Dionysodorus and Euthydemus and said: That is an example, clumsy and tedious I admit, of the sort of exhortations which I would have you give; and I hope that one of you will set forth what I have been saying in a more artistic style: or at least take up the enquiry where I left off, and proceed to show the youth whether he should have all knowledge; or whether there is one sort of knowledge only which will make him good and happy, and what that is. For, as I was saying at first, the improvement of this young man in virtue and wisdom is a matter which we have very much at heart.

Thus I spoke, Crito, and was all attention to what was coming. I wanted to see how they would approach the question, and where they would start in their exhortation to the young man that he should practise wisdom and virtue. Dionysodorus, who was the elder, spoke first. Everybody's eyes were directed towards him, perceiving that something wonderful might shortly be expected. And certainly they were not far wrong; for the man, Crito, began a remarkable discourse well worth hearing, and wonderfully persuasive regarded as an exhortation to virtue.

Tell me, he said, Socrates and the rest of you who say that you want this young man to become wise, are you in jest or in real earnest?

I was led by this to imagine that they fancied us to have been jesting when we asked them to converse with the youth, and that this made them jest and play, and being under this impression, I was the more decided in saying that we were in profound earnest. Dionysodorus said:

Reflect, Socrates; you may have to deny your words.

I have reflected, I said; and I shall never deny my words.

Well, said he, and so you say that you wish Cleinias to become wise?

Undoubtedly.

And he is not wise as yet?

At least his modesty will not allow him to say that he is.

You wish him, he said, to become wise and not, to be ignorant?

That we do.

You wish him to be what he is not, and no longer to be what he is?

I was thrown into consternation at this.

Taking advantage of my consternation he added: You wish him no longer to be what he is, which can only mean that you wish him to perish. Pretty lovers and friends they must be who want their favourite not to be, or to perish!

When Ctesippus heard this he got very angry (as a lover well might) and said: Stranger of Thurii—if politeness would allow me I should say, A plague upon you! What can make you tell such a lie about me and the others, which I hardly like to repeat, as that I wish Cleinias to perish?

Euthydemus replied: And do you think, Ctesippus, that it is possible to tell a lie?

Yes, said Ctesippus; I should be mad to say anything else.

And in telling a lie, do you tell the thing of which you speak or not?

You tell the thing of which you speak.

And he who tells, tells that thing which he tells, and no other?

Yes, said Ctesippus.

And that is a distinct thing apart from other things?

Certainly.

And he who says that thing says that which is?

Yes.

And he who says that which is, says the truth. And therefore Dionysodorus, if he says that which is, says the truth of you and no lie.

Yes, Euthydemus, said Ctesippus; but in saying this, he says what is not.

Euthydemus answered: And that which is not is not?

True.

And that which is not is nowhere?

Nowhere.

And can any one do anything about that which has no existence, or do to Cleinias that which is not and is nowhere?

I think not, said Ctesippus.

Well, but do rhetoricians, when they speak in the assembly, do nothing?

Nay, he said, they do something.

And doing is making?

Yes.

And speaking is doing and making?

He agreed.

Then no one says that which is not, for in saying what is not he would be doing something; and you have already acknowledged that no one can do what is not. And therefore, upon your own showing, no one says what is false; but if Dionysodorus says anything, he says what is true and what is.

Yes, Euthydemus, said Ctesippus; but he speaks of things in a certain way and manner, and not as they really are.

Why, Ctesippus, said Dionysodorus, do you mean to say that any one speaks of things as they are?

Yes, he said—all gentlemen and truth-speaking persons.

And are not good things good, and evil things evil?

He assented.

And you say that gentlemen speak of things as they are?

Yes.

Then the good speak evil of evil things, if they speak of them as they are?

Yes, indeed, he said; and they speak evil of evil men. And if I may give you a piece of advice, you had better take care that they do not speak evil of you, since I can tell you that the good speak evil of the evil.

And do they speak great things of the great, rejoined Euthydemus, and warm things of the warm?

To be sure they do, said Ctesippus; and they speak coldly of the insipid and cold dialectician.

You are abusive, Ctesippus, said Dionysodorus, you are abusive!

Indeed, I am not, Dionysodorus, he replied; for I love you and am giving you friendly advice, and, if I could, would persuade you not like a boor to say in my presence that I desire my beloved, whom I value above all men, to perish.

I saw that they were getting exasperated with one another, so I made a joke with him and said: O Ctesippus, I think that we must allow the strangers to use language in their own way, and not quarrel with them about words, but be thankful for what they give us. If they know how to destroy men in such a way as to make good and sensible men out of bad and foolish ones—whether this is a discovery of their own, or whether they have learned from some one else this new sort of death and destruction which enables them to get rid of a bad man and turn him into a good one—if they know this (and they do know this—at any rate they said just now that this was the secret of their newly-discovered art)—let them, in their phraseology, destroy the youth and make him wise, and all of us with him. But if you young men do not like to trust yourselves with them, then fiat experimentum in corpore senis; I will be the Carian on whom they shall operate. And here I offer my old person to Dionysodorus; he may put me into the pot, like Medea the Colchian, kill me, boil me, if he will only make me good.

Ctesippus said: And I, Socrates, am ready to commit myself to the strangers; they may skin me alive, if they please (and I am pretty well skinned by them already), if only my skin is made at last, not like that of Marsyas, into a leathern bottle, but into a piece of virtue. And here is Dionysodorus fancying that I am angry with him, when really I am not angry at all; I do but contradict him when I think that he is speaking improperly to me: and you must not confound abuse and contradiction, O illustrious Dionysodorus; for they are quite different things.

Contradiction! said Dionysodorus; why, there never was such a thing.

Certainly there is, he replied; there can be no question of that. Do you, Dionysodorus, maintain that there is not?

You will never prove to me, he said, that you have heard any one contradicting any one else.

Indeed, said Ctesippus; then now you may hear me contradicting Dionysodorus.

Are you prepared to make that good?

Certainly, he said.

Well, have not all things words expressive of them?

Yes.

Of their existence or of their non-existence?

Of their existence.

Yes, Ctesippus, and we just now proved, as you may remember, that no man could affirm a negative; for no one could affirm that which is not.

And what does that signify? said Ctesippus; you and I may contradict all the same for that.

But can we contradict one another, said Dionysodorus, when both of us are describing the same thing? Then we must surely be speaking the same thing?

He assented.

Or when neither of us is speaking of the same thing? For then neither of us says a word about the thing at all?

He granted that proposition also.

But when I describe something and you describe another thing, or I say something and you say nothing—is there any contradiction? How can he who speaks contradict him who speaks not?

Here Ctesippus was silent; and I in my astonishment said: What do you mean, Dionysodorus? I have often heard, and have been amazed to hear, this thesis of yours, which is maintained and employed by the disciples of Protagoras, and others before them, and which to me appears to be quite wonderful, and suicidal as well as destructive, and I think that I am most likely to hear the truth about it from you. The dictum is that there is no such thing as falsehood; a man must either say what is true or say nothing. Is not that your position?

He assented.

But if he cannot speak falsely, may he not think falsely?

No, he cannot, he said.

Then there is no such thing as false opinion?

No, he said.

Then there is no such thing as ignorance, or men who are ignorant; for is not ignorance, if there be such a thing, a mistake of fact?

Certainly, he said.

And that is impossible?

Impossible, he replied.

Are you saying this as a paradox, Dionysodorus; or do you seriously maintain no man to be ignorant?

Refute me, he said.

But how can I refute you, if, as you say, to tell a falsehood is impossible?

Very true, said Euthydemus.

Neither did I tell you just now to refute me, said Dionysodorus; for how can I tell you to do that which is not?

O Euthydemus, I said, I have but a dull conception of these subtleties and excellent devices of wisdom; I am afraid that I hardly understand them, and you must forgive me therefore if I ask a very stupid question: if there be no falsehood or false opinion or ignorance, there can be no such thing as erroneous action, for a man cannot fail of acting as he is acting—that is what you mean?

Yes, he replied.

And now, I said, I will ask my stupid question: If there is no such thing as error in deed, word, or thought, then what, in the name of goodness, do you come hither to teach? And were you not just now saying that you could teach virtue best of all men, to any one who was willing to learn?

And are you such an old fool, Socrates, rejoined Dionysodorus, that you bring up now what I said at first—and if I had said anything last year, I suppose that you would bring that up too—but are non-plussed at the words which I have just uttered?

Why, I said, they are not easy to answer; for they are the words of wise men: and indeed I know not what to make of this word 'nonplussed,' which you used last: what do you mean by it, Dionysodorus? You must mean that I cannot refute your argument. Tell me if the words have any other sense.

No, he replied, they mean what you say. And now answer.

What, before you, Dionysodorus? I said.

Answer, said he.

And is that fair?

Yes, quite fair, he said.

Upon what principle? I said. I can only suppose that you are a very wise man who comes to us in the character of a great logician, and who knows when to answer and when not to answer—and now you will not open your mouth at all, because you know that you ought not.

You prate, he said, instead of answering. But if, my good sir, you admit that I am wise, answer as I tell you.

I suppose that I must obey, for you are master. Put the question.

Are the things which have sense alive or lifeless?

They are alive.

And do you know of any word which is alive?

I cannot say that I do.

Then why did you ask me what sense my words had?

Why, because I was stupid and made a mistake. And yet, perhaps, I was right after all in saying that words have a sense;—what do you say, wise man? If I was not in error, even you will not refute me, and all your wisdom will be non-plussed; but if I did fall into error, then again you are wrong in saying that there is no error,—and this remark was made by you not quite a year ago. I am inclined to think, however, Dionysodorus and Euthydemus, that this argument lies where it was and is not very likely to advance: even your skill in the subtleties of logic, which is really amazing, has not found out the way of throwing another and not falling yourself, now any more than of old.

Ctesippus said: Men of Chios, Thurii, or however and whatever you call yourselves, I wonder at you, for you seem to have no objection to talking nonsense.

Fearing that there would be high words, I again endeavoured to soothe Ctesippus, and said to him: To you, Ctesippus, I must repeat what I said before to Cleinias—that you do not understand the ways of these philosophers from abroad. They are not serious, but, like the Egyptian wizard, Proteus, they take different forms and deceive us by their enchantments: and let us, like Menelaus, refuse to let them go until they show themselves to us in earnest. When they begin to be in earnest their full beauty will appear: let us then beg and entreat and beseech them to shine forth. And I think that I had better once more exhibit the form in which I pray to behold them; it might be a guide to them. I will go on therefore where I left off, as well as I can, in the hope that I may touch their hearts and move them to pity, and that when they see me deeply serious and interested, they also may be serious. You, Cleinias, I said, shall remind me at what point we left off. Did we not agree that philosophy should be studied? and was not that our conclusion?

Yes, he replied.

And philosophy is the acquisition of knowledge?

Yes, he said.

And what knowledge ought we to acquire? May we not answer with absolute truth—A knowledge which will do us good?

Certainly, he said.

And should we be any the better if we went about having a knowledge of the places where most gold was hidden in the earth?

Perhaps we should, he said.

But have we not already proved, I said, that we should be none the better off, even if without trouble and digging all the gold which there is in the earth were ours? And if we knew how to convert stones

into gold, the knowledge would be of no value to us, unless we also knew how to use the gold? Do you not remember? I said.

I quite remember, he said.

Nor would any other knowledge, whether of money-making, or of medicine, or of any other art which knows only how to make a thing, and not to use it when made, be of any good to us. Am I not right?

He agreed.

And if there were a knowledge which was able to make men immortal, without giving them the knowledge of the way to use the immortality, neither would there be any use in that, if we may argue from the analogy of the previous instances?

To all this he agreed.

Then, my dear boy, I said, the knowledge which we want is one that uses as well as makes?

True, he said.

And our desire is not to be skilful lyre-makers, or artists of that sort—far otherwise; for with them the art which makes is one, and the art which uses is another. Although they have to do with the same, they are divided: for the art which makes and the art which plays on the lyre differ widely from one another. Am I not right?

He agreed.

And clearly we do not want the art of the flute-maker; this is only another of the same sort?

He assented.

But suppose, I said, that we were to learn the art of making speeches—would that be the art which would make us happy?

I should say, no, rejoined Cleinias.

And why should you say so? I asked.

I see, he replied, that there are some composers of speeches who do not know how to use the speeches which they make, just as the makers of lyres do not know how to use the lyres; and also some who are of themselves unable to compose speeches, but are able to use the speeches which the others make for them; and this proves that the art of making speeches is not the same as the art of using them.

Yes, I said; and I take your words to be a sufficient proof that the art of making speeches is not one which will make a man happy. And yet I did think that the art which we have so long been seeking

might be discovered in that direction; for the composers of speeches, whenever I meet them, always appear to me to be very extraordinary men, Cleinias, and their art is lofty and divine, and no wonder. For their art is a part of the great art of enchantment, and hardly, if at all, inferior to it: and whereas the art of the enchanter is a mode of charming snakes and spiders and scorpions, and other monsters and pests, this art of their's acts upon dicasts and ecclesiasts and bodies of men, for the charming and pacifying of them. Do you agree with me?

Yes, he said, I think that you are quite right.

Whither then shall we go, I said, and to what art shall we have recourse?

I do not see my way, he said.

But I think that I do, I replied.

And what is your notion? asked Cleinias.

I think that the art of the general is above all others the one of which the possession is most likely to make a man happy.

I do not think so, he said.

Why not? I said.

The art of the general is surely an art of hunting mankind.

What of that? I said.

Why, he said, no art of hunting extends beyond hunting and capturing; and when the prey is taken the huntsman or fisherman cannot use it; but they hand it over to the cook, and the geometricians and astronomers and calculators (who all belong to the hunting class, for they do not make their diagrams, but only find out that which was previously contained in them)—they, I say, not being able to use but only to catch their prey, hand over their inventions to the dialectician to be applied by him, if they have any sense in them.

Good, I said, fairest and wisest Cleinias. And is this true?

Certainly, he said; just as a general when he takes a city or a camp hands over his new acquisition to the statesman, for he does not know how to use them himself; or as the quail-taker transfers the quails to the keeper of them. If we are looking for the art which is to make us blessed, and which is able to use that which it makes or takes, the art of the general is not the one, and some other must be found.

CRITO: And do you mean, Socrates, that the youngster said all this?

SOCRATES: Are you incredulous, Crito?

CRITO: Indeed, I am; for if he did say so, then in my opinion he needs neither Euthydemus nor any one else to be his instructor.

SOCRATES: Perhaps I may have forgotten, and Ctesippus was the real answerer.

CRITO: Ctesippus! nonsense.

SOCRATES: All I know is that I heard these words, and that they were not spoken either by Euthydemus or Dionysodorus. I dare say, my good Crito, that they may have been spoken by some superior person: that I heard them I am certain.

CRITO: Yes, indeed, Socrates, by some one a good deal superior, as I should be disposed to think. But did you carry the search any further, and did you find the art which you were seeking?

SOCRATES: Find! my dear sir, no indeed. And we cut a poor figure; we were like children after larks, always on the point of catching the art, which was always getting away from us. But why should I repeat the whole story? At last we came to the kingly art, and enquired whether that gave and caused happiness, and then we got into a labyrinth, and when we thought we were at the end, came out again at the beginning, having still to seek as much as ever.

CRITO: How did that happen, Socrates?

SOCRATES: I will tell you; the kingly art was identified by us with the political.

CRITO: Well, and what came of that?

SOCRATES: To this royal or political art all the arts, including the art of the general, seemed to render up the supremacy, that being the only one which knew how to use what they produce. Here obviously was the very art which we were seeking—the art which is the source of good government, and which may be described, in the language of Aeschylus, as alone sitting at the helm of the vessel of state, piloting and governing all things, and utilizing them.

CRITO: And were you not right, Socrates?

SOCRATES: You shall judge, Crito, if you are willing to hear what followed; for we resumed the enquiry, and a question of this sort was asked: Does the kingly art, having this supreme authority, do anything for us? To be sure, was the answer. And would not you, Crito, say the same?

CRITO: Yes, I should.

SOCRATES: And what would you say that the kingly art does? If medicine were supposed to have supreme authority over the subordinate arts, and I were to ask you a similar question about that, you would say—it produces health?

CRITO: I should.

SOCRATES: And what of your own art of husbandry, supposing that to have supreme authority over the subject arts—what does that do? Does it not supply us with the fruits of the earth?

CRITO: Yes.

SOCRATES: And what does the kingly art do when invested with supreme power? Perhaps you may not be ready with an answer?

CRITO: Indeed I am not, Socrates.

SOCRATES: No more were we, Crito. But at any rate you know that if this is the art which we were seeking, it ought to be useful.

CRITO: Certainly.

SOCRATES: And surely it ought to do us some good?

CRITO: Certainly, Socrates.

SOCRATES: And Cleinias and I had arrived at the conclusion that knowledge of some kind is the only good.

CRITO: Yes, that was what you were saying.

SOCRATES: All the other results of politics, and they are many, as for example, wealth, freedom, tranquillity, were neither good nor evil in themselves; but the political science ought to make us wise, and impart knowledge to us, if that is the science which is likely to do us good, and make us happy.

CRITO: Yes; that was the conclusion at which you had arrived, according to your report of the conversation.

SOCRATES: And does the kingly art make men wise and good?

CRITO: Why not, Socrates?

SOCRATES: What, all men, and in every respect? and teach them all the arts,—carpentering, and cobbling, and the rest of them?

CRITO: I think not, Socrates.

SOCRATES: But then what is this knowledge, and what are we to do with it? For it is not the source of any works which are neither good nor evil, and gives no knowledge, but the knowledge of itself; what then can it be, and what are we to do with it? Shall we say, Crito, that it is the knowledge by which we are to make other men good?

CRITO: By all means.

SOCRATES: And in what will they be good and useful? Shall we repeat that they will make others good, and that these others will make others again, without ever determining in what they are to be good; for we have put aside the results of politics, as they are called. This is the old, old song over again; and we are just as far as ever, if not farther, from the knowledge of the art or science of happiness.

CRITO: Indeed, Socrates, you do appear to have got into a great perplexity.

SOCRATES: Thereupon, Crito, seeing that I was on the point of shipwreck, I lifted up my voice, and earnestly entreated and called upon the strangers to save me and the youth from the whirlpool of the argument; they were our Castor and Pollux, I said, and they should be serious, and show us in sober earnest what that knowledge was which would enable us to pass the rest of our lives in happiness.

CRITO: And did Euthydemus show you this knowledge?

SOCRATES: Yes, indeed; he proceeded in a lofty strain to the following effect: Would you rather, Socrates, said he, that I should show you this knowledge about which you have been doubting, or shall I prove that you already have it?

What, I said, are you blessed with such a power as this?

Indeed I am.

Then I would much rather that you should prove me to have such a knowledge; at my time of life that will be more agreeable than having to learn.

Then tell me, he said, do you know anything?

Yes, I said, I know many things, but not anything of much importance.

That will do, he said: And would you admit that anything is what it is, and at the same time is not what it is?

Certainly not.

And did you not say that you knew something?

I did.

If you know, you are knowing.

Certainly, of the knowledge which I have.

That makes no difference;—and must you not, if you are knowing, know all things?

Certainly not, I said, for there are many other things which I do not know.

And if you do not know, you are not knowing.

Yes, friend, of that which I do not know.

Still you are not knowing, and you said just now that you were knowing; and therefore you are and are not at the same time, and in reference to the same things.

A pretty clatter, as men say, Euthydemus, this of yours! and will you explain how I possess that knowledge for which we were seeking? Do you mean to say that the same thing cannot be and also not be; and therefore, since I know one thing, that I know all, for I cannot be knowing and not knowing at the same time, and if I know all things, then I must have the knowledge for which we are seeking—May I assume this to be your ingenious notion?

Out of your own mouth, Socrates, you are convicted, he said.

Well, but, Euthydemus, I said, has that never happened to you? for if I am only in the same case with you and our beloved Dionysodorus, I cannot complain. Tell me, then, you two, do you not know some things, and not know others?

Certainly not, Socrates, said Dionysodorus.

What do you mean, I said; do you know nothing?

Nay, he replied, we do know something.

Then, I said, you know all things, if you know anything?

Yes, all things, he said; and that is as true of you as of us.

O, indeed, I said, what a wonderful thing, and what a great blessing! And do all other men know all things or nothing?

Certainly, he replied; they cannot know some things, and not know others, and be at the same time knowing and not knowing.

Then what is the inference? I said.

They all know all things, he replied, if they know one thing.

O heavens, Dionysodorus, I said, I see now that you are in earnest; hardly have I got you to that point. And do you really and truly know all things, including carpentering and leather-cutting?

Certainly, he said.

And do you know stitching?

Yes, by the gods, we do, and cobbling, too.

And do you know things such as the numbers of the stars and of the sand?

Certainly; did you think we should say No to that?

By Zeus, said Ctesippus, interrupting, I only wish that you would give me some proof which would enable me to know whether you speak truly.

What proof shall I give you? he said.

Will you tell me how many teeth Euthydemus has? and Euthydemus shall tell how many teeth you have.

Will you not take our word that we know all things?

Certainly not, said Ctesippus: you must further tell us this one thing, and then we shall know that you are speak the truth; if you tell us the number, and we count them, and you are found to be right, we will believe the rest. They fancied that Ctesippus was making game of them, and they refused, and they would only say in answer to each of his questions, that they knew all things. For at last Ctesippus began to throw off all restraint; no question in fact was too bad for him; he would ask them if they knew the foulest things, and they, like wild boars, came rushing on his blows, and fearlessly replied that they did. At last, Crito, I too was carried away by my incredulity, and asked Euthydemus whether Dionysodorus could dance.

Certainly, he replied.

And can he vault among swords, and turn upon a wheel, at his age? has he got to such a height of skill as that?

He can do anything, he said.

And did you always know this?

Always, he said.

When you were children, and at your birth?

They both said that they did.

This we could not believe. And Euthydemus said: You are incredulous, Socrates.

Yes, I said, and I might well be incredulous, if I did not know you to be wise men.

But if you will answer, he said, I will make you confess to similar marvels.

Well, I said, there is nothing that I should like better than to be self-convicted of this, for if I am really a wise man, which I never knew before, and you will prove to me that I know and have always known all things, nothing in life would be a greater gain to me.

Answer then, he said.

Ask, I said, and I will answer.

Do you know something, Socrates, or nothing?

Something, I said.

And do you know with what you know, or with something else?

With what I know; and I suppose that you mean with my soul?

Are you not ashamed, Socrates, of asking a question when you are asked one?

Well, I said; but then what am I to do? for I will do whatever you bid; when I do not know what you are asking, you tell me to answer nevertheless, and not to ask again.

Why, you surely have some notion of my meaning, he said.

Yes, I replied.

Well, then, answer according to your notion of my meaning.

Yes, I said; but if the question which you ask in one sense is understood and answered by me in another, will that please you—if I answer what is not to the point?

That will please me very well; but will not please you equally well, as I imagine.

I certainly will not answer unless I understand you, I said.

You will not answer, he said, according to your view of the meaning, because you will be prating, and are an ancient.

Now I saw that he was getting angry with me for drawing distinctions, when he wanted to catch me in his springes of words. And I remembered that Connus was always angry with me when I opposed him, and then he neglected me, because he thought that I was stupid; and as I was intending to go to Euthydemus as a pupil, I reflected that I had better let him have his way, as he might think me a blockhead, and refuse to take me. So I said: You are a far better dialectician than myself, Euthydemus, for I have never made a profession of the art, and therefore do as you say; ask your questions once more, and I will answer.

Answer then, he said, again, whether you know what you know with something, or with nothing.

Yes, I said; I know with my soul.

The man will answer more than the question; for I did not ask you, he said, with what you know, but whether you know with something.

Again I replied, Through ignorance I have answered too much, but I hope that you will forgive me. And now I will answer simply that I always know what I know with something.

And is that something, he rejoined, always the same, or sometimes one thing, and sometimes another thing?

Always, I replied, when I know, I know with this.

Will you not cease adding to your answers?

My fear is that this word 'always' may get us into trouble.

You, perhaps, but certainly not us. And now answer: Do you always know with this?

Always; since I am required to withdraw the words 'when I know.'

You always know with this, or, always knowing, do you know some things with this, and some things with something else, or do you know all things with this?

All that I know, I replied, I know with this.

There again, Socrates, he said, the addition is superfluous.

Well, then, I said, I will take away the words 'that I know.'

Nay, take nothing away; I desire no favours of you; but let me ask: Would you be able to know all things, if you did not know all things?

Quite impossible.

And now, he said, you may add on whatever you like, for you confess that you know all things.

I suppose that is true, I said, if my qualification implied in the words 'that I know' is not allowed to stand; and so I do know all things.

And have you not admitted that you always know all things with that which you know, whether you make the addition of 'when you know them' or not? for you have acknowledged that you have always and at once known all things, that is to say, when you were a child, and at your birth, and when you were growing up, and before you were born, and before the heaven and earth existed, you knew all things, if you always know them; and I swear that you shall always continue to know all things, if I am of the mind to make you.

But I hope that you will be of that mind, reverend Euthydemus, I said, if you are really speaking the truth, and yet I a little doubt your power to make good your words unless you have the help of your brother Dionysodorus; then you may do it. Tell me now, both of you, for although in the main I cannot doubt that I really do know all things, when I am told so by men of your prodigious wisdom—how can I say that I know such things, Euthydemus, as that the good are unjust; come, do I know that or not?

Certainly, you know that.

What do I know?

That the good are not unjust.

Quite true, I said; and that I have always known; but the question is, where did I learn that the good are unjust?

Nowhere, said Dionysodorus.

Then, I said, I do not know this.

You are ruining the argument, said Euthydemus to Dionysodorus; he will be proved not to know, and then after all he will be knowing and not knowing at the same time.

Dionysodorus blushed.

I turned to the other, and said, What do you think, Euthydemus? Does not your omniscient brother appear to you to have made a mistake?

What, replied Dionysodorus in a moment; am I the brother of Euthydemus?

Thereupon I said, Please not to interrupt, my good friend, or prevent Euthydemus from proving to me that I know the good to be unjust; such a lesson you might at least allow me to learn.

You are running away, Socrates, said Dionysodorus, and refusing to answer.

No wonder, I said, for I am not a match for one of you, and a fortiori I must run away from two. I am no Heracles; and even Heracles could not fight against the Hydra, who was a she-Sophist, and had the wit to shoot up many new heads when one of them was cut off; especially when he saw a second monster of a sea-crab, who was also a Sophist, and appeared to have newly arrived from a sea-voyage, bearing down upon him from the left, opening his mouth and biting. When the monster was growing troublesome he called Iolaus, his nephew, to his help, who ably succoured him; but if my Iolaus, who is my brother Patrocles (the statuary), were to come, he would only make a bad business worse.

And now that you have delivered yourself of this strain, said Dionysodorus, will you inform me whether Iolaus was the nephew of Heracles any more than he is yours?

I suppose that I had best answer you, Dionysodorus, I said, for you will insist on asking—that I pretty well know—out of envy, in order to prevent me from learning the wisdom of Euthydemus.

Then answer me, he said.

Well then, I said, I can only reply that Iolaus was not my nephew at all, but the nephew of Heracles; and his father was not my brother Patrocles, but Iphicles, who has a name rather like his, and was the brother of Heracles.

And is Patrocles, he said, your brother?

Yes, I said, he is my half-brother, the son of my mother, but not of my father.

Then he is and is not your brother.

Not by the same father, my good man, I said, for Chaeredemus was his father, and mine was Sophroniscus.

And was Sophroniscus a father, and Chaeredemus also?

Yes, I said; the former was my father, and the latter his.

Then, he said, Chaeredemus is not a father.

He is not my father, I said.

But can a father be other than a father? or are you the same as a stone?

I certainly do not think that I am a stone, I said, though I am afraid that you may prove me to be one.

Are you not other than a stone?

I am.

And being other than a stone, you are not a stone; and being other than gold, you are not gold?

Very true.

And so Chaeredemus, he said, being other than a father, is not a father?

I suppose that he is not a father, I replied.

For if, said Euthydemus, taking up the argument, Chaeredemus is a father, then Sophroniscus, being other than a father, is not a father; and you, Socrates, are without a father.

Ctesippus, here taking up the argument, said: And is not your father in the same case, for he is other than my father?

Assuredly not, said Euthydemus.

Then he is the same?

He is the same.

I cannot say that I like the connection; but is he only my father, Euthydemus, or is he the father of all other men?

Of all other men, he replied. Do you suppose the same person to be a father and not a father?

Certainly, I did so imagine, said Ctesippus.

And do you suppose that gold is not gold, or that a man is not a man?

They are not 'in pari materia,' Euthydemus, said Ctesippus, and you had better take care, for it is monstrous to suppose that your father is the father of all.

But he is, he replied.

What, of men only, said Ctesippus, or of horses and of all other animals?

Of all, he said.

And your mother, too, is the mother of all?

Yes, our mother too.

Yes; and your mother has a progeny of sea-urchins then?

Yes; and yours, he said.

And gudgeons and puppies and pigs are your brothers?

And yours too.

And your papa is a dog?

And so is yours, he said.

If you will answer my questions, said Dionysodorus, I will soon extract the same admissions from you, Ctesippus. You say that you have a dog.

Yes, a villain of a one, said Ctesippus.

And he has puppies?

Yes, and they are very like himself.

And the dog is the father of them?

Yes, he said, I certainly saw him and the mother of the puppies come together.

And is he not yours?

To be sure he is.

Then he is a father, and he is yours; ergo, he is your father, and the puppies are your brothers.

Let me ask you one little question more, said Dionysodorus, quickly interposing, in order that Ctesippus might not get in his word: You beat this dog?

Ctesippus said, laughing, Indeed I do; and I only wish that I could beat you instead of him.

Then you beat your father, he said.

I should have far more reason to beat yours, said Ctesippus; what could he have been thinking of when he begat such wise sons? much good has this father of you and your brethren the puppies got out of this wisdom of yours.

But neither he nor you, Ctesippus, have any need of much good.

And have you no need, Euthydemus? he said.

Neither I nor any other man; for tell me now, Ctesippus, if you think it good or evil for a man who is sick to drink medicine when he wants it; or to go to war armed rather than unarmed.

Good, I say. And yet I know that I am going to be caught in one of your charming puzzles.

That, he replied, you will discover, if you answer; since you admit medicine to be good for a man to drink, when wanted, must it not be good for him to drink as much as possible; when he takes his medicine, a cartload of hellebore will not be too much for him?

Ctesippus said: Quite so, Euthydemus, that is to say, if he who drinks is as big as the statue of Delphi.

And seeing that in war to have arms is a good thing, he ought to have as many spears and shields as possible?

Very true, said Ctesippus; and do you think, Euthydemus, that he ought to have one shield only, and one spear?

I do.

And would you arm Geryon and Briareus in that way? Considering that you and your companion fight in armour, I thought that you would have known better...Here Euthydemus held his peace, but Dionysodorus returned to the previous answer of Ctesippus and said:—

Do you not think that the possession of gold is a good thing?

Yes, said Ctesippus, and the more the better.

And to have money everywhere and always is a good?

Certainly, a great good, he said.

And you admit gold to be a good?

Certainly, he replied.

And ought not a man then to have gold everywhere and always, and as much as possible in himself, and may he not be deemed the happiest of men who has three talents of gold in his belly, and a talent in his pate, and a stater of gold in either eye?

Yes, Euthydemus, said Ctesippus; and the Scythians reckon those who have gold in their own skulls to be the happiest and bravest of men (that is only another instance of your manner of speaking about the dog and father), and what is still more extraordinary, they drink out of their own skulls gilt, and see the inside of them, and hold their own head in their hands.

And do the Scythians and others see that which has the quality of vision, or that which has not? said Euthydemus.

That which has the quality of vision clearly.

And you also see that which has the quality of vision? he said. [Note: the ambiguity of (Greek), 'things visible and able to see,' (Greek), 'the speaking of the silent,' the silent denoting either the speaker or the subject of the speech, cannot be perfectly rendered in English.] Compare Aristot. Soph. Elenchi (Poste's translation):—

'Of ambiguous propositions the following are instances:—

'I hope that you the enemy may slay.

'Whom one knows, he knows. Either the person knowing or the person known is here affirmed to know.

'What one sees, that one sees: one sees a pillar: ergo, that one pillar sees.

'What you ARE holding, that you are: you are holding a stone: ergo, a stone you are.

'Is a speaking of the silent possible? "The silent" denotes either the speaker are the subject of speech.

'There are three kinds of ambiguity of term or proposition. The first is when there is an equal linguistic propriety in several interpretations; the second when one is improper but customary; the third when the ambiguity arises in the combination of elements that are in themselves unambiguous, as in "knowing letters." "Knowing" and "letters" are perhaps separately unambiguous, but in combination may imply either that the letters are known, or that they themselves have knowledge. Such are the modes in which propositions and terms may be ambiguous.'

Yes, I do.

Then do you see our garments?

Yes.

Then our garments have the quality of vision.

They can see to any extent, said Ctesippus.

What can they see?

Nothing; but you, my sweet man, may perhaps imagine that they do not see; and certainly, Euthydemus, you do seem to me to have been caught napping when you were not asleep, and that if it be possible to speak and say nothing—you are doing so.

And may there not be a silence of the speaker? said Dionysodorus.

Impossible, said Ctesippus.

Or a speaking of the silent?

That is still more impossible, he said.

But when you speak of stones, wood, iron bars, do you not speak of the silent?

Not when I pass a smithy; for then the iron bars make a tremendous noise and outcry if they are touched: so that here your wisdom is strangely mistaken; please, however, to tell me how you can be silent when speaking (I thought that Ctesippus was put upon his mettle because Cleinias was present).

When you are silent, said Euthydemus, is there not a silence of all things?

Yes, he said.

But if speaking things are included in all things, then the speaking are silent.

What, said Ctesippus; then all things are not silent?

Certainly not, said Euthydemus.

Then, my good friend, do they all speak?

Yes; those which speak.

Nay, said Ctesippus, but the question which I ask is whether all things are silent or speak?

Neither and both, said Dionysodorus, quickly interposing; I am sure that you will be 'non-plussed' at that answer.

Here Ctesippus, as his manner was, burst into a roar of laughter; he said, That brother of yours, Euthydemus, has got into a dilemma; all is over with him. This delighted Cleinias, whose laughter made Ctesippus ten times as uproarious; but I cannot help thinking that the rogue must have picked up this answer from them; for there has been no wisdom like theirs in our time. Why do you laugh, Cleinias, I said, at such solemn and beautiful things?

Why, Socrates, said Dionysodorus, did you ever see a beautiful thing?

Yes, Dionysodorus, I replied, I have seen many.

Were they other than the beautiful, or the same as the beautiful?

Now I was in a great quandary at having to answer this question, and I thought that I was rightly served for having opened my mouth at all: I said however, They are not the same as absolute beauty, but they have beauty present with each of them.

And are you an ox because an ox is present with you, or are you Dionysodorus, because Dionysodorus is present with you?

God forbid, I replied.

But how, he said, by reason of one thing being present with another, will one thing be another?

Is that your difficulty? I said. For I was beginning to imitate their skill, on which my heart was set.

Of course, he replied, I and all the world are in a difficulty about the non-existent.

What do you mean, Dionysodorus? I said. Is not the honourable honourable and the base base?

That, he said, is as I please.

And do you please?

Yes, he said.

And you will admit that the same is the same, and the other other; for surely the other is not the same; I should imagine that even a child will hardly deny the other to be other. But I think, Dionysodorus, that you must have intentionally missed the last question; for in general you and your brother seem to me to be good workmen in your own department, and to do the dialectician's business excellently well.

What, said he, is the business of a good workman? tell me, in the first place, whose business is hammering?

The smith's.

And whose the making of pots?

The potter's.

And who has to kill and skin and mince and boil and roast?

The cook, I said.

And if a man does his business he does rightly?

Certainly.

And the business of the cook is to cut up and skin; you have admitted that?

Yes, I have admitted that, but you must not be too hard upon me.

Then if some one were to kill, mince, boil, roast the cook, he would do his business, and if he were to hammer the smith, and make a pot of the potter, he would do their business.

Poseidon, I said, this is the crown of wisdom; can I ever hope to have such wisdom of my own?

And would you be able, Socrates, to recognize this wisdom when it has become your own?

Certainly, I said, if you will allow me.

What, he said, do you think that you know what is your own?

Yes, I do, subject to your correction; for you are the bottom, and Euthydemus is the top, of all my wisdom.

Is not that which you would deem your own, he said, that which you have in your own power, and which you are able to use as you would desire, for example, an ox or a sheep—would you not think that which you could sell and give and sacrifice to any god whom you pleased, to be your own, and that which you could not give or sell or sacrifice you would think not to be in your own power?

Yes, I said (for I was certain that something good would come out of the questions, which I was impatient to hear); yes, such things, and such things only are mine.

Yes, he said, and you would mean by animals living beings?

Yes, I said.

You agree then, that those animals only are yours with which you have the power to do all these things which I was just naming?

I agree.

Then, after a pause, in which he seemed to be lost in the contemplation of something great, he said: Tell me, Socrates, have you an ancestral Zeus? Here, anticipating the final move, like a person caught in a net, who gives a desperate twist that he may get away, I said: No, Dionysodorus, I have not.

What a miserable man you must be then, he said; you are not an Athenian at all if you have no ancestral gods or temples, or any other mark of gentility.

Nay, Dionysodorus, I said, do not be rough; good words, if you please; in the way of religion I have altars and temples, domestic and ancestral, and all that other Athenians have.

And have not other Athenians, he said, an ancestral Zeus?

That name, I said, is not to be found among the Ionians, whether colonists or citizens of Athens; an ancestral Apollo there is, who is the father of Ion, and a family Zeus, and a Zeus guardian of the phratry, and an Athene guardian of the phratry. But the name of ancestral Zeus is unknown to us.

No matter, said Dionysodorus, for you admit that you have Apollo, Zeus, and Athene.

Certainly, I said.

And they are your gods, he said.

Yes, I said, my lords and ancestors.

At any rate they are yours, he said, did you not admit that?

I did, I said; what is going to happen to me?

And are not these gods animals? for you admit that all things which have life are animals; and have not these gods life?

They have life, I said.

Then are they not animals?

They are animals, I said.

And you admitted that of animals those are yours which you could give away or sell or offer in sacrifice, as you pleased?

I did admit that, Euthydemus, and I have no way of escape.

Well then, said he, if you admit that Zeus and the other gods are yours, can you sell them or give them away or do what you will with them, as you would with other animals?

At this I was quite struck dumb, Crito, and lay prostrate. Ctesippus came to the rescue.

Bravo, Heracles, brave words, said he.

Bravo Heracles, or is Heracles a Bravo? said Dionysodorus.

Poseidon, said Ctesippus, what awful distinctions. I will have no more of them; the pair are invincible.

Then, my dear Crito, there was universal applause of the speakers and their words, and what with laughing and clapping of hands and rejoicings the two men were quite overpowered; for hitherto their partisans only had cheered at each successive hit, but now the whole company shouted with delight until the columns of the Lyceum returned the sound, seeming to sympathize in their joy. To such a pitch was I affected myself, that I made a speech, in which I acknowledged that I had never seen the like of their wisdom; I was their devoted servant, and fell to praising and admiring of them. What marvellous dexterity of wit, I said, enabled you to acquire this great perfection in such a short time? There is much, indeed, to admire in your words, Euthydemus and Dionysodorus, but there is nothing that I admire more than your magnanimous disregard of any opinion—whether of the many, or of the grave and reverend seigniors—you regard only those who are like yourselves. And I do verily believe that there are few who are like you, and who would approve of such arguments; the majority of mankind are so ignorant of their value, that they would be more ashamed of employing them in the refutation of others than of being refuted by them. I must further express my approval of your kind and public-spirited denial of all differences, whether of good and evil, white or black, or any other; the result of which is that, as you say, every mouth is sewn up, not excepting your own, which graciously follows the example of others; and thus all ground of offence is taken away. But what appears to me to be more than all is, that this art and invention of yours has been so admirably contrived by you, that in a very short time it can be imparted to any one. I observed that Ctesippus learned to imitate you in no time. Now this quickness of attainment is an excellent thing; but at the same time I would advise you not to have any more public entertainments; there is a danger that men may undervalue an art which they have so easy an opportunity of acquiring; the exhibition would be best of all, if the

discussion were confined to your two selves; but if there must be an audience, let him only be present who is willing to pay a handsome fee;—you should be careful of this;—and if you are wise, you will also bid your disciples discourse with no man but you and themselves. For only what is rare is valuable; and 'water,' which, as Pindar says, is the 'best of all things,' is also the cheapest. And now I have only to request that you will receive Cleinias and me among your pupils.

Such was the discussion, Crito; and after a few more words had passed between us we went away. I hope that you will come to them with me, since they say that they are able to teach any one who will give them money; no age or want of capacity is an impediment. And I must repeat one thing which they said, for your especial benefit,—that the learning of their art did not at all interfere with the business of money-making.

CRITO: Truly, Socrates, though I am curious and ready to learn, yet I fear that I am not like-minded with Euthydemus, but one of the other sort, who, as you were saying, would rather be refuted by such arguments than use them in refutation of others. And though I may appear ridiculous in venturing to advise you, I think that you may as well hear what was said to me by a man of very considerable pretensions—he was a professor of legal oratory—who came away from you while I was walking up and down. 'Crito,' said he to me, 'are you giving no attention to these wise men?' 'No, indeed,' I said to him; 'I could not get within hearing of them—there was such a crowd.' 'You would have heard something worth hearing if you had.' 'What was that?' I said. 'You would have heard the greatest masters of the art of rhetoric discoursing.' 'And what did you think of them?' I said. 'What did I think of them?' he said:—'theirs was the sort of discourse which anybody might hear from men who were playing the fool, and making much ado about nothing.' That was the expression which he used. 'Surely,' I said, 'philosophy is a charming thing.' 'Charming!' he said; 'what simplicity! philosophy is nought; and I think that if you had been present you would have been ashamed of your friend—his conduct was so very strange in placing himself at the mercy of men who care not what they say, and fasten upon every word. And these, as I was telling you, are supposed to be the most eminent professors of their time. But the truth is, Crito, that the study itself and the men themselves are utterly mean and ridiculous.' Now censure of the pursuit, Socrates, whether coming from him or from others, appears to me to be undeserved; but as to the impropriety of holding a public discussion with such men, there, I confess that, in my opinion, he was in the right.

SOCRATES: O Crito, they are marvellous men; but what was I going to say? First of all let me know;—What manner of man was he who came up to you and censured philosophy; was he an orator who himself practises in the courts, or an instructor of orators, who makes the speeches with which they do battle?

CRITO: He was certainly not an orator, and I doubt whether he had ever been into court; but they say that he knows the business, and is a clever man, and composes wonderful speeches.

SOCRATES: Now I understand, Crito; he is one of an amphibious class, whom I was on the point of mentioning—one of those whom Prodicus describes as on the border-ground between philosophers and statesmen—they think that they are the wisest of all men, and that they are generally esteemed the wisest; nothing but the rivalry of the philosophers stands in their way; and they are of the opinion that if they can prove the philosophers to be good for nothing, no one will dispute their title to the palm of wisdom, for that they are themselves really the wisest, although they are apt to be mauled by

Euthydemus and his friends, when they get hold of them in conversation. This opinion which they entertain of their own wisdom is very natural; for they have a certain amount of philosophy, and a certain amount of political wisdom; there is reason in what they say, for they argue that they have just enough of both, and so they keep out of the way of all risks and conflicts and reap the fruits of their wisdom.

CRITO: What do you say of them, Socrates? There is certainly something specious in that notion of theirs.

SOCRATES: Yes, Crito, there is more speciousness than truth; they cannot be made to understand the nature of intermediates. For all persons or things, which are intermediate between two other things, and participate in both of them—if one of these two things is good and the other evil, are better than the one and worse than the other; but if they are in a mean between two good things which do not tend to the same end, they fall short of either of their component elements in the attainment of their ends. Only in the case when the two component elements which do not tend to the same end are evil is the participant better than either. Now, if philosophy and political action are both good, but tend to different ends, and they participate in both, and are in a mean between them, then they are talking nonsense, for they are worse than either; or, if the one be good and the other evil, they are better than the one and worse than the other; only on the supposition that they are both evil could there be any truth in what they say. I do not think that they will admit that their two pursuits are either wholly or partly evil; but the truth is, that these philosopher-politicians who aim at both fall short of both in the attainment of their respective ends, and are really third, although they would like to stand first. There is no need, however, to be angry at this ambition of theirs—which may be forgiven; for every man ought to be loved who says and manfully pursues and works out anything which is at all like wisdom: at the same time we shall do well to see them as they really are.

CRITO: I have often told you, Socrates, that I am in a constant difficulty about my two sons. What am I to do with them? There is no hurry about the younger one, who is only a child; but the other, Critobulus, is getting on, and needs some one who will improve him. I cannot help thinking, when I hear you talk, that there is a sort of madness in many of our anxieties about our children:—in the first place, about marrying a wife of good family to be the mother of them, and then about heaping up money for them—and yet taking no care about their education. But then again, when I contemplate any of those who pretend to educate others, I am amazed. To me, if I am to confess the truth, they all seem to be such outrageous beings: so that I do not know how I can advise the youth to study philosophy.

SOCRATES: Dear Crito, do you not know that in every profession the inferior sort are numerous and good for nothing, and the good are few and beyond all price: for example, are not gymnastic and rhetoric and money-making and the art of the general, noble arts?

CRITO: Certainly they are, in my judgment.

SOCRATES: Well, and do you not see that in each of these arts the many are ridiculous performers?

CRITO: Yes, indeed, that is very true.

SOCRATES: And will you on this account shun all these pursuits yourself and refuse to allow them to your son?

CRITO: That would not be reasonable, Socrates.

SOCRATES: Do you then be reasonable, Crito, and do not mind whether the teachers of philosophy are good or bad, but think only of philosophy herself. Try and examine her well and truly, and if she be evil seek to turn away all men from her, and not your sons only; but if she be what I believe that she is, then follow her and serve her, you and your house, as the saying is, and be of good cheer.

EUTHYPHRO

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

In the Meno, Anytus had parted from Socrates with the significant words: 'That in any city, and particularly in the city of Athens, it is easier to do men harm than to do them good;' and Socrates was anticipating another opportunity of talking with him. In the Euthyphro, Socrates is awaiting his trial for impiety. But before the trial begins, Plato would like to put the world on their trial, and convince them of ignorance in that very matter touching which Socrates is accused. An incident which may perhaps really have occurred in the family of Euthyphro, a learned Athenian diviner and soothsayer, furnishes the occasion of the discussion.

This Euthyphro and Socrates are represented as meeting in the porch of the King Archon. (Compare Theaet.) Both have legal business in hand. Socrates is defendant in a suit for impiety which Meletus has brought against him (it is remarked by the way that he is not a likely man himself to have brought a suit against another); and Euthyphro too is plaintiff in an action for murder, which he has brought against his own father. The latter has originated in the following manner:—A poor dependant of the family had slain one of their domestic slaves in Naxos. The guilty person was bound and thrown into a ditch by the command of Euthyphro's father, who sent to the interpreters of religion at Athens to ask what should be done with him. Before the messenger came back the criminal had died from hunger and exposure.

This is the origin of the charge of murder which Euthyphro brings against his father. Socrates is confident that before he could have undertaken the responsibility of such a prosecution, he must have been perfectly informed of the nature of piety and impiety; and as he is going to be tried for impiety himself, he thinks that he cannot do better than learn of Euthyphro (who will be admitted by everybody, including the judges, to be an unimpeachable authority) what piety is, and what is impiety. What then is piety?

Euthyphro, who, in the abundance of his knowledge, is very willing to undertake all the responsibility, replies: That piety is doing as I do, prosecuting your father (if he is guilty) on a charge of murder; doing as the gods do—as Zeus did to Cronos, and Cronos to Uranus.

Socrates has a dislike to these tales of mythology, and he fancies that this dislike of his may be the reason why he is charged with impiety. 'Are they really true?' 'Yes, they are;' and Euthyphro will gladly tell Socrates some more of them. But Socrates would like first of all to have a more satisfactory answer to the question, 'What is piety?' 'Doing as I do, charging a father with murder,' may be a single instance of piety, but can hardly be regarded as a general definition.

Euthyphro replies, that 'Piety is what is dear to the gods, and impiety is what is not dear to them.' But may there not be differences of opinion, as among men, so also among the gods? Especially, about good and evil, which have no fixed rule; and these are precisely the sort of differences which give rise to quarrels. And therefore what may be dear to one god may not be dear to another, and the same action may be both pious and impious; e.g. your chastisement of your father, Euthyphro, may be dear or pleasing to Zeus (who inflicted a similar chastisement on his own father), but not equally pleasing to Cronos or Uranus (who suffered at the hands of their sons).

Euthyphro answers that there is no difference of opinion, either among gods or men, as to the propriety of punishing a murderer. Yes, rejoins Socrates, when they know him to be a murderer; but you are assuming the point at issue. If all the circumstances of the case are considered, are you able to show that your father was guilty of murder, or that all the gods are agreed in approving of our prosecution of him? And must you not allow that what is hated by one god may be liked by another? Waiving this last, however, Socrates proposes to amend the definition, and say that 'what all the gods love is pious, and what they all hate is impious.' To this Euthyphro agrees.

Socrates proceeds to analyze the new form of the definition. He shows that in other cases the act precedes the state; e.g. the act of being carried, loved, etc. precedes the state of being carried, loved, etc., and therefore that which is dear to the gods is dear to the gods because it is first loved of them, not loved of them because it is dear to them. But the pious or holy is loved by the gods because it is pious or holy, which is equivalent to saying, that it is loved by them because it is dear to them. Here then appears to be a contradiction,—Euthyphro has been giving an attribute or accident of piety only, and not the essence. Euthyphro acknowledges himself that his explanations seem to walk away or go round in a circle, like the moving figures of Daedalus, the ancestor of Socrates, who has communicated his art to his descendants.

Socrates, who is desirous of stimulating the indolent intelligence of Euthyphro, raises the question in another manner: 'Is all the pious just?' 'Yes.' 'Is all the just pious?' 'No.' 'Then what part of justice is piety?' Euthyphro replies that piety is that part of justice which 'attends' to the gods, as there is another part of justice which 'attends' to men. But what is the meaning of 'attending' to the gods? The word 'attending,' when applied to dogs, horses, and men, implies that in some way they are made better. But how do pious or holy acts make the gods any better? Euthyphro explains that he means by pious acts, acts of service or ministration. Yes; but the ministrations of the husbandman, the physician, and the builder have an end. To what end do we serve the gods, and what do we help them to accomplish? Euthyphro replies, that all these difficult questions cannot be resolved in a short time; and he would rather say simply that piety is knowing how to please the gods in word and deed, by prayers and sacrifices. In other words, says Socrates, piety is 'a science of asking and giving'—asking what we want and giving what they want; in short, a mode of doing business between gods and men. But although they are the givers of all good, how can we give them any good in return? 'Nay, but we give them honour.' Then we give them not what is beneficial, but what is pleasing or dear to them; and this is the point which has been already disproved.

Socrates, although weary of the subterfuges and evasions of Euthyphro, remains unshaken in his conviction that he must know the nature of piety, or he would never have prosecuted his old father. He is still hoping that he will condescend to instruct him. But Euthyphro is in a hurry and cannot stay. And Socrates' last hope of knowing the nature of piety before he is prosecuted for impiety has disappeared. As in the Euthydemus the irony is carried on to the end.

The Euthyphro is manifestly designed to contrast the real nature of piety and impiety with the popular conceptions of them. But when the popular conceptions of them have been overthrown, Socrates does not offer any definition of his own: as in the Laches and Lysis, he prepares the way for an answer to the question which he has raised; but true to his own character, refuses to answer himself.

Euthyphro is a religionist, and is elsewhere spoken of, if he be the same person, as the author of a philosophy of names, by whose 'prancing steeds' Socrates in the Cratylus is carried away. He has the conceit and self-confidence of a Sophist; no doubt that he is right in prosecuting his father has ever entered into his mind. Like a Sophist too, he is incapable either of framing a general definition or of following the course of an argument. His wrong-headedness, one-sidedness, narrowness, positiveness, are characteristic of his priestly office. His failure to apprehend an argument may be compared to a similar defect which is observable in the rhapsode Ion. But he is not a bad man, and he is friendly to Socrates, whose familiar sign he recognizes with interest. Though unable to follow him he is very willing to be led by him, and eagerly catches at any suggestion which saves him from the trouble of thinking. Moreover he is the enemy of Meletus, who, as he says, is availing himself of the popular dislike to innovations in religion in order to injure Socrates; at the same time he is amusingly confident that he has weapons in his own armoury which would be more than a match for him. He is quite sincere in his prosecution of his father, who has accidentally been guilty of homicide, and is not wholly free from blame. To purge away the crime appears to him in the light of a duty, whoever may be the criminal.

Thus begins the contrast between the religion of the letter, or of the narrow and unenlightened conscience, and the higher notion of religion which Socrates vainly endeavours to elicit from him. 'Piety is doing as I do' is the idea of religion which first occurs to him, and to many others who do not say what they think with equal frankness. For men are not easily persuaded that any other religion is better than their own; or that other nations, e.g. the Greeks in the time of Socrates, were equally serious in their religious beliefs and difficulties. The chief difference between us and them is, that they were slowly learning what we are in process of forgetting. Greek mythology hardly admitted of the distinction between accidental homicide and murder: that the pollution of blood was the same in both cases is also the feeling of the Athenian diviner. He had not as yet learned the lesson, which philosophy was teaching, that Homer and Hesiod, if not banished from the state, or whipped out of the assembly, as Heracleitus more rudely proposed, at any rate were not to be appealed to as authorities in religion; and he is ready to defend his conduct by the examples of the gods. These are the very tales which Socrates cannot abide; and his dislike of them, as he suspects, has branded him with the reputation of impiety. Here is one answer to the question, 'Why Socrates was put to death,' suggested by the way. Another is conveyed in the words, 'The Athenians do not care about any man being thought wise until he begins to make other men wise; and then for some reason or other they are angry:' which may be said to be the rule of popular toleration in most other countries, and not at Athens only. In the course of the argument Socrates remarks that the controversial nature of morals and religion arises out of the difficulty of verifying them. There is no measure or standard to which they can be referred.

The next definition, 'Piety is that which is loved of the gods,' is shipwrecked on a refined distinction between the state and the act, corresponding respectively to the adjective (philon) and the participle (philoumenon), or rather perhaps to the participle and the verb (philoumenon and phileitai). The act is prior to the state (as in Aristotle the energeia precedes the dunamis); and the state of being loved is preceded by the act of being loved. But piety or holiness is preceded by the act of being pious, not by the act of being loved; and therefore piety and the state of being loved are different. Through such subtleties of dialectic Socrates is working his way into a deeper region of thought and feeling. He means to say that the words 'loved of the gods' express an attribute only, and not the essence of piety.

Then follows the third and last definition, 'Piety is a part of justice.' Thus far Socrates has proceeded in placing religion on a moral foundation. He is seeking to realize the harmony of religion and morality, which the great poets Aeschylus, Sophocles, and Pindar had unconsciously anticipated, and which is the universal want of all men. To this the soothsayer adds the ceremonial element, 'attending upon the gods.' When further interrogated by Socrates as to the nature of this 'attention to the gods,' he replies, that piety is an affair of business, a science of giving and asking, and the like. Socrates points out the anthropomorphism of these notions, (compare Symp.; Republic; Politicus.) But when we expect him to go on and show that the true service of the gods is the service of the spirit and the co-operation with them in all things true and good, he stops short; this was a lesson which the soothsayer could not have been made to understand, and which every one must learn for himself.

There seem to be altogether three aims or interests in this little Dialogue: (1) the dialectical development of the idea of piety; (2) the antithesis of true and false religion, which is carried to a certain extent only; (3) the defence of Socrates.

The subtle connection with the Apology and the Crito; the holding back of the conclusion, as in the Charmides, Lysis, Laches, Protagoras, and other Dialogues; the deep insight into the religious world; the dramatic power and play of the two characters; the inimitable irony, are reasons for believing that the Euthyphro is a genuine Platonic writing. The spirit in which the popular representations of mythology are denounced recalls Republic II. The virtue of piety has been already mentioned as one of five in the Protagoras, but is not reckoned among the four cardinal virtues of Republic IV. The figure of Daedalus has occurred in the Meno; that of Proteus in the Euthydemus and Io. The kingly science has already appeared in the Euthydemus, and will reappear in the Republic and Statesman. But neither from these nor any other indications of similarity or difference, and still less from arguments respecting the suitableness of this little work to aid Socrates at the time of his trial or the reverse, can any evidence of the date be obtained.

EUTHYPHRO

PERSONS OF THE DIALOGUE: Socrates, Euthyphro.

SCENE: The Porch of the King Archon.

EUTHYPHRO: Why have you left the Lyceum, Socrates? and what are you doing in the Porch of the King Archon? Surely you cannot be concerned in a suit before the King, like myself?

SOCRATES: Not in a suit, Euthyphro; impeachment is the word which the Athenians use.

EUTHYPHRO: What! I suppose that some one has been prosecuting you, for I cannot believe that you are the prosecutor of another.

SOCRATES: Certainly not.

EUTHYPHRO: Then some one else has been prosecuting you?

SOCRATES: Yes.

EUTHYPHRO: And who is he?

SOCRATES: A young man who is little known, Euthyphro; and I hardly know him: his name is Meletus, and he is of the deme of Pitthis. Perhaps you may remember his appearance; he has a beak, and long straight hair, and a beard which is ill grown.

EUTHYPHRO: No, I do not remember him, Socrates. But what is the charge which he brings against you?

SOCRATES: What is the charge? Well, a very serious charge, which shows a good deal of character in the young man, and for which he is certainly not to be despised. He says he knows how the youth are corrupted and who are their corruptors. I fancy that he must be a wise man, and seeing that I am the reverse of a wise man, he has found me out, and is going to accuse me of corrupting his young friends. And of this our mother the state is to be the judge. Of all our political men he is the only one who seems to me to begin in the right way, with the cultivation of virtue in youth; like a good husbandman, he makes the young shoots his first care, and clears away us who are the destroyers of them. This is only the first step; he will afterwards attend to the elder branches; and if he goes on as he has begun, he will be a very great public benefactor.

EUTHYPHRO: I hope that he may; but I rather fear, Socrates, that the opposite will turn out to be the truth. My opinion is that in attacking you he is simply aiming a blow at the foundation of the state. But in what way does he say that you corrupt the young?

SOCRATES: He brings a wonderful accusation against me, which at first hearing excites surprise: he says that I am a poet or maker of gods, and that I invent new gods and deny the existence of old ones; this is the ground of his indictment.

EUTHYPHRO: I understand, Socrates; he means to attack you about the familiar sign which occasionally, as you say, comes to you. He thinks that you are a neologian, and he is going to have you up before the court for this. He knows that such a charge is readily received by the world, as I myself know too well; for when I speak in the assembly about divine things, and foretell the future to them, they laugh at me and think me a madman. Yet every word that I say is true. But they are jealous of us all; and we must be brave and go at them.

SOCRATES: Their laughter, friend Euthyphro, is not a matter of much consequence. For a man may be thought wise; but the Athenians, I suspect, do not much trouble themselves about him until he begins to impart his wisdom to others, and then for some reason or other, perhaps, as you say, from jealousy, they are angry.

EUTHYPHRO: I am never likely to try their temper in this way.

SOCRATES: I dare say not, for you are reserved in your behaviour, and seldom impart your wisdom. But I have a benevolent habit of pouring out myself to everybody, and would even pay for a listener, and I am afraid that the Athenians may think me too talkative. Now if, as I was saying, they would only laugh at me, as you say that they laugh at you, the time might pass gaily enough in the court; but perhaps they may be in earnest, and then what the end will be you soothsayers only can predict.

EUTHYPHRO: I dare say that the affair will end in nothing, Socrates, and that you will win your cause; and I think that I shall win my own.

SOCRATES: And what is your suit, Euthyphro? are you the pursuer or the defendant?

EUTHYPHRO: I am the pursuer.

SOCRATES: Of whom?

EUTHYPHRO: You will think me mad when I tell you.

SOCRATES: Why, has the fugitive wings?

EUTHYPHRO: Nay, he is not very volatile at his time of life.

SOCRATES: Who is he?

EUTHYPHRO: My father.

SOCRATES: Your father! my good man?

EUTHYPHRO: Yes.

SOCRATES: And of what is he accused?

EUTHYPHRO: Of murder, Socrates.

SOCRATES: By the powers, Euthyphro! how little does the common herd know of the nature of right and truth. A man must be an extraordinary man, and have made great strides in wisdom, before he could have seen his way to bring such an action.

EUTHYPHRO: Indeed, Socrates, he must.

SOCRATES: I suppose that the man whom your father murdered was one of your relatives—clearly he was; for if he had been a stranger you would never have thought of prosecuting him.

EUTHYPHRO: I am amused, Socrates, at your making a distinction between one who is a relation and one who is not a relation; for surely the pollution is the same in either case, if you knowingly associate with the murderer when you ought to clear yourself and him by proceeding against him. The real question is whether the murdered man has been justly slain. If justly, then your duty is to let

the matter alone; but if unjustly, then even if the murderer lives under the same roof with you and eats at the same table, proceed against him. Now the man who is dead was a poor dependant of mine who worked for us as a field labourer on our farm in Naxos, and one day in a fit of drunken passion he got into a quarrel with one of our domestic servants and slew him. My father bound him hand and foot and threw him into a ditch, and then sent to Athens to ask of a diviner what he should do with him. Meanwhile he never attended to him and took no care about him, for he regarded him as a murderer; and thought that no great harm would be done even if he did die. Now this was just what happened. For such was the effect of cold and hunger and chains upon him, that before the messenger returned from the diviner, he was dead. And my father and family are angry with me for taking the part of the murderer and prosecuting my father. They say that he did not kill him, and that if he did, the dead man was but a murderer, and I ought not to take any notice, for that a son is impious who prosecutes a father. Which shows, Socrates, how little they know what the gods think about piety and impiety.

SOCRATES: Good heavens, Euthyphro! and is your knowledge of religion and of things pious and impious so very exact, that, supposing the circumstances to be as you state them, you are not afraid lest you too may be doing an impious thing in bringing an action against your father?

EUTHYPHRO: The best of Euthyphro, and that which distinguishes him, Socrates, from other men, is his exact knowledge of all such matters. What should I be good for without it?

SOCRATES: Rare friend! I think that I cannot do better than be your disciple. Then before the trial with Meletus comes on I shall challenge him, and say that I have always had a great interest in religious questions, and now, as he charges me with rash imaginations and innovations in religion, I have become your disciple. You, Meletus, as I shall say to him, acknowledge Euthyphro to be a great theologian, and sound in his opinions; and if you approve of him you ought to approve of me, and not have me into court; but if you disapprove, you should begin by indicting him who is my teacher, and who will be the ruin, not of the young, but of the old; that is to say, of myself whom he instructs, and of his old father whom he admonishes and chastises. And if Meletus refuses to listen to me, but will go on, and will not shift the indictment from me to you, I cannot do better than repeat this challenge in the court.

EUTHYPHRO: Yes, indeed, Socrates; and if he attempts to indict me I am mistaken if I do not find a flaw in him; the court shall have a great deal more to say to him than to me.

SOCRATES: And I, my dear friend, knowing this, am desirous of becoming your disciple. For I observe that no one appears to notice you—not even this Meletus; but his sharp eyes have found me out at once, and he has indicted me for impiety. And therefore, I adjure you to tell me the nature of piety and impiety, which you said that you knew so well, and of murder, and of other offences against the gods. What are they? Is not piety in every action always the same? and impiety, again—is it not always the opposite of piety, and also the same with itself, having, as impiety, one notion which includes whatever is impious?

EUTHYPHRO: To be sure, Socrates.

SOCRATES: And what is piety, and what is impiety?

EUTHYPHRO: Piety is doing as I am doing; that is to say, prosecuting any one who is guilty of murder, sacrilege, or of any similar crime—whether he be your father or mother, or whoever he may be—that makes no difference; and not to prosecute them is impiety. And please to consider, Socrates, what a notable proof I will give you of the truth of my words, a proof which I have already given to others:—of the principle, I mean, that the impious, whoever he may be, ought not to go unpunished. For do not men regard Zeus as the best and most righteous of the gods?—and yet they admit that he bound his father (Cronos) because he wickedly devoured his sons, and that he too had punished his own father (Uranus) for a similar reason, in a nameless manner. And yet when I proceed against my father, they are angry with me. So inconsistent are they in their way of talking when the gods are concerned, and when I am concerned.

SOCRATES: May not this be the reason, Euthyphro, why I am charged with impiety—that I cannot away with these stories about the gods? and therefore I suppose that people think me wrong. But, as you who are well informed about them approve of them, I cannot do better than assent to your superior wisdom. What else can I say, confessing as I do, that I know nothing about them? Tell me, for the love of Zeus, whether you really believe that they are true.

EUTHYPHRO: Yes, Socrates; and things more wonderful still, of which the world is in ignorance.

SOCRATES: And do you really believe that the gods fought with one another, and had dire quarrels, battles, and the like, as the poets say, and as you may see represented in the works of great artists? The temples are full of them; and notably the robe of Athene, which is carried up to the Acropolis at the great Panathenaea, is embroidered with them. Are all these tales of the gods true, Euthyphro?

EUTHYPHRO: Yes, Socrates; and, as I was saying, I can tell you, if you would like to hear them, many other things about the gods which would quite amaze you.

SOCRATES: I dare say; and you shall tell me them at some other time when I have leisure. But just at present I would rather hear from you a more precise answer, which you have not as yet given, my friend, to the question, What is 'piety'? When asked, you only replied, Doing as you do, charging your father with murder.

EUTHYPHRO: And what I said was true, Socrates.

SOCRATES: No doubt, Euthyphro; but you would admit that there are many other pious acts?

EUTHYPHRO: There are.

SOCRATES: Remember that I did not ask you to give me two or three examples of piety, but to explain the general idea which makes all pious things to be pious. Do you not recollect that there was one idea which made the impious impious, and the pious pious?

EUTHYPHRO: I remember.

SOCRATES: Tell me what is the nature of this idea, and then I shall have a standard to which I may look, and by which I may measure actions, whether yours or those of any one else, and then I shall be able to say that such and such an action is pious, such another impious.

EUTHYPHRO: I will tell you, if you like.

SOCRATES: I should very much like.

EUTHYPHRO: Piety, then, is that which is dear to the gods, and impiety is that which is not dear to them.

SOCRATES: Very good, Euthyphro; you have now given me the sort of answer which I wanted. But whether what you say is true or not I cannot as yet tell, although I make no doubt that you will prove the truth of your words.

EUTHYPHRO: Of course.

SOCRATES: Come, then, and let us examine what we are saying. That thing or person which is dear to the gods is pious, and that thing or person which is hateful to the gods is impious, these two being the extreme opposites of one another. Was not that said?

EUTHYPHRO: It was.

SOCRATES: And well said?

EUTHYPHRO: Yes, Socrates, I thought so; it was certainly said.

SOCRATES: And further, Euthyphro, the gods were admitted to have enmities and hatreds and differences?

EUTHYPHRO: Yes, that was also said.

SOCRATES: And what sort of difference creates enmity and anger? Suppose for example that you and I, my good friend, differ about a number; do differences of this sort make us enemies and set us at variance with one another? Do we not go at once to arithmetic, and put an end to them by a sum?

EUTHYPHRO: True.

SOCRATES: Or suppose that we differ about magnitudes, do we not quickly end the differences by measuring?

EUTHYPHRO: Very true.

SOCRATES: And we end a controversy about heavy and light by resorting to a weighing machine?

EUTHYPHRO: To be sure.

SOCRATES: But what differences are there which cannot be thus decided, and which therefore make us angry and set us at enmity with one another? I dare say the answer does not occur to you at the moment, and therefore I will suggest that these enmities arise when the matters of difference are the just and unjust, good and evil, honourable and dishonourable. Are not these the points about which men differ, and about which when we are unable satisfactorily to decide our differences, you and I and all of us quarrel, when we do quarrel? (Compare Alcib.)

EUTHYPHRO: Yes, Socrates, the nature of the differences about which we quarrel is such as you describe.

SOCRATES: And the quarrels of the gods, noble Euthyphro, when they occur, are of a like nature?

EUTHYPHRO: Certainly they are.

SOCRATES: They have differences of opinion, as you say, about good and evil, just and unjust, honourable and dishonourable: there would have been no quarrels among them, if there had been no such differences—would there now?

EUTHYPHRO: You are quite right.

SOCRATES: Does not every man love that which he deems noble and just and good, and hate the opposite of them?

EUTHYPHRO: Very true.

SOCRATES: But, as you say, people regard the same things, some as just and others as unjust,—about these they dispute; and so there arise wars and fightings among them.

EUTHYPHRO: Very true.

SOCRATES: Then the same things are hated by the gods and loved by the gods, and are both hateful and dear to them?

EUTHYPHRO: True.

SOCRATES: And upon this view the same things, Euthyphro, will be pious and also impious?

EUTHYPHRO: So I should suppose.

SOCRATES: Then, my friend, I remark with surprise that you have not answered the question which I asked. For I certainly did not ask you to tell me what action is both pious and impious: but now it would seem that what is loved by the gods is also hated by them. And therefore, Euthyphro, in thus chastising your father you may very likely be doing what is agreeable to Zeus but disagreeable to Cronos or Uranus, and what is acceptable to Hephaestus but unacceptable to Here, and there may be other gods who have similar differences of opinion.

EUTHYPHRO: But I believe, Socrates, that all the gods would be agreed as to the propriety of punishing a murderer: there would be no difference of opinion about that.

SOCRATES: Well, but speaking of men, Euthyphro, did you ever hear any one arguing that a murderer or any sort of evil-doer ought to be let off?

EUTHYPHRO: I should rather say that these are the questions which they are always arguing, especially in courts of law: they commit all sorts of crimes, and there is nothing which they will not do or say in their own defence.

SOCRATES: But do they admit their guilt, Euthyphro, and yet say that they ought not to be punished?

EUTHYPHRO: No; they do not.

SOCRATES: Then there are some things which they do not venture to say and do: for they do not venture to argue that the guilty are to be unpunished, but they deny their guilt, do they not?

EUTHYPHRO: Yes.

SOCRATES: Then they do not argue that the evil-doer should not be punished, but they argue about the fact of who the evil-doer is, and what he did and when?

EUTHYPHRO: True.

SOCRATES: And the gods are in the same case, if as you assert they quarrel about just and unjust, and some of them say while others deny that injustice is done among them. For surely neither God nor man will ever venture to say that the doer of injustice is not to be punished?

EUTHYPHRO: That is true, Socrates, in the main.

SOCRATES: But they join issue about the particulars—gods and men alike; and, if they dispute at all, they dispute about some act which is called in question, and which by some is affirmed to be just, by others to be unjust. Is not that true?

EUTHYPHRO: Quite true.

SOCRATES: Well then, my dear friend Euthyphro, do tell me, for my better instruction and information, what proof have you that in the opinion of all the gods a servant who is guilty of murder, and is put in chains by the master of the dead man, and dies because he is put in chains before he who bound him can learn from the interpreters of the gods what he ought to do with him, dies unjustly; and that on behalf of such an one a son ought to proceed against his father and accuse him of murder. How would you show that all the gods absolutely agree in approving of his act? Prove to me that they do, and I will applaud your wisdom as long as I live.

EUTHYPHRO: It will be a difficult task; but I could make the matter very clear indeed to you.

SOCRATES: I understand; you mean to say that I am not so quick of apprehension as the judges: for to them you will be sure to prove that the act is unjust, and hateful to the gods.

EUTHYPHRO: Yes indeed, Socrates; at least if they will listen to me.

SOCRATES: But they will be sure to listen if they find that you are a good speaker. There was a notion that came into my mind while you were speaking; I said to myself: 'Well, and what if Euthyphro does prove to me that all the gods regarded the death of the serf as unjust, how do I know anything more of the nature of piety and impiety? for granting that this action may be hateful to the gods, still piety and impiety are not adequately defined by these distinctions, for that which is hateful to the gods has been shown to be also pleasing and dear to them.' And therefore, Euthyphro, I do not ask you to prove this; I will suppose, if you like, that all the gods condemn and abominate such an action. But I will amend the definition so far as to say that what all the gods hate is impious, and what they love pious or holy; and what some of them love and others hate is both or neither. Shall this be our definition of piety and impiety?

EUTHYPHRO: Why not, Socrates?

SOCRATES: Why not! certainly, as far as I am concerned, Euthyphro, there is no reason why not. But whether this admission will greatly assist you in the task of instructing me as you promised, is a matter for you to consider.

EUTHYPHRO: Yes, I should say that what all the gods love is pious and holy, and the opposite which they all hate, impious.

SOCRATES: Ought we to enquire into the truth of this, Euthyphro, or simply to accept the mere statement on our own authority and that of others? What do you say?

EUTHYPHRO: We should enquire; and I believe that the statement will stand the test of enquiry.

SOCRATES: We shall know better, my good friend, in a little while. The point which I should first wish to understand is whether the pious or holy is beloved by the gods because it is holy, or holy because it is beloved of the gods.

EUTHYPHRO: I do not understand your meaning, Socrates.

SOCRATES: I will endeavour to explain: we, speak of carrying and we speak of being carried, of leading and being led, seeing and being seen. You know that in all such cases there is a difference, and you know also in what the difference lies?

EUTHYPHRO: I think that I understand.

SOCRATES: And is not that which is beloved distinct from that which loves?

EUTHYPHRO: Certainly.

SOCRATES: Well; and now tell me, is that which is carried in this state of carrying because it is carried, or for some other reason?

EUTHYPHRO: No; that is the reason.

SOCRATES: And the same is true of what is led and of what is seen?

EUTHYPHRO: True.

SOCRATES: And a thing is not seen because it is visible, but conversely, visible because it is seen; nor is a thing led because it is in the state of being led, or carried because it is in the state of being carried, but the converse of this. And now I think, Euthyphro, that my meaning will be intelligible; and my meaning is, that any state of action or passion implies previous action or passion. It does not become because it is becoming, but it is in a state of becoming because it becomes; neither does it suffer because it is in a state of suffering, but it is in a state of suffering because it suffers. Do you not agree?

EUTHYPHRO: Yes.

SOCRATES: Is not that which is loved in some state either of becoming or suffering?

EUTHYPHRO: Yes.

SOCRATES: And the same holds as in the previous instances; the state of being loved follows the act of being loved, and not the act the state.

EUTHYPHRO: Certainly.

SOCRATES: And what do you say of piety, Euthyphro: is not piety, according to your definition, loved by all the gods?

EUTHYPHRO: Yes.

SOCRATES: Because it is pious or holy, or for some other reason?

EUTHYPHRO: No, that is the reason.

SOCRATES: It is loved because it is holy, not holy because it is loved?

EUTHYPHRO: Yes.

SOCRATES: And that which is dear to the gods is loved by them, and is in a state to be loved of them because it is loved of them?

EUTHYPHRO: Certainly.

SOCRATES: Then that which is dear to the gods, Euthyphro, is not holy, nor is that which is holy loved of God, as you affirm; but they are two different things.

EUTHYPHRO: How do you mean, Socrates?

SOCRATES: I mean to say that the holy has been acknowledged by us to be loved of God because it is holy, not to be holy because it is loved.

EUTHYPHRO: Yes.

SOCRATES: But that which is dear to the gods is dear to them because it is loved by them, not loved by them because it is dear to them.

EUTHYPHRO: True.

SOCRATES: But, friend Euthyphro, if that which is holy is the same with that which is dear to God, and is loved because it is holy, then that which is dear to God would have been loved as being dear to God; but if that which is dear to God is dear to him because loved by him, then that which is holy would have been holy because loved by him. But now you see that the reverse is the case, and that they are quite different from one another. For one (theophiles) is of a kind to be loved cause it is loved, and the other (osion) is loved because it is of a kind to be loved. Thus you appear to me, Euthyphro, when I ask you what is the essence of holiness, to offer an attribute only, and not the essence—the attribute of being loved by all the gods. But you still refuse to explain to me the nature of holiness. And therefore, if you please, I will ask you not to hide your treasure, but to tell me once more what holiness or piety really is, whether dear to the gods or not (for that is a matter about which we will not quarrel); and what is impiety?

EUTHYPHRO: I really do not know, Socrates, how to express what I mean. For somehow or other our arguments, on whatever ground we rest them, seem to turn round and walk away from us.

SOCRATES: Your words, Euthyphro, are like the handiwork of my ancestor Daedalus; and if I were the sayer or propounder of them, you might say that my arguments walk away and will not remain fixed where they are placed because I am a descendant of his. But now, since these notions are your own, you must find some other gibe, for they certainly, as you yourself allow, show an inclination to be on the move.

EUTHYPHRO: Nay, Socrates, I shall still say that you are the Daedalus who sets arguments in motion; not I, certainly, but you make them move or go round, for they would never have stirred, as far as I am concerned.

SOCRATES: Then I must be a greater than Daedalus: for whereas he only made his own inventions to move, I move those of other people as well. And the beauty of it is, that I would rather not. For I would give the wisdom of Daedalus, and the wealth of Tantalus, to be able to detain them and keep them fixed. But enough of this. As I perceive that you are lazy, I will myself endeavour to show you how you might instruct me in the nature of piety; and I hope that you will not grudge your labour. Tell me, then—Is not that which is pious necessarily just?

EUTHYPHRO: Yes.

SOCRATES: And is, then, all which is just pious? or, is that which is pious all just, but that which is just, only in part and not all, pious?

EUTHYPHRO: I do not understand you, Socrates.

SOCRATES: And yet I know that you are as much wiser than I am, as you are younger. But, as I was saying, revered friend, the abundance of your wisdom makes you lazy. Please to exert yourself, for there is no real difficulty in understanding me. What I mean I may explain by an illustration of what I do not mean. The poet (Stasinus) sings—

'Of Zeus, the author and creator of all these things, You will not tell: for where there is fear there is also reverence.'

Now I disagree with this poet. Shall I tell you in what respect?

EUTHYPHRO: By all means.

SOCRATES: I should not say that where there is fear there is also reverence; for I am sure that many persons fear poverty and disease, and the like evils, but I do not perceive that they reverence the objects of their fear.

EUTHYPHRO: Very true.

SOCRATES: But where reverence is, there is fear; for he who has a feeling of reverence and shame about the commission of any action, fears and is afraid of an ill reputation.

EUTHYPHRO: No doubt.

SOCRATES: Then we are wrong in saying that where there is fear there is also reverence; and we should say, where there is reverence there is also fear. But there is not always reverence where there is fear; for fear is a more extended notion, and reverence is a part of fear, just as the odd is a part of number, and number is a more extended notion than the odd. I suppose that you follow me now?

EUTHYPHRO: Quite well.

SOCRATES: That was the sort of question which I meant to raise when I asked whether the just is always the pious, or the pious always the just; and whether there may not be justice where there is not piety; for justice is the more extended notion of which piety is only a part. Do you dissent?

EUTHYPHRO: No, I think that you are quite right.

SOCRATES: Then, if piety is a part of justice, I suppose that we should enquire what part? If you had pursued the enquiry in the previous cases; for instance, if you had asked me what is an even number,

and what part of number the even is, I should have had no difficulty in replying, a number which represents a figure having two equal sides. Do you not agree?

EUTHYPHRO: Yes, I quite agree.

SOCRATES: In like manner, I want you to tell me what part of justice is piety or holiness, that I may be able to tell Meletus not to do me injustice, or indict me for impiety, as I am now adequately instructed by you in the nature of piety or holiness, and their opposites.

EUTHYPHRO: Piety or holiness, Socrates, appears to me to be that part of justice which attends to the gods, as there is the other part of justice which attends to men.

SOCRATES: That is good, Euthyphro; yet still there is a little point about which I should like to have further information, What is the meaning of 'attention'? For attention can hardly be used in the same sense when applied to the gods as when applied to other things. For instance, horses are said to require attention, and not every person is able to attend to them, but only a person skilled in horsemanship. Is it not so?

EUTHYPHRO: Certainly.

SOCRATES: I should suppose that the art of horsemanship is the art of attending to horses?

EUTHYPHRO: Yes.

SOCRATES: Nor is every one qualified to attend to dogs, but only the huntsman?

EUTHYPHRO: True.

SOCRATES: And I should also conceive that the art of the huntsman is the art of attending to dogs?

EUTHYPHRO: Yes.

SOCRATES: As the art of the oxherd is the art of attending to oxen?

EUTHYPHRO: Very true.

SOCRATES: In like manner holiness or piety is the art of attending to the gods?—that would be your meaning, Euthyphro?

EUTHYPHRO: Yes.

SOCRATES: And is not attention always designed for the good or benefit of that to which the attention is given? As in the case of horses, you may observe that when attended to by the horseman's art they are benefited and improved, are they not?

EUTHYPHRO: True.

SOCRATES: As the dogs are benefited by the huntsman's art, and the oxen by the art of the oxherd, and all other things are tended or attended for their good and not for their hurt?

EUTHYPHRO: Certainly, not for their hurt.

SOCRATES: But for their good?

EUTHYPHRO: Of course.

SOCRATES: And does piety or holiness, which has been defined to be the art of attending to the gods, benefit or improve them? Would you say that when you do a holy act you make any of the gods better?

EUTHYPHRO: No, no; that was certainly not what I meant.

SOCRATES: And I, Euthyphro, never supposed that you did. I asked you the question about the nature of the attention, because I thought that you did not.

EUTHYPHRO: You do me justice, Socrates; that is not the sort of attention which I mean.

SOCRATES: Good: but I must still ask what is this attention to the gods which is called piety?

EUTHYPHRO: It is such, Socrates, as servants show to their masters.

SOCRATES: I understand—a sort of ministration to the gods.

EUTHYPHRO: Exactly.

SOCRATES: Medicine is also a sort of ministration or service, having in view the attainment of some object—would you not say of health?

EUTHYPHRO: I should.

SOCRATES: Again, there is an art which ministers to the ship-builder with a view to the attainment of some result?

EUTHYPHRO: Yes, Socrates, with a view to the building of a ship.

SOCRATES: As there is an art which ministers to the house-builder with a view to the building of a house?

EUTHYPHRO: Yes.

SOCRATES: And now tell me, my good friend, about the art which ministers to the gods: what work does that help to accomplish? For you must surely know if, as you say, you are of all men living the one who is best instructed in religion.

EUTHYPHRO: And I speak the truth, Socrates.

SOCRATES: Tell me then, oh tell me—what is that fair work which the gods do by the help of our ministrations?

EUTHYPHRO: Many and fair, Socrates, are the works which they do.

SOCRATES: Why, my friend, and so are those of a general. But the chief of them is easily told. Would you not say that victory in war is the chief of them?

EUTHYPHRO: Certainly.

SOCRATES: Many and fair, too, are the works of the husbandman, if I am not mistaken; but his chief work is the production of food from the earth?

EUTHYPHRO: Exactly.

SOCRATES: And of the many and fair things done by the gods, which is the chief or principal one?

EUTHYPHRO: I have told you already, Socrates, that to learn all these things accurately will be very tiresome. Let me simply say that piety or holiness is learning how to please the gods in word and deed, by prayers and sacrifices. Such piety is the salvation of families and states, just as the impious, which is unpleasing to the gods, is their ruin and destruction.

SOCRATES: I think that you could have answered in much fewer words the chief question which I asked, Euthyphro, if you had chosen. But I see plainly that you are not disposed to instruct me—clearly not: else why, when we reached the point, did you turn aside? Had you only answered me I should have truly learned of you by this time the nature of piety. Now, as the asker of a question is necessarily dependent on the answerer, whither he leads I must follow; and can only ask again, what is the pious, and what is piety? Do you mean that they are a sort of science of praying and sacrificing?

EUTHYPHRO: Yes, I do.

SOCRATES: And sacrificing is giving to the gods, and prayer is asking of the gods?

EUTHYPHRO: Yes, Socrates.

SOCRATES: Upon this view, then, piety is a science of asking and giving?

EUTHYPHRO: You understand me capitally, Socrates.

SOCRATES: Yes, my friend; the reason is that I am a votary of your science, and give my mind to it, and therefore nothing which you say will be thrown away upon me. Please then to tell me, what is the nature of this service to the gods? Do you mean that we prefer requests and give gifts to them?

EUTHYPHRO: Yes, I do.

SOCRATES: Is not the right way of asking to ask of them what we want?

EUTHYPHRO: Certainly.

SOCRATES: And the right way of giving is to give to them in return what they want of us. There would be no meaning in an art which gives to any one that which he does not want.

EUTHYPHRO: Very true, Socrates.

SOCRATES: Then piety, Euthyphro, is an art which gods and men have of doing business with one another?

EUTHYPHRO: That is an expression which you may use, if you like.

SOCRATES: But I have no particular liking for anything but the truth. I wish, however, that you would tell me what benefit accrues to the gods from our gifts. There is no doubt about what they give to us; for there is no good thing which they do not give; but how we can give any good thing to them in return is far from being equally clear. If they give everything and we give nothing, that must be an affair of business in which we have very greatly the advantage of them.

EUTHYPHRO: And do you imagine, Socrates, that any benefit accrues to the gods from our gifts?

SOCRATES: But if not, Euthyphro, what is the meaning of gifts which are conferred by us upon the gods?

EUTHYPHRO: What else, but tributes of honour; and, as I was just now saying, what pleases them?

SOCRATES: Piety, then, is pleasing to the gods, but not beneficial or dear to them?

EUTHYPHRO: I should say that nothing could be dearer.

SOCRATES: Then once more the assertion is repeated that piety is dear to the gods?

EUTHYPHRO: Certainly.

SOCRATES: And when you say this, can you wonder at your words not standing firm, but walking away? Will you accuse me of being the Daedalus who makes them walk away, not perceiving that there is another and far greater artist than Daedalus who makes them go round in a circle, and he is yourself; for the argument, as you will perceive, comes round to the same point. Were we not saying that the holy or pious was not the same with that which is loved of the gods? Have you forgotten?

EUTHYPHRO: I quite remember.

SOCRATES: And are you not saying that what is loved of the gods is holy; and is not this the same as what is dear to them—do you see?

EUTHYPHRO: True.

SOCRATES: Then either we were wrong in our former assertion; or, if we were right then, we are wrong now.

EUTHYPHRO: One of the two must be true.

SOCRATES: Then we must begin again and ask, What is piety? That is an enquiry which I shall never be weary of pursuing as far as in me lies; and I entreat you not to scorn me, but to apply your mind to the utmost, and tell me the truth. For, if any man knows, you are he; and therefore I must detain you, like Proteus, until you tell. If you had not certainly known the nature of piety and impiety, I am confident that you would never, on behalf of a serf, have charged your aged father with murder. You would not have run such a risk of doing wrong in the sight of the gods, and you would have had too much respect for the opinions of men. I am sure, therefore, that you know the nature of piety and impiety. Speak out then, my dear Euthyphro, and do not hide your knowledge.

EUTHYPHRO: Another time, Socrates; for I am in a hurry, and must go now.

SOCRATES: Alas! my companion, and will you leave me in despair? I was hoping that you would instruct me in the nature of piety and impiety; and then I might have cleared myself of Meletus and his indictment. I would have told him that I had been enlightened by Euthyphro, and had given up rash innovations and speculations, in which I indulged only through ignorance, and that now I am about to lead a better life.

GORGIAS

by Plato

Translated by Benjamin Jowett

INTRODUCTION.

In several of the dialogues of Plato, doubts have arisen among his interpreters as to which of the various subjects discussed in them is the main thesis. The speakers have the freedom of conversation; no severe rules of art restrict them, and sometimes we are inclined to think, with one of the dramatis personae in the Theaetetus, that the digressions have the greater interest. Yet in the most irregular of the dialogues there is also a certain natural growth or unity; the beginning is not forgotten at the end, and numerous allusions and references are interspersed, which form the loose connecting links of the whole. We must not neglect this unity, but neither must we attempt to confine the Platonic dialogue on the Procrustean bed of a single idea. (Compare Introduction to the Phaedrus.)

Two tendencies seem to have beset the interpreters of Plato in this matter. First, they have endeavoured to hang the dialogues upon one another by the slightest threads; and have thus been led to opposite and contradictory assertions respecting their order and sequence. The mantle of Schleiermacher has descended upon his successors, who have applied his method with the most various results. The value and use of the method has been hardly, if at all, examined either by him or them. Secondly, they have extended almost indefinitely the scope of each separate dialogue; in this way they think that they have escaped all difficulties, not seeing that what they have gained in generality they have lost in truth and distinctness. Metaphysical conceptions easily pass into one another; and the simpler notions of antiquity, which we can only realize by an effort, imperceptibly blend with the more familiar theories of modern philosophers. An eye for proportion is needed (his own art of measuring) in the study of Plato, as well as of other great artists. We may hardly admit that the moral antithesis of good and pleasure, or the intellectual antithesis of knowledge and opinion, being and appearance, are never far off in a Platonic discussion. But because they are in the background, we should not bring them into the foreground, or expect to discern them equally in all the dialogues.

There may be some advantage in drawing out a little the main outlines of the building; but the use of this is limited, and may be easily exaggerated. We may give Plato too much system, and alter the natural form and connection of his thoughts. Under the idea that his dialogues are finished works of art, we may find a reason for everything, and lose the highest characteristic of art, which is simplicity. Most great works receive a new light from a new and original mind. But whether these new lights are true or only suggestive, will depend on their agreement with the spirit of Plato, and the amount of direct evidence which can be urged in support of them. When a theory is running away with us, criticism does a friendly office in counselling moderation, and recalling us to the indications of the text.

Like the Phaedrus, the Gorgias has puzzled students of Plato by the appearance of two or more subjects. Under the cover of rhetoric higher themes are introduced; the argument expands into a general view of the good and evil of man. After making an ineffectual attempt to obtain a sound definition of his art from Gorgias, Socrates assumes the existence of a universal art of flattery or simulation having several branches:—this is the genus of which rhetoric is only one, and not the highest species. To flattery is opposed the true and noble art of life which he who possesses seeks always to impart to others, and which at last triumphs, if not here, at any rate in another world. These two aspects of life and knowledge appear to be the two leading ideas of the dialogue. The true and the false in individuals and states, in the treatment of the soul as well as of the body, are conceived

under the forms of true and false art. In the development of this opposition there arise various other questions, such as the two famous paradoxes of Socrates (paradoxes as they are to the world in general, ideals as they may be more worthily called): (1) that to do is worse than to suffer evil; and (2) that when a man has done evil he had better be punished than unpunished; to which may be added (3) a third Socratic paradox or ideal, that bad men do what they think best, but not what they desire, for the desire of all is towards the good. That pleasure is to be distinguished from good is proved by the simultaneousness of pleasure and pain, and by the possibility of the bad having in certain cases pleasures as great as those of the good, or even greater. Not merely rhetoricians, but poets, musicians, and other artists, the whole tribe of statesmen, past as well as present, are included in the class of flatterers. The true and false finally appear before the judgment-seat of the gods below.

The dialogue naturally falls into three divisions, to which the three characters of Gorgias, Polus, and Callicles respectively correspond; and the form and manner change with the stages of the argument. Socrates is deferential towards Gorgias, playful and yet cutting in dealing with the youthful Polus, ironical and sarcastic in his encounter with Callicles. In the first division the question is asked—What is rhetoric? To this there is no answer given, for Gorgias is soon made to contradict himself by Socrates, and the argument is transferred to the hands of his disciple Polus, who rushes to the defence of his master. The answer has at last to be given by Socrates himself, but before he can even explain his meaning to Polus, he must enlighten him upon the great subject of shams or flatteries. When Polus finds his favourite art reduced to the level of cookery, he replies that at any rate rhetoricians, like despots, have great power. Socrates denies that they have any real power, and hence arise the three paradoxes already mentioned. Although they are strange to him, Polus is at last convinced of their truth; at least, they seem to him to follow legitimately from the premises. Thus the second act of the dialogue closes. Then Callicles appears on the scene, at first maintaining that pleasure is good, and that might is right, and that law is nothing but the combination of the many weak against the few strong. When he is confuted he withdraws from the argument, and leaves Socrates to arrive at the conclusion by himself. The conclusion is that there are two kinds of statesmanship, a higher and a lower—that which makes the people better, and that which only flatters them, and he exhorts Callicles to choose the higher. The dialogue terminates with a mythus of a final judgment, in which there will be no more flattery or disguise, and no further use for the teaching of rhetoric.

The characters of the three interlocutors also correspond to the parts which are assigned to them. Gorgias is the great rhetorician, now advanced in years, who goes from city to city displaying his talents, and is celebrated throughout Greece. Like all the Sophists in the dialogues of Plato, he is vain and boastful, yet he has also a certain dignity, and is treated by Socrates with considerable respect. But he is no match for him in dialectics. Although he has been teaching rhetoric all his life, he is still incapable of defining his own art. When his ideas begin to clear up, he is unwilling to admit that rhetoric can be wholly separated from justice and injustice, and this lingering sentiment of morality, or regard for public opinion, enables Socrates to detect him in a contradiction. Like Protagoras, he is described as of a generous nature; he expresses his approbation of Socrates' manner of approaching a question; he is quite 'one of Socrates' sort, ready to be refuted as well as to refute,' and very eager that Callicles and Socrates should have the game out. He knows by experience that rhetoric exercises great influence over other men, but he is unable to explain the puzzle how rhetoric can teach everything and know nothing.

Polus is an impetuous youth, a runaway 'colt,' as Socrates describes him, who wanted originally to have taken the place of Gorgias under the pretext that the old man was tired, and now avails himself of the earliest opportunity to enter the lists. He is said to be the author of a work on rhetoric, and is again mentioned in the Phaedrus, as the inventor of balanced or double forms of speech (compare Gorg.; Symp.). At first he is violent and ill-mannered, and is angry at seeing his master overthrown. But in the judicious hands of Socrates he is soon restored to good-humour, and compelled to assent to the required conclusion. Like Gorgias, he is overthrown because he compromises; he is unwilling to say that to do is fairer or more honourable than to suffer injustice. Though he is fascinated by the power of rhetoric, and dazzled by the splendour of success, he is not insensible to higher arguments. Plato may have felt that there would be an incongruity in a youth maintaining the cause of injustice against the world. He has never heard the other side of the question, and he listens to the paradoxes, as they appear to him, of Socrates with evident astonishment. He can hardly understand the meaning of Archelaus being miserable, or of rhetoric being only useful in self-accusation. When the argument with him has fairly run out.

Callicles, in whose house they are assembled, is introduced on the stage: he is with difficulty convinced that Socrates is in earnest; for if these things are true, then, as he says with real emotion, the foundations of society are upside down. In him another type of character is represented; he is neither sophist nor philosopher, but man of the world, and an accomplished Athenian gentleman. He might be described in modern language as a cynic or materialist, a lover of power and also of pleasure, and unscrupulous in his means of attaining both. There is no desire on his part to offer any compromise in the interests of morality; nor is any concession made by him. Like Thrasymachus in the Republic, though he is not of the same weak and vulgar class, he consistently maintains that might is right. His great motive of action is political ambition; in this he is characteristically Greek. Like Anytus in the Meno, he is the enemy of the Sophists; but favours the new art of rhetoric, which he regards as an excellent weapon of attack and defence. He is a despiser of mankind as he is of philosophy, and sees in the laws of the state only a violation of the order of nature, which intended that the stronger should govern the weaker (compare Republic). Like other men of the world who are of a speculative turn of mind, he generalizes the bad side of human nature, and has easily brought down his principles to his practice. Philosophy and poetry alike supply him with distinctions suited to his view of human life. He has a good will to Socrates, whose talents he evidently admires, while he censures the puerile use which he makes of them. He expresses a keen intellectual interest in the argument. Like Anytus, again, he has a sympathy with other men of the world; the Athenian statesmen of a former generation, who showed no weakness and made no mistakes, such as Miltiades, Themistocles, Pericles, are his favourites. His ideal of human character is a man of great passions and great powers, which he has developed to the utmost, and which he uses in his own enjoyment and in the government of others. Had Critias been the name instead of Callicles, about whom we know nothing from other sources, the opinions of the man would have seemed to reflect the history of his life.

And now the combat deepens. In Callicles, far more than in any sophist or rhetorician, is concentrated the spirit of evil against which Socrates is contending, the spirit of the world, the spirit of the many contending against the one wise man, of which the Sophists, as he describes them in the Republic, are the imitators rather than the authors, being themselves carried away by the great tide of public opinion. Socrates approaches his antagonist warily from a distance, with a sort of irony which touches with a light hand both his personal vices (probably in allusion to some scandal of the day) and his

servility to the populace. At the same time, he is in most profound earnest, as Chaerephon remarks. Callicles soon loses his temper, but the more he is irritated, the more provoking and matter of fact does Socrates become. A repartee of his which appears to have been really made to the 'omniscient' Hippias, according to the testimony of Xenophon (Mem.), is introduced. He is called by Callicles a popular declaimer, and certainly shows that he has the power, in the words of Gorgias, of being 'as long as he pleases,' or 'as short as he pleases' (compare Protag.). Callicles exhibits great ability in defending himself and attacking Socrates, whom he accuses of trifling and word-splitting; he is scandalized that the legitimate consequences of his own argument should be stated in plain terms; after the manner of men of the world, he wishes to preserve the decencies of life. But he cannot consistently maintain the bad sense of words; and getting confused between the abstract notions of better, superior, stronger, he is easily turned round by Socrates, and only induced to continue the argument by the authority of Gorgias. Once, when Socrates is describing the manner in which the ambitious citizen has to identify himself with the people, he partially recognizes the truth of his words.

The Socrates of the Gorgias may be compared with the Socrates of the Protagoras and Meno. As in other dialogues, he is the enemy of the Sophists and rhetoricians; and also of the statesmen, whom he regards as another variety of the same species. His behaviour is governed by that of his opponents; the least forwardness or egotism on their part is met by a corresponding irony on the part of Socrates. He must speak, for philosophy will not allow him to be silent. He is indeed more ironical and provoking than in any other of Plato's writings: for he is 'fooled to the top of his bent' by the worldliness of Callicles. But he is also more deeply in earnest. He rises higher than even in the Phaedo and Crito: at first enveloping his moral convictions in a cloud of dust and dialectics, he ends by losing his method, his life, himself, in them. As in the Protagoras and Phaedrus, throwing aside the veil of irony, he makes a speech, but, true to his character, not until his adversary has refused to answer any more questions. The presentiment of his own fate is hanging over him. He is aware that Socrates, the single real teacher of politics, as he ventures to call himself, cannot safely go to war with the whole world, and that in the courts of earth he will be condemned. But he will be justified in the world below. Then the position of Socrates and Callicles will be reversed; all those things 'unfit for ears polite' which Callicles has prophesied as likely to happen to him in this life, the insulting language, the box on the ears, will recoil upon his assailant. (Compare Republic, and the similar reversal of the position of the lawyer and the philosopher in the Theaetetus).

There is an interesting allusion to his own behaviour at the trial of the generals after the battle of Arginusae, which he ironically attributes to his ignorance of the manner in which a vote of the assembly should be taken. This is said to have happened 'last year' (B.C. 406), and therefore the assumed date of the dialogue has been fixed at 405 B.C., when Socrates would already have been an old man. The date is clearly marked, but is scarcely reconcilable with another indication of time, viz. the 'recent' usurpation of Archelaus, which occurred in the year 413; and still less with the 'recent' death of Pericles, who really died twenty-four years previously (429 B.C.) and is afterwards reckoned among the statesmen of a past age; or with the mention of Nicias, who died in 413, and is nevertheless spoken of as a living witness. But we shall hereafter have reason to observe, that although there is a general consistency of times and persons in the Dialogues of Plato, a precise dramatic date is an invention of his commentators (Preface to Republic).

The conclusion of the Dialogue is remarkable, (1) for the truly characteristic declaration of Socrates that he is ignorant of the true nature and bearing of these things, while he affirms at the same time

that no one can maintain any other view without being ridiculous. The profession of ignorance reminds us of the earlier and more exclusively Socratic Dialogues. But neither in them, nor in the Apology, nor in the Memorabilia of Xenophon, does Socrates express any doubt of the fundamental truths of morality. He evidently regards this 'among the multitude of questions' which agitate human life 'as the principle which alone remains unshaken.' He does not insist here, any more than in the Phaedo, on the literal truth of the myth, but only on the soundness of the doctrine which is contained in it, that doing wrong is worse than suffering, and that a man should be rather than seem; for the next best thing to a man's being just is that he should be corrected and become just; also that he should avoid all flattery, whether of himself or of others; and that rhetoric should be employed for the maintenance of the right only. The revelation of another life is a recapitulation of the argument in a figure.

(2) Socrates makes the singular remark, that he is himself the only true politician of his age. In other passages, especially in the Apology, he disclaims being a politician at all. There he is convinced that he or any other good man who attempted to resist the popular will would be put to death before he had done any good to himself or others. Here he anticipates such a fate for himself, from the fact that he is 'the only man of the present day who performs his public duties at all.' The two points of view are not really inconsistent, but the difference between them is worth noticing: Socrates is and is not a public man. Not in the ordinary sense, like Alcibiades or Pericles, but in a higher one; and this will sooner or later entail the same consequences on him. He cannot be a private man if he would; neither can he separate morals from politics. Nor is he unwilling to be a politician, although he foresees the dangers which await him; but he must first become a better and wiser man, for he as well as Callicles is in a state of perplexity and uncertainty. And yet there is an inconsistency: for should not Socrates too have taught the citizens better than to put him to death?

And now, as he himself says, we will 'resume the argument from the beginning.'

Socrates, who is attended by his inseparable disciple, Chaerephon, meets Callicles in the streets of Athens. He is informed that he has just missed an exhibition of Gorgias, which he regrets, because he was desirous, not of hearing Gorgias display his rhetoric, but of interrogating him concerning the nature of his art. Callicles proposes that they shall go with him to his own house, where Gorgias is staying. There they find the great rhetorician and his younger friend and disciple Polus.

SOCRATES: Put the question to him, Chaerephon.

CHAEREPHON: What question?

SOCRATES: Who is he?—such a question as would elicit from a man the answer, 'I am a cobbler.'

Polus suggests that Gorgias may be tired, and desires to answer for him. 'Who is Gorgias?' asks Chaerephon, imitating the manner of his master Socrates. 'One of the best of men, and a proficient in the best and noblest of experimental arts,' etc., replies Polus, in rhetorical and balanced phrases. Socrates is dissatisfied at the length and unmeaningness of the answer; he tells the disconcerted volunteer that he has mistaken the quality for the nature of the art, and remarks to Gorgias, that Polus has learnt how to make a speech, but not how to answer a question. He wishes that Gorgias would answer him. Gorgias is willing enough, and replies to the question asked by Chaerephon,—that he is

a rhetorician, and in Homeric language, 'boasts himself to be a good one.' At the request of Socrates he promises to be brief; for 'he can be as long as he pleases, and as short as he pleases.' Socrates would have him bestow his length on others, and proceeds to ask him a number of questions, which are answered by him to his own great satisfaction, and with a brevity which excites the admiration of Socrates. The result of the discussion may be summed up as follows:—

Rhetoric treats of discourse; but music and medicine, and other particular arts, are also concerned with discourse; in what way then does rhetoric differ from them? Gorgias draws a distinction between the arts which deal with words, and the arts which have to do with external actions. Socrates extends this distinction further, and divides all productive arts into two classes: (1) arts which may be carried on in silence; and (2) arts which have to do with words, or in which words are coextensive with action, such as arithmetic, geometry, rhetoric. But still Gorgias could hardly have meant to say that arithmetic was the same as rhetoric. Even in the arts which are concerned with words there are differences. What then distinguishes rhetoric from the other arts which have to do with words? 'The words which rhetoric uses relate to the best and greatest of human things.' But tell me, Gorgias, what are the best? 'Health first, beauty next, wealth third,' in the words of the old song, or how would you rank them? The arts will come to you in a body, each claiming precedence and saying that her own good is superior to that of the rest—How will you choose between them? 'I should say, Socrates, that the art of persuasion, which gives freedom to all men, and to individuals power in the state, is the greatest good.' But what is the exact nature of this persuasion?—is the persevering retort: You could not describe Zeuxis as a painter, or even as a painter of figures, if there were other painters of figures; neither can you define rhetoric simply as an art of persuasion, because there are other arts which persuade, such as arithmetic, which is an art of persuasion about odd and even numbers. Gorgias is made to see the necessity of a further limitation, and he now defines rhetoric as the art of persuading in the law courts, and in the assembly, about the just and unjust. But still there are two sorts of persuasion: one which gives knowledge, and another which gives belief without knowledge; and knowledge is always true, but belief may be either true or false,—there is therefore a further question: which of the two sorts of persuasion does rhetoric effect in courts of law and assemblies? Plainly that which gives belief and not that which gives knowledge; for no one can impart a real knowledge of such matters to a crowd of persons in a few minutes. And there is another point to be considered:—when the assembly meets to advise about walls or docks or military expeditions, the rhetorician is not taken into counsel, but the architect, or the general. How would Gorgias explain this phenomenon? All who intend to become disciples, of whom there are several in the company, and not Socrates only, are eagerly asking:—About what then will rhetoric teach us to persuade or advise the state?

Gorgias illustrates the nature of rhetoric by adducing the example of Themistocles, who persuaded the Athenians to build their docks and walls, and of Pericles, whom Socrates himself has heard speaking about the middle wall of the Piraeus. He adds that he has exercised a similar power over the patients of his brother Herodicus. He could be chosen a physician by the assembly if he pleased, for no physician could compete with a rhetorician in popularity and influence. He could persuade the multitude of anything by the power of his rhetoric; not that the rhetorician ought to abuse this power any more than a boxer should abuse the art of self-defence. Rhetoric is a good thing, but, like all good things, may be unlawfully used. Neither is the teacher of the art to be deemed unjust because his pupils are unjust and make a bad use of the lessons which they have learned from him.

Socrates would like to know before he replies, whether Gorgias will quarrel with him if he points out a slight inconsistency into which he has fallen, or whether he, like himself, is one who loves to be refuted. Gorgias declares that he is quite one of his sort, but fears that the argument may be tedious to the company. The company cheer, and Chaerephon and Callicles exhort them to proceed. Socrates gently points out the supposed inconsistency into which Gorgias appears to have fallen, and which he is inclined to think may arise out of a misapprehension of his own. The rhetorician has been declared by Gorgias to be more persuasive to the ignorant than the physician, or any other expert. And he is said to be ignorant, and this ignorance of his is regarded by Gorgias as a happy condition, for he has escaped the trouble of learning. But is he as ignorant of just and unjust as he is of medicine or building? Gorgias is compelled to admit that if he did not know them previously he must learn them from his teacher as a part of the art of rhetoric. But he who has learned carpentry is a carpenter, and he who has learned music is a musician, and he who has learned justice is just. The rhetorician then must be a just man, and rhetoric is a just thing. But Gorgias has already admitted the opposite of this, viz. that rhetoric may be abused, and that the rhetorician may act unjustly. How is the inconsistency to be explained?

The fallacy of this argument is twofold; for in the first place, a man may know justice and not be just—here is the old confusion of the arts and the virtues;—nor can any teacher be expected to counteract wholly the bent of natural character; and secondly, a man may have a degree of justice, but not sufficient to prevent him from ever doing wrong. Polus is naturally exasperated at the sophism, which he is unable to detect; of course, he says, the rhetorician, like every one else, will admit that he knows justice (how can he do otherwise when pressed by the interrogations of Socrates?), but he thinks that great want of manners is shown in bringing the argument to such a pass. Socrates ironically replies, that when old men trip, the young set them on their legs again; and he is quite willing to retract, if he can be shown to be in error, but upon one condition, which is that Polus studies brevity. Polus is in great indignation at not being allowed to use as many words as he pleases in the free state of Athens. Socrates retorts, that yet harder will be his own case, if he is compelled to stay and listen to them. After some altercation they agree (compare Protag.), that Polus shall ask and Socrates answer.

'What is the art of Rhetoric?' says Polus. Not an art at all, replies Socrates, but a thing which in your book you affirm to have created art. Polus asks, 'What thing?' and Socrates answers, An experience or routine of making a sort of delight or gratification. 'But is not rhetoric a fine thing?' I have not yet told you what rhetoric is. Will you ask me another question—What is cookery? 'What is cookery?' An experience or routine of making a sort of delight or gratification. Then they are the same, or rather fall under the same class, and rhetoric has still to be distinguished from cookery. 'What is rhetoric?' asks Polus once more. A part of a not very creditable whole, which may be termed flattery, is the reply. 'But what part?' A shadow of a part of politics. This, as might be expected, is wholly unintelligible, both to Gorgias and Polus; and, in order to explain his meaning to them, Socrates draws a distinction between shadows or appearances and realities; e.g. there is real health of body or soul, and the appearance of them; real arts and sciences, and the simulations of them. Now the soul and body have two arts waiting upon them, first the art of politics, which attends on the soul, having a legislative part and a judicial part; and another art attending on the body, which has no generic name, but may also be described as having two divisions, one of which is medicine and the other gymnastic. Corresponding with these four arts or sciences there are four shams or simulations of them, mere experiences, as they may be termed, because they give no reason of their own existence. The art of

dressing up is the sham or simulation of gymnastic, the art of cookery, of medicine; rhetoric is the simulation of justice, and sophistic of legislation. They may be summed up in an arithmetical formula:—

Tiring: gymnastic:: cookery: medicine:: sophistic: legislation.

And,

Cookery: medicine:: rhetoric: the art of justice.

And this is the true scheme of them, but when measured only by the gratification which they procure, they become jumbled together and return to their aboriginal chaos. Socrates apologizes for the length of his speech, which was necessary to the explanation of the subject, and begs Polus not unnecessarily to retaliate on him.

'Do you mean to say that the rhetoricians are esteemed flatterers?' They are not esteemed at all. 'Why, have they not great power, and can they not do whatever they desire?' They have no power, and they only do what they think best, and never what they desire; for they never attain the true object of desire, which is the good. 'As if you, Socrates, would not envy the possessor of despotic power, who can imprison, exile, kill any one whom he pleases.' But Socrates replies that he has no wish to put any one to death; he who kills another, even justly, is not to be envied, and he who kills him unjustly is to be pitied; it is better to suffer than to do injustice. He does not consider that going about with a dagger and putting men out of the way, or setting a house on fire, is real power. To this Polus assents, on the ground that such acts would be punished, but he is still of opinion that evil-doers, if they are unpunished, may be happy enough. He instances Archelaus, son of Perdiccas, the usurper of Macedonia. Does not Socrates think him happy?—Socrates would like to know more about him; he cannot pronounce even the great king to be happy, unless he knows his mental and moral condition. Polus explains that Archelaus was a slave, being the son of a woman who was the slave of Alcetas, brother of Perdiccas king of Macedon—and he, by every species of crime, first murdering his uncle and then his cousin and half-brother, obtained the kingdom. This was very wicked, and yet all the world, including Socrates, would like to have his place. Socrates dismisses the appeal to numbers; Polus, if he will, may summon all the rich men of Athens, Nicias and his brothers, Aristocrates, the house of Pericles, or any other great family—this is the kind of evidence which is adduced in courts of justice, where truth depends upon numbers. But Socrates employs proof of another sort; his appeal is to one witness only,—that is to say, the person with whom he is speaking; him he will convict out of his own mouth. And he is prepared to show, after his manner, that Archelaus cannot be a wicked man and yet happy.

The evil-doer is deemed happy if he escapes, and miserable if he suffers punishment; but Socrates thinks him less miserable if he suffers than if he escapes. Polus is of opinion that such a paradox as this hardly deserves refutation, and is at any rate sufficiently refuted by the fact. Socrates has only to compare the lot of the successful tyrant who is the envy of the world, and of the wretch who, having been detected in a criminal attempt against the state, is crucified or burnt to death. Socrates replies, that if they are both criminal they are both miserable, but that the unpunished is the more miserable of the two. At this Polus laughs outright, which leads Socrates to remark that laughter is a new species of refutation. Polus replies, that he is already refuted; for if he will take the votes of the company, he

will find that no one agrees with him. To this Socrates rejoins, that he is not a public man, and (referring to his own conduct at the trial of the generals after the battle of Arginusae) is unable to take the suffrages of any company, as he had shown on a recent occasion; he can only deal with one witness at a time, and that is the person with whom he is arguing. But he is certain that in the opinion of any man to do is worse than to suffer evil.

Polus, though he will not admit this, is ready to acknowledge that to do evil is considered the more foul or dishonourable of the two. But what is fair and what is foul; whether the terms are applied to bodies, colours, figures, laws, habits, studies, must they not be defined with reference to pleasure and utility? Polus assents to this latter doctrine, and is easily persuaded that the fouler of two things must exceed either in pain or in hurt. But the doing cannot exceed the suffering of evil in pain, and therefore must exceed in hurt. Thus doing is proved by the testimony of Polus himself to be worse or more hurtful than suffering.

There remains the other question: Is a guilty man better off when he is punished or when he is unpunished? Socrates replies, that what is done justly is suffered justly: if the act is just, the effect is just; if to punish is just, to be punished is just, and therefore fair, and therefore beneficent; and the benefit is that the soul is improved. There are three evils from which a man may suffer, and which affect him in estate, body, and soul;—these are, poverty, disease, injustice; and the foulest of these is injustice, the evil of the soul, because that brings the greatest hurt. And there are three arts which heal these evils—trading, medicine, justice—and the fairest of these is justice. Happy is he who has never committed injustice, and happy in the second degree he who has been healed by punishment. And therefore the criminal should himself go to the judge as he would to the physician, and purge away his crime. Rhetoric will enable him to display his guilt in proper colours, and to sustain himself and others in enduring the necessary penalty. And similarly if a man has an enemy, he will desire not to punish him, but that he shall go unpunished and become worse and worse, taking care only that he does no injury to himself. These are at least conceivable uses of the art, and no others have been discovered by us.

Here Callicles, who has been listening in silent amazement, asks Chaerephon whether Socrates is in earnest, and on receiving the assurance that he is, proceeds to ask the same question of Socrates himself. For if such doctrines are true, life must have been turned upside down, and all of us are doing the opposite of what we ought to be doing.

Socrates replies in a style of playful irony, that before men can understand one another they must have some common feeling. And such a community of feeling exists between himself and Callicles, for both of them are lovers, and they have both a pair of loves; the beloved of Callicles are the Athenian Demos and Demos the son of Pyrilampes; the beloved of Socrates are Alcibiades and philosophy. The peculiarity of Callicles is that he can never contradict his loves; he changes as his Demos changes in all his opinions; he watches the countenance of both his loves, and repeats their sentiments, and if any one is surprised at his sayings and doings, the explanation of them is, that he is not a free agent, but must always be imitating his two loves. And this is the explanation of Socrates' peculiarities also. He is always repeating what his mistress, Philosophy, is saying to him, who unlike his other love, Alcibiades, is ever the same, ever true. Callicles must refute her, or he will never be at unity with himself; and discord in life is far worse than the discord of musical sounds.

Callicles answers, that Gorgias was overthrown because, as Polus said, in compliance with popular prejudice he had admitted that if his pupil did not know justice the rhetorician must teach him; and Polus has been similarly entangled, because his modesty led him to admit that to suffer is more honourable than to do injustice. By custom 'yes,' but not by nature, says Callicles. And Socrates is always playing between the two points of view, and putting one in the place of the other. In this very argument, what Polus only meant in a conventional sense has been affirmed by him to be a law of nature. For convention says that 'injustice is dishonourable,' but nature says that 'might is right.' And we are always taming down the nobler spirits among us to the conventional level. But sometimes a great man will rise up and reassert his original rights, trampling under foot all our formularies, and then the light of natural justice shines forth. Pindar says, 'Law, the king of all, does violence with high hand;' as is indeed proved by the example of Heracles, who drove off the oxen of Geryon and never paid for them.

This is the truth, Socrates, as you will be convinced, if you leave philosophy and pass on to the real business of life. A little philosophy is an excellent thing; too much is the ruin of a man. He who has not 'passed his metaphysics' before he has grown up to manhood will never know the world. Philosophers are ridiculous when they take to politics, and I dare say that politicians are equally ridiculous when they take to philosophy: 'Every man,' as Euripides says, 'is fondest of that in which he is best.' Philosophy is graceful in youth, like the lisp of infancy, and should be cultivated as a part of education; but when a grown-up man lisps or studies philosophy, I should like to beat him. None of those over-refined natures ever come to any good; they avoid the busy haunts of men, and skulk in corners, whispering to a few admiring youths, and never giving utterance to any noble sentiments.

For you, Socrates, I have a regard, and therefore I say to you, as Zethus says to Amphion in the play, that you have 'a noble soul disguised in a puerile exterior.' And I would have you consider the danger which you and other philosophers incur. For you would not know how to defend yourself if any one accused you in a law-court,—there you would stand, with gaping mouth and dizzy brain, and might be murdered, robbed, boxed on the ears with impunity. Take my advice, then, and get a little common sense; leave to others these frivolities; walk in the ways of the wealthy and be wise.

Socrates professes to have found in Callicles the philosopher's touchstone; and he is certain that any opinion in which they both agree must be the very truth. Callicles has all the three qualities which are needed in a critic—knowledge, good-will, frankness; Gorgias and Polus, although learned men, were too modest, and their modesty made them contradict themselves. But Callicles is well-educated; and he is not too modest to speak out (of this he has already given proof), and his good-will is shown both by his own profession and by his giving the same caution against philosophy to Socrates, which Socrates remembers hearing him give long ago to his own clique of friends. He will pledge himself to retract any error into which he may have fallen, and which Callicles may point out. But he would like to know first of all what he and Pindar mean by natural justice. Do they suppose that the rule of justice is the rule of the stronger or of the better?' 'There is no difference.' Then are not the many superior to the one, and the opinions of the many better? And their opinion is that justice is equality, and that to do is more dishonourable than to suffer wrong. And as they are the superior or stronger, this opinion of theirs must be in accordance with natural as well as conventional justice. 'Why will you continue splitting words? Have I not told you that the superior is the better?' But what do you mean by the better? Tell me that, and please to be a little milder in your language, if you do not wish to drive me away. 'I mean the worthier, the wiser.' You mean to say that one man of sense ought to rule over

ten thousand fools? 'Yes, that is my meaning.' Ought the physician then to have a larger share of meats and drinks? or the weaver to have more coats, or the cobbler larger shoes, or the farmer more seed? 'You are always saying the same things, Socrates.' Yes, and on the same subjects too; but you are never saying the same things. For, first, you defined the superior to be the stronger, and then the wiser, and now something else;—what DO you mean? 'I mean men of political ability, who ought to govern and to have more than the governed.' Than themselves? 'What do you mean?' I mean to say that every man is his own governor. 'I see that you mean those dolts, the temperate. But my doctrine is, that a man should let his desires grow, and take the means of satisfying them. To the many this is impossible, and therefore they combine to prevent him. But if he is a king, and has power, how base would he be in submitting to them! To invite the common herd to be lord over him, when he might have the enjoyment of all things! For the truth is, Socrates, that luxury and self-indulgence are virtue and happiness; all the rest is mere talk.'

Socrates compliments Callicles on his frankness in saying what other men only think. According to his view, those who want nothing are not happy. 'Why,' says Callicles, 'if they were, stones and the dead would be happy.' Socrates in reply is led into a half-serious, half-comic vein of reflection. 'Who knows,' as Euripides says, 'whether life may not be death, and death life?' Nay, there are philosophers who maintain that even in life we are dead, and that the body (soma) is the tomb (sema) of the soul. And some ingenious Sicilian has made an allegory, in which he represents fools as the uninitiated, who are supposed to be carrying water to a vessel, which is full of holes, in a similarly holey sieve, and this sieve is their own soul. The idea is fanciful, but nevertheless is a figure of a truth which I want to make you acknowledge, viz. that the life of contentment is better than the life of indulgence. Are you disposed to admit that? 'Far otherwise.' Then hear another parable. The life of self-contentment and self-indulgence may be represented respectively by two men, who are filling jars with streams of wine, honey, milk,—the jars of the one are sound, and the jars of the other leaky; the first fils his jars, and has no more trouble with them; the second is always filling them, and would suffer extreme misery if he desisted. Are you of the same opinion still? 'Yes, Socrates, and the figure expresses what I mean. For true pleasure is a perpetual stream, flowing in and flowing out. To be hungry and always eating, to be thirsty and always drinking, and to have all the other desires and to satisfy them, that, as I admit, is my idea of happiness.' And to be itching and always scratching? 'I do not deny that there may be happiness even in that.' And to indulge unnatural desires, if they are abundantly satisfied? Callicles is indignant at the introduction of such topics. But he is reminded by Socrates that they are introduced, not by him, but by the maintainer of the identity of pleasure and good. Will Callicles still maintain this? 'Yes, for the sake of consistency, he will.' The answer does not satisfy Socrates, who fears that he is losing his touchstone. A profession of seriousness on the part of Callicles reassures him, and they proceed with the argument. Pleasure and good are the same, but knowledge and courage are not the same either with pleasure or good, or with one another. Socrates disproves the first of these statements by showing that two opposites cannot coexist, but must alternate with one another—to be well and ill together is impossible. But pleasure and pain are simultaneous, and the cessation of them is simultaneous; e.g. in the case of drinking and thirsting, whereas good and evil are not simultaneous, and do not cease simultaneously, and therefore pleasure cannot be the same as good.

Callicles has already lost his temper, and can only be persuaded to go on by the interposition of Gorgias. Socrates, having already guarded against objections by distinguishing courage and knowledge from pleasure and good, proceeds:—The good are good by the presence of good, and the

bad are bad by the presence of evil. And the brave and wise are good, and the cowardly and foolish are bad. And he who feels pleasure is good, and he who feels pain is bad, and both feel pleasure and pain in nearly the same degree, and sometimes the bad man or coward in a greater degree. Therefore the bad man or coward is as good as the brave or may be even better.

Callicles endeavours now to avert the inevitable absurdity by affirming that he and all mankind admitted some pleasures to be good and others bad. The good are the beneficial, and the bad are the hurtful, and we should choose the one and avoid the other. But this, as Socrates observes, is a return to the old doctrine of himself and Polus, that all things should be done for the sake of the good.

Callicles assents to this, and Socrates, finding that they are agreed in distinguishing pleasure from good, returns to his old division of empirical habits, or shams, or flatteries, which study pleasure only, and the arts which are concerned with the higher interests of soul and body. Does Callicles agree to this division? Callicles will agree to anything, in order that he may get through the argument. Which of the arts then are flatteries? Flute-playing, harp-playing, choral exhibitions, the dithyrambics of Cinesias are all equally condemned on the ground that they give pleasure only; and Meles the harp-player, who was the father of Cinesias, failed even in that. The stately muse of Tragedy is bent upon pleasure, and not upon improvement. Poetry in general is only a rhetorical address to a mixed audience of men, women, and children. And the orators are very far from speaking with a view to what is best; their way is to humour the assembly as if they were children.

Callicles replies, that this is only true of some of them; others have a real regard for their fellow-citizens. Granted; then there are two species of oratory; the one a flattery, another which has a real regard for the citizens. But where are the orators among whom you find the latter? Callicles admits that there are none remaining, but there were such in the days when Themistocles, Cimon, Miltiades, and the great Pericles were still alive. Socrates replies that none of these were true artists, setting before themselves the duty of bringing order out of disorder. The good man and true orator has a settled design, running through his life, to which he conforms all his words and actions; he desires to implant justice and eradicate injustice, to implant all virtue and eradicate all vice in the minds of his citizens. He is the physician who will not allow the sick man to indulge his appetites with a variety of meats and drinks, but insists on his exercising self-restraint. And this is good for the soul, and better than the unrestrained indulgence which Callicles was recently approving.

Here Callicles, who had been with difficulty brought to this point, turns restive, and suggests that Socrates shall answer his own questions. 'Then,' says Socrates, 'one man must do for two;' and though he had hoped to have given Callicles an 'Amphion' in return for his 'Zethus,' he is willing to proceed; at the same time, he hopes that Callicles will correct him, if he falls into error. He recapitulates the advantages which he has already won:—

The pleasant is not the same as the good—Callicles and I are agreed about that,—but pleasure is to be pursued for the sake of the good, and the good is that of which the presence makes us good; we and all things good have acquired some virtue or other. And virtue, whether of body or soul, of things or persons, is not attained by accident, but is due to order and harmonious arrangement. And the soul which has order is better than the soul which is without order, and is therefore temperate and is therefore good, and the intemperate is bad. And he who is temperate is also just and brave and pious, and has attained the perfection of goodness and therefore of happiness, and the intemperate

whom you approve is the opposite of all this and is wretched. He therefore who would be happy must pursue temperance and avoid intemperance, and if possible escape the necessity of punishment, but if he have done wrong he must endure punishment. In this way states and individuals should seek to attain harmony, which, as the wise tell us, is the bond of heaven and earth, of gods and men. Callicles has never discovered the power of geometrical proportion in both worlds; he would have men aim at disproportion and excess. But if he be wrong in this, and if self-control is the true secret of happiness, then the paradox is true that the only use of rhetoric is in self-accusation, and Polus was right in saying that to do wrong is worse than to suffer wrong, and Gorgias was right in saying that the rhetorician must be a just man. And you were wrong in taunting me with my defenceless condition, and in saying that I might be accused or put to death or boxed on the ears with impunity. For I may repeat once more, that to strike is worse than to be stricken—to do than to suffer. What I said then is now made fast in adamantine bonds. I myself know not the true nature of these things, but I know that no one can deny my words and not be ridiculous. To do wrong is the greatest of evils, and to suffer wrong is the next greatest evil. He who would avoid the last must be a ruler, or the friend of a ruler; and to be the friend he must be the equal of the ruler, and must also resemble him. Under his protection he will suffer no evil, but will he also do no evil? Nay, will he not rather do all the evil which he can and escape? And in this way the greatest of all evils will befall him. 'But this imitator of the tyrant,' rejoins Callicles, 'will kill any one who does not similarly imitate him.' Socrates replies that he is not deaf, and that he has heard that repeated many times, and can only reply, that a bad man will kill a good one. 'Yes, and that is the provoking thing.' Not provoking to a man of sense who is not studying the arts which will preserve him from danger; and this, as you say, is the use of rhetoric in courts of justice. But how many other arts are there which also save men from death, and are yet quite humble in their pretensions—such as the art of swimming, or the art of the pilot? Does not the pilot do men at least as much service as the rhetorician, and yet for the voyage from Aegina to Athens he does not charge more than two obols, and when he disembarks is quite unassuming in his demeanour? The reason is that he is not certain whether he has done his passengers any good in saving them from death, if one of them is diseased in body, and still more if he is diseased in mind—who can say? The engineer too will often save whole cities, and yet you despise him, and would not allow your son to marry his daughter, or his son to marry yours. But what reason is there in this? For if virtue only means the saving of life, whether your own or another's, you have no right to despise him or any practiser of saving arts. But is not virtue something different from saving and being saved? I would have you rather consider whether you ought not to disregard length of life, and think only how you can live best, leaving all besides to the will of Heaven. For you must not expect to have influence either with the Athenian Demos or with Demos the son of Pyrilampes, unless you become like them. What do you say to this?

'There is some truth in what you are saying, but I do not entirely believe you.'

That is because you are in love with Demos. But let us have a little more conversation. You remember the two processes—one which was directed to pleasure, the other which was directed to making men as good as possible. And those who have the care of the city should make the citizens as good as possible. But who would undertake a public building, if he had never had a teacher of the art of building, and had never constructed a building before? or who would undertake the duty of state-physician, if he had never cured either himself or any one else? Should we not examine him before we entrusted him with the office? And as Callicles is about to enter public life, should we not examine him? Whom has he made better? For we have already admitted that this is the statesman's

proper business. And we must ask the same question about Pericles, and Cimon, and Miltiades, and Themistocles. Whom did they make better? Nay, did not Pericles make the citizens worse? For he gave them pay, and at first he was very popular with them, but at last they condemned him to death. Yet surely he would be a bad tamer of animals who, having received them gentle, taught them to kick and butt, and man is an animal; and Pericles who had the charge of man only made him wilder, and more savage and unjust, and therefore he could not have been a good statesman. The same tale might be repeated about Cimon, Themistocles, Miltiades. But the charioteer who keeps his seat at first is not thrown out when he gains greater experience and skill. The inference is, that the statesman of a past age were no better than those of our own. They may have been cleverer constructors of docks and harbours, but they did not improve the character of the citizens. I have told you again and again (and I purposely use the same images) that the soul, like the body, may be treated in two ways—there is the meaner and the higher art. You seemed to understand what I said at the time, but when I ask you who were the really good statesmen, you answer—as if I asked you who were the good trainers, and you answered, Thearion, the baker, Mithoecus, the author of the Sicilian cookery-book, Sarambus, the vintner. And you would be affronted if I told you that these are a parcel of cooks who make men fat only to make them thin. And those whom they have fattened applaud them, instead of finding fault with them, and lay the blame of their subsequent disorders on their physicians. In this respect, Callicles, you are like them; you applaud the statesmen of old, who pandered to the vices of the citizens, and filled the city with docks and harbours, but neglected virtue and justice. And when the fit of illness comes, the citizens who in like manner applauded Themistocles, Pericles, and others, will lay hold of you and my friend Alcibiades, and you will suffer for the misdeeds of your predecessors. The old story is always being repeated—'after all his services, the ungrateful city banished him, or condemned him to death.' As if the statesman should not have taught the city better! He surely cannot blame the state for having unjustly used him, any more than the sophist or teacher can find fault with his pupils if they cheat him. And the sophist and orator are in the same case; although you admire rhetoric and despise sophistic, whereas sophistic is really the higher of the two. The teacher of the arts takes money, but the teacher of virtue or politics takes no money, because this is the only kind of service which makes the disciple desirous of requiting his teacher.

Socrates concludes by finally asking, to which of the two modes of serving the state Callicles invites him:—'to the inferior and ministerial one,' is the ingenuous reply. That is the only way of avoiding death, replies Socrates; and he has heard often enough, and would rather not hear again, that the bad man will kill the good. But he thinks that such a fate is very likely reserved for him, because he remarks that he is the only person who teaches the true art of politics. And very probably, as in the case which he described to Polus, he may be the physician who is tried by a jury of children. He cannot say that he has procured the citizens any pleasure, and if any one charges him with perplexing them, or with reviling their elders, he will not be able to make them understand that he has only been actuated by a desire for their good. And therefore there is no saying what his fate may be. 'And do you think that a man who is unable to help himself is in a good condition?' Yes, Callicles, if he have the true self-help, which is never to have said or done any wrong to himself or others. If I had not this kind of self-help, I should be ashamed; but if I die for want of your flattering rhetoric, I shall die in peace. For death is no evil, but to go to the world below laden with offences is the worst of evils. In proof of which I will tell you a tale:—

Under the rule of Cronos, men were judged on the day of their death, and when judgment had been given upon them they departed—the good to the islands of the blest, the bad to the house of

vengeance. But as they were still living, and had their clothes on at the time when they were being judged, there was favouritism, and Zeus, when he came to the throne, was obliged to alter the mode of procedure, and try them after death, having first sent down Prometheus to take away from them the foreknowledge of death. Minos, Rhadamanthus, and Aeacus were appointed to be the judges; Rhadamanthus for Asia, Aeacus for Europe, and Minos was to hold the court of appeal. Now death is the separation of soul and body, but after death soul and body alike retain their characteristics; the fat man, the dandy, the branded slave, are all distinguishable. Some prince or potentate, perhaps even the great king himself, appears before Rhadamanthus, and he instantly detects him, though he knows not who he is; he sees the scars of perjury and iniquity, and sends him away to the house of torment.

For there are two classes of souls who undergo punishment—the curable and the incurable. The curable are those who are benefited by their punishment; the incurable are such as Archelaus, who benefit others by becoming a warning to them. The latter class are generally kings and potentates; meaner persons, happily for themselves, have not the same power of doing injustice. Sisyphus and Tityus, not Thersites, are supposed by Homer to be undergoing everlasting punishment. Not that there is anything to prevent a great man from being a good one, as is shown by the famous example of Aristeides, the son of Lysimachus. But to Rhadamanthus the souls are only known as good or bad; they are stripped of their dignities and preferments; he despatches the bad to Tartarus, labelled either as curable or incurable, and looks with love and admiration on the soul of some just one, whom he sends to the islands of the blest. Similar is the practice of Aeacus; and Minos overlooks them, holding a golden sceptre, as Odysseus in Homer saw him

> 'Wielding a sceptre of gold, and giving laws to the dead.'

My wish for myself and my fellow-men is, that we may present our souls undefiled to the judge in that day; my desire in life is to be able to meet death. And I exhort you, and retort upon you the reproach which you cast upon me,—that you will stand before the judge, gaping, and with dizzy brain, and any one may box you on the ear, and do you all manner of evil.

Perhaps you think that this is an old wives' fable. But you, who are the three wisest men in Hellas, have nothing better to say, and no one will ever show that to do is better than to suffer evil. A man should study to be, and not merely to seem. If he is bad, he should become good, and avoid all flattery, whether of the many or of the few.

Follow me, then; and if you are looked down upon, that will do you no harm. And when we have practised virtue, we will betake ourselves to politics, but not until we are delivered from the shameful state of ignorance and uncertainty in which we are at present. Let us follow in the way of virtue and justice, and not in the way to which you, Callicles, invite us; for that way is nothing worth.

We will now consider in order some of the principal points of the dialogue. Having regard (1) to the age of Plato and the ironical character of his writings, we may compare him with himself, and with other great teachers, and we may note in passing the objections of his critics. And then (2) casting one eye upon him, we may cast another upon ourselves, and endeavour to draw out the great lessons which he teaches for all time, stripped of the accidental form in which they are enveloped.

(1) In the Gorgias, as in nearly all the other dialogues of Plato, we are made aware that formal logic has as yet no existence. The old difficulty of framing a definition recurs. The illusive analogy of the arts and the virtues also continues. The ambiguity of several words, such as nature, custom, the honourable, the good, is not cleared up. The Sophists are still floundering about the distinction of the real and seeming. Figures of speech are made the basis of arguments. The possibility of conceiving a universal art or science, which admits of application to a particular subject-matter, is a difficulty which remains unsolved, and has not altogether ceased to haunt the world at the present day (compare Charmides). The defect of clearness is also apparent in Socrates himself, unless we suppose him to be practising on the simplicity of his opponent, or rather perhaps trying an experiment in dialectics. Nothing can be more fallacious than the contradiction which he pretends to have discovered in the answers of Gorgias (see above). The advantages which he gains over Polus are also due to a false antithesis of pleasure and good, and to an erroneous assertion that an agent and a patient may be described by similar predicates;—a mistake which Aristotle partly shares and partly corrects in the Nicomachean Ethics. Traces of a 'robust sophistry' are likewise discernible in his argument with Callicles.

(2) Although Socrates professes to be convinced by reason only, yet the argument is often a sort of dialectical fiction, by which he conducts himself and others to his own ideal of life and action. And we may sometimes wish that we could have suggested answers to his antagonists, or pointed out to them the rocks which lay concealed under the ambiguous terms good, pleasure, and the like. But it would be as useless to examine his arguments by the requirements of modern logic, as to criticise this ideal from a merely utilitarian point of view. If we say that the ideal is generally regarded as unattainable, and that mankind will by no means agree in thinking that the criminal is happier when punished than when unpunished, any more than they would agree to the stoical paradox that a man may be happy on the rack, Plato has already admitted that the world is against him. Neither does he mean to say that Archelaus is tormented by the stings of conscience; or that the sensations of the impaled criminal are more agreeable than those of the tyrant drowned in luxurious enjoyment. Neither is he speaking, as in the Protagoras, of virtue as a calculation of pleasure, an opinion which he afterwards repudiates in the Phaedo. What then is his meaning? His meaning we shall be able to illustrate best by parallel notions, which, whether justifiable by logic or not, have always existed among mankind. We must remind the reader that Socrates himself implies that he will be understood or appreciated by very few.

He is speaking not of the consciousness of happiness, but of the idea of happiness. When a martyr dies in a good cause, when a soldier falls in battle, we do not suppose that death or wounds are without pain, or that their physical suffering is always compensated by a mental satisfaction. Still we regard them as happy, and we would a thousand times rather have their death than a shameful life. Nor is this only because we believe that they will obtain an immortality of fame, or that they will have crowns of glory in another world, when their enemies and persecutors will be proportionably tormented. Men are found in a few instances to do what is right, without reference to public opinion or to consequences. And we regard them as happy on this ground only, much as Socrates' friends in the opening of the Phaedo are described as regarding him; or as was said of another, 'they looked upon his face as upon the face of an angel.' We are not concerned to justify this idealism by the standard of utility or public opinion, but merely to point out the existence of such a sentiment in the better part of human nature.

The idealism of Plato is founded upon this sentiment. He would maintain that in some sense or other truth and right are alone to be sought, and that all other goods are only desirable as means towards these. He is thought to have erred in 'considering the agent only, and making no reference to the happiness of others, as affected by him.' But the happiness of others or of mankind, if regarded as an end, is really quite as ideal and almost as paradoxical to the common understanding as Plato's conception of happiness. For the greatest happiness of the greatest number may mean also the greatest pain of the individual which will procure the greatest pleasure of the greatest number. Ideas of utility, like those of duty and right, may be pushed to unpleasant consequences. Nor can Plato in the Gorgias be deemed purely self-regarding, considering that Socrates expressly mentions the duty of imparting the truth when discovered to others. Nor must we forget that the side of ethics which regards others is by the ancients merged in politics. Both in Plato and Aristotle, as well as in the Stoics, the social principle, though taking another form, is really far more prominent than in most modern treatises on ethics.

The idealizing of suffering is one of the conceptions which have exercised the greatest influence on mankind. Into the theological import of this, or into the consideration of the errors to which the idea may have given rise, we need not now enter. All will agree that the ideal of the Divine Sufferer, whose words the world would not receive, the man of sorrows of whom the Hebrew prophets spoke, has sunk deep into the heart of the human race. It is a similar picture of suffering goodness which Plato desires to pourtray, not without an allusion to the fate of his master Socrates. He is convinced that, somehow or other, such an one must be happy in life or after death. In the Republic, he endeavours to show that his happiness would be assured here in a well-ordered state. But in the actual condition of human things the wise and good are weak and miserable; such an one is like a man fallen among wild beasts, exposed to every sort of wrong and obloquy.

Plato, like other philosophers, is thus led on to the conclusion, that if 'the ways of God' to man are to be 'justified,' the hopes of another life must be included. If the question could have been put to him, whether a man dying in torments was happy still, even if, as he suggests in the Apology, 'death be only a long sleep,' we can hardly tell what would have been his answer. There have been a few, who, quite independently of rewards and punishments or of posthumous reputation, or any other influence of public opinion, have been willing to sacrifice their lives for the good of others. It is difficult to say how far in such cases an unconscious hope of a future life, or a general faith in the victory of good in the world, may have supported the sufferers. But this extreme idealism is not in accordance with the spirit of Plato. He supposes a day of retribution, in which the good are to be rewarded and the wicked punished. Though, as he says in the Phaedo, no man of sense will maintain that the details of the stories about another world are true, he will insist that something of the kind is true, and will frame his life with a view to this unknown future. Even in the Republic he introduces a future life as an afterthought, when the superior happiness of the just has been established on what is thought to be an immutable foundation. At the same time he makes a point of determining his main thesis independently of remoter consequences.

(3) Plato's theory of punishment is partly vindictive, partly corrective. In the Gorgias, as well as in the Phaedo and Republic, a few great criminals, chiefly tyrants, are reserved as examples. But most men have never had the opportunity of attaining this pre-eminence of evil. They are not incurable, and their punishment is intended for their improvement. They are to suffer because they have sinned; like sick men, they must go to the physician and be healed. On this representation of Plato's the criticism

has been made, that the analogy of disease and injustice is partial only, and that suffering, instead of improving men, may have just the opposite effect.

Like the general analogy of the arts and the virtues, the analogy of disease and injustice, or of medicine and justice, is certainly imperfect. But ideas must be given through something; the nature of the mind which is unseen can only be represented under figures derived from visible objects. If these figures are suggestive of some new aspect under which the mind may be considered, we cannot find fault with them for not exactly coinciding with the ideas represented. They partake of the imperfect nature of language, and must not be construed in too strict a manner. That Plato sometimes reasons from them as if they were not figures but realities, is due to the defective logical analysis of his age.

Nor does he distinguish between the suffering which improves and the suffering which only punishes and deters. He applies to the sphere of ethics a conception of punishment which is really derived from criminal law. He does not see that such punishment is only negative, and supplies no principle of moral growth or development. He is not far off the higher notion of an education of man to be begun in this world, and to be continued in other stages of existence, which is further developed in the Republic. And Christian thinkers, who have ventured out of the beaten track in their meditations on the 'last things,' have found a ray of light in his writings. But he has not explained how or in what way punishment is to contribute to the improvement of mankind. He has not followed out the principle which he affirms in the Republic, that 'God is the author of evil only with a view to good,' and that 'they were the better for being punished.' Still his doctrine of a future state of rewards and punishments may be compared favourably with that perversion of Christian doctrine which makes the everlasting punishment of human beings depend on a brief moment of time, or even on the accident of an accident. And he has escaped the difficulty which has often beset divines, respecting the future destiny of the meaner sort of men (Thersites and the like), who are neither very good nor very bad, by not counting them worthy of eternal damnation.

We do Plato violence in pressing his figures of speech or chains of argument; and not less so in asking questions which were beyond the horizon of his vision, or did not come within the scope of his design. The main purpose of the Gorgias is not to answer questions about a future world, but to place in antagonism the true and false life, and to contrast the judgments and opinions of men with judgment according to the truth. Plato may be accused of representing a superhuman or transcendental virtue in the description of the just man in the Gorgias, or in the companion portrait of the philosopher in the Theaetetus; and at the same time may be thought to be condemning a state of the world which always has existed and always will exist among men. But such ideals act powerfully on the imagination of mankind. And such condemnations are not mere paradoxes of philosophers, but the natural rebellion of the higher sense of right in man against the ordinary conditions of human life. The greatest statesmen have fallen very far short of the political ideal, and are therefore justly involved in the general condemnation.

Subordinate to the main purpose of the dialogue are some other questions, which may be briefly considered:—

a. The antithesis of good and pleasure, which as in other dialogues is supposed to consist in the permanent nature of the one compared with the transient and relative nature of the other. Good and pleasure, knowledge and sense, truth and opinion, essence and generation, virtue and pleasure, the

real and the apparent, the infinite and finite, harmony or beauty and discord, dialectic and rhetoric or poetry, are so many pairs of opposites, which in Plato easily pass into one another, and are seldom kept perfectly distinct. And we must not forget that Plato's conception of pleasure is the Heracleitean flux transferred to the sphere of human conduct. There is some degree of unfairness in opposing the principle of good, which is objective, to the principle of pleasure, which is subjective. For the assertion of the permanence of good is only based on the assumption of its objective character. Had Plato fixed his mind, not on the ideal nature of good, but on the subjective consciousness of happiness, that would have been found to be as transient and precarious as pleasure.

b. The arts or sciences, when pursued without any view to truth, or the improvement of human life, are called flatteries. They are all alike dependent upon the opinion of mankind, from which they are derived. To Plato the whole world appears to be sunk in error, based on self-interest. To this is opposed the one wise man hardly professing to have found truth, yet strong in the conviction that a virtuous life is the only good, whether regarded with reference to this world or to another. Statesmen, Sophists, rhetoricians, poets, are alike brought up for judgment. They are the parodies of wise men, and their arts are the parodies of true arts and sciences. All that they call science is merely the result of that study of the tempers of the Great Beast, which he describes in the Republic.

c. Various other points of contact naturally suggest themselves between the Gorgias and other dialogues, especially the Republic, the Philebus, and the Protagoras. There are closer resemblances both of spirit and language in the Republic than in any other dialogue, the verbal similarity tending to show that they were written at the same period of Plato's life. For the Republic supplies that education and training of which the Gorgias suggests the necessity. The theory of the many weak combining against the few strong in the formation of society (which is indeed a partial truth), is similar in both of them, and is expressed in nearly the same language. The sufferings and fate of the just man, the powerlessness of evil, and the reversal of the situation in another life, are also points of similarity. The poets, like the rhetoricians, are condemned because they aim at pleasure only, as in the Republic they are expelled the State, because they are imitators, and minister to the weaker side of human nature. That poetry is akin to rhetoric may be compared with the analogous notion, which occurs in the Protagoras, that the ancient poets were the Sophists of their day. In some other respects the Protagoras rather offers a contrast than a parallel. The character of Protagoras may be compared with that of Gorgias, but the conception of happiness is different in the two dialogues; being described in the former, according to the old Socratic notion, as deferred or accumulated pleasure, while in the Gorgias, and in the Phaedo, pleasure and good are distinctly opposed.

This opposition is carried out from a speculative point of view in the Philebus. There neither pleasure nor wisdom are allowed to be the chief good, but pleasure and good are not so completely opposed as in the Gorgias. For innocent pleasures, and such as have no antecedent pains, are allowed to rank in the class of goods. The allusion to Gorgias' definition of rhetoric (Philebus; compare Gorg.), as the art of persuasion, of all arts the best, for to it all things submit, not by compulsion, but of their own free will—marks a close and perhaps designed connection between the two dialogues. In both the ideas of measure, order, harmony, are the connecting links between the beautiful and the good.

In general spirit and character, that is, in irony and antagonism to public opinion, the Gorgias most nearly resembles the Apology, Crito, and portions of the Republic, and like the Philebus, though from

another point of view, may be thought to stand in the same relation to Plato's theory of morals which the Theaetetus bears to his theory of knowledge.

d. A few minor points still remain to be summed up: (1) The extravagant irony in the reason which is assigned for the pilot's modest charge; and in the proposed use of rhetoric as an instrument of self-condemnation; and in the mighty power of geometrical equality in both worlds. (2) The reference of the mythus to the previous discussion should not be overlooked: the fate reserved for incurable criminals such as Archelaus; the retaliation of the box on the ears; the nakedness of the souls and of the judges who are stript of the clothes or disguises which rhetoric and public opinion have hitherto provided for them (compare Swift's notion that the universe is a suit of clothes, Tale of a Tub). The fiction seems to have involved Plato in the necessity of supposing that the soul retained a sort of corporeal likeness after death. (3) The appeal of the authority of Homer, who says that Odysseus saw Minos in his court 'holding a golden sceptre,' which gives verisimilitude to the tale.

It is scarcely necessary to repeat that Plato is playing 'both sides of the game,' and that in criticising the characters of Gorgias and Polus, we are not passing any judgment on historical individuals, but only attempting to analyze the 'dramatis personae' as they were conceived by him. Neither is it necessary to enlarge upon the obvious fact that Plato is a dramatic writer, whose real opinions cannot always be assumed to be those which he puts into the mouth of Socrates, or any other speaker who appears to have the best of the argument; or to repeat the observation that he is a poet as well as a philosopher; or to remark that he is not to be tried by a modern standard, but interpreted with reference to his place in the history of thought and the opinion of his time.

It has been said that the most characteristic feature of the Gorgias is the assertion of the right of dissent, or private judgment. But this mode of stating the question is really opposed both to the spirit of Plato and of ancient philosophy generally. For Plato is not asserting any abstract right or duty of toleration, or advantage to be derived from freedom of thought; indeed, in some other parts of his writings (e.g. Laws), he has fairly laid himself open to the charge of intolerance. No speculations had as yet arisen respecting the 'liberty of prophesying;' and Plato is not affirming any abstract right of this nature: but he is asserting the duty and right of the one wise and true man to dissent from the folly and falsehood of the many. At the same time he acknowledges the natural result, which he hardly seeks to avert, that he who speaks the truth to a multitude, regardless of consequences, will probably share the fate of Socrates.

The irony of Plato sometimes veils from us the height of idealism to which he soars. When declaring truths which the many will not receive, he puts on an armour which cannot be pierced by them. The weapons of ridicule are taken out of their hands and the laugh is turned against themselves. The disguises which Socrates assumes are like the parables of the New Testament, or the oracles of the Delphian God; they half conceal, half reveal, his meaning. The more he is in earnest, the more ironical he becomes; and he is never more in earnest or more ironical than in the Gorgias. He hardly troubles himself to answer seriously the objections of Gorgias and Polus, and therefore he sometimes appears to be careless of the ordinary requirements of logic. Yet in the highest sense he is always logical and consistent with himself. The form of the argument may be paradoxical; the substance is an appeal to the higher reason. He is uttering truths before they can be understood, as in all ages the

words of philosophers, when they are first uttered, have found the world unprepared for them. A further misunderstanding arises out of the wildness of his humour; he is supposed not only by Callicles, but by the rest of mankind, to be jesting when he is profoundly serious. At length he makes even Polus in earnest. Finally, he drops the argument, and heedless any longer of the forms of dialectic, he loses himself in a sort of triumph, while at the same time he retaliates upon his adversaries. From this confusion of jest and earnest, we may now return to the ideal truth, and draw out in a simple form the main theses of the dialogue.

First Thesis:—

It is a greater evil to do than to suffer injustice.

Compare the New Testament—

'It is better to suffer for well doing than for evil doing.'—1 Pet.

And the Sermon on the Mount—

'Blessed are they that are persecuted for righteousness' sake.'—Matt.

The words of Socrates are more abstract than the words of Christ, but they equally imply that the only real evil is moral evil. The righteous may suffer or die, but they have their reward; and even if they had no reward, would be happier than the wicked. The world, represented by Polus, is ready, when they are asked, to acknowledge that injustice is dishonourable, and for their own sakes men are willing to punish the offender (compare Republic). But they are not equally willing to acknowledge that injustice, even if successful, is essentially evil, and has the nature of disease and death. Especially when crimes are committed on the great scale—the crimes of tyrants, ancient or modern—after a while, seeing that they cannot be undone, and have become a part of history, mankind are disposed to forgive them, not from any magnanimity or charity, but because their feelings are blunted by time, and 'to forgive is convenient to them.' The tangle of good and evil can no longer be unravelled; and although they know that the end cannot justify the means, they feel also that good has often come out of evil. But Socrates would have us pass the same judgment on the tyrant now and always; though he is surrounded by his satellites, and has the applauses of Europe and Asia ringing in his ears; though he is the civilizer or liberator of half a continent, he is, and always will be, the most miserable of men. The greatest consequences for good or for evil cannot alter a hair's breadth the morality of actions which are right or wrong in themselves. This is the standard which Socrates holds up to us. Because politics, and perhaps human life generally, are of a mixed nature we must not allow our principles to sink to the level of our practice.

And so of private individuals—to them, too, the world occasionally speaks of the consequences of their actions:—if they are lovers of pleasure, they will ruin their health; if they are false or dishonest, they will lose their character. But Socrates would speak to them, not of what will be, but of what is—of the present consequence of lowering and degrading the soul. And all higher natures, or perhaps all men everywhere, if they were not tempted by interest or passion, would agree with him—they would rather be the victims than the perpetrators of an act of treachery or of tyranny. Reason tells them that death comes sooner or later to all, and is not so great an evil as an unworthy life, or rather, if rightly

regarded, not an evil at all, but to a good man the greatest good. For in all of us there are slumbering ideals of truth and right, which may at any time awaken and develop a new life in us.

Second Thesis:—

It is better to suffer for wrong doing than not to suffer.

There might have been a condition of human life in which the penalty followed at once, and was proportioned to the offence. Moral evil would then be scarcely distinguishable from physical; mankind would avoid vice as they avoid pain or death. But nature, with a view of deepening and enlarging our characters, has for the most part hidden from us the consequences of our actions, and we can only foresee them by an effort of reflection. To awaken in us this habit of reflection is the business of early education, which is continued in maturer years by observation and experience. The spoilt child is in later life said to be unfortunate—he had better have suffered when he was young, and been saved from suffering afterwards. But is not the sovereign equally unfortunate whose education and manner of life are always concealing from him the consequences of his own actions, until at length they are revealed to him in some terrible downfall, which may, perhaps, have been caused not by his own fault? Another illustration is afforded by the pauper and criminal classes, who scarcely reflect at all, except on the means by which they can compass their immediate ends. We pity them, and make allowances for them; but we do not consider that the same principle applies to human actions generally. Not to have been found out in some dishonesty or folly, regarded from a moral or religious point of view, is the greatest of misfortunes. The success of our evil doings is a proof that the gods have ceased to strive with us, and have given us over to ourselves. There is nothing to remind us of our sins, and therefore nothing to correct them. Like our sorrows, they are healed by time;

> 'While rank corruption, mining all within,
> Infects unseen.'

The 'accustomed irony' of Socrates adds a corollary to the argument:—'Would you punish your enemy, you should allow him to escape unpunished'—this is the true retaliation. (Compare the obscure verse of Proverbs, 'Therefore if thine enemy hunger, feed him,' etc., quoted in Romans.)

Men are not in the habit of dwelling upon the dark side of their own lives: they do not easily see themselves as others see them. They are very kind and very blind to their own faults; the rhetoric of self-love is always pleading with them on their own behalf. Adopting a similar figure of speech, Socrates would have them use rhetoric, not in defence but in accusation of themselves. As they are guided by feeling rather than by reason, to their feelings the appeal must be made. They must speak to themselves; they must argue with themselves; they must paint in eloquent words the character of their own evil deeds. To any suffering which they have deserved, they must persuade themselves to submit. Under the figure there lurks a real thought, which, expressed in another form, admits of an easy application to ourselves. For do not we too accuse as well as excuse ourselves? And we call to our aid the rhetoric of prayer and preaching, which the mind silently employs while the struggle between the better and the worse is going on within us. And sometimes we are too hard upon ourselves, because we want to restore the balance which self-love has overthrown or disturbed; and then again we may hear a voice as of a parent consoling us. In religious diaries a sort of drama is often enacted by the consciences of men 'accusing or else excusing them.' For all our life long we are

talking with ourselves:—What is thought but speech? What is feeling but rhetoric? And if rhetoric is used on one side only we shall be always in danger of being deceived. And so the words of Socrates, which at first sounded paradoxical, come home to the experience of all of us.

Third Thesis:—

We do not what we will, but what we wish.

Socrates would teach us a lesson which we are slow to learn—that good intentions, and even benevolent actions, when they are not prompted by wisdom, are of no value. We believe something to be for our good which we afterwards find out not to be for our good. The consequences may be inevitable, for they may follow an invariable law, yet they may often be the very opposite of what is expected by us. When we increase pauperism by almsgiving; when we tie up property without regard to changes of circumstances; when we say hastily what we deliberately disapprove; when we do in a moment of passion what upon reflection we regret; when from any want of self-control we give another an advantage over us—we are doing not what we will, but what we wish. All actions of which the consequences are not weighed and foreseen, are of this impotent and paralytic sort; and the author of them has 'the least possible power' while seeming to have the greatest. For he is actually bringing about the reverse of what he intended. And yet the book of nature is open to him, in which he who runs may read if he will exercise ordinary attention; every day offers him experiences of his own and of other men's characters, and he passes them unheeded by. The contemplation of the consequences of actions, and the ignorance of men in regard to them, seems to have led Socrates to his famous thesis:—'Virtue is knowledge;' which is not so much an error or paradox as a half truth, seen first in the twilight of ethical philosophy, but also the half of the truth which is especially needed in the present age. For as the world has grown older men have been too apt to imagine a right and wrong apart from consequences; while a few, on the other hand, have sought to resolve them wholly into their consequences. But Socrates, or Plato for him, neither divides nor identifies them; though the time has not yet arrived either for utilitarian or transcendental systems of moral philosophy, he recognizes the two elements which seem to lie at the basis of morality. (Compare the following: 'Now, and for us, it is a time to Hellenize and to praise knowing; for we have Hebraized too much and have overvalued doing. But the habits and discipline received from Hebraism remain for our race an eternal possession. And as humanity is constituted, one must never assign the second rank to-day without being ready to restore them to the first to-morrow.' Sir William W. Hunter, Preface to Orissa.)

Fourth Thesis:—

To be and not to seem is the end of life.

The Greek in the age of Plato admitted praise to be one of the chief incentives to moral virtue, and to most men the opinion of their fellows is a leading principle of action. Hence a certain element of seeming enters into all things; all or almost all desire to appear better than they are, that they may win the esteem or admiration of others. A man of ability can easily feign the language of piety or virtue; and there is an unconscious as well as a conscious hypocrisy which, according to Socrates, is the worst of the two. Again, there is the sophistry of classes and professions. There are the different opinions about themselves and one another which prevail in different ranks of society. There is the bias given to the mind by the study of one department of human knowledge to the exclusion of the

rest; and stronger far the prejudice engendered by a pecuniary or party interest in certain tenets. There is the sophistry of law, the sophistry of medicine, the sophistry of politics, the sophistry of theology. All of these disguises wear the appearance of the truth; some of them are very ancient, and we do not easily disengage ourselves from them; for we have inherited them, and they have become a part of us. The sophistry of an ancient Greek sophist is nothing compared with the sophistry of a religious order, or of a church in which during many ages falsehood has been accumulating, and everything has been said on one side, and nothing on the other. The conventions and customs which we observe in conversation, and the opposition of our interests when we have dealings with one another ('the buyer saith, it is nought—it is nought,' etc.), are always obscuring our sense of truth and right. The sophistry of human nature is far more subtle than the deceit of any one man. Few persons speak freely from their own natures, and scarcely any one dares to think for himself: most of us imperceptibly fall into the opinions of those around us, which we partly help to make. A man who would shake himself loose from them, requires great force of mind; he hardly knows where to begin in the search after truth. On every side he is met by the world, which is not an abstraction of theologians, but the most real of all things, being another name for ourselves when regarded collectively and subjected to the influences of society.

Then comes Socrates, impressed as no other man ever was, with the unreality and untruthfulness of popular opinion, and tells mankind that they must be and not seem. How are they to be? At any rate they must have the spirit and desire to be. If they are ignorant, they must acknowledge their ignorance to themselves; if they are conscious of doing evil, they must learn to do well; if they are weak, and have nothing in them which they can call themselves, they must acquire firmness and consistency; if they are indifferent, they must begin to take an interest in the great questions which surround them. They must try to be what they would fain appear in the eyes of their fellow-men. A single individual cannot easily change public opinion; but he can be true and innocent, simple and independent; he can know what he does, and what he does not know; and though not without an effort, he can form a judgment of his own, at least in common matters. In his most secret actions he can show the same high principle (compare Republic) which he shows when supported and watched by public opinion. And on some fitting occasion, on some question of humanity or truth or right, even an ordinary man, from the natural rectitude of his disposition, may be found to take up arms against a whole tribe of politicians and lawyers, and be too much for them.

Who is the true and who the false statesman?—

The true statesman is he who brings order out of disorder; who first organizes and then administers the government of his own country; and having made a nation, seeks to reconcile the national interests with those of Europe and of mankind. He is not a mere theorist, nor yet a dealer in expedients; the whole and the parts grow together in his mind; while the head is conceiving, the hand is executing. Although obliged to descend to the world, he is not of the world. His thoughts are fixed not on power or riches or extension of territory, but on an ideal state, in which all the citizens have an equal chance of health and life, and the highest education is within the reach of all, and the moral and intellectual qualities of every individual are freely developed, and 'the idea of good' is the animating principle of the whole. Not the attainment of freedom alone, or of order alone, but how to unite freedom with order is the problem which he has to solve.

The statesman who places before himself these lofty aims has undertaken a task which will call forth all his powers. He must control himself before he can control others; he must know mankind before he can manage them. He has no private likes or dislikes; he does not conceal personal enmity under the disguise of moral or political principle: such meannesses, into which men too often fall unintentionally, are absorbed in the consciousness of his mission, and in his love for his country and for mankind. He will sometimes ask himself what the next generation will say of him; not because he is careful of posthumous fame, but because he knows that the result of his life as a whole will then be more fairly judged. He will take time for the execution of his plans; not hurrying them on when the mind of a nation is unprepared for them; but like the Ruler of the Universe Himself, working in the appointed time, for he knows that human life, 'if not long in comparison with eternity' (Republic), is sufficient for the fulfilment of many great purposes. He knows, too, that the work will be still going on when he is no longer here; and he will sometimes, especially when his powers are failing, think of that other 'city of which the pattern is in heaven' (Republic).

The false politician is the serving-man of the state. In order to govern men he becomes like them; their 'minds are married in conjunction;' they 'bear themselves' like vulgar and tyrannical masters, and he is their obedient servant. The true politician, if he would rule men, must make them like himself; he must 'educate his party' until they cease to be a party; he must breathe into them the spirit which will hereafter give form to their institutions. Politics with him are not a mechanism for seeming what he is not, or for carrying out the will of the majority. Himself a representative man, he is the representative not of the lower but of the higher elements of the nation. There is a better (as well as a worse) public opinion of which he seeks to lay hold; as there is also a deeper current of human affairs in which he is borne up when the waves nearer the shore are threatening him. He acknowledges that he cannot take the world by force—two or three moves on the political chess board are all that he can fore see—two or three weeks moves on the political chessboard are all that he can foresee—two or three weeks or months are granted to him in which he can provide against a coming struggle. But he knows also that there are permanent principles of politics which are always tending to the well-being of states—better administration, better education, the reconciliation of conflicting elements, increased security against external enemies. These are not 'of to-day or yesterday,' but are the same in all times, and under all forms of government. Then when the storm descends and the winds blow, though he knows not beforehand the hour of danger, the pilot, not like Plato's captain in the Republic, half-blind and deaf, but with penetrating eye and quick ear, is ready to take command of the ship and guide her into port.

The false politician asks not what is true, but what is the opinion of the world—not what is right, but what is expedient. The only measures of which he approves are the measures which will pass. He has no intention of fighting an uphill battle; he keeps the roadway of politics. He is unwilling to incur the persecution and enmity which political convictions would entail upon him. He begins with popularity, and in fair weather sails gallantly along. But unpopularity soon follows him. For men expect their leaders to be better and wiser than themselves: to be their guides in danger, their saviours in extremity; they do not really desire them to obey all the ignorant impulses of the popular mind; and if they fail them in a crisis they are disappointed. Then, as Socrates says, the cry of ingratitude is heard, which is most unreasonable; for the people, who have been taught no better, have done what might be expected of them, and their statesmen have received justice at their hands.

The true statesman is aware that he must adapt himself to times and circumstances. He must have allies if he is to fight against the world; he must enlighten public opinion; he must accustom his followers to act together. Although he is not the mere executor of the will of the majority, he must win over the majority to himself. He is their leader and not their follower, but in order to lead he must also follow. He will neither exaggerate nor undervalue the power of a statesman, neither adopting the 'laissez faire' nor the 'paternal government' principle; but he will, whether he is dealing with children in politics, or with full-grown men, seek to do for the people what the government can do for them, and what, from imperfect education or deficient powers of combination, they cannot do for themselves. He knows that if he does too much for them they will do nothing; and that if he does nothing for them they will in some states of society be utterly helpless. For the many cannot exist without the few, if the material force of a country is from below, wisdom and experience are from above. It is not a small part of human evils which kings and governments make or cure. The statesman is well aware that a great purpose carried out consistently during many years will at last be executed. He is playing for a stake which may be partly determined by some accident, and therefore he will allow largely for the unknown element of politics. But the game being one in which chance and skill are combined, if he plays long enough he is certain of victory. He will not be always consistent, for the world is changing; and though he depends upon the support of a party, he will remember that he is the minister of the whole. He lives not for the present, but for the future, and he is not at all sure that he will be appreciated either now or then. For he may have the existing order of society against him, and may not be remembered by a distant posterity.

There are always discontented idealists in politics who, like Socrates in the Gorgias, find fault with all statesmen past as well as present, not excepting the greatest names of history. Mankind have an uneasy feeling that they ought to be better governed than they are. Just as the actual philosopher falls short of the one wise man, so does the actual statesman fall short of the ideal. And so partly from vanity and egotism, but partly also from a true sense of the faults of eminent men, a temper of dissatisfaction and criticism springs up among those who are ready enough to acknowledge the inferiority of their own powers. No matter whether a statesman makes high professions or none at all—they are reduced sooner or later to the same level. And sometimes the more unscrupulous man is better esteemed than the more conscientious, because he has not equally deceived expectations. Such sentiments may be unjust, but they are widely spread; we constantly find them recurring in reviews and newspapers, and still oftener in private conversation.

We may further observe that the art of government, while in some respects tending to improve, has in others a tendency to degenerate, as institutions become more popular. Governing for the people cannot easily be combined with governing by the people: the interests of classes are too strong for the ideas of the statesman who takes a comprehensive view of the whole. According to Socrates the true governor will find ruin or death staring him in the face, and will only be induced to govern from the fear of being governed by a worse man than himself (Republic). And in modern times, though the world has grown milder, and the terrible consequences which Plato foretells no longer await an English statesman, any one who is not actuated by a blind ambition will only undertake from a sense of duty a work in which he is most likely to fail; and even if he succeed, will rarely be rewarded by the gratitude of his own generation.

Socrates, who is not a politician at all, tells us that he is the only real politician of his time. Let us illustrate the meaning of his words by applying them to the history of our own country. He would have

said that not Pitt or Fox, or Canning or Sir R. Peel, are the real politicians of their time, but Locke, Hume, Adam Smith, Bentham, Ricardo. These during the greater part of their lives occupied an inconsiderable space in the eyes of the public. They were private persons; nevertheless they sowed in the minds of men seeds which in the next generation have become an irresistible power. 'Herein is that saying true, One soweth and another reapeth.' We may imagine with Plato an ideal statesman in whom practice and speculation are perfectly harmonized; for there is no necessary opposition between them. But experience shows that they are commonly divorced—the ordinary politician is the interpreter or executor of the thoughts of others, and hardly ever brings to the birth a new political conception. One or two only in modern times, like the Italian statesman Cavour, have created the world in which they moved. The philosopher is naturally unfitted for political life; his great ideas are not understood by the many; he is a thousand miles away from the questions of the day. Yet perhaps the lives of thinkers, as they are stiller and deeper, are also happier than the lives of those who are more in the public eye. They have the promise of the future, though they are regarded as dreamers and visionaries by their own contemporaries. And when they are no longer here, those who would have been ashamed of them during their lives claim kindred with them, and are proud to be called by their names. (Compare Thucyd.)

Who is the true poet?

Plato expels the poets from his Republic because they are allied to sense; because they stimulate the emotions; because they are thrice removed from the ideal truth. And in a similar spirit he declares in the Gorgias that the stately muse of tragedy is a votary of pleasure and not of truth. In modern times we almost ridicule the idea of poetry admitting of a moral. The poet and the prophet, or preacher, in primitive antiquity are one and the same; but in later ages they seem to fall apart. The great art of novel writing, that peculiar creation of our own and the last century, which, together with the sister art of review writing, threatens to absorb all literature, has even less of seriousness in her composition. Do we not often hear the novel writer censured for attempting to convey a lesson to the minds of his readers?

Yet the true office of a poet or writer of fiction is not merely to give amusement, or to be the expression of the feelings of mankind, good or bad, or even to increase our knowledge of human nature. There have been poets in modern times, such as Goethe or Wordsworth, who have not forgotten their high vocation of teachers; and the two greatest of the Greek dramatists owe their sublimity to their ethical character. The noblest truths, sung of in the purest and sweetest language, are still the proper material of poetry. The poet clothes them with beauty, and has a power of making them enter into the hearts and memories of men. He has not only to speak of themes above the level of ordinary life, but to speak of them in a deeper and tenderer way than they are ordinarily felt, so as to awaken the feeling of them in others. The old he makes young again; the familiar principle he invests with a new dignity; he finds a noble expression for the common-places of morality and politics. He uses the things of sense so as to indicate what is beyond; he raises us through earth to heaven. He expresses what the better part of us would fain say, and the half-conscious feeling is strengthened by the expression. He is his own critic, for the spirit of poetry and of criticism are not divided in him. His mission is not to disguise men from themselves, but to reveal to them their own nature, and make them better acquainted with the world around them. True poetry is the remembrance of youth, of love, the embodiment in words of the happiest and holiest moments of life, of the noblest thoughts of man, of the greatest deeds of the past. The poet of the future may return to his greater calling of the

prophet or teacher; indeed, we hardly know what may not be effected for the human race by a better use of the poetical and imaginative faculty. The reconciliation of poetry, as of religion, with truth, may still be possible. Neither is the element of pleasure to be excluded. For when we substitute a higher pleasure for a lower we raise men in the scale of existence. Might not the novelist, too, make an ideal, or rather many ideals of social life, better than a thousand sermons? Plato, like the Puritans, is too much afraid of poetic and artistic influences. But he is not without a true sense of the noble purposes to which art may be applied (Republic).

Modern poetry is often a sort of plaything, or, in Plato's language, a flattery, a sophistry, or sham, in which, without any serious purpose, the poet lends wings to his fancy and exhibits his gifts of language and metre. Such an one seeks to gratify the taste of his readers; he has the 'savoir faire,' or trick of writing, but he has not the higher spirit of poetry. He has no conception that true art should bring order out of disorder; that it should make provision for the soul's highest interest; that it should be pursued only with a view to 'the improvement of the citizens.' He ministers to the weaker side of human nature (Republic); he idealizes the sensual; he sings the strain of love in the latest fashion; instead of raising men above themselves he brings them back to the 'tyranny of the many masters,' from which all his life long a good man has been praying to be delivered. And often, forgetful of measure and order, he will express not that which is truest, but that which is strongest. Instead of a great and nobly-executed subject, perfect in every part, some fancy of a heated brain is worked out with the strangest incongruity. He is not the master of his words, but his words—perhaps borrowed from another—the faded reflection of some French or German or Italian writer, have the better of him. Though we are not going to banish the poets, how can we suppose that such utterances have any healing or life-giving influence on the minds of men?

'Let us hear the conclusion of the whole matter:' Art then must be true, and politics must be true, and the life of man must be true and not a seeming or sham. In all of them order has to be brought out of disorder, truth out of error and falsehood. This is what we mean by the greatest improvement of man. And so, having considered in what way 'we can best spend the appointed time, we leave the result with God.' Plato does not say that God will order all things for the best (compare Phaedo), but he indirectly implies that the evils of this life will be corrected in another. And as we are very far from the best imaginable world at present, Plato here, as in the Phaedo and Republic, supposes a purgatory or place of education for mankind in general, and for a very few a Tartarus or hell. The myth which terminates the dialogue is not the revelation, but rather, like all similar descriptions, whether in the Bible or Plato, the veil of another life. For no visible thing can reveal the invisible. Of this Plato, unlike some commentators on Scripture, is fully aware. Neither will he dogmatize about the manner in which we are 'born again' (Republic). Only he is prepared to maintain the ultimate triumph of truth and right, and declares that no one, not even the wisest of the Greeks, can affirm any other doctrine without being ridiculous.

There is a further paradox of ethics, in which pleasure and pain are held to be indifferent, and virtue at the time of action and without regard to consequences is happiness. From this elevation or exaggeration of feeling Plato seems to shrink: he leaves it to the Stoics in a later generation to maintain that when impaled or on the rack the philosopher may be happy (compare Republic). It is observable that in the Republic he raises this question, but it is not really discussed; the veil of the ideal state, the shadow of another life, are allowed to descend upon it and it passes out of sight. The martyr or sufferer in the cause of right or truth is often supposed to die in raptures, having his eye

fixed on a city which is in heaven. But if there were no future, might he not still be happy in the performance of an action which was attended only by a painful death? He himself may be ready to thank God that he was thought worthy to do Him the least service, without looking for a reward; the joys of another life may not have been present to his mind at all. Do we suppose that the mediaeval saint, St. Bernard, St. Francis, St. Catharine of Sienna, or the Catholic priest who lately devoted himself to death by a lingering disease that he might solace and help others, was thinking of the 'sweets' of heaven? No; the work was already heaven to him and enough. Much less will the dying patriot be dreaming of the praises of man or of an immortality of fame: the sense of duty, of right, and trust in God will be sufficient, and as far as the mind can reach, in that hour. If he were certain that there were no life to come, he would not have wished to speak or act otherwise than he did in the cause of truth or of humanity. Neither, on the other hand, will he suppose that God has forsaken him or that the future is to be a mere blank to him. The greatest act of faith, the only faith which cannot pass away, is his who has not known, but yet has believed. A very few among the sons of men have made themselves independent of circumstances, past, present, or to come. He who has attained to such a temper of mind has already present with him eternal life; he needs no arguments to convince him of immortality; he has in him already a principle stronger than death. He who serves man without the thought of reward is deemed to be a more faithful servant than he who works for hire. May not the service of God, which is the more disinterested, be in like manner the higher? And although only a very few in the course of the world's history—Christ himself being one of them—have attained to such a noble conception of God and of the human soul, yet the ideal of them may be present to us, and the remembrance of them be an example to us, and their lives may shed a light on many dark places both of philosophy and theology.

THE MYTHS OF PLATO.

The myths of Plato are a phenomenon unique in literature. There are four longer ones: these occur in the Phaedrus, Phaedo, Gorgias, and Republic. That in the Republic is the most elaborate and finished of them. Three of these greater myths, namely those contained in the Phaedo, the Gorgias and the Republic, relate to the destiny of human souls in a future life. The magnificent myth in the Phaedrus treats of the immortality, or rather the eternity of the soul, in which is included a former as well as a future state of existence. To these may be added, (1) the myth, or rather fable, occurring in the Statesman, in which the life of innocence is contrasted with the ordinary life of man and the consciousness of evil: (2) the legend of the Island of Atlantis, an imaginary history, which is a fragment only, commenced in the Timaeus and continued in the Critias: (3) the much less artistic fiction of the foundation of the Cretan colony which is introduced in the preface to the Laws, but soon falls into the background: (4) the beautiful but rather artificial tale of Prometheus and Epimetheus narrated in his rhetorical manner by Protagoras in the dialogue called after him: (5) the speech at the beginning of the Phaedrus, which is a parody of the orator Lysias; the rival speech of Socrates and the recantation of it. To these may be added (6) the tale of the grasshoppers, and (7) the tale of Thamus and of Theuth, both in the Phaedrus: (8) the parable of the Cave (Republic), in which the previous argument is recapitulated, and the nature and degrees of knowledge having been previously set forth in the abstract are represented in a picture: (9) the fiction of the earth-born men (Republic; compare Laws), in which by the adaptation of an old tradition Plato makes a new beginning for his society: (10) the myth of Aristophanes respecting the division of the sexes, Sym.: (11) the parable of the noble captain, the pilot, and the mutinous sailors (Republic), in which is represented the relation of the better part of the world, and of the philosopher, to the mob of politicians: (12) the ironical tale of

the pilot who plies between Athens and Aegina charging only a small payment for saving men from death, the reason being that he is uncertain whether to live or die is better for them (Gor.): (13) the treatment of freemen and citizens by physicians and of slaves by their apprentices,—a somewhat laboured figure of speech intended to illustrate the two different ways in which the laws speak to men (Laws). There also occur in Plato continuous images; some of them extend over several pages, appearing and reappearing at intervals: such as the bees stinging and stingless (paupers and thieves) in the Eighth Book of the Republic, who are generated in the transition from timocracy to oligarchy: the sun, which is to the visible world what the idea of good is to the intellectual, in the Sixth Book of the Republic: the composite animal, having the form of a man, but containing under a human skin a lion and a many-headed monster (Republic): the great beast, i.e. the populace: and the wild beast within us, meaning the passions which are always liable to break out: the animated comparisons of the degradation of philosophy by the arts to the dishonoured maiden, and of the tyrant to the parricide, who 'beats his father, having first taken away his arms': the dog, who is your only philosopher: the grotesque and rather paltry image of the argument wandering about without a head (Laws), which is repeated, not improved, from the Gorgias: the argument personified as veiling her face (Republic), as engaged in a chase, as breaking upon us in a first, second and third wave:—on these figures of speech the changes are rung many times over. It is observable that nearly all these parables or continuous images are found in the Republic; that which occurs in the Theaetetus, of the midwifery of Socrates, is perhaps the only exception. To make the list complete, the mathematical figure of the number of the state (Republic), or the numerical interval which separates king from tyrant, should not be forgotten.

The myth in the Gorgias is one of those descriptions of another life which, like the Sixth Aeneid of Virgil, appear to contain reminiscences of the mysteries. It is a vision of the rewards and punishments which await good and bad men after death. It supposes the body to continue and to be in another world what it has become in this. It includes a Paradiso, Purgatorio, and Inferno, like the sister myths of the Phaedo and the Republic. The Inferno is reserved for great criminals only. The argument of the dialogue is frequently referred to, and the meaning breaks through so as rather to destroy the liveliness and consistency of the picture. The structure of the fiction is very slight, the chief point or moral being that in the judgments of another world there is no possibility of concealment: Zeus has taken from men the power of foreseeing death, and brings together the souls both of them and their judges naked and undisguised at the judgment-seat. Both are exposed to view, stripped of the veils and clothes which might prevent them from seeing into or being seen by one another.

The myth of the Phaedo is of the same type, but it is more cosmological, and also more poetical. The beautiful and ingenious fancy occurs to Plato that the upper atmosphere is an earth and heaven in one, a glorified earth, fairer and purer than that in which we dwell. As the fishes live in the ocean, mankind are living in a lower sphere, out of which they put their heads for a moment or two and behold a world beyond. The earth which we inhabit is a sediment of the coarser particles which drop from the world above, and is to that heavenly earth what the desert and the shores of the ocean are to us. A part of the myth consists of description of the interior of the earth, which gives the opportunity of introducing several mythological names and of providing places of torment for the wicked. There is no clear distinction of soul and body; the spirits beneath the earth are spoken of as souls only, yet they retain a sort of shadowy form when they cry for mercy on the shores of the lake; and the philosopher alone is said to have got rid of the body. All the three myths in Plato which relate to the world below have a place for repentant sinners, as well as other homes or places for the very good

and very bad. It is a natural reflection which is made by Plato elsewhere, that the two extremes of human character are rarely met with, and that the generality of mankind are between them. Hence a place must be found for them. In the myth of the Phaedo they are carried down the river Acheron to the Acherusian lake, where they dwell, and are purified of their evil deeds, and receive the rewards of their good. There are also incurable sinners, who are cast into Tartarus, there to remain as the penalty of atrocious crimes; these suffer everlastingly. And there is another class of hardly-curable sinners who are allowed from time to time to approach the shores of the Acherusian lake, where they cry to their victims for mercy; which if they obtain they come out into the lake and cease from their torments.

Neither this, nor any of the three greater myths of Plato, nor perhaps any allegory or parable relating to the unseen world, is consistent with itself. The language of philosophy mingles with that of mythology; abstract ideas are transformed into persons, figures of speech into realities. These myths may be compared with the Pilgrim's Progress of Bunyan, in which discussions of theology are mixed up with the incidents of travel, and mythological personages are associated with human beings: they are also garnished with names and phrases taken out of Homer, and with other fragments of Greek tradition.

The myth of the Republic is more subtle and also more consistent than either of the two others. It has a greater verisimilitude than they have, and is full of touches which recall the experiences of human life. It will be noticed by an attentive reader that the twelve days during which Er lay in a trance after he was slain coincide with the time passed by the spirits in their pilgrimage. It is a curious observation, not often made, that good men who have lived in a well-governed city (shall we say in a religious and respectable society?) are more likely to make mistakes in their choice of life than those who have had more experience of the world and of evil. It is a more familiar remark that we constantly blame others when we have only ourselves to blame; and the philosopher must acknowledge, however reluctantly, that there is an element of chance in human life with which it is sometimes impossible for man to cope. That men drink more of the waters of forgetfulness than is good for them is a poetical description of a familiar truth. We have many of us known men who, like Odysseus, have wearied of ambition and have only desired rest. We should like to know what became of the infants 'dying almost as soon as they were born,' but Plato only raises, without satisfying, our curiosity. The two companies of souls, ascending and descending at either chasm of heaven and earth, and conversing when they come out into the meadow, the majestic figures of the judges sitting in heaven, the voice heard by Ardiaeus, are features of the great allegory which have an indescribable grandeur and power. The remark already made respecting the inconsistency of the two other myths must be extended also to this: it is at once an orrery, or model of the heavens, and a picture of the Day of Judgment.

The three myths are unlike anything else in Plato. There is an Oriental, or rather an Egyptian element in them, and they have an affinity to the mysteries and to the Orphic modes of worship. To a certain extent they are un-Greek; at any rate there is hardly anything like them in other Greek writings which have a serious purpose; in spirit they are mediaeval. They are akin to what may be termed the underground religion in all ages and countries. They are presented in the most lively and graphic manner, but they are never insisted on as true; it is only affirmed that nothing better can be said about a future life. Plato seems to make use of them when he has reached the limits of human knowledge; or, to borrow an expression of his own, when he is standing on the outside of the intellectual world.

They are very simple in style; a few touches bring the picture home to the mind, and make it present to us. They have also a kind of authority gained by the employment of sacred and familiar names, just as mere fragments of the words of Scripture, put together in any form and applied to any subject, have a power of their own. They are a substitute for poetry and mythology; and they are also a reform of mythology. The moral of them may be summed up in a word or two: After death the Judgment; and 'there is some better thing remaining for the good than for the evil.'

All literature gathers into itself many elements of the past: for example, the tale of the earth-born men in the Republic appears at first sight to be an extravagant fancy, but it is restored to propriety when we remember that it is based on a legendary belief. The art of making stories of ghosts and apparitions credible is said to consist in the manner of telling them. The effect is gained by many literary and conversational devices, such as the previous raising of curiosity, the mention of little circumstances, simplicity, picturesqueness, the naturalness of the occasion, and the like. This art is possessed by Plato in a degree which has never been equalled.

The myth in the Phaedrus is even greater than the myths which have been already described, but is of a different character. It treats of a former rather than of a future life. It represents the conflict of reason aided by passion or righteous indignation on the one hand, and of the animal lusts and instincts on the other. The soul of man has followed the company of some god, and seen truth in the form of the universal before it was born in this world. Our present life is the result of the struggle which was then carried on. This world is relative to a former world, as it is often projected into a future. We ask the question, Where were men before birth? As we likewise enquire, What will become of them after death? The first question is unfamiliar to us, and therefore seems to be unnatural; but if we survey the whole human race, it has been as influential and as widely spread as the other. In the Phaedrus it is really a figure of speech in which the 'spiritual combat' of this life is represented. The majesty and power of the whole passage—especially of what may be called the theme or proem (beginning 'The mind through all her being is immortal')—can only be rendered very inadequately in another language.

The myth in the Statesman relates to a former cycle of existence, in which men were born of the earth, and by the reversal of the earth's motion had their lives reversed and were restored to youth and beauty: the dead came to life, the old grew middle-aged, and the middle-aged young; the youth became a child, the child an infant, the infant vanished into the earth. The connection between the reversal of the earth's motion and the reversal of human life is of course verbal only, yet Plato, like theologians in other ages, argues from the consistency of the tale to its truth. The new order of the world was immediately under the government of God; it was a state of innocence in which men had neither wants nor cares, in which the earth brought forth all things spontaneously, and God was to man what man now is to the animals. There were no great estates, or families, or private possessions, nor any traditions of the past, because men were all born out of the earth. This is what Plato calls the 'reign of Cronos;' and in like manner he connects the reversal of the earth's motion with some legend of which he himself was probably the inventor.

The question is then asked, under which of these two cycles of existence was man the happier,—under that of Cronos, which was a state of innocence, or that of Zeus, which is our ordinary life? For a while Plato balances the two sides of the serious controversy, which he has suggested in a figure. The answer depends on another question: What use did the children of Cronos make of their time?

They had boundless leisure and the faculty of discoursing, not only with one another, but with the animals. Did they employ these advantages with a view to philosophy, gathering from every nature some addition to their store of knowledge? or, Did they pass their time in eating and drinking and telling stories to one another and to the beasts?—in either case there would be no difficulty in answering. But then, as Plato rather mischievously adds, 'Nobody knows what they did,' and therefore the doubt must remain undetermined.

To the first there succeeds a second epoch. After another natural convulsion, in which the order of the world and of human life is once more reversed, God withdraws his guiding hand, and man is left to the government of himself. The world begins again, and arts and laws are slowly and painfully invented. A secular age succeeds to a theocratical. In this fanciful tale Plato has dropped, or almost dropped, the garb of mythology. He suggests several curious and important thoughts, such as the possibility of a state of innocence, the existence of a world without traditions, and the difference between human and divine government. He has also carried a step further his speculations concerning the abolition of the family and of property, which he supposes to have no place among the children of Cronos any more than in the ideal state.

It is characteristic of Plato and of his age to pass from the abstract to the concrete, from poetry to reality. Language is the expression of the seen, and also of the unseen, and moves in a region between them. A great writer knows how to strike both these chords, sometimes remaining within the sphere of the visible, and then again comprehending a wider range and soaring to the abstract and universal. Even in the same sentence he may employ both modes of speech not improperly or inharmoniously. It is useless to criticise the broken metaphors of Plato, if the effect of the whole is to create a picture not such as can be painted on canvas, but which is full of life and meaning to the reader. A poem may be contained in a word or two, which may call up not one but many latent images; or half reveal to us by a sudden flash the thoughts of many hearts. Often the rapid transition from one image to another is pleasing to us: on the other hand, any single figure of speech if too often repeated, or worked out too much at length, becomes prosy and monotonous. In theology and philosophy we necessarily include both 'the moral law within and the starry heaven above,' and pass from one to the other (compare for examples Psalms xviii. and xix.). Whether such a use of language is puerile or noble depends upon the genius of the writer or speaker, and the familiarity of the associations employed.

In the myths and parables of Plato the ease and grace of conversation is not forgotten: they are spoken, not written words, stories which are told to a living audience, and so well told that we are more than half-inclined to believe them (compare Phaedrus). As in conversation too, the striking image or figure of speech is not forgotten, but is quickly caught up, and alluded to again and again; as it would still be in our own day in a genial and sympathetic society. The descriptions of Plato have a greater life and reality than is to be found in any modern writing. This is due to their homeliness and simplicity. Plato can do with words just as he pleases; to him they are indeed 'more plastic than wax' (Republic). We are in the habit of opposing speech and writing, poetry and prose. But he has discovered a use of language in which they are united; which gives a fitting expression to the highest truths; and in which the trifles of courtesy and the familiarities of daily life are not overlooked.

GORGIAS

By Plato

Translated by Benjamin Jowett

PERSONS OF THE DIALOGUE: Callicles, Socrates, Chaerephon, Gorgias, Polus.

SCENE: The house of Callicles.

CALLICLES: The wise man, as the proverb says, is late for a fray, but not for a feast.

SOCRATES: And are we late for a feast?

CALLICLES: Yes, and a delightful feast; for Gorgias has just been exhibiting to us many fine things.

SOCRATES: It is not my fault, Callicles; our friend Chaerephon is to blame; for he would keep us loitering in the Agora.

CHAEREPHON: Never mind, Socrates; the misfortune of which I have been the cause I will also repair; for Gorgias is a friend of mine, and I will make him give the exhibition again either now, or, if you prefer, at some other time.

CALLICLES: What is the matter, Chaerephon—does Socrates want to hear Gorgias?

CHAEREPHON: Yes, that was our intention in coming.

CALLICLES: Come into my house, then; for Gorgias is staying with me, and he shall exhibit to you.

SOCRATES: Very good, Callicles; but will he answer our questions? for I want to hear from him what is the nature of his art, and what it is which he professes and teaches; he may, as you (Chaerephon) suggest, defer the exhibition to some other time.

CALLICLES: There is nothing like asking him, Socrates; and indeed to answer questions is a part of his exhibition, for he was saying only just now, that any one in my house might put any question to him, and that he would answer.

SOCRATES: How fortunate! will you ask him, Chaerephon—?

CHAEREPHON: What shall I ask him?

SOCRATES: Ask him who he is.

CHAEREPHON: What do you mean?

SOCRATES: I mean such a question as would elicit from him, if he had been a maker of shoes, the answer that he is a cobbler. Do you understand?

CHAEREPHON: I understand, and will ask him: Tell me, Gorgias, is our friend Callicles right in saying that you undertake to answer any questions which you are asked?

GORGIAS: Quite right, Chaerephon: I was saying as much only just now; and I may add, that many years have elapsed since any one has asked me a new one.

CHAEREPHON: Then you must be very ready, Gorgias.

GORGIAS: Of that, Chaerephon, you can make trial.

POLUS: Yes, indeed, and if you like, Chaerephon, you may make trial of me too, for I think that Gorgias, who has been talking a long time, is tired.

CHAEREPHON: And do you, Polus, think that you can answer better than Gorgias?

POLUS: What does that matter if I answer well enough for you?

CHAEREPHON: Not at all:—and you shall answer if you like.

POLUS: Ask:—

CHAEREPHON: My question is this: If Gorgias had the skill of his brother Herodicus, what ought we to call him? Ought he not to have the name which is given to his brother?

POLUS: Certainly.

CHAEREPHON: Then we should be right in calling him a physician?

POLUS: Yes.

CHAEREPHON: And if he had the skill of Aristophon the son of Aglaophon, or of his brother Polygnotus, what ought we to call him?

POLUS: Clearly, a painter.

CHAEREPHON: But now what shall we call him—what is the art in which he is skilled.

POLUS: O Chaerephon, there are many arts among mankind which are experimental, and have their origin in experience, for experience makes the days of men to proceed according to art, and

inexperience according to chance, and different persons in different ways are proficient in different arts, and the best persons in the best arts. And our friend Gorgias is one of the best, and the art in which he is a proficient is the noblest.

SOCRATES: Polus has been taught how to make a capital speech, Gorgias; but he is not fulfilling the promise which he made to Chaerephon.

GORGIAS: What do you mean, Socrates?

SOCRATES: I mean that he has not exactly answered the question which he was asked.

GORGIAS: Then why not ask him yourself?

SOCRATES: But I would much rather ask you, if you are disposed to answer: for I see, from the few words which Polus has uttered, that he has attended more to the art which is called rhetoric than to dialectic.

POLUS: What makes you say so, Socrates?

SOCRATES: Because, Polus, when Chaerephon asked you what was the art which Gorgias knows, you praised it as if you were answering some one who found fault with it, but you never said what the art was.

POLUS: Why, did I not say that it was the noblest of arts?

SOCRATES: Yes, indeed, but that was no answer to the question: nobody asked what was the quality, but what was the nature, of the art, and by what name we were to describe Gorgias. And I would still beg you briefly and clearly, as you answered Chaerephon when he asked you at first, to say what this art is, and what we ought to call Gorgias: Or rather, Gorgias, let me turn to you, and ask the same question,—what are we to call you, and what is the art which you profess?

GORGIAS: Rhetoric, Socrates, is my art.

SOCRATES: Then I am to call you a rhetorician?

GORGIAS: Yes, Socrates, and a good one too, if you would call me that which, in Homeric language, 'I boast myself to be.'

SOCRATES: I should wish to do so.

GORGIAS: Then pray do.

SOCRATES: And are we to say that you are able to make other men rhetoricians?

GORGIAS: Yes, that is exactly what I profess to make them, not only at Athens, but in all places.

SOCRATES: And will you continue to ask and answer questions, Gorgias, as we are at present doing, and reserve for another occasion the longer mode of speech which Polus was attempting? Will you keep your promise, and answer shortly the questions which are asked of you?

GORGIAS: Some answers, Socrates, are of necessity longer; but I will do my best to make them as short as possible; for a part of my profession is that I can be as short as any one.

SOCRATES: That is what is wanted, Gorgias; exhibit the shorter method now, and the longer one at some other time.

GORGIAS: Well, I will; and you will certainly say, that you never heard a man use fewer words.

SOCRATES: Very good then; as you profess to be a rhetorician, and a maker of rhetoricians, let me ask you, with what is rhetoric concerned: I might ask with what is weaving concerned, and you would reply (would you not?), with the making of garments?

GORGIAS: Yes.

SOCRATES: And music is concerned with the composition of melodies?

GORGIAS: It is.

SOCRATES: By Here, Gorgias, I admire the surpassing brevity of your answers.

GORGIAS: Yes, Socrates, I do think myself good at that.

SOCRATES: I am glad to hear it; answer me in like manner about rhetoric: with what is rhetoric concerned?

GORGIAS: With discourse.

SOCRATES: What sort of discourse, Gorgias?—such discourse as would teach the sick under what treatment they might get well?

GORGIAS: No.

SOCRATES: Then rhetoric does not treat of all kinds of discourse?

GORGIAS: Certainly not.

SOCRATES: And yet rhetoric makes men able to speak?

GORGIAS: Yes.

SOCRATES: And to understand that about which they speak?

GORGIAS: Of course.

SOCRATES: But does not the art of medicine, which we were just now mentioning, also make men able to understand and speak about the sick?

GORGIAS: Certainly.

SOCRATES: Then medicine also treats of discourse?

GORGIAS: Yes.

SOCRATES: Of discourse concerning diseases?

GORGIAS: Just so.

SOCRATES: And does not gymnastic also treat of discourse concerning the good or evil condition of the body?

GORGIAS: Very true.

SOCRATES: And the same, Gorgias, is true of the other arts:—all of them treat of discourse concerning the subjects with which they severally have to do.

GORGIAS: Clearly.

SOCRATES: Then why, if you call rhetoric the art which treats of discourse, and all the other arts treat of discourse, do you not call them arts of rhetoric?

GORGIAS: Because, Socrates, the knowledge of the other arts has only to do with some sort of external action, as of the hand; but there is no such action of the hand in rhetoric which works and takes effect only through the medium of discourse. And therefore I am justified in saying that rhetoric treats of discourse.

SOCRATES: I am not sure whether I entirely understand you, but I dare say I shall soon know better; please to answer me a question:—you would allow that there are arts?

GORGIAS: Yes.

SOCRATES: As to the arts generally, they are for the most part concerned with doing, and require little or no speaking; in painting, and statuary, and many other arts, the work may proceed in silence; and of such arts I suppose you would say that they do not come within the province of rhetoric.

GORGIAS: You perfectly conceive my meaning, Socrates.

SOCRATES: But there are other arts which work wholly through the medium of language, and require either no action or very little, as, for example, the arts of arithmetic, of calculation, of geometry, and of

playing draughts; in some of these speech is pretty nearly co-extensive with action, but in most of them the verbal element is greater—they depend wholly on words for their efficacy and power: and I take your meaning to be that rhetoric is an art of this latter sort?

GORGIAS: Exactly.

SOCRATES: And yet I do not believe that you really mean to call any of these arts rhetoric; although the precise expression which you used was, that rhetoric is an art which works and takes effect only through the medium of discourse; and an adversary who wished to be captious might say, 'And so, Gorgias, you call arithmetic rhetoric.' But I do not think that you really call arithmetic rhetoric any more than geometry would be so called by you.

GORGIAS: You are quite right, Socrates, in your apprehension of my meaning.

SOCRATES: Well, then, let me now have the rest of my answer:—seeing that rhetoric is one of those arts which works mainly by the use of words, and there are other arts which also use words, tell me what is that quality in words with which rhetoric is concerned:—Suppose that a person asks me about some of the arts which I was mentioning just now; he might say, 'Socrates, what is arithmetic?' and I should reply to him, as you replied to me, that arithmetic is one of those arts which take effect through words. And then he would proceed to ask: 'Words about what?' and I should reply, Words about odd and even numbers, and how many there are of each. And if he asked again: 'What is the art of calculation?' I should say, That also is one of the arts which is concerned wholly with words. And if he further said, 'Concerned with what?' I should say, like the clerks in the assembly, 'as aforesaid' of arithmetic, but with a difference, the difference being that the art of calculation considers not only the quantities of odd and even numbers, but also their numerical relations to themselves and to one another. And suppose, again, I were to say that astronomy is only words—he would ask, 'Words about what, Socrates?' and I should answer, that astronomy tells us about the motions of the stars and sun and moon, and their relative swiftness.

GORGIAS: You would be quite right, Socrates.

SOCRATES: And now let us have from you, Gorgias, the truth about rhetoric: which you would admit (would you not?) to be one of those arts which act always and fulfil all their ends through the medium of words?

GORGIAS: True.

SOCRATES: Words which do what? I should ask. To what class of things do the words which rhetoric uses relate?

GORGIAS: To the greatest, Socrates, and the best of human things.

SOCRATES: That again, Gorgias is ambiguous; I am still in the dark: for which are the greatest and best of human things? I dare say that you have heard men singing at feasts the old drinking song, in which the singers enumerate the goods of life, first health, beauty next, thirdly, as the writer of the song says, wealth honestly obtained.

GORGIAS: Yes, I know the song; but what is your drift?

SOCRATES: I mean to say, that the producers of those things which the author of the song praises, that is to say, the physician, the trainer, the money-maker, will at once come to you, and first the physician will say: 'O Socrates, Gorgias is deceiving you, for my art is concerned with the greatest good of men and not his.' And when I ask, Who are you? he will reply, 'I am a physician.' What do you mean? I shall say. Do you mean that your art produces the greatest good? 'Certainly,' he will answer, 'for is not health the greatest good? What greater good can men have, Socrates?' And after him the trainer will come and say, 'I too, Socrates, shall be greatly surprised if Gorgias can show more good of his art than I can show of mine.' To him again I shall say, Who are you, honest friend, and what is your business? 'I am a trainer,' he will reply, 'and my business is to make men beautiful and strong in body.' When I have done with the trainer, there arrives the money-maker, and he, as I expect, will utterly despise them all. 'Consider Socrates,' he will say, 'whether Gorgias or any one else can produce any greater good than wealth.' Well, you and I say to him, and are you a creator of wealth? 'Yes,' he replies. And who are you? 'A money-maker.' And do you consider wealth to be the greatest good of man? 'Of course,' will be his reply. And we shall rejoin: Yes; but our friend Gorgias contends that his art produces a greater good than yours. And then he will be sure to go on and ask, 'What good? Let Gorgias answer.' Now I want you, Gorgias, to imagine that this question is asked of you by them and by me; What is that which, as you say, is the greatest good of man, and of which you are the creator? Answer us.

GORGIAS: That good, Socrates, which is truly the greatest, being that which gives to men freedom in their own persons, and to individuals the power of ruling over others in their several states.

SOCRATES: And what would you consider this to be?

GORGIAS: What is there greater than the word which persuades the judges in the courts, or the senators in the council, or the citizens in the assembly, or at any other political meeting?—if you have the power of uttering this word, you will have the physician your slave, and the trainer your slave, and the money-maker of whom you talk will be found to gather treasures, not for himself, but for you who are able to speak and to persuade the multitude.

SOCRATES: Now I think, Gorgias, that you have very accurately explained what you conceive to be the art of rhetoric; and you mean to say, if I am not mistaken, that rhetoric is the artificer of persuasion, having this and no other business, and that this is her crown and end. Do you know any other effect of rhetoric over and above that of producing persuasion?

GORGIAS: No: the definition seems to me very fair, Socrates; for persuasion is the chief end of rhetoric.

SOCRATES: Then hear me, Gorgias, for I am quite sure that if there ever was a man who entered on the discussion of a matter from a pure love of knowing the truth, I am such a one, and I should say the same of you.

GORGIAS: What is coming, Socrates?

SOCRATES: I will tell you: I am very well aware that I do not know what, according to you, is the exact nature, or what are the topics of that persuasion of which you speak, and which is given by rhetoric; although I have a suspicion about both the one and the other. And I am going to ask—what is this power of persuasion which is given by rhetoric, and about what? But why, if I have a suspicion, do I ask instead of telling you? Not for your sake, but in order that the argument may proceed in such a manner as is most likely to set forth the truth. And I would have you observe, that I am right in asking this further question: If I asked, 'What sort of a painter is Zeuxis?' and you said, 'The painter of figures,' should I not be right in asking, 'What kind of figures, and where do you find them?'

GORGIAS: Certainly.

SOCRATES: And the reason for asking this second question would be, that there are other painters besides, who paint many other figures?

GORGIAS: True.

SOCRATES: But if there had been no one but Zeuxis who painted them, then you would have answered very well?

GORGIAS: Quite so.

SOCRATES: Now I want to know about rhetoric in the same way;—is rhetoric the only art which brings persuasion, or do other arts have the same effect? I mean to say—Does he who teaches anything persuade men of that which he teaches or not?

GORGIAS: He persuades, Socrates,—there can be no mistake about that.

SOCRATES: Again, if we take the arts of which we were just now speaking:—do not arithmetic and the arithmeticians teach us the properties of number?

GORGIAS: Certainly.

SOCRATES: And therefore persuade us of them?

GORGIAS: Yes.

SOCRATES: Then arithmetic as well as rhetoric is an artificer of persuasion?

GORGIAS: Clearly.

SOCRATES: And if any one asks us what sort of persuasion, and about what,—we shall answer, persuasion which teaches the quantity of odd and even; and we shall be able to show that all the other arts of which we were just now speaking are artificers of persuasion, and of what sort, and about what.

GORGIAS: Very true.

SOCRATES: Then rhetoric is not the only artificer of persuasion?

GORGIAS: True.

SOCRATES: Seeing, then, that not only rhetoric works by persuasion, but that other arts do the same, as in the case of the painter, a question has arisen which is a very fair one: Of what persuasion is rhetoric the artificer, and about what?—is not that a fair way of putting the question?

GORGIAS: I think so.

SOCRATES: Then, if you approve the question, Gorgias, what is the answer?

GORGIAS: I answer, Socrates, that rhetoric is the art of persuasion in courts of law and other assemblies, as I was just now saying, and about the just and unjust.

SOCRATES: And that, Gorgias, was what I was suspecting to be your notion; yet I would not have you wonder if by-and-by I am found repeating a seemingly plain question; for I ask not in order to confute you, but as I was saying that the argument may proceed consecutively, and that we may not get the habit of anticipating and suspecting the meaning of one another's words; I would have you develope your own views in your own way, whatever may be your hypothesis.

GORGIAS: I think that you are quite right, Socrates.

SOCRATES: Then let me raise another question; there is such a thing as 'having learned'?

GORGIAS: Yes.

SOCRATES: And there is also 'having believed'?

GORGIAS: Yes.

SOCRATES: And is the 'having learned' the same as 'having believed,' and are learning and belief the same things?

GORGIAS: In my judgment, Socrates, they are not the same.

SOCRATES: And your judgment is right, as you may ascertain in this way:—If a person were to say to you, 'Is there, Gorgias, a false belief as well as a true?'—you would reply, if I am not mistaken, that there is.

GORGIAS: Yes.

SOCRATES: Well, but is there a false knowledge as well as a true?

GORGIAS: No.

SOCRATES: No, indeed; and this again proves that knowledge and belief differ.

GORGIAS: Very true.

SOCRATES: And yet those who have learned as well as those who have believed are persuaded?

GORGIAS: Just so.

SOCRATES: Shall we then assume two sorts of persuasion,—one which is the source of belief without knowledge, as the other is of knowledge?

GORGIAS: By all means.

SOCRATES: And which sort of persuasion does rhetoric create in courts of law and other assemblies about the just and unjust, the sort of persuasion which gives belief without knowledge, or that which gives knowledge?

GORGIAS: Clearly, Socrates, that which only gives belief.

SOCRATES: Then rhetoric, as would appear, is the artificer of a persuasion which creates belief about the just and unjust, but gives no instruction about them?

GORGIAS: True.

SOCRATES: And the rhetorician does not instruct the courts of law or other assemblies about things just and unjust, but he creates belief about them; for no one can be supposed to instruct such a vast multitude about such high matters in a short time?

GORGIAS: Certainly not.

SOCRATES: Come, then, and let us see what we really mean about rhetoric; for I do not know what my own meaning is as yet. When the assembly meets to elect a physician or a shipwright or any other craftsman, will the rhetorician be taken into counsel? Surely not. For at every election he ought to be chosen who is most skilled; and, again, when walls have to be built or harbours or docks to be constructed, not the rhetorician but the master workman will advise; or when generals have to be chosen and an order of battle arranged, or a position taken, then the military will advise and not the rhetoricians: what do you say, Gorgias? Since you profess to be a rhetorician and a maker of rhetoricians, I cannot do better than learn the nature of your art from you. And here let me assure you that I have your interest in view as well as my own. For likely enough some one or other of the young men present might desire to become your pupil, and in fact I see some, and a good many too, who have this wish, but they would be too modest to question you. And therefore when you are interrogated by me, I would have you imagine that you are interrogated by them. 'What is the use of coming to you, Gorgias?' they will say—'about what will you teach us to advise the state?—about the just and unjust only, or about those other things also which Socrates has just mentioned?' How will you answer them?

GORGIAS: I like your way of leading us on, Socrates, and I will endeavour to reveal to you the whole nature of rhetoric. You must have heard, I think, that the docks and the walls of the Athenians and the plan of the harbour were devised in accordance with the counsels, partly of Themistocles, and partly of Pericles, and not at the suggestion of the builders.

SOCRATES: Such is the tradition, Gorgias, about Themistocles; and I myself heard the speech of Pericles when he advised us about the middle wall.

GORGIAS: And you will observe, Socrates, that when a decision has to be given in such matters the rhetoricians are the advisers; they are the men who win their point.

SOCRATES: I had that in my admiring mind, Gorgias, when I asked what is the nature of rhetoric, which always appears to me, when I look at the matter in this way, to be a marvel of greatness.

GORGIAS: A marvel, indeed, Socrates, if you only knew how rhetoric comprehends and holds under her sway all the inferior arts. Let me offer you a striking example of this. On several occasions I have been with my brother Herodicus or some other physician to see one of his patients, who would not allow the physician to give him medicine, or apply the knife or hot iron to him; and I have persuaded him to do for me what he would not do for the physician just by the use of rhetoric. And I say that if a rhetorician and a physician were to go to any city, and had there to argue in the Ecclesia or any other assembly as to which of them should be elected state-physician, the physician would have no chance; but he who could speak would be chosen if he wished; and in a contest with a man of any other profession the rhetorician more than any one would have the power of getting himself chosen, for he can speak more persuasively to the multitude than any of them, and on any subject. Such is the nature and power of the art of rhetoric! And yet, Socrates, rhetoric should be used like any other competitive art, not against everybody,—the rhetorician ought not to abuse his strength any more than a pugilist or pancratiast or other master of fence;—because he has powers which are more than a match either for friend or enemy, he ought not therefore to strike, stab, or slay his friends. Suppose a man to have been trained in the palestra and to be a skilful boxer,—he in the fulness of his strength goes and strikes his father or mother or one of his familiars or friends; but that is no reason why the trainers or fencing-masters should be held in detestation or banished from the city;—surely not. For they taught their art for a good purpose, to be used against enemies and evil-doers, in self-defence not in aggression, and others have perverted their instructions, and turned to a bad use their own strength and skill. But not on this account are the teachers bad, neither is the art in fault, or bad in itself; I should rather say that those who make a bad use of the art are to blame. And the same argument holds good of rhetoric; for the rhetorician can speak against all men and upon any subject,—in short, he can persuade the multitude better than any other man of anything which he pleases, but he should not therefore seek to defraud the physician or any other artist of his reputation merely because he has the power; he ought to use rhetoric fairly, as he would also use his athletic powers. And if after having become a rhetorician he makes a bad use of his strength and skill, his instructor surely ought not on that account to be held in detestation or banished. For he was intended by his teacher to make a good use of his instructions, but he abuses them. And therefore he is the person who ought to be held in detestation, banished, and put to death, and not his instructor.

SOCRATES: You, Gorgias, like myself, have had great experience of disputations, and you must have observed, I think, that they do not always terminate in mutual edification, or in the definition by

either party of the subjects which they are discussing; but disagreements are apt to arise—somebody says that another has not spoken truly or clearly; and then they get into a passion and begin to quarrel, both parties conceiving that their opponents are arguing from personal feeling only and jealousy of themselves, not from any interest in the question at issue. And sometimes they will go on abusing one another until the company at last are quite vexed at themselves for ever listening to such fellows. Why do I say this? Why, because I cannot help feeling that you are now saying what is not quite consistent or accordant with what you were saying at first about rhetoric. And I am afraid to point this out to you, lest you should think that I have some animosity against you, and that I speak, not for the sake of discovering the truth, but from jealousy of you. Now if you are one of my sort, I should like to cross-examine you, but if not I will let you alone. And what is my sort? you will ask. I am one of those who are very willing to be refuted if I say anything which is not true, and very willing to refute any one else who says what is not true, and quite as ready to be refuted as to refute; for I hold that this is the greater gain of the two, just as the gain is greater of being cured of a very great evil than of curing another. For I imagine that there is no evil which a man can endure so great as an erroneous opinion about the matters of which we are speaking; and if you claim to be one of my sort, let us have the discussion out, but if you would rather have done, no matter;—let us make an end of it.

GORGIAS: I should say, Socrates, that I am quite the man whom you indicate; but, perhaps, we ought to consider the audience, for, before you came, I had already given a long exhibition, and if we proceed the argument may run on to a great length. And therefore I think that we should consider whether we may not be detaining some part of the company when they are wanting to do something else.

CHAEREPHON: You hear the audience cheering, Gorgias and Socrates, which shows their desire to listen to you; and for myself, Heaven forbid that I should have any business on hand which would take me away from a discussion so interesting and so ably maintained.

CALLICLES: By the gods, Chaerephon, although I have been present at many discussions, I doubt whether I was ever so much delighted before, and therefore if you go on discoursing all day I shall be the better pleased.

SOCRATES: I may truly say, Callicles, that I am willing, if Gorgias is.

GORGIAS: After all this, Socrates, I should be disgraced if I refused, especially as I have promised to answer all comers; in accordance with the wishes of the company, then, do you begin, and ask of me any question which you like.

SOCRATES: Let me tell you then, Gorgias, what surprises me in your words; though I dare say that you may be right, and I may have misunderstood your meaning. You say that you can make any man, who will learn of you, a rhetorician?

GORGIAS: Yes.

SOCRATES: Do you mean that you will teach him to gain the ears of the multitude on any subject, and this not by instruction but by persuasion?

GORGIAS: Quite so.

SOCRATES: You were saying, in fact, that the rhetorician will have greater powers of persuasion than the physician even in a matter of health?

GORGIAS: Yes, with the multitude,—that is.

SOCRATES: You mean to say, with the ignorant; for with those who know he cannot be supposed to have greater powers of persuasion.

GORGIAS: Very true.

SOCRATES: But if he is to have more power of persuasion than the physician, he will have greater power than he who knows?

GORGIAS: Certainly.

SOCRATES: Although he is not a physician:—is he?

GORGIAS: No.

SOCRATES: And he who is not a physician must, obviously, be ignorant of what the physician knows.

GORGIAS: Clearly.

SOCRATES: Then, when the rhetorician is more persuasive than the physician, the ignorant is more persuasive with the ignorant than he who has knowledge?—is not that the inference?

GORGIAS: In the case supposed:—yes.

SOCRATES: And the same holds of the relation of rhetoric to all the other arts; the rhetorician need not know the truth about things; he has only to discover some way of persuading the ignorant that he has more knowledge than those who know?

GORGIAS: Yes, Socrates, and is not this a great comfort?—not to have learned the other arts, but the art of rhetoric only, and yet to be in no way inferior to the professors of them?

SOCRATES: Whether the rhetorician is or not inferior on this account is a question which we will hereafter examine if the enquiry is likely to be of any service to us; but I would rather begin by asking, whether he is or is not as ignorant of the just and unjust, base and honourable, good and evil, as he is of medicine and the other arts; I mean to say, does he really know anything of what is good and evil, base or honourable, just or unjust in them; or has he only a way with the ignorant of persuading them that he not knowing is to be esteemed to know more about these things than some one else who knows? Or must the pupil know these things and come to you knowing them before he can acquire the art of rhetoric? If he is ignorant, you who are the teacher of rhetoric will not teach him—it is not

your business; but you will make him seem to the multitude to know them, when he does not know them; and seem to be a good man, when he is not. Or will you be unable to teach him rhetoric at all, unless he knows the truth of these things first? What is to be said about all this? By heavens, Gorgias, I wish that you would reveal to me the power of rhetoric, as you were saying that you would.

GORGIAS: Well, Socrates, I suppose that if the pupil does chance not to know them, he will have to learn of me these things as well.

SOCRATES: Say no more, for there you are right; and so he whom you make a rhetorician must either know the nature of the just and unjust already, or he must be taught by you.

GORGIAS: Certainly.

SOCRATES: Well, and is not he who has learned carpentering a carpenter?

GORGIAS: Yes.

SOCRATES: And he who has learned music a musician?

GORGIAS: Yes.

SOCRATES: And he who has learned medicine is a physician, in like manner? He who has learned anything whatever is that which his knowledge makes him.

GORGIAS: Certainly.

SOCRATES: And in the same way, he who has learned what is just is just?

GORGIAS: To be sure.

SOCRATES: And he who is just may be supposed to do what is just?

GORGIAS: Yes.

SOCRATES: And must not the just man always desire to do what is just?

GORGIAS: That is clearly the inference.

SOCRATES: Surely, then, the just man will never consent to do injustice?

GORGIAS: Certainly not.

SOCRATES: And according to the argument the rhetorician must be a just man?

GORGIAS: Yes.

SOCRATES: And will therefore never be willing to do injustice?

GORGIAS: Clearly not.

SOCRATES: But do you remember saying just now that the trainer is not to be accused or banished if the pugilist makes a wrong use of his pugilistic art; and in like manner, if the rhetorician makes a bad and unjust use of his rhetoric, that is not to be laid to the charge of his teacher, who is not to be banished, but the wrong-doer himself who made a bad use of his rhetoric—he is to be banished—was not that said?

GORGIAS: Yes, it was.

SOCRATES: But now we are affirming that the aforesaid rhetorician will never have done injustice at all?

GORGIAS: True.

SOCRATES: And at the very outset, Gorgias, it was said that rhetoric treated of discourse, not (like arithmetic) about odd and even, but about just and unjust? Was not this said?

GORGIAS: Yes.

SOCRATES: I was thinking at the time, when I heard you saying so, that rhetoric, which is always discoursing about justice, could not possibly be an unjust thing. But when you added, shortly afterwards, that the rhetorician might make a bad use of rhetoric I noted with surprise the inconsistency into which you had fallen; and I said, that if you thought, as I did, that there was a gain in being refuted, there would be an advantage in going on with the question, but if not, I would leave off. And in the course of our investigations, as you will see yourself, the rhetorician has been acknowledged to be incapable of making an unjust use of rhetoric, or of willingness to do injustice. By the dog, Gorgias, there will be a great deal of discussion, before we get at the truth of all this.

POLUS: And do even you, Socrates, seriously believe what you are now saying about rhetoric? What! because Gorgias was ashamed to deny that the rhetorician knew the just and the honourable and the good, and admitted that to any one who came to him ignorant of them he could teach them, and then out of this admission there arose a contradiction—the thing which you dearly love, and to which not he, but you, brought the argument by your captious questions—(do you seriously believe that there is any truth in all this?) For will any one ever acknowledge that he does not know, or cannot teach, the nature of justice? The truth is, that there is great want of manners in bringing the argument to such a pass.

SOCRATES: Illustrious Polus, the reason why we provide ourselves with friends and children is, that when we get old and stumble, a younger generation may be at hand to set us on our legs again in our words and in our actions: and now, if I and Gorgias are stumbling, here are you who should raise us up; and I for my part engage to retract any error into which you may think that I have fallen-upon one condition:

POLUS: What condition?

SOCRATES: That you contract, Polus, the prolixity of speech in which you indulged at first.

POLUS: What! do you mean that I may not use as many words as I please?

SOCRATES: Only to think, my friend, that having come on a visit to Athens, which is the most free-spoken state in Hellas, you when you got there, and you alone, should be deprived of the power of speech—that would be hard indeed. But then consider my case:—shall not I be very hardly used, if, when you are making a long oration, and refusing to answer what you are asked, I am compelled to stay and listen to you, and may not go away? I say rather, if you have a real interest in the argument, or, to repeat my former expression, have any desire to set it on its legs, take back any statement which you please; and in your turn ask and answer, like myself and Gorgias—refute and be refuted: for I suppose that you would claim to know what Gorgias knows—would you not?

POLUS: Yes.

SOCRATES: And you, like him, invite any one to ask you about anything which he pleases, and you will know how to answer him?

POLUS: To be sure.

SOCRATES: And now, which will you do, ask or answer?

POLUS: I will ask; and do you answer me, Socrates, the same question which Gorgias, as you suppose, is unable to answer: What is rhetoric?

SOCRATES: Do you mean what sort of an art?

POLUS: Yes.

SOCRATES: To say the truth, Polus, it is not an art at all, in my opinion.

POLUS: Then what, in your opinion, is rhetoric?

SOCRATES: A thing which, as I was lately reading in a book of yours, you say that you have made an art.

POLUS: What thing?

SOCRATES: I should say a sort of experience.

POLUS: Does rhetoric seem to you to be an experience?

SOCRATES: That is my view, but you may be of another mind.

POLUS: An experience in what?

SOCRATES: An experience in producing a sort of delight and gratification.

POLUS: And if able to gratify others, must not rhetoric be a fine thing?

SOCRATES: What are you saying, Polus? Why do you ask me whether rhetoric is a fine thing or not, when I have not as yet told you what rhetoric is?

POLUS: Did I not hear you say that rhetoric was a sort of experience?

SOCRATES: Will you, who are so desirous to gratify others, afford a slight gratification to me?

POLUS: I will.

SOCRATES: Will you ask me, what sort of an art is cookery?

POLUS: What sort of an art is cookery?

SOCRATES: Not an art at all, Polus.

POLUS: What then?

SOCRATES: I should say an experience.

POLUS: In what? I wish that you would explain to me.

SOCRATES: An experience in producing a sort of delight and gratification, Polus.

POLUS: Then are cookery and rhetoric the same?

SOCRATES: No, they are only different parts of the same profession.

POLUS: Of what profession?

SOCRATES: I am afraid that the truth may seem discourteous; and I hesitate to answer, lest Gorgias should imagine that I am making fun of his own profession. For whether or no this is that art of rhetoric which Gorgias practises I really cannot tell:—from what he was just now saying, nothing appeared of what he thought of his art, but the rhetoric which I mean is a part of a not very creditable whole.

GORGIAS: A part of what, Socrates? Say what you mean, and never mind me.

SOCRATES: In my opinion then, Gorgias, the whole of which rhetoric is a part is not an art at all, but the habit of a bold and ready wit, which knows how to manage mankind: this habit I sum up under the word 'flattery'; and it appears to me to have many other parts, one of which is cookery, which may

seem to be an art, but, as I maintain, is only an experience or routine and not an art:—another part is rhetoric, and the art of attiring and sophistry are two others: thus there are four branches, and four different things answering to them. And Polus may ask, if he likes, for he has not as yet been informed, what part of flattery is rhetoric: he did not see that I had not yet answered him when he proceeded to ask a further question: Whether I do not think rhetoric a fine thing? But I shall not tell him whether rhetoric is a fine thing or not, until I have first answered, 'What is rhetoric?' For that would not be right, Polus; but I shall be happy to answer, if you will ask me, What part of flattery is rhetoric?

POLUS: I will ask and do you answer? What part of flattery is rhetoric?

SOCRATES: Will you understand my answer? Rhetoric, according to my view, is the ghost or counterfeit of a part of politics.

POLUS: And noble or ignoble?

SOCRATES: Ignoble, I should say, if I am compelled to answer, for I call what is bad ignoble: though I doubt whether you understand what I was saying before.

GORGIAS: Indeed, Socrates, I cannot say that I understand myself.

SOCRATES: I do not wonder, Gorgias; for I have not as yet explained myself, and our friend Polus, colt by name and colt by nature, is apt to run away. (This is an untranslatable play on the name 'Polus,' which means 'a colt.')

GORGIAS: Never mind him, but explain to me what you mean by saying that rhetoric is the counterfeit of a part of politics.

SOCRATES: I will try, then, to explain my notion of rhetoric, and if I am mistaken, my friend Polus shall refute me. We may assume the existence of bodies and of souls?

GORGIAS: Of course.

SOCRATES: You would further admit that there is a good condition of either of them?

GORGIAS: Yes.

SOCRATES: Which condition may not be really good, but good only in appearance? I mean to say, that there are many persons who appear to be in good health, and whom only a physician or trainer will discern at first sight not to be in good health.

GORGIAS: True.

SOCRATES: And this applies not only to the body, but also to the soul: in either there may be that which gives the appearance of health and not the reality?

GORGIAS: Yes, certainly.

SOCRATES: And now I will endeavour to explain to you more clearly what I mean: The soul and body being two, have two arts corresponding to them: there is the art of politics attending on the soul; and another art attending on the body, of which I know no single name, but which may be described as having two divisions, one of them gymnastic, and the other medicine. And in politics there is a legislative part, which answers to gymnastic, as justice does to medicine; and the two parts run into one another, justice having to do with the same subject as legislation, and medicine with the same subject as gymnastic, but with a difference. Now, seeing that there are these four arts, two attending on the body and two on the soul for their highest good; flattery knowing, or rather guessing their natures, has distributed herself into four shams or simulations of them; she puts on the likeness of some one or other of them, and pretends to be that which she simulates, and having no regard for men's highest interests, is ever making pleasure the bait of the unwary, and deceiving them into the belief that she is of the highest value to them. Cookery simulates the disguise of medicine, and pretends to know what food is the best for the body; and if the physician and the cook had to enter into a competition in which children were the judges, or men who had no more sense than children, as to which of them best understands the goodness or badness of food, the physician would be starved to death. A flattery I deem this to be and of an ignoble sort, Polus, for to you I am now addressing myself, because it aims at pleasure without any thought of the best. An art I do not call it, but only an experience, because it is unable to explain or to give a reason of the nature of its own applications. And I do not call any irrational thing an art; but if you dispute my words, I am prepared to argue in defence of them.

Cookery, then, I maintain to be a flattery which takes the form of medicine; and tiring, in like manner, is a flattery which takes the form of gymnastic, and is knavish, false, ignoble, illiberal, working deceitfully by the help of lines, and colours, and enamels, and garments, and making men affect a spurious beauty to the neglect of the true beauty which is given by gymnastic.

I would rather not be tedious, and therefore I will only say, after the manner of the geometricians (for I think that by this time you will be able to follow)

as tiring: gymnastic:: cookery: medicine;

or rather,

as tiring: gymnastic:: sophistry: legislation;

and

as cookery: medicine:: rhetoric: justice.

And this, I say, is the natural difference between the rhetorician and the sophist, but by reason of their near connection, they are apt to be jumbled up together; neither do they know what to make of themselves, nor do other men know what to make of them. For if the body presided over itself, and were not under the guidance of the soul, and the soul did not discern and discriminate between cookery and medicine, but the body was made the judge of them, and the rule of judgment was the

bodily delight which was given by them, then the word of Anaxagoras, that word with which you, friend Polus, are so well acquainted, would prevail far and wide: 'Chaos' would come again, and cookery, health, and medicine would mingle in an indiscriminate mass. And now I have told you my notion of rhetoric, which is, in relation to the soul, what cookery is to the body. I may have been inconsistent in making a long speech, when I would not allow you to discourse at length. But I think that I may be excused, because you did not understand me, and could make no use of my answer when I spoke shortly, and therefore I had to enter into an explanation. And if I show an equal inability to make use of yours, I hope that you will speak at equal length; but if I am able to understand you, let me have the benefit of your brevity, as is only fair: And now you may do what you please with my answer.

POLUS: What do you mean? do you think that rhetoric is flattery?

SOCRATES: Nay, I said a part of flattery; if at your age, Polus, you cannot remember, what will you do by-and-by, when you get older?

POLUS: And are the good rhetoricians meanly regarded in states, under the idea that they are flatterers?

SOCRATES: Is that a question or the beginning of a speech?

POLUS: I am asking a question.

SOCRATES: Then my answer is, that they are not regarded at all.

POLUS: How not regarded? Have they not very great power in states?

SOCRATES: Not if you mean to say that power is a good to the possessor.

POLUS: And that is what I do mean to say.

SOCRATES: Then, if so, I think that they have the least power of all the citizens.

POLUS: What! are they not like tyrants? They kill and despoil and exile any one whom they please.

SOCRATES: By the dog, Polus, I cannot make out at each deliverance of yours, whether you are giving an opinion of your own, or asking a question of me.

POLUS: I am asking a question of you.

SOCRATES: Yes, my friend, but you ask two questions at once.

POLUS: How two questions?

SOCRATES: Why, did you not say just now that the rhetoricians are like tyrants, and that they kill and despoil or exile any one whom they please?

POLUS: I did.

SOCRATES: Well then, I say to you that here are two questions in one, and I will answer both of them. And I tell you, Polus, that rhetoricians and tyrants have the least possible power in states, as I was just now saying; for they do literally nothing which they will, but only what they think best.

POLUS: And is not that a great power?

SOCRATES: Polus has already said the reverse.

POLUS: Said the reverse! nay, that is what I assert.

SOCRATES: No, by the great—what do you call him?—not you, for you say that power is a good to him who has the power.

POLUS: I do.

SOCRATES: And would you maintain that if a fool does what he thinks best, this is a good, and would you call this great power?

POLUS: I should not.

SOCRATES: Then you must prove that the rhetorician is not a fool, and that rhetoric is an art and not a flattery—and so you will have refuted me; but if you leave me unrefuted, why, the rhetoricians who do what they think best in states, and the tyrants, will have nothing upon which to congratulate themselves, if as you say, power be indeed a good, admitting at the same time that what is done without sense is an evil.

POLUS: Yes; I admit that.

SOCRATES: How then can the rhetoricians or the tyrants have great power in states, unless Polus can refute Socrates, and prove to him that they do as they will?

POLUS: This fellow—

SOCRATES: I say that they do not do as they will;—now refute me.

POLUS: Why, have you not already said that they do as they think best?

SOCRATES: And I say so still.

POLUS: Then surely they do as they will?

SOCRATES: I deny it.

POLUS: But they do what they think best?

SOCRATES: Aye.

POLUS: That, Socrates, is monstrous and absurd.

SOCRATES: Good words, good Polus, as I may say in your own peculiar style; but if you have any questions to ask of me, either prove that I am in error or give the answer yourself.

POLUS: Very well, I am willing to answer that I may know what you mean.

SOCRATES: Do men appear to you to will that which they do, or to will that further end for the sake of which they do a thing? when they take medicine, for example, at the bidding of a physician, do they will the drinking of the medicine which is painful, or the health for the sake of which they drink?

POLUS: Clearly, the health.

SOCRATES: And when men go on a voyage or engage in business, they do not will that which they are doing at the time; for who would desire to take the risk of a voyage or the trouble of business?—But they will, to have the wealth for the sake of which they go on a voyage.

POLUS: Certainly.

SOCRATES: And is not this universally true? If a man does something for the sake of something else, he wills not that which he does, but that for the sake of which he does it.

POLUS: Yes.

SOCRATES: And are not all things either good or evil, or intermediate and indifferent?

POLUS: To be sure, Socrates.

SOCRATES: Wisdom and health and wealth and the like you would call goods, and their opposites evils?

POLUS: I should.

SOCRATES: And the things which are neither good nor evil, and which partake sometimes of the nature of good and at other times of evil, or of neither, are such as sitting, walking, running, sailing; or, again, wood, stones, and the like:—these are the things which you call neither good nor evil?

POLUS: Exactly so.

SOCRATES: Are these indifferent things done for the sake of the good, or the good for the sake of the indifferent?

POLUS: Clearly, the indifferent for the sake of the good.

SOCRATES: When we walk we walk for the sake of the good, and under the idea that it is better to walk, and when we stand we stand equally for the sake of the good?

POLUS: Yes.

SOCRATES: And when we kill a man we kill him or exile him or despoil him of his goods, because, as we think, it will conduce to our good?

POLUS: Certainly.

SOCRATES: Men who do any of these things do them for the sake of the good?

POLUS: Yes.

SOCRATES: And did we not admit that in doing something for the sake of something else, we do not will those things which we do, but that other thing for the sake of which we do them?

POLUS: Most true.

SOCRATES: Then we do not will simply to kill a man or to exile him or to despoil him of his goods, but we will to do that which conduces to our good, and if the act is not conducive to our good we do not will it; for we will, as you say, that which is our good, but that which is neither good nor evil, or simply evil, we do not will. Why are you silent, Polus? Am I not right?

POLUS: You are right.

SOCRATES: Hence we may infer, that if any one, whether he be a tyrant or a rhetorician, kills another or exiles another or deprives him of his property, under the idea that the act is for his own interests when really not for his own interests, he may be said to do what seems best to him?

POLUS: Yes.

SOCRATES: But does he do what he wills if he does what is evil? Why do you not answer?

POLUS: Well, I suppose not.

SOCRATES: Then if great power is a good as you allow, will such a one have great power in a state?

POLUS: He will not.

SOCRATES: Then I was right in saying that a man may do what seems good to him in a state, and not have great power, and not do what he wills?

POLUS: As though you, Socrates, would not like to have the power of doing what seemed good to you in the state, rather than not; you would not be jealous when you saw any one killing or despoiling or imprisoning whom he pleased, Oh, no!

SOCRATES: Justly or unjustly, do you mean?

POLUS: In either case is he not equally to be envied?

SOCRATES: Forbear, Polus!

POLUS: Why 'forbear'?

SOCRATES: Because you ought not to envy wretches who are not to be envied, but only to pity them.

POLUS: And are those of whom I spoke wretches?

SOCRATES: Yes, certainly they are.

POLUS: And so you think that he who slays any one whom he pleases, and justly slays him, is pitiable and wretched?

SOCRATES: No, I do not say that of him: but neither do I think that he is to be envied.

POLUS: Were you not saying just now that he is wretched?

SOCRATES: Yes, my friend, if he killed another unjustly, in which case he is also to be pitied; and he is not to be envied if he killed him justly.

POLUS: At any rate you will allow that he who is unjustly put to death is wretched, and to be pitied?

SOCRATES: Not so much, Polus, as he who kills him, and not so much as he who is justly killed.

POLUS: How can that be, Socrates?

SOCRATES: That may very well be, inasmuch as doing injustice is the greatest of evils.

POLUS: But is it the greatest? Is not suffering injustice a greater evil?

SOCRATES: Certainly not.

POLUS: Then would you rather suffer than do injustice?

SOCRATES: I should not like either, but if I must choose between them, I would rather suffer than do.

POLUS: Then you would not wish to be a tyrant?

SOCRATES: Not if you mean by tyranny what I mean.

POLUS: I mean, as I said before, the power of doing whatever seems good to you in a state, killing, banishing, doing in all things as you like.

SOCRATES: Well then, illustrious friend, when I have said my say, do you reply to me. Suppose that I go into a crowded Agora, and take a dagger under my arm. Polus, I say to you, I have just acquired rare power, and become a tyrant; for if I think that any of these men whom you see ought to be put to death, the man whom I have a mind to kill is as good as dead; and if I am disposed to break his head or tear his garment, he will have his head broken or his garment torn in an instant. Such is my great power in this city. And if you do not believe me, and I show you the dagger, you would probably reply: Socrates, in that sort of way any one may have great power—he may burn any house which he pleases, and the docks and triremes of the Athenians, and all their other vessels, whether public or private—but can you believe that this mere doing as you think best is great power?

POLUS: Certainly not such doing as this.

SOCRATES: But can you tell me why you disapprove of such a power?

POLUS: I can.

SOCRATES: Why then?

POLUS: Why, because he who did as you say would be certain to be punished.

SOCRATES: And punishment is an evil?

POLUS: Certainly.

SOCRATES: And you would admit once more, my good sir, that great power is a benefit to a man if his actions turn out to his advantage, and that this is the meaning of great power; and if not, then his power is an evil and is no power. But let us look at the matter in another way:—do we not acknowledge that the things of which we were speaking, the infliction of death, and exile, and the deprivation of property are sometimes a good and sometimes not a good?

POLUS: Certainly.

SOCRATES: About that you and I may be supposed to agree?

POLUS: Yes.

SOCRATES: Tell me, then, when do you say that they are good and when that they are evil—what principle do you lay down?

POLUS: I would rather, Socrates, that you should answer as well as ask that question.

SOCRATES: Well, Polus, since you would rather have the answer from me, I say that they are good when they are just, and evil when they are unjust.

POLUS: You are hard of refutation, Socrates, but might not a child refute that statement?

SOCRATES: Then I shall be very grateful to the child, and equally grateful to you if you will refute me and deliver me from my foolishness. And I hope that refute me you will, and not weary of doing good to a friend.

POLUS: Yes, Socrates, and I need not go far or appeal to antiquity; events which happened only a few days ago are enough to refute you, and to prove that many men who do wrong are happy.

SOCRATES: What events?

POLUS: You see, I presume, that Archelaus the son of Perdiccas is now the ruler of Macedonia?

SOCRATES: At any rate I hear that he is.

POLUS: And do you think that he is happy or miserable?

SOCRATES: I cannot say, Polus, for I have never had any acquaintance with him.

POLUS: And cannot you tell at once, and without having an acquaintance with him, whether a man is happy?

SOCRATES: Most certainly not.

POLUS: Then clearly, Socrates, you would say that you did not even know whether the great king was a happy man?

SOCRATES: And I should speak the truth; for I do not know how he stands in the matter of education and justice.

POLUS: What! and does all happiness consist in this?

SOCRATES: Yes, indeed, Polus, that is my doctrine; the men and women who are gentle and good are also happy, as I maintain, and the unjust and evil are miserable.

POLUS: Then, according to your doctrine, the said Archelaus is miserable?

SOCRATES: Yes, my friend, if he is wicked.

POLUS: That he is wicked I cannot deny; for he had no title at all to the throne which he now occupies, he being only the son of a woman who was the slave of Alcetas the brother of Perdiccas; he himself therefore in strict right was the slave of Alcetas; and if he had meant to do rightly he would have remained his slave, and then, according to your doctrine, he would have been happy. But now he is unspeakably miserable, for he has been guilty of the greatest crimes: in the first place he invited his uncle and master, Alcetas, to come to him, under the pretence that he would restore to him the throne which Perdiccas has usurped, and after entertaining him and his son Alexander, who was his

own cousin, and nearly of an age with him, and making them drunk, he threw them into a waggon and carried them off by night, and slew them, and got both of them out of the way; and when he had done all this wickedness he never discovered that he was the most miserable of all men, and was very far from repenting: shall I tell you how he showed his remorse? he had a younger brother, a child of seven years old, who was the legitimate son of Perdiccas, and to him of right the kingdom belonged; Archelaus, however, had no mind to bring him up as he ought and restore the kingdom to him; that was not his notion of happiness; but not long afterwards he threw him into a well and drowned him, and declared to his mother Cleopatra that he had fallen in while running after a goose, and had been killed. And now as he is the greatest criminal of all the Macedonians, he may be supposed to be the most miserable and not the happiest of them, and I dare say that there are many Athenians, and you would be at the head of them, who would rather be any other Macedonian than Archelaus!

SOCRATES: I praised you at first, Polus, for being a rhetorician rather than a reasoner. And this, as I suppose, is the sort of argument with which you fancy that a child might refute me, and by which I stand refuted when I say that the unjust man is not happy. But, my good friend, where is the refutation? I cannot admit a word which you have been saying.

POLUS: That is because you will not; for you surely must think as I do.

SOCRATES: Not so, my simple friend, but because you will refute me after the manner which rhetoricians practise in courts of law. For there the one party think that they refute the other when they bring forward a number of witnesses of good repute in proof of their allegations, and their adversary has only a single one or none at all. But this kind of proof is of no value where truth is the aim; a man may often be sworn down by a multitude of false witnesses who have a great air of respectability. And in this argument nearly every one, Athenian and stranger alike, would be on your side, if you should bring witnesses in disproof of my statement;—you may, if you will, summon Nicias the son of Niceratus, and let his brothers, who gave the row of tripods which stand in the precincts of Dionysus, come with him; or you may summon Aristocrates, the son of Scellius, who is the giver of that famous offering which is at Delphi; summon, if you will, the whole house of Pericles, or any other great Athenian family whom you choose;—they will all agree with you: I only am left alone and cannot agree, for you do not convince me; although you produce many false witnesses against me, in the hope of depriving me of my inheritance, which is the truth. But I consider that nothing worth speaking of will have been effected by me unless I make you the one witness of my words; nor by you, unless you make me the one witness of yours; no matter about the rest of the world. For there are two ways of refutation, one which is yours and that of the world in general; but mine is of another sort—let us compare them, and see in what they differ. For, indeed, we are at issue about matters which to know is honourable and not to know disgraceful; to know or not to know happiness and misery—that is the chief of them. And what knowledge can be nobler? or what ignorance more disgraceful than this? And therefore I will begin by asking you whether you do not think that a man who is unjust and doing injustice can be happy, seeing that you think Archelaus unjust, and yet happy? May I assume this to be your opinion?

POLUS: Certainly.

SOCRATES: But I say that this is an impossibility—here is one point about which we are at issue:—very good. And do you mean to say also that if he meets with retribution and punishment he will still be happy?

POLUS: Certainly not; in that case he will be most miserable.

SOCRATES: On the other hand, if the unjust be not punished, then, according to you, he will be happy?

POLUS: Yes.

SOCRATES: But in my opinion, Polus, the unjust or doer of unjust actions is miserable in any case,—more miserable, however, if he be not punished and does not meet with retribution, and less miserable if he be punished and meets with retribution at the hands of gods and men.

POLUS: You are maintaining a strange doctrine, Socrates.

SOCRATES: I shall try to make you agree with me, O my friend, for as a friend I regard you. Then these are the points at issue between us—are they not? I was saying that to do is worse than to suffer injustice?

POLUS: Exactly so.

SOCRATES: And you said the opposite?

POLUS: Yes.

SOCRATES: I said also that the wicked are miserable, and you refuted me?

POLUS: By Zeus, I did.

SOCRATES: In your own opinion, Polus.

POLUS: Yes, and I rather suspect that I was in the right.

SOCRATES: You further said that the wrong-doer is happy if he be unpunished?

POLUS: Certainly.

SOCRATES: And I affirm that he is most miserable, and that those who are punished are less miserable—are you going to refute this proposition also?

POLUS: A proposition which is harder of refutation than the other, Socrates.

SOCRATES: Say rather, Polus, impossible; for who can refute the truth?

POLUS: What do you mean? If a man is detected in an unjust attempt to make himself a tyrant, and when detected is racked, mutilated, has his eyes burned out, and after having had all sorts of great injuries inflicted on him, and having seen his wife and children suffer the like, is at last impaled or tarred and burned alive, will he be happier than if he escape and become a tyrant, and continue all through life doing what he likes and holding the reins of government, the envy and admiration both of citizens and strangers? Is that the paradox which, as you say, cannot be refuted?

SOCRATES: There again, noble Polus, you are raising hobgoblins instead of refuting me; just now you were calling witnesses against me. But please to refresh my memory a little; did you say—'in an unjust attempt to make himself a tyrant'?

POLUS: Yes, I did.

SOCRATES: Then I say that neither of them will be happier than the other,—neither he who unjustly acquires a tyranny, nor he who suffers in the attempt, for of two miserables one cannot be the happier, but that he who escapes and becomes a tyrant is the more miserable of the two. Do you laugh, Polus? Well, this is a new kind of refutation,—when any one says anything, instead of refuting him to laugh at him.

POLUS: But do you not think, Socrates, that you have been sufficiently refuted, when you say that which no human being will allow? Ask the company.

SOCRATES: O Polus, I am not a public man, and only last year, when my tribe were serving as Prytanes, and it became my duty as their president to take the votes, there was a laugh at me, because I was unable to take them. And as I failed then, you must not ask me to count the suffrages of the company now; but if, as I was saying, you have no better argument than numbers, let me have a turn, and do you make trial of the sort of proof which, as I think, is required; for I shall produce one witness only of the truth of my words, and he is the person with whom I am arguing; his suffrage I know how to take; but with the many I have nothing to do, and do not even address myself to them. May I ask then whether you will answer in turn and have your words put to the proof? For I certainly think that I and you and every man do really believe, that to do is a greater evil than to suffer injustice: and not to be punished than to be punished.

POLUS: And I should say neither I, nor any man: would you yourself, for example, suffer rather than do injustice?

SOCRATES: Yes, and you, too; I or any man would.

POLUS: Quite the reverse; neither you, nor I, nor any man.

SOCRATES: But will you answer?

POLUS: To be sure, I will; for I am curious to hear what you can have to say.

SOCRATES: Tell me, then, and you will know, and let us suppose that I am beginning at the beginning: which of the two, Polus, in your opinion, is the worst?—to do injustice or to suffer?

POLUS: I should say that suffering was worst.

SOCRATES: And which is the greater disgrace?—Answer.

POLUS: To do.

SOCRATES: And the greater disgrace is the greater evil?

POLUS: Certainly not.

SOCRATES: I understand you to say, if I am not mistaken, that the honourable is not the same as the good, or the disgraceful as the evil?

POLUS: Certainly not.

SOCRATES: Let me ask a question of you: When you speak of beautiful things, such as bodies, colours, figures, sounds, institutions, do you not call them beautiful in reference to some standard: bodies, for example, are beautiful in proportion as they are useful, or as the sight of them gives pleasure to the spectators; can you give any other account of personal beauty?

POLUS: I cannot.

SOCRATES: And you would say of figures or colours generally that they were beautiful, either by reason of the pleasure which they give, or of their use, or of both?

POLUS: Yes, I should.

SOCRATES: And you would call sounds and music beautiful for the same reason?

POLUS: I should.

SOCRATES: Laws and institutions also have no beauty in them except in so far as they are useful or pleasant or both?

POLUS: I think not.

SOCRATES: And may not the same be said of the beauty of knowledge?

POLUS: To be sure, Socrates; and I very much approve of your measuring beauty by the standard of pleasure and utility.

SOCRATES: And deformity or disgrace may be equally measured by the opposite standard of pain and evil?

POLUS: Certainly.

SOCRATES: Then when of two beautiful things one exceeds in beauty, the measure of the excess is to be taken in one or both of these; that is to say, in pleasure or utility or both?

POLUS: Very true.

SOCRATES: And of two deformed things, that which exceeds in deformity or disgrace, exceeds either in pain or evil—must it not be so?

POLUS: Yes.

SOCRATES: But then again, what was the observation which you just now made, about doing and suffering wrong? Did you not say, that suffering wrong was more evil, and doing wrong more disgraceful?

POLUS: I did.

SOCRATES: Then, if doing wrong is more disgraceful than suffering, the more disgraceful must be more painful and must exceed in pain or in evil or both: does not that also follow?

POLUS: Of course.

SOCRATES: First, then, let us consider whether the doing of injustice exceeds the suffering in the consequent pain: Do the injurers suffer more than the injured?

POLUS: No, Socrates; certainly not.

SOCRATES: Then they do not exceed in pain?

POLUS: No.

SOCRATES: But if not in pain, then not in both?

POLUS: Certainly not.

SOCRATES: Then they can only exceed in the other?

POLUS: Yes.

SOCRATES: That is to say, in evil?

POLUS: True.

SOCRATES: Then doing injustice will have an excess of evil, and will therefore be a greater evil than suffering injustice?

POLUS: Clearly.

SOCRATES: But have not you and the world already agreed that to do injustice is more disgraceful than to suffer?

POLUS: Yes.

SOCRATES: And that is now discovered to be more evil?

POLUS: True.

SOCRATES: And would you prefer a greater evil or a greater dishonour to a less one? Answer, Polus, and fear not; for you will come to no harm if you nobly resign yourself into the healing hand of the argument as to a physician without shrinking, and either say 'Yes' or 'No' to me.

POLUS: I should say 'No.'

SOCRATES: Would any other man prefer a greater to a less evil?

POLUS: No, not according to this way of putting the case, Socrates.

SOCRATES: Then I said truly, Polus, that neither you, nor I, nor any man, would rather do than suffer injustice; for to do injustice is the greater evil of the two.

POLUS: That is the conclusion.

SOCRATES: You see, Polus, when you compare the two kinds of refutations, how unlike they are. All men, with the exception of myself, are of your way of thinking; but your single assent and witness are enough for me,—I have no need of any other, I take your suffrage, and am regardless of the rest. Enough of this, and now let us proceed to the next question; which is, Whether the greatest of evils to a guilty man is to suffer punishment, as you supposed, or whether to escape punishment is not a greater evil, as I supposed. Consider:—You would say that to suffer punishment is another name for being justly corrected when you do wrong?

POLUS: I should.

SOCRATES: And would you not allow that all just things are honourable in so far as they are just? Please to reflect, and tell me your opinion.

POLUS: Yes, Socrates, I think that they are.

SOCRATES: Consider again:—Where there is an agent, must there not also be a patient?

POLUS: I should say so.

SOCRATES: And will not the patient suffer that which the agent does, and will not the suffering have the quality of the action? I mean, for example, that if a man strikes, there must be something which is stricken?

POLUS: Yes.

SOCRATES: And if the striker strikes violently or quickly, that which is struck will be struck violently or quickly?

POLUS: True.

SOCRATES: And the suffering to him who is stricken is of the same nature as the act of him who strikes?

POLUS: Yes.

SOCRATES: And if a man burns, there is something which is burned?

POLUS: Certainly.

SOCRATES: And if he burns in excess or so as to cause pain, the thing burned will be burned in the same way?

POLUS: Truly.

SOCRATES: And if he cuts, the same argument holds—there will be something cut?

POLUS: Yes.

SOCRATES: And if the cutting be great or deep or such as will cause pain, the cut will be of the same nature?

POLUS: That is evident.

SOCRATES: Then you would agree generally to the universal proposition which I was just now asserting: that the affection of the patient answers to the affection of the agent?

POLUS: I agree.

SOCRATES: Then, as this is admitted, let me ask whether being punished is suffering or acting?

POLUS: Suffering, Socrates; there can be no doubt of that.

SOCRATES: And suffering implies an agent?

POLUS: Certainly, Socrates; and he is the punisher.

SOCRATES: And he who punishes rightly, punishes justly?

POLUS: Yes.

SOCRATES: And therefore he acts justly?

POLUS: Justly.

SOCRATES: Then he who is punished and suffers retribution, suffers justly?

POLUS: That is evident.

SOCRATES: And that which is just has been admitted to be honourable?

POLUS: Certainly.

SOCRATES: Then the punisher does what is honourable, and the punished suffers what is honourable?

POLUS: True.

SOCRATES: And if what is honourable, then what is good, for the honourable is either pleasant or useful?

POLUS: Certainly.

SOCRATES: Then he who is punished suffers what is good?

POLUS: That is true.

SOCRATES: Then he is benefited?

POLUS: Yes.

SOCRATES: Do I understand you to mean what I mean by the term 'benefited'? I mean, that if he be justly punished his soul is improved.

POLUS: Surely.

SOCRATES: Then he who is punished is delivered from the evil of his soul?

POLUS: Yes.

SOCRATES: And is he not then delivered from the greatest evil? Look at the matter in this way:—In respect of a man's estate, do you see any greater evil than poverty?

POLUS: There is no greater evil.

SOCRATES: Again, in a man's bodily frame, you would say that the evil is weakness and disease and deformity?

POLUS: I should.

SOCRATES: And do you not imagine that the soul likewise has some evil of her own?

POLUS: Of course.

SOCRATES: And this you would call injustice and ignorance and cowardice, and the like?

POLUS: Certainly.

SOCRATES: So then, in mind, body, and estate, which are three, you have pointed out three corresponding evils—injustice, disease, poverty?

POLUS: True.

SOCRATES: And which of the evils is the most disgraceful?—Is not the most disgraceful of them injustice, and in general the evil of the soul?

POLUS: By far the most.

SOCRATES: And if the most disgraceful, then also the worst?

POLUS: What do you mean, Socrates?

SOCRATES: I mean to say, that is most disgraceful has been already admitted to be most painful or hurtful, or both.

POLUS: Certainly.

SOCRATES: And now injustice and all evil in the soul has been admitted by us to be most disgraceful?

POLUS: It has been admitted.

SOCRATES: And most disgraceful either because most painful and causing excessive pain, or most hurtful, or both?

POLUS: Certainly.

SOCRATES: And therefore to be unjust and intemperate, and cowardly and ignorant, is more painful than to be poor and sick?

POLUS: Nay, Socrates; the painfulness does not appear to me to follow from your premises.

SOCRATES: Then, if, as you would argue, not more painful, the evil of the soul is of all evils the most disgraceful; and the excess of disgrace must be caused by some preternatural greatness, or extraordinary hurtfulness of the evil.

POLUS: Clearly.

SOCRATES: And that which exceeds most in hurtfulness will be the greatest of evils?

POLUS: Yes.

SOCRATES: Then injustice and intemperance, and in general the depravity of the soul, are the greatest of evils?

POLUS: That is evident.

SOCRATES: Now, what art is there which delivers us from poverty? Does not the art of making money?

POLUS: Yes.

SOCRATES: And what art frees us from disease? Does not the art of medicine?

POLUS: Very true.

SOCRATES: And what from vice and injustice? If you are not able to answer at once, ask yourself whither we go with the sick, and to whom we take them.

POLUS: To the physicians, Socrates.

SOCRATES: And to whom do we go with the unjust and intemperate?

POLUS: To the judges, you mean.

SOCRATES: —Who are to punish them?

POLUS: Yes.

SOCRATES: And do not those who rightly punish others, punish them in accordance with a certain rule of justice?

POLUS: Clearly.

SOCRATES: Then the art of money-making frees a man from poverty; medicine from disease; and justice from intemperance and injustice?

POLUS: That is evident.

SOCRATES: Which, then, is the best of these three?

POLUS: Will you enumerate them?

SOCRATES: Money-making, medicine, and justice.

POLUS: Justice, Socrates, far excels the two others.

SOCRATES: And justice, if the best, gives the greatest pleasure or advantage or both?

POLUS: Yes.

SOCRATES: But is the being healed a pleasant thing, and are those who are being healed pleased?

POLUS: I think not.

SOCRATES: A useful thing, then?

POLUS: Yes.

SOCRATES: Yes, because the patient is delivered from a great evil; and this is the advantage of enduring the pain—that you get well?

POLUS: Certainly.

SOCRATES: And would he be the happier man in his bodily condition, who is healed, or who never was out of health?

POLUS: Clearly he who was never out of health.

SOCRATES: Yes; for happiness surely does not consist in being delivered from evils, but in never having had them.

POLUS: True.

SOCRATES: And suppose the case of two persons who have some evil in their bodies, and that one of them is healed and delivered from evil, and another is not healed, but retains the evil—which of them is the most miserable?

POLUS: Clearly he who is not healed.

SOCRATES: And was not punishment said by us to be a deliverance from the greatest of evils, which is vice?

POLUS: True.

SOCRATES: And justice punishes us, and makes us more just, and is the medicine of our vice?

POLUS: True.

SOCRATES: He, then, has the first place in the scale of happiness who has never had vice in his soul; for this has been shown to be the greatest of evils.

POLUS: Clearly.

SOCRATES: And he has the second place, who is delivered from vice?

POLUS: True.

SOCRATES: That is to say, he who receives admonition and rebuke and punishment?

POLUS: Yes.

SOCRATES: Then he lives worst, who, having been unjust, has no deliverance from injustice?

POLUS: Certainly.

SOCRATES: That is, he lives worst who commits the greatest crimes, and who, being the most unjust of men, succeeds in escaping rebuke or correction or punishment; and this, as you say, has been accomplished by Archelaus and other tyrants and rhetoricians and potentates? (Compare Republic.)

POLUS: True.

SOCRATES: May not their way of proceeding, my friend, be compared to the conduct of a person who is afflicted with the worst of diseases and yet contrives not to pay the penalty to the physician for his sins against his constitution, and will not be cured, because, like a child, he is afraid of the pain of being burned or cut:—Is not that a parallel case?

POLUS: Yes, truly.

SOCRATES: He would seem as if he did not know the nature of health and bodily vigour; and if we are right, Polus, in our previous conclusions, they are in a like case who strive to evade justice, which they see to be painful, but are blind to the advantage which ensues from it, not knowing how far more miserable a companion a diseased soul is than a diseased body; a soul, I say, which is corrupt and unrighteous and unholy. And hence they do all that they can to avoid punishment and to avoid being released from the greatest of evils; they provide themselves with money and friends, and cultivate to the utmost their powers of persuasion. But if we, Polus, are right, do you see what follows, or shall we draw out the consequences in form?

POLUS: If you please.

SOCRATES: Is it not a fact that injustice, and the doing of injustice, is the greatest of evils?

POLUS: That is quite clear.

SOCRATES: And further, that to suffer punishment is the way to be released from this evil?

POLUS: True.

SOCRATES: And not to suffer, is to perpetuate the evil?

POLUS: Yes.

SOCRATES: To do wrong, then, is second only in the scale of evils; but to do wrong and not to be punished, is first and greatest of all?

POLUS: That is true.

SOCRATES: Well, and was not this the point in dispute, my friend? You deemed Archelaus happy, because he was a very great criminal and unpunished: I, on the other hand, maintained that he or any other who like him has done wrong and has not been punished, is, and ought to be, the most miserable of all men; and that the doer of injustice is more miserable than the sufferer; and he who escapes punishment, more miserable than he who suffers.—Was not that what I said?

POLUS: Yes.

SOCRATES: And it has been proved to be true?

POLUS: Certainly.

SOCRATES: Well, Polus, but if this is true, where is the great use of rhetoric? If we admit what has been just now said, every man ought in every way to guard himself against doing wrong, for he will thereby suffer great evil?

POLUS: True.

SOCRATES: And if he, or any one about whom he cares, does wrong, he ought of his own accord to go where he will be immediately punished; he will run to the judge, as he would to the physician, in order that the disease of injustice may not be rendered chronic and become the incurable cancer of the soul; must we not allow this consequence, Polus, if our former admissions are to stand:—is any other inference consistent with them?

POLUS: To that, Socrates, there can be but one answer.

SOCRATES: Then rhetoric is of no use to us, Polus, in helping a man to excuse his own injustice, that of his parents or friends, or children or country; but may be of use to any one who holds that instead of excusing he ought to accuse—himself above all, and in the next degree his family or any of his friends who may be doing wrong; he should bring to light the iniquity and not conceal it, that so the wrong-doer may suffer and be made whole; and he should even force himself and others not to

shrink, but with closed eyes like brave men to let the physician operate with knife or searing iron, not regarding the pain, in the hope of attaining the good and the honourable; let him who has done things worthy of stripes, allow himself to be scourged, if of bonds, to be bound, if of a fine, to be fined, if of exile, to be exiled, if of death, to die, himself being the first to accuse himself and his own relations, and using rhetoric to this end, that his and their unjust actions may be made manifest, and that they themselves may be delivered from injustice, which is the greatest evil. Then, Polus, rhetoric would indeed be useful. Do you say 'Yes' or 'No' to that?

POLUS: To me, Socrates, what you are saying appears very strange, though probably in agreement with your premises.

SOCRATES: Is not this the conclusion, if the premises are not disproven?

POLUS: Yes; it certainly is.

SOCRATES: And from the opposite point of view, if indeed it be our duty to harm another, whether an enemy or not—I except the case of self-defence—then I have to be upon my guard—but if my enemy injures a third person, then in every sort of way, by word as well as deed, I should try to prevent his being punished, or appearing before the judge; and if he appears, I should contrive that he should escape, and not suffer punishment: if he has stolen a sum of money, let him keep what he has stolen and spend it on him and his, regardless of religion and justice; and if he have done things worthy of death, let him not die, but rather be immortal in his wickedness; or, if this is not possible, let him at any rate be allowed to live as long as he can. For such purposes, Polus, rhetoric may be useful, but is of small if of any use to him who is not intending to commit injustice; at least, there was no such use discovered by us in the previous discussion.

CALLICLES: Tell me, Chaerephon, is Socrates in earnest, or is he joking?

CHAEREPHON: I should say, Callicles, that he is in most profound earnest; but you may well ask him.

CALLICLES: By the gods, and I will. Tell me, Socrates, are you in earnest, or only in jest? For if you are in earnest, and what you say is true, is not the whole of human life turned upside down; and are we not doing, as would appear, in everything the opposite of what we ought to be doing?

SOCRATES: O Callicles, if there were not some community of feelings among mankind, however varying in different persons—I mean to say, if every man's feelings were peculiar to himself and were not shared by the rest of his species—I do not see how we could ever communicate our impressions to one another. I make this remark because I perceive that you and I have a common feeling. For we are lovers both, and both of us have two loves apiece:—I am the lover of Alcibiades, the son of Cleinias, and of philosophy; and you of the Athenian Demus, and of Demus the son of Pyrilampes. Now, I observe that you, with all your cleverness, do not venture to contradict your favourite in any word or opinion of his; but as he changes you change, backwards and forwards. When the Athenian Demus denies anything that you are saying in the assembly, you go over to his opinion; and you do the same with Demus, the fair young son of Pyrilampes. For you have not the power to resist the words and ideas of your loves; and if a person were to express surprise at the strangeness of what

you say from time to time when under their influence, you would probably reply to him, if you were honest, that you cannot help saying what your loves say unless they are prevented; and that you can only be silent when they are. Now you must understand that my words are an echo too, and therefore you need not wonder at me; but if you want to silence me, silence philosophy, who is my love, for she is always telling me what I am now telling you, my friend; neither is she capricious like my other love, for the son of Cleinias says one thing to-day and another thing to-morrow, but philosophy is always true. She is the teacher at whose words you are now wondering, and you have heard her yourself. Her you must refute, and either show, as I was saying, that to do injustice and to escape punishment is not the worst of all evils; or, if you leave her word unrefuted, by the dog the god of Egypt, I declare, O Callicles, that Callicles will never be at one with himself, but that his whole life will be a discord. And yet, my friend, I would rather that my lyre should be inharmonious, and that there should be no music in the chorus which I provided; aye, or that the whole world should be at odds with me, and oppose me, rather than that I myself should be at odds with myself, and contradict myself.

CALLICLES: O Socrates, you are a regular declaimer, and seem to be running riot in the argument. And now you are declaiming in this way because Polus has fallen into the same error himself of which he accused Gorgias:—for he said that when Gorgias was asked by you, whether, if some one came to him who wanted to learn rhetoric, and did not know justice, he would teach him justice, Gorgias in his modesty replied that he would, because he thought that mankind in general would be displeased if he answered 'No'; and then in consequence of this admission, Gorgias was compelled to contradict himself, that being just the sort of thing in which you delight. Whereupon Polus laughed at you deservedly, as I think; but now he has himself fallen into the same trap. I cannot say very much for his wit when he conceded to you that to do is more dishonourable than to suffer injustice, for this was the admission which led to his being entangled by you; and because he was too modest to say what he thought, he had his mouth stopped. For the truth is, Socrates, that you, who pretend to be engaged in the pursuit of truth, are appealing now to the popular and vulgar notions of right, which are not natural, but only conventional. Convention and nature are generally at variance with one another: and hence, if a person is too modest to say what he thinks, he is compelled to contradict himself; and you, in your ingenuity perceiving the advantage to be thereby gained, slyly ask of him who is arguing conventionally a question which is to be determined by the rule of nature; and if he is talking of the rule of nature, you slip away to custom: as, for instance, you did in this very discussion about doing and suffering injustice. When Polus was speaking of the conventionally dishonourable, you assailed him from the point of view of nature; for by the rule of nature, to suffer injustice is the greater disgrace because the greater evil; but conventionally, to do evil is the more disgraceful. For the suffering of injustice is not the part of a man, but of a slave, who indeed had better die than live; since when he is wronged and trampled upon, he is unable to help himself, or any other about whom he cares. The reason, as I conceive, is that the makers of laws are the majority who are weak; and they make laws and distribute praises and censures with a view to themselves and to their own interests; and they terrify the stronger sort of men, and those who are able to get the better of them, in order that they may not get the better of them; and they say, that dishonesty is shameful and unjust; meaning, by the word injustice, the desire of a man to have more than his neighbours; for knowing their own inferiority, I suspect that they are too glad of equality. And therefore the endeavour to have more than the many, is conventionally said to be shameful and unjust, and is called injustice (compare Republic), whereas nature herself intimates that it is just for the better to have more than the worse, the more powerful than the weaker; and in many ways she shows, among men as well as among animals, and indeed among whole cities and races, that justice consists in the superior ruling over and having more than

the inferior. For on what principle of justice did Xerxes invade Hellas, or his father the Scythians? (not to speak of numberless other examples). Nay, but these are the men who act according to nature; yes, by Heaven, and according to the law of nature: not, perhaps, according to that artificial law, which we invent and impose upon our fellows, of whom we take the best and strongest from their youth upwards, and tame them like young lions,—charming them with the sound of the voice, and saying to them, that with equality they must be content, and that the equal is the honourable and the just. But if there were a man who had sufficient force, he would shake off and break through, and escape from all this; he would trample under foot all our formulas and spells and charms, and all our laws which are against nature: the slave would rise in rebellion and be lord over us, and the light of natural justice would shine forth. And this I take to be the sentiment of Pindar, when he says in his poem, that

'Law is the king of all, of mortals as well as of immortals;'

this, as he says,

'Makes might to be right, doing violence with highest hand; as I infer from the deeds of Heracles, for without buying them—' (Fragm. Incert. 151 (Bockh).) —I do not remember the exact words, but the meaning is, that without buying them, and without their being given to him, he carried off the oxen of Geryon, according to the law of natural right, and that the oxen and other possessions of the weaker and inferior properly belong to the stronger and superior. And this is true, as you may ascertain, if you will leave philosophy and go on to higher things: for philosophy, Socrates, if pursued in moderation and at the proper age, is an elegant accomplishment, but too much philosophy is the ruin of human life. Even if a man has good parts, still, if he carries philosophy into later life, he is necessarily ignorant of all those things which a gentleman and a person of honour ought to know; he is inexperienced in the laws of the State, and in the language which ought to be used in the dealings of man with man, whether private or public, and utterly ignorant of the pleasures and desires of mankind and of human character in general. And people of this sort, when they betake themselves to politics or business, are as ridiculous as I imagine the politicians to be, when they make their appearance in the arena of philosophy. For, as Euripides says,

'Every man shines in that and pursues that, and devotes the greatest portion of the day to that in which he most excels,' (Antiope, fragm. 20 (Dindorf).)

but anything in which he is inferior, he avoids and depreciates, and praises the opposite from partiality to himself, and because he thinks that he will thus praise himself. The true principle is to unite them. Philosophy, as a part of education, is an excellent thing, and there is no disgrace to a man while he is young in pursuing such a study; but when he is more advanced in years, the thing becomes ridiculous, and I feel towards philosophers as I do towards those who lisp and imitate children. For I love to see a little child, who is not of an age to speak plainly, lisping at his play; there is an appearance of grace and freedom in his utterance, which is natural to his childish years. But when I hear some small creature carefully articulating its words, I am offended; the sound is disagreeable, and has to my ears the twang of slavery. So when I hear a man lisping, or see him playing like a child, his behaviour appears to me ridiculous and unmanly and worthy of stripes. And I have the same feeling about students of philosophy; when I see a youth thus engaged,—the study appears to me to be in character, and becoming a man of liberal education, and him who neglects

philosophy I regard as an inferior man, who will never aspire to anything great or noble. But if I see him continuing the study in later life, and not leaving off, I should like to beat him, Socrates; for, as I was saying, such a one, even though he have good natural parts, becomes effeminate. He flies from the busy centre and the market-place, in which, as the poet says, men become distinguished; he creeps into a corner for the rest of his life, and talks in a whisper with three or four admiring youths, but never speaks out like a freeman in a satisfactory manner. Now I, Socrates, am very well inclined towards you, and my feeling may be compared with that of Zethus towards Amphion, in the play of Euripides, whom I was mentioning just now: for I am disposed to say to you much what Zethus said to his brother, that you, Socrates, are careless about the things of which you ought to be careful; and that you

'Who have a soul so noble, are remarkable for a puerile exterior; Neither in a court of justice could you state a case, or give any reason or proof, Or offer valiant counsel on another's behalf.'

And you must not be offended, my dear Socrates, for I am speaking out of good-will towards you, if I ask whether you are not ashamed of being thus defenceless; which I affirm to be the condition not of you only but of all those who will carry the study of philosophy too far. For suppose that some one were to take you, or any one of your sort, off to prison, declaring that you had done wrong when you had done no wrong, you must allow that you would not know what to do:—there you would stand giddy and gaping, and not having a word to say; and when you went up before the Court, even if the accuser were a poor creature and not good for much, you would die if he were disposed to claim the penalty of death. And yet, Socrates, what is the value of

'An art which converts a man of sense into a fool,'

who is helpless, and has no power to save either himself or others, when he is in the greatest danger and is going to be despoiled by his enemies of all his goods, and has to live, simply deprived of his rights of citizenship?—he being a man who, if I may use the expression, may be boxed on the ears with impunity. Then, my good friend, take my advice, and refute no more:

'Learn the philosophy of business, and acquire the reputation of wisdom. But leave to others these niceties,'

whether they are to be described as follies or absurdities:

'For they will only Give you poverty for the inmate of your dwelling.'

Cease, then, emulating these paltry splitters of words, and emulate only the man of substance and honour, who is well to do.

SOCRATES: If my soul, Callicles, were made of gold, should I not rejoice to discover one of those stones with which they test gold, and the very best possible one to which I might bring my soul; and if the stone and I agreed in approving of her training, then I should know that I was in a satisfactory state, and that no other test was needed by me.

CALLICLES: What is your meaning, Socrates?

SOCRATES: I will tell you; I think that I have found in you the desired touchstone.

CALLICLES: Why?

SOCRATES: Because I am sure that if you agree with me in any of the opinions which my soul forms, I have at last found the truth indeed. For I consider that if a man is to make a complete trial of the good or evil of the soul, he ought to have three qualities—knowledge, good-will, outspokenness, which are all possessed by you. Many whom I meet are unable to make trial of me, because they are not wise as you are; others are wise, but they will not tell me the truth, because they have not the same interest in me which you have; and these two strangers, Gorgias and Polus, are undoubtedly wise men and my very good friends, but they are not outspoken enough, and they are too modest. Why, their modesty is so great that they are driven to contradict themselves, first one and then the other of them, in the face of a large company, on matters of the highest moment. But you have all the qualities in which these others are deficient, having received an excellent education; to this many Athenians can testify. And you are my friend. Shall I tell you why I think so? I know that you, Callicles, and Tisander of Aphidnae, and Andron the son of Androtion, and Nausicydes of the deme of Cholarges, studied together: there were four of you, and I once heard you advising with one another as to the extent to which the pursuit of philosophy should be carried, and, as I know, you came to the conclusion that the study should not be pushed too much into detail. You were cautioning one another not to be overwise; you were afraid that too much wisdom might unconsciously to yourselves be the ruin of you. And now when I hear you giving the same advice to me which you then gave to your most intimate friends, I have a sufficient evidence of your real good-will to me. And of the frankness of your nature and freedom from modesty I am assured by yourself, and the assurance is confirmed by your last speech. Well then, the inference in the present case clearly is, that if you agree with me in an argument about any point, that point will have been sufficiently tested by us, and will not require to be submitted to any further test. For you could not have agreed with me, either from lack of knowledge or from superfluity of modesty, nor yet from a desire to deceive me, for you are my friend, as you tell me yourself. And therefore when you and I are agreed, the result will be the attainment of perfect truth. Now there is no nobler enquiry, Callicles, than that which you censure me for making,—What ought the character of a man to be, and what his pursuits, and how far is he to go, both in maturer years and in youth? For be assured that if I err in my own conduct I do not err intentionally, but from ignorance. Do not then desist from advising me, now that you have begun, until I have learned clearly what this is which I am to practise, and how I may acquire it. And if you find me assenting to your words, and hereafter not doing that to which I assented, call me 'dolt,' and deem me unworthy of receiving further instruction. Once more, then, tell me what you and Pindar mean by natural justice: Do you not mean that the superior should take the property of the inferior by force; that the better should rule the worse, the noble have more than the mean? Am I not right in my recollection?

CALLICLES: Yes; that is what I was saying, and so I still aver.

SOCRATES: And do you mean by the better the same as the superior? for I could not make out what you were saying at the time—whether you meant by the superior the stronger, and that the weaker must obey the stronger, as you seemed to imply when you said that great cities attack small ones in accordance with natural right, because they are superior and stronger, as though the superior and stronger and better were the same; or whether the better may be also the inferior and weaker, and

the superior the worse, or whether better is to be defined in the same way as superior:—this is the point which I want to have cleared up. Are the superior and better and stronger the same or different?

CALLICLES: I say unequivocally that they are the same.

SOCRATES: Then the many are by nature superior to the one, against whom, as you were saying, they make the laws?

CALLICLES: Certainly.

SOCRATES: Then the laws of the many are the laws of the superior?

CALLICLES: Very true.

SOCRATES: Then they are the laws of the better; for the superior class are far better, as you were saying?

CALLICLES: Yes.

SOCRATES: And since they are superior, the laws which are made by them are by nature good?

CALLICLES: Yes.

SOCRATES: And are not the many of opinion, as you were lately saying, that justice is equality, and that to do is more disgraceful than to suffer injustice?—is that so or not? Answer, Callicles, and let no modesty be found to come in the way; do the many think, or do they not think thus?—I must beg of you to answer, in order that if you agree with me I may fortify myself by the assent of so competent an authority.

CALLICLES: Yes; the opinion of the many is what you say.

SOCRATES: Then not only custom but nature also affirms that to do is more disgraceful than to suffer injustice, and that justice is equality; so that you seem to have been wrong in your former assertion, when accusing me you said that nature and custom are opposed, and that I, knowing this, was dishonestly playing between them, appealing to custom when the argument is about nature, and to nature when the argument is about custom?

CALLICLES: This man will never cease talking nonsense. At your age, Socrates, are you not ashamed to be catching at words and chuckling over some verbal slip? do you not see—have I not told you already, that by superior I mean better: do you imagine me to say, that if a rabble of slaves and nondescripts, who are of no use except perhaps for their physical strength, get together, their ipsissima verba are laws?

SOCRATES: Ho! my philosopher, is that your line?

CALLICLES: Certainly.

SOCRATES: I was thinking, Callicles, that something of the kind must have been in your mind, and that is why I repeated the question,—What is the superior? I wanted to know clearly what you meant; for you surely do not think that two men are better than one, or that your slaves are better than you because they are stronger? Then please to begin again, and tell me who the better are, if they are not the stronger; and I will ask you, great Sir, to be a little milder in your instructions, or I shall have to run away from you.

CALLICLES: You are ironical.

SOCRATES: No, by the hero Zethus, Callicles, by whose aid you were just now saying many ironical things against me, I am not:—tell me, then, whom you mean, by the better?

CALLICLES: I mean the more excellent.

SOCRATES: Do you not see that you are yourself using words which have no meaning and that you are explaining nothing?—will you tell me whether you mean by the better and superior the wiser, or if not, whom?

CALLICLES: Most assuredly, I do mean the wiser.

SOCRATES: Then according to you, one wise man may often be superior to ten thousand fools, and he ought to rule them, and they ought to be his subjects, and he ought to have more than they should. This is what I believe that you mean (and you must not suppose that I am word-catching), if you allow that the one is superior to the ten thousand?

CALLICLES: Yes; that is what I mean, and that is what I conceive to be natural justice—that the better and wiser should rule and have more than the inferior.

SOCRATES: Stop there, and let me ask you what you would say in this case: Let us suppose that we are all together as we are now; there are several of us, and we have a large common store of meats and drinks, and there are all sorts of persons in our company having various degrees of strength and weakness, and one of us, being a physician, is wiser in the matter of food than all the rest, and he is probably stronger than some and not so strong as others of us—will he not, being wiser, be also better than we are, and our superior in this matter of food?

CALLICLES: Certainly.

SOCRATES: Either, then, he will have a larger share of the meats and drinks, because he is better, or he will have the distribution of all of them by reason of his authority, but he will not expend or make use of a larger share of them on his own person, or if he does, he will be punished;—his share will exceed that of some, and be less than that of others, and if he be the weakest of all, he being the best of all will have the smallest share of all, Callicles:—am I not right, my friend?

CALLICLES: You talk about meats and drinks and physicians and other nonsense; I am not speaking of them.

SOCRATES: Well, but do you admit that the wiser is the better? Answer 'Yes' or 'No.'

CALLICLES: Yes.

SOCRATES: And ought not the better to have a larger share?

CALLICLES: Not of meats and drinks.

SOCRATES: I understand: then, perhaps, of coats—the skilfullest weaver ought to have the largest coat, and the greatest number of them, and go about clothed in the best and finest of them?

CALLICLES: Fudge about coats!

SOCRATES: Then the skilfullest and best in making shoes ought to have the advantage in shoes; the shoemaker, clearly, should walk about in the largest shoes, and have the greatest number of them?

CALLICLES: Fudge about shoes! What nonsense are you talking?

SOCRATES: Or, if this is not your meaning, perhaps you would say that the wise and good and true husbandman should actually have a larger share of seeds, and have as much seed as possible for his own land?

CALLICLES: How you go on, always talking in the same way, Socrates!

SOCRATES: Yes, Callicles, and also about the same things.

CALLICLES: Yes, by the Gods, you are literally always talking of cobblers and fullers and cooks and doctors, as if this had to do with our argument.

SOCRATES: But why will you not tell me in what a man must be superior and wiser in order to claim a larger share; will you neither accept a suggestion, nor offer one?

CALLICLES: I have already told you. In the first place, I mean by superiors not cobblers or cooks, but wise politicians who understand the administration of a state, and who are not only wise, but also valiant and able to carry out their designs, and not the men to faint from want of soul.

SOCRATES: See now, most excellent Callicles, how different my charge against you is from that which you bring against me, for you reproach me with always saying the same; but I reproach you with never saying the same about the same things, for at one time you were defining the better and the superior to be the stronger, then again as the wiser, and now you bring forward a new notion; the superior and the better are now declared by you to be the more courageous: I wish, my good friend, that you would tell me, once for all, whom you affirm to be the better and superior, and in what they are better?

CALLICLES: I have already told you that I mean those who are wise and courageous in the administration of a state—they ought to be the rulers of their states, and justice consists in their having more than their subjects.

SOCRATES: But whether rulers or subjects will they or will they not have more than themselves, my friend?

CALLICLES: What do you mean?

SOCRATES: I mean that every man is his own ruler; but perhaps you think that there is no necessity for him to rule himself; he is only required to rule others?

CALLICLES: What do you mean by his 'ruling over himself'?

SOCRATES: A simple thing enough; just what is commonly said, that a man should be temperate and master of himself, and ruler of his own pleasures and passions.

CALLICLES: What innocence! you mean those fools,—the temperate?

SOCRATES: Certainly:—any one may know that to be my meaning.

CALLICLES: Quite so, Socrates; and they are really fools, for how can a man be happy who is the servant of anything? On the contrary, I plainly assert, that he who would truly live ought to allow his desires to wax to the uttermost, and not to chastise them; but when they have grown to their greatest he should have courage and intelligence to minister to them and to satisfy all his longings. And this I affirm to be natural justice and nobility. To this however the many cannot attain; and they blame the strong man because they are ashamed of their own weakness, which they desire to conceal, and hence they say that intemperance is base. As I have remarked already, they enslave the nobler natures, and being unable to satisfy their pleasures, they praise temperance and justice out of their own cowardice. For if a man had been originally the son of a king, or had a nature capable of acquiring an empire or a tyranny or sovereignty, what could be more truly base or evil than temperance—to a man like him, I say, who might freely be enjoying every good, and has no one to stand in his way, and yet has admitted custom and reason and the opinion of other men to be lords over him?—must not he be in a miserable plight whom the reputation of justice and temperance hinders from giving more to his friends than to his enemies, even though he be a ruler in his city? Nay, Socrates, for you profess to be a votary of the truth, and the truth is this:—that luxury and intemperance and licence, if they be provided with means, are virtue and happiness—all the rest is a mere bauble, agreements contrary to nature, foolish talk of men, nothing worth. (Compare Republic.)

SOCRATES: There is a noble freedom, Callicles, in your way of approaching the argument; for what you say is what the rest of the world think, but do not like to say. And I must beg of you to persevere, that the true rule of human life may become manifest. Tell me, then:—you say, do you not, that in the rightly-developed man the passions ought not to be controlled, but that we should let them grow to the utmost and somehow or other satisfy them, and that this is virtue?

CALLICLES: Yes; I do.

SOCRATES: Then those who want nothing are not truly said to be happy?

CALLICLES: No indeed, for then stones and dead men would be the happiest of all.

SOCRATES: But surely life according to your view is an awful thing; and indeed I think that Euripides may have been right in saying,

'Who knows if life be not death and death life;'

and that we are very likely dead; I have heard a philosopher say that at this moment we are actually dead, and that the body (soma) is our tomb (sema (compare Phaedr.)), and that the part of the soul which is the seat of the desires is liable to be tossed about by words and blown up and down; and some ingenious person, probably a Sicilian or an Italian, playing with the word, invented a tale in which he called the soul—because of its believing and make-believe nature—a vessel (An untranslatable pun,—dia to pithanon te kai pistikon onomase pithon.), and the ignorant he called the uninitiated or leaky, and the place in the souls of the uninitiated in which the desires are seated, being the intemperate and incontinent part, he compared to a vessel full of holes, because it can never be satisfied. He is not of your way of thinking, Callicles, for he declares, that of all the souls in Hades, meaning the invisible world (aeides), these uninitiated or leaky persons are the most miserable, and that they pour water into a vessel which is full of holes out of a colander which is similarly perforated. The colander, as my informer assures me, is the soul, and the soul which he compares to a colander is the soul of the ignorant, which is likewise full of holes, and therefore incontinent, owing to a bad memory and want of faith. These notions are strange enough, but they show the principle which, if I can, I would fain prove to you; that you should change your mind, and, instead of the intemperate and insatiate life, choose that which is orderly and sufficient and has a due provision for daily needs. Do I make any impression on you, and are you coming over to the opinion that the orderly are happier than the intemperate? Or do I fail to persuade you, and, however many tales I rehearse to you, do you continue of the same opinion still?

CALLICLES: The latter, Socrates, is more like the truth.

SOCRATES: Well, I will tell you another image, which comes out of the same school:—Let me request you to consider how far you would accept this as an account of the two lives of the temperate and intemperate in a figure:—There are two men, both of whom have a number of casks; the one man has his casks sound and full, one of wine, another of honey, and a third of milk, besides others filled with other liquids, and the streams which fill them are few and scanty, and he can only obtain them with a great deal of toil and difficulty; but when his casks are once filled he has no need to feed them any more, and has no further trouble with them or care about them. The other, in like manner, can procure streams, though not without difficulty; but his vessels are leaky and unsound, and night and day he is compelled to be filling them, and if he pauses for a moment, he is in an agony of pain. Such are their respective lives:—And now would you say that the life of the intemperate is happier than that of the temperate? Do I not convince you that the opposite is the truth?

CALLICLES: You do not convince me, Socrates, for the one who has filled himself has no longer any pleasure left; and this, as I was just now saying, is the life of a stone: he has neither joy nor sorrow after he is once filled; but the pleasure depends on the superabundance of the influx.

SOCRATES: But the more you pour in, the greater the waste; and the holes must be large for the liquid to escape.

CALLICLES: Certainly.

SOCRATES: The life which you are now depicting is not that of a dead man, or of a stone, but of a cormorant; you mean that he is to be hungering and eating?

CALLICLES: Yes.

SOCRATES: And he is to be thirsting and drinking?

CALLICLES: Yes, that is what I mean; he is to have all his desires about him, and to be able to live happily in the gratification of them.

SOCRATES: Capital, excellent; go on as you have begun, and have no shame; I, too, must disencumber myself of shame: and first, will you tell me whether you include itching and scratching, provided you have enough of them and pass your life in scratching, in your notion of happiness?

CALLICLES: What a strange being you are, Socrates! a regular mob-orator.

SOCRATES: That was the reason, Callicles, why I scared Polus and Gorgias, until they were too modest to say what they thought; but you will not be too modest and will not be scared, for you are a brave man. And now, answer my question.

CALLICLES: I answer, that even the scratcher would live pleasantly.

SOCRATES: And if pleasantly, then also happily?

CALLICLES: To be sure.

SOCRATES: But what if the itching is not confined to the head? Shall I pursue the question? And here, Callicles, I would have you consider how you would reply if consequences are pressed upon you, especially if in the last resort you are asked, whether the life of a catamite is not terrible, foul, miserable? Or would you venture to say, that they too are happy, if they only get enough of what they want?

CALLICLES: Are you not ashamed, Socrates, of introducing such topics into the argument?

SOCRATES: Well, my fine friend, but am I the introducer of these topics, or he who says without any qualification that all who feel pleasure in whatever manner are happy, and who admits of no distinction between good and bad pleasures? And I would still ask, whether you say that pleasure and good are the same, or whether there is some pleasure which is not a good?

CALLICLES: Well, then, for the sake of consistency, I will say that they are the same.

SOCRATES: You are breaking the original agreement, Callicles, and will no longer be a satisfactory companion in the search after truth, if you say what is contrary to your real opinion.

CALLICLES: Why, that is what you are doing too, Socrates.

SOCRATES: Then we are both doing wrong. Still, my dear friend, I would ask you to consider whether pleasure, from whatever source derived, is the good; for, if this be true, then the disagreeable consequences which have been darkly intimated must follow, and many others.

CALLICLES: That, Socrates, is only your opinion.

SOCRATES: And do you, Callicles, seriously maintain what you are saying?

CALLICLES: Indeed I do.

SOCRATES: Then, as you are in earnest, shall we proceed with the argument?

CALLICLES: By all means. (Or, 'I am in profound earnest.')

SOCRATES: Well, if you are willing to proceed, determine this question for me:—There is something, I presume, which you would call knowledge?

CALLICLES: There is.

SOCRATES: And were you not saying just now, that some courage implied knowledge?

CALLICLES: I was.

SOCRATES: And you were speaking of courage and knowledge as two things different from one another?

CALLICLES: Certainly I was.

SOCRATES: And would you say that pleasure and knowledge are the same, or not the same?

CALLICLES: Not the same, O man of wisdom.

SOCRATES: And would you say that courage differed from pleasure?

CALLICLES: Certainly.

SOCRATES: Well, then, let us remember that Callicles, the Acharnian, says that pleasure and good are the same; but that knowledge and courage are not the same, either with one another, or with the good.

CALLICLES: And what does our friend Socrates, of Foxton, say—does he assent to this, or not?

SOCRATES: He does not assent; neither will Callicles, when he sees himself truly. You will admit, I suppose, that good and evil fortune are opposed to each other?

CALLICLES: Yes.

SOCRATES: And if they are opposed to each other, then, like health and disease, they exclude one another; a man cannot have them both, or be without them both, at the same time?

CALLICLES: What do you mean?

SOCRATES: Take the case of any bodily affection:—a man may have the complaint in his eyes which is called ophthalmia?

CALLICLES: To be sure.

SOCRATES: But he surely cannot have the same eyes well and sound at the same time?

CALLICLES: Certainly not.

SOCRATES: And when he has got rid of his ophthalmia, has he got rid of the health of his eyes too? Is the final result, that he gets rid of them both together?

CALLICLES: Certainly not.

SOCRATES: That would surely be marvellous and absurd?

CALLICLES: Very.

SOCRATES: I suppose that he is affected by them, and gets rid of them in turns?

CALLICLES: Yes.

SOCRATES: And he may have strength and weakness in the same way, by fits?

CALLICLES: Yes.

SOCRATES: Or swiftness and slowness?

CALLICLES: Certainly.

SOCRATES: And does he have and not have good and happiness, and their opposites, evil and misery, in a similar alternation? (Compare Republic.)

CALLICLES: Certainly he has.

SOCRATES: If then there be anything which a man has and has not at the same time, clearly that cannot be good and evil—do we agree? Please not to answer without consideration.

CALLICLES: I entirely agree.

SOCRATES: Go back now to our former admissions.—Did you say that to hunger, I mean the mere state of hunger, was pleasant or painful?

CALLICLES: I said painful, but that to eat when you are hungry is pleasant.

SOCRATES: I know; but still the actual hunger is painful: am I not right?

CALLICLES: Yes.

SOCRATES: And thirst, too, is painful?

CALLICLES: Yes, very.

SOCRATES: Need I adduce any more instances, or would you agree that all wants or desires are painful?

CALLICLES: I agree, and therefore you need not adduce any more instances.

SOCRATES: Very good. And you would admit that to drink, when you are thirsty, is pleasant?

CALLICLES: Yes.

SOCRATES: And in the sentence which you have just uttered, the word 'thirsty' implies pain?

CALLICLES: Yes.

SOCRATES: And the word 'drinking' is expressive of pleasure, and of the satisfaction of the want?

CALLICLES: Yes.

SOCRATES: There is pleasure in drinking?

CALLICLES: Certainly.

SOCRATES: When you are thirsty?

SOCRATES: And in pain?

CALLICLES: Yes.

SOCRATES: Do you see the inference:—that pleasure and pain are simultaneous, when you say that being thirsty, you drink? For are they not simultaneous, and do they not affect at the same time the same part, whether of the soul or the body?—which of them is affected cannot be supposed to be of any consequence: Is not this true?

CALLICLES: It is.

SOCRATES: You said also, that no man could have good and evil fortune at the same time?

CALLICLES: Yes, I did.

SOCRATES: But you admitted, that when in pain a man might also have pleasure?

CALLICLES: Clearly.

SOCRATES: Then pleasure is not the same as good fortune, or pain the same as evil fortune, and therefore the good is not the same as the pleasant?

CALLICLES: I wish I knew, Socrates, what your quibbling means.

SOCRATES: You know, Callicles, but you affect not to know.

CALLICLES: Well, get on, and don't keep fooling: then you will know what a wiseacre you are in your admonition of me.

SOCRATES: Does not a man cease from his thirst and from his pleasure in drinking at the same time?

CALLICLES: I do not understand what you are saying.

GORGIAS: Nay, Callicles, answer, if only for our sakes;—we should like to hear the argument out.

CALLICLES: Yes, Gorgias, but I must complain of the habitual trifling of Socrates; he is always arguing about little and unworthy questions.

GORGIAS: What matter? Your reputation, Callicles, is not at stake. Let Socrates argue in his own fashion.

CALLICLES: Well, then, Socrates, you shall ask these little peddling questions, since Gorgias wishes to have them.

SOCRATES: I envy you, Callicles, for having been initiated into the great mysteries before you were initiated into the lesser. I thought that this was not allowable. But to return to our argument:—Does not a man cease from thirsting and from the pleasure of drinking at the same moment?

CALLICLES: True.

SOCRATES: And if he is hungry, or has any other desire, does he not cease from the desire and the pleasure at the same moment?

CALLICLES: Very true.

SOCRATES: Then he ceases from pain and pleasure at the same moment?

CALLICLES: Yes.

SOCRATES: But he does not cease from good and evil at the same moment, as you have admitted: do you still adhere to what you said?

CALLICLES: Yes, I do; but what is the inference?

SOCRATES: Why, my friend, the inference is that the good is not the same as the pleasant, or the evil the same as the painful; there is a cessation of pleasure and pain at the same moment; but not of good and evil, for they are different. How then can pleasure be the same as good, or pain as evil? And I would have you look at the matter in another light, which could hardly, I think, have been considered by you when you identified them: Are not the good good because they have good present with them, as the beautiful are those who have beauty present with them?

CALLICLES: Yes.

SOCRATES: And do you call the fools and cowards good men? For you were saying just now that the courageous and the wise are the good—would you not say so?

CALLICLES: Certainly.

SOCRATES: And did you never see a foolish child rejoicing?

CALLICLES: Yes, I have.

SOCRATES: And a foolish man too?

CALLICLES: Yes, certainly; but what is your drift?

SOCRATES: Nothing particular, if you will only answer.

CALLICLES: Yes, I have.

SOCRATES: And did you ever see a sensible man rejoicing or sorrowing?

CALLICLES: Yes.

SOCRATES: Which rejoice and sorrow most—the wise or the foolish?

CALLICLES: They are much upon a par, I think, in that respect.

SOCRATES: Enough: And did you ever see a coward in battle?

CALLICLES: To be sure.

SOCRATES: And which rejoiced most at the departure of the enemy, the coward or the brave?

CALLICLES: I should say 'most' of both; or at any rate, they rejoiced about equally.

SOCRATES: No matter; then the cowards, and not only the brave, rejoice?

CALLICLES: Greatly.

SOCRATES: And the foolish; so it would seem?

CALLICLES: Yes.

SOCRATES: And are only the cowards pained at the approach of their enemies, or are the brave also pained?

CALLICLES: Both are pained.

SOCRATES: And are they equally pained?

CALLICLES: I should imagine that the cowards are more pained.

SOCRATES: And are they not better pleased at the enemy's departure?

CALLICLES: I dare say.

SOCRATES: Then are the foolish and the wise and the cowards and the brave all pleased and pained, as you were saying, in nearly equal degree; but are the cowards more pleased and pained than the brave?

CALLICLES: Yes.

SOCRATES: But surely the wise and brave are the good, and the foolish and the cowardly are the bad?

CALLICLES: Yes.

SOCRATES: Then the good and the bad are pleased and pained in a nearly equal degree?

CALLICLES: Yes.

SOCRATES: Then are the good and bad good and bad in a nearly equal degree, or have the bad the advantage both in good and evil? (i.e. in having more pleasure and more pain.)

CALLICLES: I really do not know what you mean.

SOCRATES: Why, do you not remember saying that the good were good because good was present with them, and the evil because evil; and that pleasures were goods and pains evils?

CALLICLES: Yes, I remember.

SOCRATES: And are not these pleasures or goods present to those who rejoice—if they do rejoice?

CALLICLES: Certainly.

SOCRATES: Then those who rejoice are good when goods are present with them?

CALLICLES: Yes.

SOCRATES: And those who are in pain have evil or sorrow present with them?

CALLICLES: Yes.

SOCRATES: And would you still say that the evil are evil by reason of the presence of evil?

CALLICLES: I should.

SOCRATES: Then those who rejoice are good, and those who are in pain evil?

CALLICLES: Yes.

SOCRATES: The degrees of good and evil vary with the degrees of pleasure and of pain?

CALLICLES: Yes.

SOCRATES: Have the wise man and the fool, the brave and the coward, joy and pain in nearly equal degrees? or would you say that the coward has more?

CALLICLES: I should say that he has.

SOCRATES: Help me then to draw out the conclusion which follows from our admissions; for it is good to repeat and review what is good twice and thrice over, as they say. Both the wise man and the brave man we allow to be good?

CALLICLES: Yes.

SOCRATES: And the foolish man and the coward to be evil?

CALLICLES: Certainly.

SOCRATES: And he who has joy is good?

CALLICLES: Yes.

SOCRATES: And he who is in pain is evil?

CALLICLES: Certainly.

SOCRATES: The good and evil both have joy and pain, but, perhaps, the evil has more of them?

CALLICLES: Yes.

SOCRATES: Then must we not infer, that the bad man is as good and bad as the good, or, perhaps, even better?—is not this a further inference which follows equally with the preceding from the assertion that the good and the pleasant are the same:—can this be denied, Callicles?

CALLICLES: I have been listening and making admissions to you, Socrates; and I remark that if a person grants you anything in play, you, like a child, want to keep hold and will not give it back. But do you really suppose that I or any other human being denies that some pleasures are good and others bad?

SOCRATES: Alas, Callicles, how unfair you are! you certainly treat me as if I were a child, sometimes saying one thing, and then another, as if you were meaning to deceive me. And yet I thought at first that you were my friend, and would not have deceived me if you could have helped. But I see that I was mistaken; and now I suppose that I must make the best of a bad business, as they said of old, and take what I can get out of you.—Well, then, as I understand you to say, I may assume that some pleasures are good and others evil?

CALLICLES: Yes.

SOCRATES: The beneficial are good, and the hurtful are evil?

CALLICLES: To be sure.

SOCRATES: And the beneficial are those which do some good, and the hurtful are those which do some evil?

CALLICLES: Yes.

SOCRATES: Take, for example, the bodily pleasures of eating and drinking, which we were just now mentioning—you mean to say that those which promote health, or any other bodily excellence, are good, and their opposites evil?

CALLICLES: Certainly.

SOCRATES: And in the same way there are good pains and there are evil pains?

CALLICLES: To be sure.

SOCRATES: And ought we not to choose and use the good pleasures and pains?

CALLICLES: Certainly.

SOCRATES: But not the evil?

CALLICLES: Clearly.

SOCRATES: Because, if you remember, Polus and I have agreed that all our actions are to be done for the sake of the good;—and will you agree with us in saying, that the good is the end of all our actions, and that all our actions are to be done for the sake of the good, and not the good for the sake of them?—will you add a third vote to our two?

CALLICLES: I will.

SOCRATES: Then pleasure, like everything else, is to be sought for the sake of that which is good, and not that which is good for the sake of pleasure?

CALLICLES: To be sure.

SOCRATES: But can every man choose what pleasures are good and what are evil, or must he have art or knowledge of them in detail?

CALLICLES: He must have art.

SOCRATES: Let me now remind you of what I was saying to Gorgias and Polus; I was saying, as you will not have forgotten, that there were some processes which aim only at pleasure, and know nothing of a better and worse, and there are other processes which know good and evil. And I considered that cookery, which I do not call an art, but only an experience, was of the former class, which is concerned with pleasure, and that the art of medicine was of the class which is concerned with the good. And now, by the god of friendship, I must beg you, Callicles, not to jest, or to imagine that I am jesting with you; do not answer at random and contrary to your real opinion—for you will observe that we are arguing about the way of human life; and to a man who has any sense at all, what question can be more serious than this?—whether he should follow after that way of life to which you exhort me, and act what you call the manly part of speaking in the assembly, and cultivating rhetoric, and engaging in public affairs, according to the principles now in vogue; or whether he should pursue the life of philosophy;—and in what the latter way differs from the former. But perhaps we had better first try to distinguish them, as I did before, and when we have come to an agreement that they are distinct, we may proceed to consider in what they differ from one another, and which of them we should choose. Perhaps, however, you do not even now understand what I mean?

CALLICLES: No, I do not.

SOCRATES: Then I will explain myself more clearly: seeing that you and I have agreed that there is such a thing as good, and that there is such a thing as pleasure, and that pleasure is not the same as good, and that the pursuit and process of acquisition of the one, that is pleasure, is different from the pursuit and process of acquisition of the other, which is good—I wish that you would tell me whether you agree with me thus far or not—do you agree?

CALLICLES: I do.

SOCRATES: Then I will proceed, and ask whether you also agree with me, and whether you think that I spoke the truth when I further said to Gorgias and Polus that cookery in my opinion is only an experience, and not an art at all; and that whereas medicine is an art, and attends to the nature and constitution of the patient, and has principles of action and reason in each case, cookery in attending upon pleasure never regards either the nature or reason of that pleasure to which she devotes herself, but goes straight to her end, nor ever considers or calculates anything, but works by experience and routine, and just preserves the recollection of what she has usually done when producing pleasure. And first, I would have you consider whether I have proved what I was saying, and then whether there are not other similar processes which have to do with the soul—some of them processes of art, making a provision for the soul's highest interest—others despising the interest, and, as in the previous case, considering only the pleasure of the soul, and how this may be acquired, but not considering what pleasures are good or bad, and having no other aim but to afford gratification, whether good or bad. In my opinion, Callicles, there are such processes, and this is the sort of thing which I term flattery, whether concerned with the body or the soul, or whenever employed with a view to pleasure and without any consideration of good and evil. And now I wish that you would tell me whether you agree with us in this notion, or whether you differ.

CALLICLES: I do not differ; on the contrary, I agree; for in that way I shall soonest bring the argument to an end, and shall oblige my friend Gorgias.

SOCRATES: And is this notion true of one soul, or of two or more?

CALLICLES: Equally true of two or more.

SOCRATES: Then a man may delight a whole assembly, and yet have no regard for their true interests?

CALLICLES: Yes.

SOCRATES: Can you tell me the pursuits which delight mankind—or rather, if you would prefer, let me ask, and do you answer, which of them belong to the pleasurable class, and which of them not? In the first place, what say you of flute-playing? Does not that appear to be an art which seeks only pleasure, Callicles, and thinks of nothing else?

CALLICLES: I assent.

SOCRATES: And is not the same true of all similar arts, as, for example, the art of playing the lyre at festivals?

CALLICLES: Yes.

SOCRATES: And what do you say of the choral art and of dithyrambic poetry?—are not they of the same nature? Do you imagine that Cinesias the son of Meles cares about what will tend to the moral improvement of his hearers, or about what will give pleasure to the multitude?

CALLICLES: There can be no mistake about Cinesias, Socrates.

SOCRATES: And what do you say of his father, Meles the harp-player? Did he perform with any view to the good of his hearers? Could he be said to regard even their pleasure? For his singing was an infliction to his audience. And of harp-playing and dithyrambic poetry in general, what would you say? Have they not been invented wholly for the sake of pleasure?

CALLICLES: That is my notion of them.

SOCRATES: And as for the Muse of Tragedy, that solemn and august personage—what are her aspirations? Is all her aim and desire only to give pleasure to the spectators, or does she fight against them and refuse to speak of their pleasant vices, and willingly proclaim in word and song truths welcome and unwelcome?—which in your judgment is her character?

CALLICLES: There can be no doubt, Socrates, that Tragedy has her face turned towards pleasure and the gratification of the audience.

SOCRATES: And is not that the sort of thing, Callicles, which we were just now describing as flattery?

CALLICLES: Quite true.

SOCRATES: Well now, suppose that we strip all poetry of song and rhythm and metre, there will remain speech? (Compare Republic.)

CALLICLES: To be sure.

SOCRATES: And this speech is addressed to a crowd of people?

CALLICLES: Yes.

SOCRATES: Then poetry is a sort of rhetoric?

CALLICLES: True.

SOCRATES: And do not the poets in the theatres seem to you to be rhetoricians?

CALLICLES: Yes.

SOCRATES: Then now we have discovered a sort of rhetoric which is addressed to a crowd of men, women, and children, freemen and slaves. And this is not much to our taste, for we have described it as having the nature of flattery.

CALLICLES: Quite true.

SOCRATES: Very good. And what do you say of that other rhetoric which addresses the Athenian assembly and the assemblies of freemen in other states? Do the rhetoricians appear to you always to aim at what is best, and do they seek to improve the citizens by their speeches, or are they too, like the rest of mankind, bent upon giving them pleasure, forgetting the public good in the thought of their own interest, playing with the people as with children, and trying to amuse them, but never considering whether they are better or worse for this?

CALLICLES: I must distinguish. There are some who have a real care of the public in what they say, while others are such as you describe.

SOCRATES: I am contented with the admission that rhetoric is of two sorts; one, which is mere flattery and disgraceful declamation; the other, which is noble and aims at the training and improvement of the souls of the citizens, and strives to say what is best, whether welcome or unwelcome, to the audience; but have you ever known such a rhetoric; or if you have, and can point out any rhetorician who is of this stamp, who is he?

CALLICLES: But, indeed, I am afraid that I cannot tell you of any such among the orators who are at present living.

SOCRATES: Well, then, can you mention any one of a former generation, who may be said to have improved the Athenians, who found them worse and made them better, from the day that he began to make speeches? for, indeed, I do not know of such a man.

CALLICLES: What! did you never hear that Themistocles was a good man, and Cimon and Miltiades and Pericles, who is just lately dead, and whom you heard yourself?

SOCRATES: Yes, Callicles, they were good men, if, as you said at first, true virtue consists only in the satisfaction of our own desires and those of others; but if not, and if, as we were afterwards compelled to acknowledge, the satisfaction of some desires makes us better, and of others, worse, and we ought to gratify the one and not the other, and there is an art in distinguishing them,—can you tell me of any of these statesmen who did distinguish them?

CALLICLES: No, indeed, I cannot.

SOCRATES: Yet, surely, Callicles, if you look you will find such a one. Suppose that we just calmly consider whether any of these was such as I have described. Will not the good man, who says whatever he says with a view to the best, speak with a reference to some standard and not at random; just as all other artists, whether the painter, the builder, the shipwright, or any other look all of them to their own work, and do not select and apply at random what they apply, but strive to give a definite form to it? The artist disposes all things in order, and compels the one part to harmonize and

accord with the other part, until he has constructed a regular and systematic whole; and this is true of all artists, and in the same way the trainers and physicians, of whom we spoke before, give order and regularity to the body: do you deny this?

CALLICLES: No; I am ready to admit it.

SOCRATES: Then the house in which order and regularity prevail is good; that in which there is disorder, evil?

CALLICLES: Yes.

SOCRATES: And the same is true of a ship?

CALLICLES: Yes.

SOCRATES: And the same may be said of the human body?

CALLICLES: Yes.

SOCRATES: And what would you say of the soul? Will the good soul be that in which disorder is prevalent, or that in which there is harmony and order?

CALLICLES: The latter follows from our previous admissions.

SOCRATES: What is the name which is given to the effect of harmony and order in the body?

CALLICLES: I suppose that you mean health and strength?

SOCRATES: Yes, I do; and what is the name which you would give to the effect of harmony and order in the soul? Try and discover a name for this as well as for the other.

CALLICLES: Why not give the name yourself, Socrates?

SOCRATES: Well, if you had rather that I should, I will; and you shall say whether you agree with me, and if not, you shall refute and answer me. 'Healthy,' as I conceive, is the name which is given to the regular order of the body, whence comes health and every other bodily excellence: is that true or not?

CALLICLES: True.

SOCRATES: And 'lawful' and 'law' are the names which are given to the regular order and action of the soul, and these make men lawful and orderly:—and so we have temperance and justice: have we not?

CALLICLES: Granted.

SOCRATES: And will not the true rhetorician who is honest and understands his art have his eye fixed upon these, in all the words which he addresses to the souls of men, and in all his actions, both in what he gives and in what he takes away? Will not his aim be to implant justice in the souls of his citizens and take away injustice, to implant temperance and take away intemperance, to implant every virtue and take away every vice? Do you not agree?

CALLICLES: I agree.

SOCRATES: For what use is there, Callicles, in giving to the body of a sick man who is in a bad state of health a quantity of the most delightful food or drink or any other pleasant thing, which may be really as bad for him as if you gave him nothing, or even worse if rightly estimated. Is not that true?

CALLICLES: I will not say No to it.

SOCRATES: For in my opinion there is no profit in a man's life if his body is in an evil plight—in that case his life also is evil: am I not right?

CALLICLES: Yes.

SOCRATES: When a man is in health the physicians will generally allow him to eat when he is hungry and drink when he is thirsty, and to satisfy his desires as he likes, but when he is sick they hardly suffer him to satisfy his desires at all: even you will admit that?

CALLICLES: Yes.

SOCRATES: And does not the same argument hold of the soul, my good sir? While she is in a bad state and is senseless and intemperate and unjust and unholy, her desires ought to be controlled, and she ought to be prevented from doing anything which does not tend to her own improvement.

CALLICLES: Yes.

SOCRATES: Such treatment will be better for the soul herself?

CALLICLES: To be sure.

SOCRATES: And to restrain her from her appetites is to chastise her?

CALLICLES: Yes.

SOCRATES: Then restraint or chastisement is better for the soul than intemperance or the absence of control, which you were just now preferring?

CALLICLES: I do not understand you, Socrates, and I wish that you would ask some one who does.

SOCRATES: Here is a gentleman who cannot endure to be improved or to subject himself to that very chastisement of which the argument speaks!

CALLICLES: I do not heed a word of what you are saying, and have only answered hitherto out of civility to Gorgias.

SOCRATES: What are we to do, then? Shall we break off in the middle?

CALLICLES: You shall judge for yourself.

SOCRATES: Well, but people say that 'a tale should have a head and not break off in the middle,' and I should not like to have the argument going about without a head (compare Laws); please then to go on a little longer, and put the head on.

CALLICLES: How tyrannical you are, Socrates! I wish that you and your argument would rest, or that you would get some one else to argue with you.

SOCRATES: But who else is willing?—I want to finish the argument.

CALLICLES: Cannot you finish without my help, either talking straight on, or questioning and answering yourself?

SOCRATES: Must I then say with Epicharmus, 'Two men spoke before, but now one shall be enough'? I suppose that there is absolutely no help. And if I am to carry on the enquiry by myself, I will first of all remark that not only I but all of us should have an ambition to know what is true and what is false in this matter, for the discovery of the truth is a common good. And now I will proceed to argue according to my own notion. But if any of you think that I arrive at conclusions which are untrue you must interpose and refute me, for I do not speak from any knowledge of what I am saying; I am an enquirer like yourselves, and therefore, if my opponent says anything which is of force, I shall be the first to agree with him. I am speaking on the supposition that the argument ought to be completed; but if you think otherwise let us leave off and go our ways.

GORGIAS: I think, Socrates, that we should not go our ways until you have completed the argument; and this appears to me to be the wish of the rest of the company; I myself should very much like to hear what more you have to say.

SOCRATES: I too, Gorgias, should have liked to continue the argument with Callicles, and then I might have given him an 'Amphion' in return for his 'Zethus'; but since you, Callicles, are unwilling to continue, I hope that you will listen, and interrupt me if I seem to you to be in error. And if you refute me, I shall not be angry with you as you are with me, but I shall inscribe you as the greatest of benefactors on the tablets of my soul.

CALLICLES: My good fellow, never mind me, but get on.

SOCRATES: Listen to me, then, while I recapitulate the argument:—Is the pleasant the same as the good? Not the same. Callicles and I are agreed about that. And is the pleasant to be pursued for the sake of the good? or the good for the sake of the pleasant? The pleasant is to be pursued for the sake of the good. And that is pleasant at the presence of which we are pleased, and that is good at the presence of which we are good? To be sure. And we are good, and all good things whatever are

good when some virtue is present in us or them? That, Callicles, is my conviction. But the virtue of each thing, whether body or soul, instrument or creature, when given to them in the best way comes to them not by chance but as the result of the order and truth and art which are imparted to them: Am I not right? I maintain that I am. And is not the virtue of each thing dependent on order or arrangement? Yes, I say. And that which makes a thing good is the proper order inhering in each thing? Such is my view. And is not the soul which has an order of her own better than that which has no order? Certainly. And the soul which has order is orderly? Of course. And that which is orderly is temperate? Assuredly. And the temperate soul is good? No other answer can I give, Callicles dear; have you any?

CALLICLES: Go on, my good fellow.

SOCRATES: Then I shall proceed to add, that if the temperate soul is the good soul, the soul which is in the opposite condition, that is, the foolish and intemperate, is the bad soul. Very true.

And will not the temperate man do what is proper, both in relation to the gods and to men;—for he would not be temperate if he did not? Certainly he will do what is proper. In his relation to other men he will do what is just; and in his relation to the gods he will do what is holy; and he who does what is just and holy must be just and holy? Very true. And must he not be courageous? for the duty of a temperate man is not to follow or to avoid what he ought not, but what he ought, whether things or men or pleasures or pains, and patiently to endure when he ought; and therefore, Callicles, the temperate man, being, as we have described, also just and courageous and holy, cannot be other than a perfectly good man, nor can the good man do otherwise than well and perfectly whatever he does; and he who does well must of necessity be happy and blessed, and the evil man who does evil, miserable: now this latter is he whom you were applauding—the intemperate who is the opposite of the temperate. Such is my position, and these things I affirm to be true. And if they are true, then I further affirm that he who desires to be happy must pursue and practise temperance and run away from intemperance as fast as his legs will carry him: he had better order his life so as not to need punishment; but if either he or any of his friends, whether private individual or city, are in need of punishment, then justice must be done and he must suffer punishment, if he would be happy. This appears to me to be the aim which a man ought to have, and towards which he ought to direct all the energies both of himself and of the state, acting so that he may have temperance and justice present with him and be happy, not suffering his lusts to be unrestrained, and in the never-ending desire satisfy them leading a robber's life. Such a one is the friend neither of God nor man, for he is incapable of communion, and he who is incapable of communion is also incapable of friendship. And philosophers tell us, Callicles, that communion and friendship and orderliness and temperance and justice bind together heaven and earth and gods and men, and that this universe is therefore called Cosmos or order, not disorder or misrule, my friend. But although you are a philosopher you seem to me never to have observed that geometrical equality is mighty, both among gods and men; you think that you ought to cultivate inequality or excess, and do not care about geometry.—Well, then, either the principle that the happy are made happy by the possession of justice and temperance, and the miserable miserable by the possession of vice, must be refuted, or, if it is granted, what will be the consequences? All the consequences which I drew before, Callicles, and about which you asked me whether I was in earnest when I said that a man ought to accuse himself and his son and his friend if he did anything wrong, and that to this end he should use his rhetoric—all those consequences are true. And that which you thought that Polus was led to admit out of modesty is true, viz., that, to do

injustice, if more disgraceful than to suffer, is in that degree worse; and the other position, which, according to Polus, Gorgias admitted out of modesty, that he who would truly be a rhetorician ought to be just and have a knowledge of justice, has also turned out to be true.

And now, these things being as we have said, let us proceed in the next place to consider whether you are right in throwing in my teeth that I am unable to help myself or any of my friends or kinsmen, or to save them in the extremity of danger, and that I am in the power of another like an outlaw to whom any one may do what he likes,—he may box my ears, which was a brave saying of yours; or take away my goods or banish me, or even do his worst and kill me; a condition which, as you say, is the height of disgrace. My answer to you is one which has been already often repeated, but may as well be repeated once more. I tell you, Callicles, that to be boxed on the ears wrongfully is not the worst evil which can befall a man, nor to have my purse or my body cut open, but that to smite and slay me and mine wrongfully is far more disgraceful and more evil; aye, and to despoil and enslave and pillage, or in any way at all to wrong me and mine, is far more disgraceful and evil to the doer of the wrong than to me who am the sufferer. These truths, which have been already set forth as I state them in the previous discussion, would seem now to have been fixed and riveted by us, if I may use an expression which is certainly bold, in words which are like bonds of iron and adamant; and unless you or some other still more enterprising hero shall break them, there is no possibility of denying what I say. For my position has always been, that I myself am ignorant how these things are, but that I have never met any one who could say otherwise, any more than you can, and not appear ridiculous. This is my position still, and if what I am saying is true, and injustice is the greatest of evils to the doer of injustice, and yet there is if possible a greater than this greatest of evils (compare Republic), in an unjust man not suffering retribution, what is that defence of which the want will make a man truly ridiculous? Must not the defence be one which will avert the greatest of human evils? And will not the worst of all defences be that with which a man is unable to defend himself or his family or his friends?—and next will come that which is unable to avert the next greatest evil; thirdly that which is unable to avert the third greatest evil; and so of other evils. As is the greatness of evil so is the honour of being able to avert them in their several degrees, and the disgrace of not being able to avert them. Am I not right Callicles?

CALLICLES: Yes, quite right.

SOCRATES: Seeing then that there are these two evils, the doing injustice and the suffering injustice—and we affirm that to do injustice is a greater, and to suffer injustice a lesser evil—by what devices can a man succeed in obtaining the two advantages, the one of not doing and the other of not suffering injustice? must he have the power, or only the will to obtain them? I mean to ask whether a man will escape injustice if he has only the will to escape, or must he have provided himself with the power?

CALLICLES: He must have provided himself with the power; that is clear.

SOCRATES: And what do you say of doing injustice? Is the will only sufficient, and will that prevent him from doing injustice, or must he have provided himself with power and art; and if he have not studied and practised, will he be unjust still? Surely you might say, Callicles, whether you think that Polus and I were right in admitting the conclusion that no one does wrong voluntarily, but that all do wrong against their will?

CALLICLES: Granted, Socrates, if you will only have done.

SOCRATES: Then, as would appear, power and art have to be provided in order that we may do no injustice?

CALLICLES: Certainly.

SOCRATES: And what art will protect us from suffering injustice, if not wholly, yet as far as possible? I want to know whether you agree with me; for I think that such an art is the art of one who is either a ruler or even tyrant himself, or the equal and companion of the ruling power.

CALLICLES: Well said, Socrates; and please to observe how ready I am to praise you when you talk sense.

SOCRATES: Think and tell me whether you would approve of another view of mine: To me every man appears to be most the friend of him who is most like to him—like to like, as ancient sages say: Would you not agree to this?

CALLICLES: I should.

SOCRATES: But when the tyrant is rude and uneducated, he may be expected to fear any one who is his superior in virtue, and will never be able to be perfectly friendly with him.

CALLICLES: That is true.

SOCRATES: Neither will he be the friend of any one who is greatly his inferior, for the tyrant will despise him, and will never seriously regard him as a friend.

CALLICLES: That again is true.

SOCRATES: Then the only friend worth mentioning, whom the tyrant can have, will be one who is of the same character, and has the same likes and dislikes, and is at the same time willing to be subject and subservient to him; he is the man who will have power in the state, and no one will injure him with impunity:—is not that so?

CALLICLES: Yes.

SOCRATES: And if a young man begins to ask how he may become great and formidable, this would seem to be the way—he will accustom himself, from his youth upward, to feel sorrow and joy on the same occasions as his master, and will contrive to be as like him as possible?

CALLICLES: Yes.

SOCRATES: And in this way he will have accomplished, as you and your friends would say, the end of becoming a great man and not suffering injury?

CALLICLES: Very true.

SOCRATES: But will he also escape from doing injury? Must not the very opposite be true,—if he is to be like the tyrant in his injustice, and to have influence with him? Will he not rather contrive to do as much wrong as possible, and not be punished?

CALLICLES: True.

SOCRATES: And by the imitation of his master and by the power which he thus acquires will not his soul become bad and corrupted, and will not this be the greatest evil to him?

CALLICLES: You always contrive somehow or other, Socrates, to invert everything: do you not know that he who imitates the tyrant will, if he has a mind, kill him who does not imitate him and take away his goods?

SOCRATES: Excellent Callicles, I am not deaf, and I have heard that a great many times from you and from Polus and from nearly every man in the city, but I wish that you would hear me too. I dare say that he will kill him if he has a mind—the bad man will kill the good and true.

CALLICLES: And is not that just the provoking thing?

SOCRATES: Nay, not to a man of sense, as the argument shows: do you think that all our cares should be directed to prolonging life to the uttermost, and to the study of those arts which secure us from danger always; like that art of rhetoric which saves men in courts of law, and which you advise me to cultivate?

CALLICLES: Yes, truly, and very good advice too.

SOCRATES: Well, my friend, but what do you think of swimming; is that an art of any great pretensions?

CALLICLES: No, indeed.

SOCRATES: And yet surely swimming saves a man from death, and there are occasions on which he must know how to swim. And if you despise the swimmers, I will tell you of another and greater art, the art of the pilot, who not only saves the souls of men, but also their bodies and properties from the extremity of danger, just like rhetoric. Yet his art is modest and unpresuming: it has no airs or pretences of doing anything extraordinary, and, in return for the same salvation which is given by the pleader, demands only two obols, if he brings us from Aegina to Athens, or for the longer voyage from Pontus or Egypt, at the utmost two drachmae, when he has saved, as I was just now saying, the passenger and his wife and children and goods, and safely disembarked them at the Piraeus,—this is the payment which he asks in return for so great a boon; and he who is the master of the art, and has done all this, gets out and walks about on the sea-shore by his ship in an unassuming way. For he is able to reflect and is aware that he cannot tell which of his fellow-passengers he has benefited, and which of them he has injured in not allowing them to be drowned. He knows that they are just the same when he has disembarked them as when they embarked, and not a whit better either in their

bodies or in their souls; and he considers that if a man who is afflicted by great and incurable bodily diseases is only to be pitied for having escaped, and is in no way benefited by him in having been saved from drowning, much less he who has great and incurable diseases, not of the body, but of the soul, which is the more valuable part of him; neither is life worth having nor of any profit to the bad man, whether he be delivered from the sea, or the law-courts, or any other devourer;—and so he reflects that such a one had better not live, for he cannot live well. (Compare Republic.)

And this is the reason why the pilot, although he is our saviour, is not usually conceited, any more than the engineer, who is not at all behind either the general, or the pilot, or any one else, in his saving power, for he sometimes saves whole cities. Is there any comparison between him and the pleader? And if he were to talk, Callicles, in your grandiose style, he would bury you under a mountain of words, declaring and insisting that we ought all of us to be engine-makers, and that no other profession is worth thinking about; he would have plenty to say. Nevertheless you despise him and his art, and sneeringly call him an engine-maker, and you will not allow your daughters to marry his son, or marry your son to his daughters. And yet, on your principle, what justice or reason is there in your refusal? What right have you to despise the engine-maker, and the others whom I was just now mentioning? I know that you will say, 'I am better, and better born.' But if the better is not what I say, and virtue consists only in a man saving himself and his, whatever may be his character, then your censure of the engine-maker, and of the physician, and of the other arts of salvation, is ridiculous. O my friend! I want you to see that the noble and the good may possibly be something different from saving and being saved:—May not he who is truly a man cease to care about living a certain time?—he knows, as women say, that no man can escape fate, and therefore he is not fond of life; he leaves all that with God, and considers in what way he can best spend his appointed term;—whether by assimilating himself to the constitution under which he lives, as you at this moment have to consider how you may become as like as possible to the Athenian people, if you mean to be in their good graces, and to have power in the state; whereas I want you to think and see whether this is for the interest of either of us;—I would not have us risk that which is dearest on the acquisition of this power, like the Thessalian enchantresses, who, as they say, bring down the moon from heaven at the risk of their own perdition. But if you suppose that any man will show you the art of becoming great in the city, and yet not conforming yourself to the ways of the city, whether for better or worse, then I can only say that you are mistaken, Callides; for he who would deserve to be the true natural friend of the Athenian Demus, aye, or of Pyrilampes' darling who is called after them, must be by nature like them, and not an imitator only. He, then, who will make you most like them, will make you as you desire, a statesman and orator: for every man is pleased when he is spoken to in his own language and spirit, and dislikes any other. But perhaps you, sweet Callicles, may be of another mind. What do you say?

CALLICLES: Somehow or other your words, Socrates, always appear to me to be good words; and yet, like the rest of the world, I am not quite convinced by them. (Compare Symp.: 1 Alcib.)

SOCRATES: The reason is, Callicles, that the love of Demus which abides in your soul is an adversary to me; but I dare say that if we recur to these same matters, and consider them more thoroughly, you may be convinced for all that. Please, then, to remember that there are two processes of training all things, including body and soul; in the one, as we said, we treat them with a view to pleasure, and in the other with a view to the highest good, and then we do not indulge but resist them: was not that the distinction which we drew?

CALLICLES: Very true.

SOCRATES: And the one which had pleasure in view was just a vulgar flattery:—was not that another of our conclusions?

CALLICLES: Be it so, if you will have it.

SOCRATES: And the other had in view the greatest improvement of that which was ministered to, whether body or soul?

CALLICLES: Quite true.

SOCRATES: And must we not have the same end in view in the treatment of our city and citizens? Must we not try and make them as good as possible? For we have already discovered that there is no use in imparting to them any other good, unless the mind of those who are to have the good, whether money, or office, or any other sort of power, be gentle and good. Shall we say that?

CALLICLES: Yes, certainly, if you like.

SOCRATES: Well, then, if you and I, Callicles, were intending to set about some public business, and were advising one another to undertake buildings, such as walls, docks or temples of the largest size, ought we not to examine ourselves, first, as to whether we know or do not know the art of building, and who taught us?—would not that be necessary, Callicles?

CALLICLES: True.

SOCRATES: In the second place, we should have to consider whether we had ever constructed any private house, either of our own or for our friends, and whether this building of ours was a success or not; and if upon consideration we found that we had had good and eminent masters, and had been successful in constructing many fine buildings, not only with their assistance, but without them, by our own unaided skill—in that case prudence would not dissuade us from proceeding to the construction of public works. But if we had no master to show, and only a number of worthless buildings or none at all, then, surely, it would be ridiculous in us to attempt public works, or to advise one another to undertake them. Is not this true?

CALLICLES: Certainly.

SOCRATES: And does not the same hold in all other cases? If you and I were physicians, and were advising one another that we were competent to practise as state-physicians, should I not ask about you, and would you not ask about me, Well, but how about Socrates himself, has he good health? and was any one else ever known to be cured by him, whether slave or freeman? And I should make the same enquiries about you. And if we arrived at the conclusion that no one, whether citizen or stranger, man or woman, had ever been any the better for the medical skill of either of us, then, by Heaven, Callicles, what an absurdity to think that we or any human being should be so silly as to set up as state-physicians and advise others like ourselves to do the same, without having first practised

in private, whether successfully or not, and acquired experience of the art! Is not this, as they say, to begin with the big jar when you are learning the potter's art; which is a foolish thing?

CALLICLES: True.

SOCRATES: And now, my friend, as you are already beginning to be a public character, and are admonishing and reproaching me for not being one, suppose that we ask a few questions of one another. Tell me, then, Callicles, how about making any of the citizens better? Was there ever a man who was once vicious, or unjust, or intemperate, or foolish, and became by the help of Callicles good and noble? Was there ever such a man, whether citizen or stranger, slave or freeman? Tell me, Callicles, if a person were to ask these questions of you, what would you answer? Whom would you say that you had improved by your conversation? There may have been good deeds of this sort which were done by you as a private person, before you came forward in public. Why will you not answer?

CALLICLES: You are contentious, Socrates.

SOCRATES: Nay, I ask you, not from a love of contention, but because I really want to know in what way you think that affairs should be administered among us—whether, when you come to the administration of them, you have any other aim but the improvement of the citizens? Have we not already admitted many times over that such is the duty of a public man? Nay, we have surely said so; for if you will not answer for yourself I must answer for you. But if this is what the good man ought to effect for the benefit of his own state, allow me to recall to you the names of those whom you were just now mentioning, Pericles, and Cimon, and Miltiades, and Themistocles, and ask whether you still think that they were good citizens.

CALLICLES: I do.

SOCRATES: But if they were good, then clearly each of them must have made the citizens better instead of worse?

CALLICLES: Yes.

SOCRATES: And, therefore, when Pericles first began to speak in the assembly, the Athenians were not so good as when he spoke last?

CALLICLES: Very likely.

SOCRATES: Nay, my friend, 'likely' is not the word; for if he was a good citizen, the inference is certain.

CALLICLES: And what difference does that make?

SOCRATES: None; only I should like further to know whether the Athenians are supposed to have been made better by Pericles, or, on the contrary, to have been corrupted by him; for I hear that he

was the first who gave the people pay, and made them idle and cowardly, and encouraged them in the love of talk and money.

CALLICLES: You heard that, Socrates, from the laconising set who bruise their ears.

SOCRATES: But what I am going to tell you now is not mere hearsay, but well known both to you and me: that at first, Pericles was glorious and his character unimpeached by any verdict of the Athenians—this was during the time when they were not so good—yet afterwards, when they had been made good and gentle by him, at the very end of his life they convicted him of theft, and almost put him to death, clearly under the notion that he was a malefactor.

CALLICLES: Well, but how does that prove Pericles' badness?

SOCRATES: Why, surely you would say that he was a bad manager of asses or horses or oxen, who had received them originally neither kicking nor butting nor biting him, and implanted in them all these savage tricks? Would he not be a bad manager of any animals who received them gentle, and made them fiercer than they were when he received them? What do you say?

CALLICLES: I will do you the favour of saying 'yes.'

SOCRATES: And will you also do me the favour of saying whether man is an animal?

CALLICLES: Certainly he is.

SOCRATES: And was not Pericles a shepherd of men?

CALLICLES: Yes.

SOCRATES: And if he was a good political shepherd, ought not the animals who were his subjects, as we were just now acknowledging, to have become more just, and not more unjust?

CALLICLES: Quite true.

SOCRATES: And are not just men gentle, as Homer says?—or are you of another mind?

CALLICLES: I agree.

SOCRATES: And yet he really did make them more savage than he received them, and their savageness was shown towards himself; which he must have been very far from desiring.

CALLICLES: Do you want me to agree with you?

SOCRATES: Yes, if I seem to you to speak the truth.

CALLICLES: Granted then.

SOCRATES: And if they were more savage, must they not have been more unjust and inferior?

CALLICLES: Granted again.

SOCRATES: Then upon this view, Pericles was not a good statesman?

CALLICLES: That is, upon your view.

SOCRATES: Nay, the view is yours, after what you have admitted. Take the case of Cimon again. Did not the very persons whom he was serving ostracize him, in order that they might not hear his voice for ten years? and they did just the same to Themistocles, adding the penalty of exile; and they voted that Miltiades, the hero of Marathon, should be thrown into the pit of death, and he was only saved by the Prytanis. And yet, if they had been really good men, as you say, these things would never have happened to them. For the good charioteers are not those who at first keep their place, and then, when they have broken-in their horses, and themselves become better charioteers, are thrown out—that is not the way either in charioteering or in any profession.—What do you think?

CALLICLES: I should think not.

SOCRATES: Well, but if so, the truth is as I have said already, that in the Athenian State no one has ever shown himself to be a good statesman—you admitted that this was true of our present statesmen, but not true of former ones, and you preferred them to the others; yet they have turned out to be no better than our present ones; and therefore, if they were rhetoricians, they did not use the true art of rhetoric or of flattery, or they would not have fallen out of favour.

CALLICLES: But surely, Socrates, no living man ever came near any one of them in his performances.

SOCRATES: O, my dear friend, I say nothing against them regarded as the serving-men of the State; and I do think that they were certainly more serviceable than those who are living now, and better able to gratify the wishes of the State; but as to transforming those desires and not allowing them to have their way, and using the powers which they had, whether of persuasion or of force, in the improvement of their fellow citizens, which is the prime object of the truly good citizen, I do not see that in these respects they were a whit superior to our present statesmen, although I do admit that they were more clever at providing ships and walls and docks, and all that. You and I have a ridiculous way, for during the whole time that we are arguing, we are always going round and round to the same point, and constantly misunderstanding one another. If I am not mistaken, you have admitted and acknowledged more than once, that there are two kinds of operations which have to do with the body, and two which have to do with the soul: one of the two is ministerial, and if our bodies are hungry provides food for them, and if they are thirsty gives them drink, or if they are cold supplies them with garments, blankets, shoes, and all that they crave. I use the same images as before intentionally, in order that you may understand me the better. The purveyor of the articles may provide them either wholesale or retail, or he may be the maker of any of them,—the baker, or the cook, or the weaver, or the shoemaker, or the currier; and in so doing, being such as he is, he is naturally supposed by himself and every one to minister to the body. For none of them know that there is another art—an art of gymnastic and medicine which is the true minister of the body, and

ought to be the mistress of all the rest, and to use their results according to the knowledge which she has and they have not, of the real good or bad effects of meats and drinks on the body. All other arts which have to do with the body are servile and menial and illiberal; and gymnastic and medicine are, as they ought to be, their mistresses. Now, when I say that all this is equally true of the soul, you seem at first to know and understand and assent to my words, and then a little while afterwards you come repeating, Has not the State had good and noble citizens? and when I ask you who they are, you reply, seemingly quite in earnest, as if I had asked, Who are or have been good trainers?—and you had replied, Thearion, the baker, Mithoecus, who wrote the Sicilian cookery-book, Sarambus, the vintner: these are ministers of the body, first-rate in their art; for the first makes admirable loaves, the second excellent dishes, and the third capital wine;—to me these appear to be the exact parallel of the statesmen whom you mention. Now you would not be altogether pleased if I said to you, My friend, you know nothing of gymnastics; those of whom you are speaking to me are only the ministers and purveyors of luxury, who have no good or noble notions of their art, and may very likely be filling and fattening men's bodies and gaining their approval, although the result is that they lose their original flesh in the long run, and become thinner than they were before; and yet they, in their simplicity, will not attribute their diseases and loss of flesh to their entertainers; but when in after years the unhealthy surfeit brings the attendant penalty of disease, he who happens to be near them at the time, and offers them advice, is accused and blamed by them, and if they could they would do him some harm; while they proceed to eulogize the men who have been the real authors of the mischief. And that, Callicles, is just what you are now doing. You praise the men who feasted the citizens and satisfied their desires, and people say that they have made the city great, not seeing that the swollen and ulcerated condition of the State is to be attributed to these elder statesmen; for they have filled the city full of harbours and docks and walls and revenues and all that, and have left no room for justice and temperance. And when the crisis of the disorder comes, the people will blame the advisers of the hour, and applaud Themistocles and Cimon and Pericles, who are the real authors of their calamities; and if you are not careful they may assail you and my friend Alcibiades, when they are losing not only their new acquisitions, but also their original possessions; not that you are the authors of these misfortunes of theirs, although you may perhaps be accessories to them. A great piece of work is always being made, as I see and am told, now as of old; about our statesmen. When the State treats any of them as malefactors, I observe that there is a great uproar and indignation at the supposed wrong which is done to them; 'after all their many services to the State, that they should unjustly perish,'—so the tale runs. But the cry is all a lie; for no statesman ever could be unjustly put to death by the city of which he is the head. The case of the professed statesman is, I believe, very much like that of the professed sophist; for the sophists, although they are wise men, are nevertheless guilty of a strange piece of folly; professing to be teachers of virtue, they will often accuse their disciples of wronging them, and defrauding them of their pay, and showing no gratitude for their services. Yet what can be more absurd than that men who have become just and good, and whose injustice has been taken away from them, and who have had justice implanted in them by their teachers, should act unjustly by reason of the injustice which is not in them? Can anything be more irrational, my friends, than this? You, Callicles, compel me to be a mob-orator, because you will not answer.

CALLICLES: And you are the man who cannot speak unless there is some one to answer?

SOCRATES: I suppose that I can; just now, at any rate, the speeches which I am making are long enough because you refuse to answer me. But I adjure you by the god of friendship, my good sir, do

tell me whether there does not appear to you to be a great inconsistency in saying that you have made a man good, and then blaming him for being bad?

CALLICLES: Yes, it appears so to me.

SOCRATES: Do you never hear our professors of education speaking in this inconsistent manner?

CALLICLES: Yes, but why talk of men who are good for nothing?

SOCRATES: I would rather say, why talk of men who profess to be rulers, and declare that they are devoted to the improvement of the city, and nevertheless upon occasion declaim against the utter vileness of the city:—do you think that there is any difference between one and the other? My good friend, the sophist and the rhetorician, as I was saying to Polus, are the same, or nearly the same; but you ignorantly fancy that rhetoric is a perfect thing, and sophistry a thing to be despised; whereas the truth is, that sophistry is as much superior to rhetoric as legislation is to the practice of law, or gymnastic to medicine. The orators and sophists, as I am inclined to think, are the only class who cannot complain of the mischief ensuing to themselves from that which they teach others, without in the same breath accusing themselves of having done no good to those whom they profess to benefit. Is not this a fact?

CALLICLES: Certainly it is.

SOCRATES: If they were right in saying that they make men better, then they are the only class who can afford to leave their remuneration to those who have been benefited by them. Whereas if a man has been benefited in any other way, if, for example, he has been taught to run by a trainer, he might possibly defraud him of his pay, if the trainer left the matter to him, and made no agreement with him that he should receive money as soon as he had given him the utmost speed; for not because of any deficiency of speed do men act unjustly, but by reason of injustice.

CALLICLES: Very true.

SOCRATES: And he who removes injustice can be in no danger of being treated unjustly: he alone can safely leave the honorarium to his pupils, if he be really able to make them good—am I not right? (Compare Protag.)

CALLICLES: Yes.

SOCRATES: Then we have found the reason why there is no dishonour in a man receiving pay who is called in to advise about building or any other art?

CALLICLES: Yes, we have found the reason.

SOCRATES: But when the point is, how a man may become best himself, and best govern his family and state, then to say that you will give no advice gratis is held to be dishonourable?

CALLICLES: True.

SOCRATES: And why? Because only such benefits call forth a desire to requite them, and there is evidence that a benefit has been conferred when the benefactor receives a return; otherwise not. Is this true?

CALLICLES: It is.

SOCRATES: Then to which service of the State do you invite me? determine for me. Am I to be the physician of the State who will strive and struggle to make the Athenians as good as possible; or am I to be the servant and flatterer of the State? Speak out, my good friend, freely and fairly as you did at first and ought to do again, and tell me your entire mind.

CALLICLES: I say then that you should be the servant of the State.

SOCRATES: The flatterer? well, sir, that is a noble invitation.

CALLICLES: The Mysian, Socrates, or what you please. For if you refuse, the consequences will be—

SOCRATES: Do not repeat the old story—that he who likes will kill me and get my money; for then I shall have to repeat the old answer, that he will be a bad man and will kill the good, and that the money will be of no use to him, but that he will wrongly use that which he wrongly took, and if wrongly, basely, and if basely, hurtfully.

CALLICLES: How confident you are, Socrates, that you will never come to harm! you seem to think that you are living in another country, and can never be brought into a court of justice, as you very likely may be brought by some miserable and mean person.

SOCRATES: Then I must indeed be a fool, Callicles, if I do not know that in the Athenian State any man may suffer anything. And if I am brought to trial and incur the dangers of which you speak, he will be a villain who brings me to trial—of that I am very sure, for no good man would accuse the innocent. Nor shall I be surprised if I am put to death. Shall I tell you why I anticipate this?

CALLICLES: By all means.

SOCRATES: I think that I am the only or almost the only Athenian living who practises the true art of politics; I am the only politician of my time. Now, seeing that when I speak my words are not uttered with any view of gaining favour, and that I look to what is best and not to what is most pleasant, having no mind to use those arts and graces which you recommend, I shall have nothing to say in the justice court. And you might argue with me, as I was arguing with Polus:—I shall be tried just as a physician would be tried in a court of little boys at the indictment of the cook. What would he reply under such circumstances, if some one were to accuse him, saying, 'O my boys, many evil things has this man done to you: he is the death of you, especially of the younger ones among you, cutting and burning and starving and suffocating you, until you know not what to do; he gives you the bitterest potions, and compels you to hunger and thirst. How unlike the variety of meats and sweets on which I feasted you!' What do you suppose that the physician would be able to reply when he found himself in such a predicament? If he told the truth he could only say, 'All these evil things, my boys, I did for

your health,' and then would there not just be a clamour among a jury like that? How they would cry out!

CALLICLES: I dare say.

SOCRATES: Would he not be utterly at a loss for a reply?

CALLICLES: He certainly would.

SOCRATES: And I too shall be treated in the same way, as I well know, if I am brought before the court. For I shall not be able to rehearse to the people the pleasures which I have procured for them, and which, although I am not disposed to envy either the procurers or enjoyers of them, are deemed by them to be benefits and advantages. And if any one says that I corrupt young men, and perplex their minds, or that I speak evil of old men, and use bitter words towards them, whether in private or public, it is useless for me to reply, as I truly might:—'All this I do for the sake of justice, and with a view to your interest, my judges, and to nothing else.' And therefore there is no saying what may happen to me.

CALLICLES: And do you think, Socrates, that a man who is thus defenceless is in a good position?

SOCRATES: Yes, Callicles, if he have that defence, which as you have often acknowledged he should have—if he be his own defence, and have never said or done anything wrong, either in respect of gods or men; and this has been repeatedly acknowledged by us to be the best sort of defence. And if any one could convict me of inability to defend myself or others after this sort, I should blush for shame, whether I was convicted before many, or before a few, or by myself alone; and if I died from want of ability to do so, that would indeed grieve me. But if I died because I have no powers of flattery or rhetoric, I am very sure that you would not find me repining at death. For no man who is not an utter fool and coward is afraid of death itself, but he is afraid of doing wrong. For to go to the world below having one's soul full of injustice is the last and worst of all evils. And in proof of what I say, if you have no objection, I should like to tell you a story.

CALLICLES: Very well, proceed; and then we shall have done.

SOCRATES: Listen, then, as story-tellers say, to a very pretty tale, which I dare say that you may be disposed to regard as a fable only, but which, as I believe, is a true tale, for I mean to speak the truth. Homer tells us (Il.), how Zeus and Poseidon and Pluto divided the empire which they inherited from their father. Now in the days of Cronos there existed a law respecting the destiny of man, which has always been, and still continues to be in Heaven,—that he who has lived all his life in justice and holiness shall go, when he is dead, to the Islands of the Blessed, and dwell there in perfect happiness out of the reach of evil; but that he who has lived unjustly and impiously shall go to the house of vengeance and punishment, which is called Tartarus. And in the time of Cronos, and even quite lately in the reign of Zeus, the judgment was given on the very day on which the men were to die; the judges were alive, and the men were alive; and the consequence was that the judgments were not well given. Then Pluto and the authorities from the Islands of the Blessed came to Zeus, and said that the souls found their way to the wrong places. Zeus said: 'I shall put a stop to this; the judgments are not well given, because the persons who are judged have their clothes on, for they are alive; and

there are many who, having evil souls, are apparelled in fair bodies, or encased in wealth or rank, and, when the day of judgment arrives, numerous witnesses come forward and testify on their behalf that they have lived righteously. The judges are awed by them, and they themselves too have their clothes on when judging; their eyes and ears and their whole bodies are interposed as a veil before their own souls. All this is a hindrance to them; there are the clothes of the judges and the clothes of the judged.—What is to be done? I will tell you:—In the first place, I will deprive men of the foreknowledge of death, which they possess at present: this power which they have Prometheus has already received my orders to take from them: in the second place, they shall be entirely stripped before they are judged, for they shall be judged when they are dead; and the judge too shall be naked, that is to say, dead—he with his naked soul shall pierce into the other naked souls; and they shall die suddenly and be deprived of all their kindred, and leave their brave attire strewn upon the earth—conducted in this manner, the judgment will be just. I knew all about the matter before any of you, and therefore I have made my sons judges; two from Asia, Minos and Rhadamanthus, and one from Europe, Aeacus. And these, when they are dead, shall give judgment in the meadow at the parting of the ways, whence the two roads lead, one to the Islands of the Blessed, and the other to Tartarus. Rhadamanthus shall judge those who come from Asia, and Aeacus those who come from Europe. And to Minos I shall give the primacy, and he shall hold a court of appeal, in case either of the two others are in any doubt:—then the judgment respecting the last journey of men will be as just as possible.'

From this tale, Callicles, which I have heard and believe, I draw the following inferences:—Death, if I am right, is in the first place the separation from one another of two things, soul and body; nothing else. And after they are separated they retain their several natures, as in life; the body keeps the same habit, and the results of treatment or accident are distinctly visible in it: for example, he who by nature or training or both, was a tall man while he was alive, will remain as he was, after he is dead; and the fat man will remain fat; and so on; and the dead man, who in life had a fancy to have flowing hair, will have flowing hair. And if he was marked with the whip and had the prints of the scourge, or of wounds in him when he was alive, you might see the same in the dead body; and if his limbs were broken or misshapen when he was alive, the same appearance would be visible in the dead. And in a word, whatever was the habit of the body during life would be distinguishable after death, either perfectly, or in a great measure and for a certain time. And I should imagine that this is equally true of the soul, Callicles; when a man is stripped of the body, all the natural or acquired affections of the soul are laid open to view.—And when they come to the judge, as those from Asia come to Rhadamanthus, he places them near him and inspects them quite impartially, not knowing whose the soul is: perhaps he may lay hands on the soul of the great king, or of some other king or potentate, who has no soundness in him, but his soul is marked with the whip, and is full of the prints and scars of perjuries and crimes with which each action has stained him, and he is all crooked with falsehood and imposture, and has no straightness, because he has lived without truth. Him Rhadamanthus beholds, full of all deformity and disproportion, which is caused by licence and luxury and insolence and incontinence, and despatches him ignominiously to his prison, and there he undergoes the punishment which he deserves.

Now the proper office of punishment is twofold: he who is rightly punished ought either to become better and profit by it, or he ought to be made an example to his fellows, that they may see what he suffers, and fear and become better. Those who are improved when they are punished by gods and men, are those whose sins are curable; and they are improved, as in this world so also in another, by

pain and suffering; for there is no other way in which they can be delivered from their evil. But they who have been guilty of the worst crimes, and are incurable by reason of their crimes, are made examples; for, as they are incurable, the time has passed at which they can receive any benefit. They get no good themselves, but others get good when they behold them enduring for ever the most terrible and painful and fearful sufferings as the penalty of their sins—there they are, hanging up as examples, in the prison-house of the world below, a spectacle and a warning to all unrighteous men who come thither. And among them, as I confidently affirm, will be found Archelaus, if Polus truly reports of him, and any other tyrant who is like him. Of these fearful examples, most, as I believe, are taken from the class of tyrants and kings and potentates and public men, for they are the authors of the greatest and most impious crimes, because they have the power. And Homer witnesses to the truth of this; for they are always kings and potentates whom he has described as suffering everlasting punishment in the world below: such were Tantalus and Sisyphus and Tityus. But no one ever described Thersites, or any private person who was a villain, as suffering everlasting punishment, or as incurable. For to commit the worst crimes, as I am inclined to think, was not in his power, and he was happier than those who had the power. No, Callicles, the very bad men come from the class of those who have power (compare Republic). And yet in that very class there may arise good men, and worthy of all admiration they are, for where there is great power to do wrong, to live and to die justly is a hard thing, and greatly to be praised, and few there are who attain to this. Such good and true men, however, there have been, and will be again, at Athens and in other states, who have fulfilled their trust righteously; and there is one who is quite famous all over Hellas, Aristeides, the son of Lysimachus. But, in general, great men are also bad, my friend.

As I was saying, Rhadamanthus, when he gets a soul of the bad kind, knows nothing about him, neither who he is, nor who his parents are; he knows only that he has got hold of a villain; and seeing this, he stamps him as curable or incurable, and sends him away to Tartarus, whither he goes and receives his proper recompense. Or, again, he looks with admiration on the soul of some just one who has lived in holiness and truth; he may have been a private man or not; and I should say, Callicles, that he is most likely to have been a philosopher who has done his own work, and not troubled himself with the doings of other men in his lifetime; him Rhadamanthus sends to the Islands of the Blessed. Aeacus does the same; and they both have sceptres, and judge; but Minos alone has a golden sceptre and is seated looking on, as Odysseus in Homer declares that he saw him:

'Holding a sceptre of gold, and giving laws to the dead.'

Now I, Callicles, am persuaded of the truth of these things, and I consider how I shall present my soul whole and undefiled before the judge in that day. Renouncing the honours at which the world aims, I desire only to know the truth, and to live as well as I can, and, when I die, to die as well as I can. And, to the utmost of my power, I exhort all other men to do the same. And, in return for your exhortation of me, I exhort you also to take part in the great combat, which is the combat of life, and greater than every other earthly conflict. And I retort your reproach of me, and say, that you will not be able to help yourself when the day of trial and judgment, of which I was speaking, comes upon you; you will go before the judge, the son of Aegina, and, when he has got you in his grip and is carrying you off, you will gape and your head will swim round, just as mine would in the courts of this world, and very likely some one will shamefully box you on the ears, and put upon you any sort of insult.

Perhaps this may appear to you to be only an old wife's tale, which you will contemn. And there might be reason in your contemning such tales, if by searching we could find out anything better or truer: but now you see that you and Polus and Gorgias, who are the three wisest of the Greeks of our day, are not able to show that we ought to live any life which does not profit in another world as well as in this. And of all that has been said, nothing remains unshaken but the saying, that to do injustice is more to be avoided than to suffer injustice, and that the reality and not the appearance of virtue is to be followed above all things, as well in public as in private life; and that when any one has been wrong in anything, he is to be chastised, and that the next best thing to a man being just is that he should become just, and be chastised and punished; also that he should avoid all flattery of himself as well as of others, of the few or of the many: and rhetoric and any other art should be used by him, and all his actions should be done always, with a view to justice.

Follow me then, and I will lead you where you will be happy in life and after death, as the argument shows. And never mind if some one despises you as a fool, and insults you, if he has a mind; let him strike you, by Zeus, and do you be of good cheer, and do not mind the insulting blow, for you will never come to any harm in the practice of virtue, if you are a really good and true man. When we have practised virtue together, we will apply ourselves to politics, if that seems desirable, or we will advise about whatever else may seem good to us, for we shall be better able to judge then. In our present condition we ought not to give ourselves airs, for even on the most important subjects we are always changing our minds; so utterly stupid are we! Let us, then, take the argument as our guide, which has revealed to us that the best way of life is to practise justice and every virtue in life and death. This way let us go; and in this exhort all men to follow, not in the way to which you trust and in which you exhort me to follow you; for that way, Callicles, is nothing worth.

ION

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

The Ion is the shortest, or nearly the shortest, of all the writings which bear the name of Plato, and is not authenticated by any early external testimony. The grace and beauty of this little work supply the only, and perhaps a sufficient, proof of its genuineness. The plan is simple; the dramatic interest consists entirely in the contrast between the irony of Socrates and the transparent vanity and childlike enthusiasm of the rhapsode Ion. The theme of the Dialogue may possibly have been suggested by the passage of Xenophon's Memorabilia in which the rhapsodists are described by Euthydemus as 'very precise about the exact words of Homer, but very idiotic themselves.' (Compare Aristotle, Met.)

Ion the rhapsode has just come to Athens; he has been exhibiting in Epidaurus at the festival of Asclepius, and is intending to exhibit at the festival of the Panathenaea. Socrates admires and envies the rhapsode's art; for he is always well dressed and in good company—in the company of good poets and of Homer, who is the prince of them. In the course of conversation the admission is elicited from Ion that his skill is restricted to Homer, and that he knows nothing of inferior poets, such as Hesiod and Archilochus;—he brightens up and is wide awake when Homer is being recited, but is apt to go to sleep at the recitations of any other poet. 'And yet, surely, he who knows the superior ought to know the inferior also;—he who can judge of the good speaker is able to judge of the bad. And poetry is a whole; and he who judges of poetry by rules of art ought to be able to judge of all poetry.' This is confirmed by the analogy of sculpture, painting, flute-playing, and the other arts. The argument is at last brought home to the mind of Ion, who asks how this contradiction is to be solved. The solution given by Socrates is as follows:—

The rhapsode is not guided by rules of art, but is an inspired person who derives a mysterious power from the poet; and the poet, in like manner, is inspired by the God. The poets and their interpreters may be compared to a chain of magnetic rings suspended from one another, and from a magnet. The magnet is the Muse, and the ring which immediately follows is the poet himself; from him are suspended other poets; there is also a chain of rhapsodes and actors, who also hang from the Muses, but are let down at the side; and the last ring of all is the spectator. The poet is the inspired interpreter of the God, and this is the reason why some poets, like Homer, are restricted to a single theme, or, like Tynnichus, are famous for a single poem; and the rhapsode is the inspired interpreter of the poet, and for a similar reason some rhapsodes, like Ion, are the interpreters of single poets.

Ion is delighted at the notion of being inspired, and acknowledges that he is beside himself when he is performing;—his eyes rain tears and his hair stands on end. Socrates is of opinion that a man must be mad who behaves in this way at a festival when he is surrounded by his friends and there is nothing to trouble him. Ion is confident that Socrates would never think him mad if he could only hear his embellishments of Homer. Socrates asks whether he can speak well about everything in Homer. 'Yes, indeed he can.' 'What about things of which he has no knowledge?' Ion answers that he can interpret anything in Homer. But, rejoins Socrates, when Homer speaks of the arts, as for example, of chariot-driving, or of medicine, or of prophecy, or of navigation—will he, or will the charioteer or physician or prophet or pilot be the better judge? Ion is compelled to admit that every man will judge of his own particular art better than the rhapsode. He still maintains, however, that he understands the art of the general as well as any one. 'Then why in this city of Athens, in which men of merit are always being sought after, is he not at once appointed a general?' Ion replies that he is a foreigner, and the Athenians and Spartans will not appoint a foreigner to be their general. 'No, that is not the

real reason; there are many examples to the contrary. But Ion has long been playing tricks with the argument; like Proteus, he transforms himself into a variety of shapes, and is at last about to run away in the disguise of a general. Would he rather be regarded as inspired or dishonest?' Ion, who has no suspicion of the irony of Socrates, eagerly embraces the alternative of inspiration.

The Ion, like the other earlier Platonic Dialogues, is a mixture of jest and earnest, in which no definite result is obtained, but some Socratic or Platonic truths are allowed dimly to appear.

The elements of a true theory of poetry are contained in the notion that the poet is inspired. Genius is often said to be unconscious, or spontaneous, or a gift of nature: that 'genius is akin to madness' is a popular aphorism of modern times. The greatest strength is observed to have an element of limitation. Sense or passion are too much for the 'dry light' of intelligence which mingles with them and becomes discoloured by them. Imagination is often at war with reason and fact. The concentration of the mind on a single object, or on a single aspect of human nature, overpowers the orderly perception of the whole. Yet the feelings too bring truths home to the minds of many who in the way of reason would be incapable of understanding them. Reflections of this kind may have been passing before Plato's mind when he describes the poet as inspired, or when, as in the Apology, he speaks of poets as the worst critics of their own writings—anybody taken at random from the crowd is a better interpreter of them than they are of themselves. They are sacred persons, 'winged and holy things' who have a touch of madness in their composition (Phaedr.), and should be treated with every sort of respect (Republic), but not allowed to live in a well-ordered state. Like the Statesmen in the Meno, they have a divine instinct, but they are narrow and confused; they do not attain to the clearness of ideas, or to the knowledge of poetry or of any other art as a whole.

In the Protagoras the ancient poets are recognized by Protagoras himself as the original sophists; and this family resemblance may be traced in the Ion. The rhapsode belongs to the realm of imitation and of opinion: he professes to have all knowledge, which is derived by him from Homer, just as the sophist professes to have all wisdom, which is contained in his art of rhetoric. Even more than the sophist he is incapable of appreciating the commonest logical distinctions; he cannot explain the nature of his own art; his great memory contrasts with his inability to follow the steps of the argument. And in his highest moments of inspiration he has an eye to his own gains.

The old quarrel between philosophy and poetry, which in the Republic leads to their final separation, is already working in the mind of Plato, and is embodied by him in the contrast between Socrates and Ion. Yet here, as in the Republic, Socrates shows a sympathy with the poetic nature. Also, the manner in which Ion is affected by his own recitations affords a lively illustration of the power which, in the Republic, Socrates attributes to dramatic performances over the mind of the performer. His allusion to his embellishments of Homer, in which he declares himself to have surpassed Metrodorus of Lampsacus and Stesimbrotus of Thasos, seems to show that, like them, he belonged to the allegorical school of interpreters. The circumstance that nothing more is known of him may be adduced in confirmation of the argument that this truly Platonic little work is not a forgery of later times.

ION

PERSONS OF THE DIALOGUE: Socrates, Ion.

SOCRATES: Welcome, Ion. Are you from your native city of Ephesus?

ION: No, Socrates; but from Epidaurus, where I attended the festival of Asclepius.

SOCRATES: And do the Epidaurians have contests of rhapsodes at the festival?

ION: O yes; and of all sorts of musical performers.

SOCRATES: And were you one of the competitors—and did you succeed?

ION: I obtained the first prize of all, Socrates.

SOCRATES: Well done; and I hope that you will do the same for us at the Panathenaea.

ION: And I will, please heaven.

SOCRATES: I often envy the profession of a rhapsode, Ion; for you have always to wear fine clothes, and to look as beautiful as you can is a part of your art. Then, again, you are obliged to be continually in the company of many good poets; and especially of Homer, who is the best and most divine of them; and to understand him, and not merely learn his words by rote, is a thing greatly to be envied. And no man can be a rhapsode who does not understand the meaning of the poet. For the rhapsode ought to interpret the mind of the poet to his hearers, but how can he interpret him well unless he knows what he means? All this is greatly to be envied.

ION: Very true, Socrates; interpretation has certainly been the most laborious part of my art; and I believe myself able to speak about Homer better than any man; and that neither Metrodorus of Lampsacus, nor Stesimbrotus of Thasos, nor Glaucon, nor any one else who ever was, had as good ideas about Homer as I have, or as many.

SOCRATES: I am glad to hear you say so, Ion; I see that you will not refuse to acquaint me with them.

ION: Certainly, Socrates; and you really ought to hear how exquisitely I render Homer. I think that the Homeridae should give me a golden crown.

SOCRATES: I shall take an opportunity of hearing your embellishments of him at some other time. But just now I should like to ask you a question: Does your art extend to Hesiod and Archilochus, or to Homer only?

ION: To Homer only; he is in himself quite enough.

SOCRATES: Are there any things about which Homer and Hesiod agree?

ION: Yes; in my opinion there are a good many.

SOCRATES: And can you interpret better what Homer says, or what Hesiod says, about these matters in which they agree?

ION: I can interpret them equally well, Socrates, where they agree.

SOCRATES: But what about matters in which they do not agree?—for example, about divination, of which both Homer and Hesiod have something to say,—

ION: Very true:

SOCRATES: Would you or a good prophet be a better interpreter of what these two poets say about divination, not only when they agree, but when they disagree?

ION: A prophet.

SOCRATES: And if you were a prophet, would you not be able to interpret them when they disagree as well as when they agree?

ION: Clearly.

SOCRATES: But how did you come to have this skill about Homer only, and not about Hesiod or the other poets? Does not Homer speak of the same themes which all other poets handle? Is not war his great argument? and does he not speak of human society and of intercourse of men, good and bad, skilled and unskilled, and of the gods conversing with one another and with mankind, and about what happens in heaven and in the world below, and the generations of gods and heroes? Are not these the themes of which Homer sings?

ION: Very true, Socrates.

SOCRATES: And do not the other poets sing of the same?

ION: Yes, Socrates; but not in the same way as Homer.

SOCRATES: What, in a worse way?

ION: Yes, in a far worse.

SOCRATES: And Homer in a better way?

ION: He is incomparably better.

SOCRATES: And yet surely, my dear friend Ion, in a discussion about arithmetic, where many people are speaking, and one speaks better than the rest, there is somebody who can judge which of them is the good speaker?

ION: Yes.

SOCRATES: And he who judges of the good will be the same as he who judges of the bad speakers?

ION: The same.

SOCRATES: And he will be the arithmetician?

ION: Yes.

SOCRATES: Well, and in discussions about the wholesomeness of food, when many persons are speaking, and one speaks better than the rest, will he who recognizes the better speaker be a different person from him who recognizes the worse, or the same?

ION: Clearly the same.

SOCRATES: And who is he, and what is his name?

ION: The physician.

SOCRATES: And speaking generally, in all discussions in which the subject is the same and many men are speaking, will not he who knows the good know the bad speaker also? For if he does not know the bad, neither will he know the good when the same topic is being discussed.

ION: True.

SOCRATES: Is not the same person skilful in both?

ION: Yes.

SOCRATES: And you say that Homer and the other poets, such as Hesiod and Archilochus, speak of the same things, although not in the same way; but the one speaks well and the other not so well?

ION: Yes; and I am right in saying so.

SOCRATES: And if you knew the good speaker, you would also know the inferior speakers to be inferior?

ION: That is true.

SOCRATES: Then, my dear friend, can I be mistaken in saying that Ion is equally skilled in Homer and in other poets, since he himself acknowledges that the same person will be a good judge of all those who speak of the same things; and that almost all poets do speak of the same things?

ION: Why then, Socrates, do I lose attention and go to sleep and have absolutely no ideas of the least value, when any one speaks of any other poet; but when Homer is mentioned, I wake up at once and am all attention and have plenty to say?

SOCRATES: The reason, my friend, is obvious. No one can fail to see that you speak of Homer without any art or knowledge. If you were able to speak of him by rules of art, you would have been able to speak of all other poets; for poetry is a whole.

ION: Yes.

SOCRATES: And when any one acquires any other art as a whole, the same may be said of them. Would you like me to explain my meaning, Ion?

ION: Yes, indeed, Socrates; I very much wish that you would: for I love to hear you wise men talk.

SOCRATES: O that we were wise, Ion, and that you could truly call us so; but you rhapsodes and actors, and the poets whose verses you sing, are wise; whereas I am a common man, who only speak the truth. For consider what a very commonplace and trivial thing is this which I have said—a thing which any man might say: that when a man has acquired a knowledge of a whole art, the enquiry into good and bad is one and the same. Let us consider this matter; is not the art of painting a whole?

ION: Yes.

SOCRATES: And there are and have been many painters good and bad?

ION: Yes.

SOCRATES: And did you ever know any one who was skilful in pointing out the excellences and defects of Polygnotus the son of Aglaophon, but incapable of criticizing other painters; and when the work of any other painter was produced, went to sleep and was at a loss, and had no ideas; but when he had to give his opinion about Polygnotus, or whoever the painter might be, and about him only, woke up and was attentive and had plenty to say?

ION: No indeed, I have never known such a person.

SOCRATES: Or did you ever know of any one in sculpture, who was skilful in expounding the merits of Daedalus the son of Metion, or of Epeius the son of Panopeus, or of Theodorus the Samian, or of any individual sculptor; but when the works of sculptors in general were produced, was at a loss and went to sleep and had nothing to say?

ION: No indeed; no more than the other.

SOCRATES: And if I am not mistaken, you never met with any one among flute-players or harp-players or singers to the harp or rhapsodes who was able to discourse of Olympus or Thamyras or Orpheus, or Phemius the rhapsode of Ithaca, but was at a loss when he came to speak of Ion of Ephesus, and had no notion of his merits or defects?

ION: I cannot deny what you say, Socrates. Nevertheless I am conscious in my own self, and the world agrees with me in thinking that I do speak better and have more to say about Homer than any other man. But I do not speak equally well about others—tell me the reason of this.

SOCRATES: I perceive, Ion; and I will proceed to explain to you what I imagine to be the reason of this. The gift which you possess of speaking excellently about Homer is not an art, but, as I was just saying, an inspiration; there is a divinity moving you, like that contained in the stone which Euripides calls a magnet, but which is commonly known as the stone of Heraclea. This stone not only attracts iron rings, but also imparts to them a similar power of attracting other rings; and sometimes you may see a number of pieces of iron and rings suspended from one another so as to form quite a long chain: and all of them derive their power of suspension from the original stone. In like manner the Muse first of all inspires men herself; and from these inspired persons a chain of other persons is suspended, who take the inspiration. For all good poets, epic as well as lyric, compose their beautiful poems not by art, but because they are inspired and possessed. And as the Corybantian revellers when they dance are not in their right mind, so the lyric poets are not in their right mind when they are composing their beautiful strains: but when falling under the power of music and metre they are inspired and possessed; like Bacchic maidens who draw milk and honey from the rivers when they are under the influence of Dionysus but not when they are in their right mind. And the soul of the lyric poet does the same, as they themselves say; for they tell us that they bring songs from honeyed fountains, culling them out of the gardens and dells of the Muses; they, like the bees, winging their way from flower to flower. And this is true. For the poet is a light and winged and holy thing, and there is no invention in him until he has been inspired and is out of his senses, and the mind is no longer in him: when he has not attained to this state, he is powerless and is unable to utter his oracles. Many are the noble words in which poets speak concerning the actions of men; but like yourself when speaking about Homer, they do not speak of them by any rules of art: they are simply inspired to utter that to which the Muse impels them, and that only; and when inspired, one of them will make dithyrambs, another hymns of praise, another choral strains, another epic or iambic verses—and he who is good at one is not good at any other kind of verse: for not by art does the poet sing, but by power divine. Had he learned by rules of art, he would have known how to speak not of one theme only, but of all; and therefore God takes away the minds of poets, and uses them as his ministers, as he also uses diviners and holy prophets, in order that we who hear them may know them to be speaking not of themselves who utter these priceless words in a state of unconsciousness, but that God himself is the speaker, and that through them he is conversing with us. And Tynnichus the Chalcidian affords a striking instance of what I am saying: he wrote nothing that any one would care to remember but the famous paean which is in every one's mouth, one of the finest poems ever written, simply an invention of the Muses, as he himself says. For in this way the God would seem to indicate to us and not allow us to doubt that these beautiful poems are not human, or the work of man, but divine and the work of God; and that the poets are only the interpreters of the Gods by whom they are severally possessed. Was not this the lesson which the God intended to teach when by the mouth of the worst of poets he sang the best of songs? Am I not right, Ion?

ION: Yes, indeed, Socrates, I feel that you are; for your words touch my soul, and I am persuaded that good poets by a divine inspiration interpret the things of the Gods to us.

SOCRATES: And you rhapsodists are the interpreters of the poets?

ION: There again you are right.

SOCRATES: Then you are the interpreters of interpreters?

ION: Precisely.

SOCRATES: I wish you would frankly tell me, Ion, what I am going to ask of you: When you produce the greatest effect upon the audience in the recitation of some striking passage, such as the apparition of Odysseus leaping forth on the floor, recognized by the suitors and casting his arrows at his feet, or the description of Achilles rushing at Hector, or the sorrows of Andromache, Hecuba, or Priam,—are you in your right mind? Are you not carried out of yourself, and does not your soul in an ecstasy seem to be among the persons or places of which you are speaking, whether they are in Ithaca or in Troy or whatever may be the scene of the poem?

ION: That proof strikes home to me, Socrates. For I must frankly confess that at the tale of pity my eyes are filled with tears, and when I speak of horrors, my hair stands on end and my heart throbs.

SOCRATES: Well, Ion, and what are we to say of a man who at a sacrifice or festival, when he is dressed in holiday attire, and has golden crowns upon his head, of which nobody has robbed him, appears weeping or panic-stricken in the presence of more than twenty thousand friendly faces, when there is no one despoiling or wronging him;—is he in his right mind or is he not?

ION: No indeed, Socrates, I must say that, strictly speaking, he is not in his right mind.

SOCRATES: And are you aware that you produce similar effects on most of the spectators?

ION: Only too well; for I look down upon them from the stage, and behold the various emotions of pity, wonder, sternness, stamped upon their countenances when I am speaking: and I am obliged to give my very best attention to them; for if I make them cry I myself shall laugh, and if I make them laugh I myself shall cry when the time of payment arrives.

SOCRATES: Do you know that the spectator is the last of the rings which, as I am saying, receive the power of the original magnet from one another? The rhapsode like yourself and the actor are intermediate links, and the poet himself is the first of them. Through all these the God sways the souls of men in any direction which he pleases, and makes one man hang down from another. Thus there is a vast chain of dancers and masters and under-masters of choruses, who are suspended, as if from the stone, at the side of the rings which hang down from the Muse. And every poet has some Muse from whom he is suspended, and by whom he is said to be possessed, which is nearly the same thing; for he is taken hold of. And from these first rings, which are the poets, depend others, some deriving their inspiration from Orpheus, others from Musaeus; but the greater number are possessed and held by Homer. Of whom, Ion, you are one, and are possessed by Homer; and when

any one repeats the words of another poet you go to sleep, and know not what to say; but when any one recites a strain of Homer you wake up in a moment, and your soul leaps within you, and you have plenty to say; for not by art or knowledge about Homer do you say what you say, but by divine inspiration and by possession; just as the Corybantian revellers too have a quick perception of that strain only which is appropriated to the God by whom they are possessed, and have plenty of dances and words for that, but take no heed of any other. And you, Ion, when the name of Homer is mentioned have plenty to say, and have nothing to say of others. You ask, 'Why is this?' The answer is that you praise Homer not by art but by divine inspiration.

ION: That is good, Socrates; and yet I doubt whether you will ever have eloquence enough to persuade me that I praise Homer only when I am mad and possessed; and if you could hear me speak of him I am sure you would never think this to be the case.

SOCRATES: I should like very much to hear you, but not until you have answered a question which I have to ask. On what part of Homer do you speak well?—not surely about every part.

ION: There is no part, Socrates, about which I do not speak well: of that I can assure you.

SOCRATES: Surely not about things in Homer of which you have no knowledge?

ION: And what is there in Homer of which I have no knowledge?

SOCRATES: Why, does not Homer speak in many passages about arts? For example, about driving; if I can only remember the lines I will repeat them.

ION: I remember, and will repeat them.

SOCRATES: Tell me then, what Nestor says to Antilochus, his son, where he bids him be careful of the turn at the horserace in honour of Patroclus.

ION: 'Bend gently,' he says, 'in the polished chariot to the left of them, and urge the horse on the right hand with whip and voice; and slacken the rein. And when you are at the goal, let the left horse draw near, yet so that the nave of the well-wrought wheel may not even seem to touch the extremity; and avoid catching the stone (Il.).'

SOCRATES: Enough. Now, Ion, will the charioteer or the physician be the better judge of the propriety of these lines?

ION: The charioteer, clearly.

SOCRATES: And will the reason be that this is his art, or will there be any other reason?

ION: No, that will be the reason.

SOCRATES: And every art is appointed by God to have knowledge of a certain work; for that which we know by the art of the pilot we do not know by the art of medicine?

ION: Certainly not.

SOCRATES: Nor do we know by the art of the carpenter that which we know by the art of medicine?

ION: Certainly not.

SOCRATES: And this is true of all the arts;—that which we know with one art we do not know with the other? But let me ask a prior question: You admit that there are differences of arts?

ION: Yes.

SOCRATES: You would argue, as I should, that when one art is of one kind of knowledge and another of another, they are different?

ION: Yes.

SOCRATES: Yes, surely; for if the subject of knowledge were the same, there would be no meaning in saying that the arts were different,—if they both gave the same knowledge. For example, I know that here are five fingers, and you know the same. And if I were to ask whether I and you became acquainted with this fact by the help of the same art of arithmetic, you would acknowledge that we did?

ION: Yes.

SOCRATES: Tell me, then, what I was intending to ask you,—whether this holds universally? Must the same art have the same subject of knowledge, and different arts other subjects of knowledge?

ION: That is my opinion, Socrates.

SOCRATES: Then he who has no knowledge of a particular art will have no right judgment of the sayings and doings of that art?

ION: Very true.

SOCRATES: Then which will be a better judge of the lines which you were reciting from Homer, you or the charioteer?

ION: The charioteer.

SOCRATES: Why, yes, because you are a rhapsode and not a charioteer.

ION: Yes.

SOCRATES: And the art of the rhapsode is different from that of the charioteer?

ION: Yes.

SOCRATES: And if a different knowledge, then a knowledge of different matters?

ION: True.

SOCRATES: You know the passage in which Hecamede, the concubine of Nestor, is described as giving to the wounded Machaon a posset, as he says,

'Made with Pramnian wine; and she grated cheese of goat's milk with a grater of bronze, and at his side placed an onion which gives a relish to drink (Il.).'

Now would you say that the art of the rhapsode or the art of medicine was better able to judge of the propriety of these lines?

ION: The art of medicine.

SOCRATES: And when Homer says,

'And she descended into the deep like a leaden plummet, which, set in the horn of ox that ranges in the fields, rushes along carrying death among the ravenous fishes (Il.),'—

will the art of the fisherman or of the rhapsode be better able to judge whether these lines are rightly expressed or not?

ION: Clearly, Socrates, the art of the fisherman.

SOCRATES: Come now, suppose that you were to say to me: 'Since you, Socrates, are able to assign different passages in Homer to their corresponding arts, I wish that you would tell me what are the passages of which the excellence ought to be judged by the prophet and prophetic art'; and you will see how readily and truly I shall answer you. For there are many such passages, particularly in the Odyssee; as, for example, the passage in which Theoclymenus the prophet of the house of Melampus says to the suitors:—

'Wretched men! what is happening to you? Your heads and your faces and your limbs underneath are shrouded in night; and the voice of lamentation bursts forth, and your cheeks are wet with tears. And the vestibule is full, and the court is full, of ghosts descending into the darkness of Erebus, and the sun has perished out of heaven, and an evil mist is spread abroad (Od.).'

And there are many such passages in the Iliad also; as for example in the description of the battle near the rampart, where he says:—

'As they were eager to pass the ditch, there came to them an omen: a soaring eagle, holding back the people on the left, bore a huge bloody dragon in his talons, still living and panting; nor had he yet resigned the strife, for he bent back and smote the bird which carried him on the breast by the neck, and he in pain let him fall from him to the ground into the midst of the multitude. And the eagle, with a cry, was borne afar on the wings of the wind (Il.).'

These are the sort of things which I should say that the prophet ought to consider and determine.

ION: And you are quite right, Socrates, in saying so.

SOCRATES: Yes, Ion, and you are right also. And as I have selected from the Iliad and Odyssee for you passages which describe the office of the prophet and the physician and the fisherman, do you, who know Homer so much better than I do, Ion, select for me passages which relate to the rhapsode and the rhapsode's art, and which the rhapsode ought to examine and judge of better than other men.

ION: All passages, I should say, Socrates.

SOCRATES: Not all, Ion, surely. Have you already forgotten what you were saying? A rhapsode ought to have a better memory.

ION: Why, what am I forgetting?

SOCRATES: Do you not remember that you declared the art of the rhapsode to be different from the art of the charioteer?

ION: Yes, I remember.

SOCRATES: And you admitted that being different they would have different subjects of knowledge?

ION: Yes.

SOCRATES: Then upon your own showing the rhapsode, and the art of the rhapsode, will not know everything?

ION: I should exclude certain things, Socrates.

SOCRATES: You mean to say that you would exclude pretty much the subjects of the other arts. As he does not know all of them, which of them will he know?

ION: He will know what a man and what a woman ought to say, and what a freeman and what a slave ought to say, and what a ruler and what a subject.

SOCRATES: Do you mean that a rhapsode will know better than the pilot what the ruler of a sea-tossed vessel ought to say?

ION: No; the pilot will know best.

SOCRATES: Or will the rhapsode know better than the physician what the ruler of a sick man ought to say?

ION: He will not.

SOCRATES: But he will know what a slave ought to say?

ION: Yes.

SOCRATES: Suppose the slave to be a cowherd; the rhapsode will know better than the cowherd what he ought to say in order to soothe the infuriated cows?

ION: No, he will not.

SOCRATES: But he will know what a spinning-woman ought to say about the working of wool?

ION: No.

SOCRATES: At any rate he will know what a general ought to say when exhorting his soldiers?

ION: Yes, that is the sort of thing which the rhapsode will be sure to know.

SOCRATES: Well, but is the art of the rhapsode the art of the general?

ION: I am sure that I should know what a general ought to say.

SOCRATES: Why, yes, Ion, because you may possibly have a knowledge of the art of the general as well as of the rhapsode; and you may also have a knowledge of horsemanship as well as of the lyre: and then you would know when horses were well or ill managed. But suppose I were to ask you: By the help of which art, Ion, do you know whether horses are well managed, by your skill as a horseman or as a performer on the lyre—what would you answer?

ION: I should reply, by my skill as a horseman.

SOCRATES: And if you judged of performers on the lyre, you would admit that you judged of them as a performer on the lyre, and not as a horseman?

ION: Yes.

SOCRATES: And in judging of the general's art, do you judge of it as a general or a rhapsode?

ION: To me there appears to be no difference between them.

SOCRATES: What do you mean? Do you mean to say that the art of the rhapsode and of the general is the same?

ION: Yes, one and the same.

SOCRATES: Then he who is a good rhapsode is also a good general?

ION: Certainly, Socrates.

SOCRATES: And he who is a good general is also a good rhapsode?

ION: No; I do not say that.

SOCRATES: But you do say that he who is a good rhapsode is also a good general.

ION: Certainly.

SOCRATES: And you are the best of Hellenic rhapsodes?

ION: Far the best, Socrates.

SOCRATES: And are you the best general, Ion?

ION: To be sure, Socrates; and Homer was my master.

SOCRATES: But then, Ion, what in the name of goodness can be the reason why you, who are the best of generals as well as the best of rhapsodes in all Hellas, go about as a rhapsode when you might be a general? Do you think that the Hellenes want a rhapsode with his golden crown, and do not want a general?

ION: Why, Socrates, the reason is, that my countrymen, the Ephesians, are the servants and soldiers of Athens, and do not need a general; and you and Sparta are not likely to have me, for you think that you have enough generals of your own.

SOCRATES: My good Ion, did you never hear of Apollodorus of Cyzicus?

ION: Who may he be?

SOCRATES: One who, though a foreigner, has often been chosen their general by the Athenians: and there is Phanosthenes of Andros, and Heraclides of Clazomenae, whom they have also appointed to the command of their armies and to other offices, although aliens, after they had shown their merit. And will they not choose Ion the Ephesian to be their general, and honour him, if he prove himself worthy? Were not the Ephesians originally Athenians, and Ephesus is no mean city? But, indeed, Ion, if you are correct in saying that by art and knowledge you are able to praise Homer, you do not deal fairly with me, and after all your professions of knowing many glorious things about Homer, and promises that you would exhibit them, you are only a deceiver, and so far from exhibiting the art of which you are a master, will not, even after my repeated entreaties, explain to me the nature of it. You have literally as many forms as Proteus; and now you go all manner of ways, twisting and turning, and, like Proteus, become all manner of people at once, and at last slip away from me in the disguise of a general, in order that you may escape exhibiting your Homeric lore. And if you have art, then, as I was saying, in falsifying your promise that you would exhibit Homer, you are not dealing fairly with me. But if, as I believe, you have no art, but speak all these beautiful words about Homer unconsciously under his inspiring influence, then I acquit you of dishonesty, and shall only say that you are inspired. Which do you prefer to be thought, dishonest or inspired?

ION: There is a great difference, Socrates, between the two alternatives; and inspiration is by far the nobler.

SOCRATES: Then, Ion, I shall assume the nobler alternative; and attribute to you in your praises of Homer inspiration, and not art.

LACHES

OR COURAGE

By Plato

Translated by Benjamin Jowett

INTRODUCTION.

Lysimachus, the son of Aristides the Just, and Melesias, the son of the elder Thucydides, two aged men who live together, are desirous of educating their sons in the best manner. Their own education, as often happens with the sons of great men, has been neglected; and they are resolved that their children shall have more care taken of them, than they received themselves at the hands of their fathers.

At their request, Nicias and Laches have accompanied them to see a man named Stesilaus fighting in heavy armour. The two fathers ask the two generals what they think of this exhibition, and whether they would advise that their sons should acquire the accomplishment. Nicias and Laches are quite willing to give their opinion; but they suggest that Socrates should be invited to take part in the consultation. He is a stranger to Lysimachus, but is afterwards recognised as the son of his old friend Sophroniscus, with whom he never had a difference to the hour of his death. Socrates is also known to Nicias, to whom he had introduced the excellent Damon, musician and sophist, as a tutor for his son, and to Laches, who had witnessed his heroic behaviour at the battle of Delium (compare Symp.).

Socrates, as he is younger than either Nicias or Laches, prefers to wait until they have delivered their opinions, which they give in a characteristic manner. Nicias, the tactician, is very much in favour of the new art, which he describes as the gymnastics of war—useful when the ranks are formed, and still more useful when they are broken; creating a general interest in military studies, and greatly adding to the appearance of the soldier in the field. Laches, the blunt warrior, is of opinion that such an art is not knowledge, and cannot be of any value, because the Lacedaemonians, those great masters of arms, neglect it. His own experience in actual service has taught him that these pretenders are useless and ridiculous. This man Stesilaus has been seen by him on board ship making a very sorry exhibition of himself. The possession of the art will make the coward rash, and subject the courageous, if he chance to make a slip, to invidious remarks. And now let Socrates be taken into counsel. As they differ he must decide.

Socrates would rather not decide the question by a plurality of votes: in such a serious matter as the education of a friend's children, he would consult the one skilled person who has had masters, and has works to show as evidences of his skill. This is not himself; for he has never been able to pay the sophists for instructing him, and has never had the wit to do or discover anything. But Nicias and Laches are older and richer than he is: they have had teachers, and perhaps have made discoveries; and he would have trusted them entirely, if they had not been diametrically opposed.

Lysimachus here proposes to resign the argument into the hands of the younger part of the company, as he is old, and has a bad memory. He earnestly requests Socrates to remain;—in this showing, as Nicias says, how little he knows the man, who will certainly not go away until he has cross-examined the company about their past lives. Nicias has often submitted to this process; and Laches is quite willing to learn from Socrates, because his actions, in the true Dorian mode, correspond to his words.

Socrates proceeds: We might ask who are our teachers? But a better and more thorough way of examining the question will be to ask, 'What is Virtue?'—or rather, to restrict the enquiry to that part of virtue which is concerned with the use of weapons—'What is Courage?' Laches thinks that he knows this: (1) 'He is courageous who remains at his post.' But some nations fight flying, after the manner of

Aeneas in Homer; or as the heavy-armed Spartans also did at the battle of Plataea. (2) Socrates wants a more general definition, not only of military courage, but of courage of all sorts, tried both amid pleasures and pains. Laches replies that this universal courage is endurance. But courage is a good thing, and mere endurance may be hurtful and injurious. Therefore (3) the element of intelligence must be added. But then again unintelligent endurance may often be more courageous than the intelligent, the bad than the good. How is this contradiction to be solved? Socrates and Laches are not set 'to the Dorian mode' of words and actions; for their words are all confusion, although their actions are courageous. Still they must 'endure' in an argument about endurance. Laches is very willing, and is quite sure that he knows what courage is, if he could only tell.

Nicias is now appealed to; and in reply he offers a definition which he has heard from Socrates himself, to the effect that (1) 'Courage is intelligence.' Laches derides this; and Socrates enquires, 'What sort of intelligence?' to which Nicias replies, 'Intelligence of things terrible.' 'But every man knows the things to be dreaded in his own art.' 'No they do not. They may predict results, but cannot tell whether they are really terrible; only the courageous man can tell that.' Laches draws the inference that the courageous man is either a soothsayer or a god.

Again, (2) in Nicias' way of speaking, the term 'courageous' must be denied to animals or children, because they do not know the danger. Against this inversion of the ordinary use of language Laches reclaims, but is in some degree mollified by a compliment to his own courage. Still, he does not like to see an Athenian statesman and general descending to sophistries of this sort. Socrates resumes the argument. Courage has been defined to be intelligence or knowledge of the terrible; and courage is not all virtue, but only one of the virtues. The terrible is in the future, and therefore the knowledge of the terrible is a knowledge of the future. But there can be no knowledge of future good or evil separated from a knowledge of the good and evil of the past or present; that is to say, of all good and evil. Courage, therefore, is the knowledge of good and evil generally. But he who has the knowledge of good and evil generally, must not only have courage, but also temperance, justice, and every other virtue. Thus, a single virtue would be the same as all virtues (compare Protagoras). And after all the two generals, and Socrates, the hero of Delium, are still in ignorance of the nature of courage. They must go to school again, boys, old men and all.

Some points of resemblance, and some points of difference, appear in the Laches when compared with the Charmides and Lysis. There is less of poetical and simple beauty, and more of dramatic interest and power. They are richer in the externals of the scene; the Laches has more play and development of character. In the Lysis and Charmides the youths are the central figures, and frequent allusions are made to the place of meeting, which is a palaestra. Here the place of meeting, which is also a palaestra, is quite forgotten, and the boys play a subordinate part. The seance is of old and elder men, of whom Socrates is the youngest.

First is the aged Lysimachus, who may be compared with Cephalus in the Republic, and, like him, withdraws from the argument. Melesias, who is only his shadow, also subsides into silence. Both of them, by their own confession, have been ill-educated, as is further shown by the circumstance that Lysimachus, the friend of Sophroniscus, has never heard of the fame of Socrates, his son; they belong to different circles. In the Meno their want of education in all but the arts of riding and wrestling is adduced as a proof that virtue cannot be taught. The recognition of Socrates by Lysimachus is extremely graceful; and his military exploits naturally connect him with the two generals, of whom one

has witnessed them. The characters of Nicias and Laches are indicated by their opinions on the exhibition of the man fighting in heavy armour. The more enlightened Nicias is quite ready to accept the new art, which Laches treats with ridicule, seeming to think that this, or any other military question, may be settled by asking, 'What do the Lacedaemonians say?' The one is the thoughtful general, willing to avail himself of any discovery in the art of war (Aristoph. Aves); the other is the practical man, who relies on his own experience, and is the enemy of innovation; he can act but cannot speak, and is apt to lose his temper. It is to be noted that one of them is supposed to be a hearer of Socrates; the other is only acquainted with his actions. Laches is the admirer of the Dorian mode; and into his mouth the remark is put that there are some persons who, having never been taught, are better than those who have. Like a novice in the art of disputation, he is delighted with the hits of Socrates; and is disposed to be angry with the refinements of Nicias.

In the discussion of the main thesis of the Dialogue—'What is Courage?' the antagonism of the two characters is still more clearly brought out; and in this, as in the preliminary question, the truth is parted between them. Gradually, and not without difficulty, Laches is made to pass on from the more popular to the more philosophical; it has never occurred to him that there was any other courage than that of the soldier; and only by an effort of the mind can he frame a general notion at all. No sooner has this general notion been formed than it evanesces before the dialectic of Socrates; and Nicias appears from the other side with the Socratic doctrine, that courage is knowledge. This is explained to mean knowledge of things terrible in the future. But Socrates denies that the knowledge of the future is separable from that of the past and present; in other words, true knowledge is not that of the soothsayer but of the philosopher. And all knowledge will thus be equivalent to all virtue—a position which elsewhere Socrates is not unwilling to admit, but which will not assist us in distinguishing the nature of courage. In this part of the Dialogue the contrast between the mode of cross-examination which is practised by Laches and by Socrates, and also the manner in which the definition of Laches is made to approximate to that of Nicias, are worthy of attention.

Thus, with some intimation of the connexion and unity of virtue and knowledge, we arrive at no distinct result. The two aspects of courage are never harmonized. The knowledge which in the Protagoras is explained as the faculty of estimating pleasures and pains is here lost in an unmeaning and transcendental conception. Yet several true intimations of the nature of courage are allowed to appear: (1) That courage is moral as well as physical: (2) That true courage is inseparable from knowledge, and yet (3) is based on a natural instinct. Laches exhibits one aspect of courage; Nicias the other. The perfect image and harmony of both is only realized in Socrates himself.

The Dialogue offers one among many examples of the freedom with which Plato treats facts. For the scene must be supposed to have occurred between B.C. 424, the year of the battle of Delium, and B.C. 418, the year of the battle of Mantinea, at which Laches fell. But if Socrates was more than seventy years of age at his trial in 399 (see Apology), he could not have been a young man at any time after the battle of Delium.

LACHES,

OR COURAGE.

PERSONS OF THE DIALOGUE:

Lysimachus, son of Aristides.
Melesias, son of Thucydides.
Their sons.
Nicias, Laches, Socrates.

LYSIMACHUS: You have seen the exhibition of the man fighting in armour, Nicias and Laches, but we did not tell you at the time the reason why my friend Melesias and I asked you to go with us and see him. I think that we may as well confess what this was, for we certainly ought not to have any reserve with you. The reason was, that we were intending to ask your advice. Some laugh at the very notion of advising others, and when they are asked will not say what they think. They guess at the wishes of the person who asks them, and answer according to his, and not according to their own, opinion. But as we know that you are good judges, and will say exactly what you think, we have taken you into our counsels. The matter about which I am making all this preface is as follows: Melesias and I have two sons; that is his son, and he is named Thucydides, after his grandfather; and this is mine, who is also called after his grandfather, Aristides. Now, we are resolved to take the greatest care of the youths, and not to let them run about as they like, which is too often the way with the young, when they are no longer children, but to begin at once and do the utmost that we can for them. And knowing you to have sons of your own, we thought that you were most likely to have attended to their training and improvement, and, if perchance you have not attended to them, we may remind you that you ought to have done so, and would invite you to assist us in the fulfilment of a common duty. I will tell you, Nicias and Laches, even at the risk of being tedious, how we came to think of this. Melesias and I live together, and our sons live with us; and now, as I was saying at first, we are going to confess to you. Both of us often talk to the lads about the many noble deeds which our own fathers did in war and peace—in the management of the allies, and in the administration of

the city; but neither of us has any deeds of his own which he can show. The truth is that we are ashamed of this contrast being seen by them, and we blame our fathers for letting us be spoiled in the days of our youth, while they were occupied with the concerns of others; and we urge all this upon the lads, pointing out to them that they will not grow up to honour if they are rebellious and take no pains about themselves; but that if they take pains they may, perhaps, become worthy of the names which they bear. They, on their part, promise to comply with our wishes; and our care is to discover what studies or pursuits are likely to be most improving to them. Some one commended to us the art of fighting in armour, which he thought an excellent accomplishment for a young man to learn; and he praised the man whose exhibition you have seen, and told us to go and see him. And we determined that we would go, and get you to accompany us; and we were intending at the same time, if you did not object, to take counsel with you about the education of our sons. That is the matter which we wanted to talk over with you; and we hope that you will give us your opinion about this art of fighting in armour, and about any other studies or pursuits which may or may not be desirable for a young man to learn. Please to say whether you agree to our proposal.

NICIAS: As far as I am concerned, Lysimachus and Melesias, I applaud your purpose, and will gladly assist you; and I believe that you, Laches, will be equally glad.

LACHES: Certainly, Nicias; and I quite approve of the remark which Lysimachus made about his own father and the father of Melesias, and which is applicable, not only to them, but to us, and to every one who is occupied with public affairs. As he says, such persons are too apt to be negligent and careless of their own children and their private concerns. There is much truth in that remark of yours, Lysimachus. But why, instead of consulting us, do you not consult our friend Socrates about the education of the youths? He is of the same deme with you, and is always passing his time in places where the youth have any noble study or pursuit, such as you are enquiring after.

LYSIMACHUS: Why, Laches, has Socrates ever attended to matters of this sort?

LACHES: Certainly, Lysimachus.

NICIAS: That I have the means of knowing as well as Laches; for quite lately he supplied me with a teacher of music for my sons,—Damon, the disciple of Agathocles, who is a most accomplished man in every way, as well as a musician, and a companion of inestimable value for young men at their age.

LYSIMACHUS: Those who have reached my time of life, Socrates and Nicias and Laches, fall out of acquaintance with the young, because they are generally detained at home by old age; but you, O son of Sophroniscus, should let your fellow demesman have the benefit of any advice which you are able to give. Moreover I have a claim upon you as an old friend of your father; for I and he were always companions and friends, and to the hour of his death there never was a difference between us; and now it comes back to me, at the mention of your name, that I have heard these lads talking to one another at home, and often speaking of Socrates in terms of the highest praise; but I have never thought to ask them whether the son of Sophroniscus was the person whom they meant. Tell me, my boys, whether this is the Socrates of whom you have often spoken?

SON: Certainly, father, this is he.

LYSIMACHUS: I am delighted to hear, Socrates, that you maintain the name of your father, who was a most excellent man; and I further rejoice at the prospect of our family ties being renewed.

LACHES: Indeed, Lysimachus, you ought not to give him up; for I can assure you that I have seen him maintaining, not only his father's, but also his country's name. He was my companion in the retreat from Delium, and I can tell you that if others had only been like him, the honour of our country would have been upheld, and the great defeat would never have occurred.

LYSIMACHUS: That is very high praise which is accorded to you, Socrates, by faithful witnesses and for actions like those which they praise. Let me tell you the pleasure which I feel in hearing of your fame; and I hope that you will regard me as one of your warmest friends. You ought to have visited us long ago, and made yourself at home with us; but now, from this day forward, as we have at last found one another out, do as I say—come and make acquaintance with me, and with these young men, that I may continue your friend, as I was your father's. I shall expect you to do so, and shall venture at some future time to remind you of your duty. But what say you of the matter of which we were beginning to speak—the art of fighting in armour? Is that a practice in which the lads may be advantageously instructed?

SOCRATES: I will endeavour to advise you, Lysimachus, as far as I can in this matter, and also in every way will comply with your wishes; but as I am younger and not so experienced, I think that I ought certainly to hear first what my elders have to say, and to learn of them, and if I have anything to add, then I may venture to give my opinion to them as well as to you. Suppose, Nicias, that one or other of you begin.

NICIAS: I have no objection, Socrates; and my opinion is that the acquirement of this art is in many ways useful to young men. It is an advantage to them that among the favourite amusements of their leisure hours they should have one which tends to improve and not to injure their bodily health. No gymnastics could be better or harder exercise; and this, and the art of riding, are of all arts most befitting to a freeman; for they only who are thus trained in the use of arms are the athletes of our military profession, trained in that on which the conflict turns. Moreover in actual battle, when you have to fight in a line with a number of others, such an acquirement will be of some use, and will be of the greatest whenever the ranks are broken and you have to fight singly, either in pursuit, when you are attacking some one who is defending himself, or in flight, when you have to defend yourself against an assailant. Certainly he who possessed the art could not meet with any harm at the hands of a single person, or perhaps of several; and in any case he would have a great advantage. Further, this sort of skill inclines a man to the love of other noble lessons; for every man who has learned how to fight in armour will desire to learn the proper arrangement of an army, which is the sequel of the lesson: and when he has learned this, and his ambition is once fired, he will go on to learn the complete art of the general. There is no difficulty in seeing that the knowledge and practice of other military arts will be honourable and valuable to a man; and this lesson may be the beginning of them. Let me add a further advantage, which is by no means a slight one,—that this science will make any man a great deal more valiant and self-possessed in the field. And I will not disdain to mention, what by some may be thought to be a small matter;—he will make a better appearance at the right time; that is to say, at the time when his appearance will strike terror into his enemies. My opinion then, Lysimachus, is, as I say, that the youths should be instructed in this art, and for the reasons which I have given. But Laches may take a different view; and I shall be very glad to hear what he has to say.

LACHES: I should not like to maintain, Nicias, that any kind of knowledge is not to be learned; for all knowledge appears to be a good: and if, as Nicias and as the teachers of the art affirm, this use of arms is really a species of knowledge, then it ought to be learned; but if not, and if those who profess to teach it are deceivers only; or if it be knowledge, but not of a valuable sort, then what is the use of learning it? I say this, because I think that if it had been really valuable, the Lacedaemonians, whose whole life is passed in finding out and practising the arts which give them an advantage over other nations in war, would have discovered this one. And even if they had not, still these professors of the art would certainly not have failed to discover that of all the Hellenes the Lacedaemonians have the greatest interest in such matters, and that a master of the art who was honoured among them would be sure to make his fortune among other nations, just as a tragic poet would who is honoured among ourselves; which is the reason why he who fancies that he can write a tragedy does not go about itinerating in the neighbouring states, but rushes hither straight, and exhibits at Athens; and this is natural. Whereas I perceive that these fighters in armour regard Lacedaemon as a sacred inviolable territory, which they do not touch with the point of their foot; but they make a circuit of the neighbouring states, and would rather exhibit to any others than to the Spartans; and particularly to those who would themselves acknowledge that they are by no means first-rate in the arts of war. Further, Lysimachus, I have encountered a good many of these gentlemen in actual service, and have taken their measure, which I can give you at once; for none of these masters of fence have ever been distinguished in war,—there has been a sort of fatality about them; while in all other arts the men of note have been always those who have practised the art, they appear to be a most unfortunate exception. For example, this very Stesilaus, whom you and I have just witnessed exhibiting in all that crowd and making such great professions of his powers, I have seen at another time making, in sober truth, an involuntary exhibition of himself, which was a far better spectacle. He was a marine on board a ship which struck a transport vessel, and was armed with a weapon, half spear, half scythe; the singularity of this weapon was worthy of the singularity of the man. To make a long story short, I will only tell you what happened to this notable invention of the scythe spear. He was fighting, and the scythe was caught in the rigging of the other ship, and stuck fast; and he tugged, but was unable to get his weapon free. The two ships were passing one another. He first ran along his own ship holding on to the spear; but as the other ship passed by and drew him after as he was holding on, he let the spear slip through his hand until he retained only the end of the handle. The people in the transport clapped their hands, and laughed at his ridiculous figure; and when some one threw a stone, which fell on the deck at his feet, and he quitted his hold of the scythe-spear, the crew of his own trireme also burst out laughing; they could not refrain when they beheld the weapon waving in the air, suspended from the transport. Now I do not deny that there may be something in such an art, as Nicias asserts, but I tell you my experience; and, as I said at first, whether this be an art of which the advantage is so slight, or not an art at all, but only an imposition, in either case such an acquirement is not worth having. For my opinion is, that if the professor of this art be a coward, he will be likely to become rash, and his character will be only more notorious; or if he be brave, and fail ever so little, other men will be on the watch, and he will be greatly traduced; for there is a jealousy of such pretenders; and unless a man be pre-eminent in valour, he cannot help being ridiculous, if he says that he has this sort of skill. Such is my judgment, Lysimachus, of the desirableness of this art; but, as I said at first, ask Socrates, and do not let him go until he has given you his opinion of the matter.

LYSIMACHUS: I am going to ask this favour of you, Socrates; as is the more necessary because the two councillors disagree, and some one is in a manner still needed who will decide between them.

Had they agreed, no arbiter would have been required. But as Laches has voted one way and Nicias another, I should like to hear with which of our two friends you agree.

SOCRATES: What, Lysimachus, are you going to accept the opinion of the majority?

LYSIMACHUS: Why, yes, Socrates; what else am I to do?

SOCRATES: And would you do so too, Melesias? If you were deliberating about the gymnastic training of your son, would you follow the advice of the majority of us, or the opinion of the one who had been trained and exercised under a skilful master?

MELESIAS: The latter, Socrates; as would surely be reasonable.

SOCRATES: His one vote would be worth more than the vote of all us four?

MELESIAS: Certainly.

SOCRATES: And for this reason, as I imagine,—because a good decision is based on knowledge and not on numbers?

MELESIAS: To be sure.

SOCRATES: Must we not then first of all ask, whether there is any one of us who has knowledge of that about which we are deliberating? If there is, let us take his advice, though he be one only, and not mind the rest; if there is not, let us seek further counsel. Is this a slight matter about which you and Lysimachus are deliberating? Are you not risking the greatest of your possessions? For children are your riches; and upon their turning out well or ill depends the whole order of their father's house.

MELESIAS: That is true.

SOCRATES: Great care, then, is required in this matter?

MELESIAS: Certainly.

SOCRATES: Suppose, as I was just now saying, that we were considering, or wanting to consider, who was the best trainer. Should we not select him who knew and had practised the art, and had the best teachers?

MELESIAS: I think that we should.

SOCRATES: But would there not arise a prior question about the nature of the art of which we want to find the masters?

MELESIAS: I do not understand.

SOCRATES: Let me try to make my meaning plainer then. I do not think that we have as yet decided what that is about which we are consulting, when we ask which of us is or is not skilled in the art, and has or has not had a teacher of the art.

NICIAS: Why, Socrates, is not the question whether young men ought or ought not to learn the art of fighting in armour?

SOCRATES: Yes, Nicias; but there is also a prior question, which I may illustrate in this way: When a person considers about applying a medicine to the eyes, would you say that he is consulting about the medicine or about the eyes?

NICIAS: About the eyes.

SOCRATES: And when he considers whether he shall set a bridle on a horse and at what time, he is thinking of the horse and not of the bridle?

NICIAS: True.

SOCRATES: And in a word, when he considers anything for the sake of another thing, he thinks of the end and not of the means?

NICIAS: Certainly.

SOCRATES: And when you call in an adviser, you should see whether he too is skilful in the accomplishment of the end which you have in view?

NICIAS: Most true.

SOCRATES: And at present we have in view some knowledge, of which the end is the soul of youth?

NICIAS: Yes.

SOCRATES: And we are enquiring, Which of us is skilful or successful in the treatment of the soul, and which of us has had good teachers?

LACHES: Well but, Socrates; did you never observe that some persons, who have had no teachers, are more skilful than those who have, in some things?

SOCRATES: Yes, Laches, I have observed that; but you would not be very willing to trust them if they only professed to be masters of their art, unless they could show some proof of their skill or excellence in one or more works.

LACHES: That is true.

SOCRATES: And therefore, Laches and Nicias, as Lysimachus and Melesias, in their anxiety to improve the minds of their sons, have asked our advice about them, we too should tell them who our

teachers were, if we say that we have had any, and prove them to be in the first place men of merit and experienced trainers of the minds of youth and also to have been really our teachers. Or if any of us says that he has no teacher, but that he has works of his own to show; then he should point out to them what Athenians or strangers, bond or free, he is generally acknowledged to have improved. But if he can show neither teachers nor works, then he should tell them to look out for others; and not run the risk of spoiling the children of friends, and thereby incurring the most formidable accusation which can be brought against any one by those nearest to him. As for myself, Lysimachus and Melesias, I am the first to confess that I have never had a teacher of the art of virtue; although I have always from my earliest youth desired to have one. But I am too poor to give money to the Sophists, who are the only professors of moral improvement; and to this day I have never been able to discover the art myself, though I should not be surprised if Nicias or Laches may have discovered or learned it; for they are far wealthier than I am, and may therefore have learnt of others. And they are older too; so that they have had more time to make the discovery. And I really believe that they are able to educate a man; for unless they had been confident in their own knowledge, they would never have spoken thus decidedly of the pursuits which are advantageous or hurtful to a young man. I repose confidence in both of them; but I am surprised to find that they differ from one another. And therefore, Lysimachus, as Laches suggested that you should detain me, and not let me go until I answered, I in turn earnestly beseech and advise you to detain Laches and Nicias, and question them. I would have you say to them: Socrates avers that he has no knowledge of the matter—he is unable to decide which of you speaks truly; neither discoverer nor student is he of anything of the kind. But you, Laches and Nicias, should each of you tell us who is the most skilful educator whom you have ever known; and whether you invented the art yourselves, or learned of another; and if you learned, who were your respective teachers, and who were their brothers in the art; and then, if you are too much occupied in politics to teach us yourselves, let us go to them, and present them with gifts, or make interest with them, or both, in the hope that they may be induced to take charge of our children and of yours; and then they will not grow up inferior, and disgrace their ancestors. But if you are yourselves original discoverers in that field, give us some proof of your skill. Who are they who, having been inferior persons, have become under your care good and noble? For if this is your first attempt at education, there is a danger that you may be trying the experiment, not on the 'vile corpus' of a Carian slave, but on your own sons, or the sons of your friend, and, as the proverb says, 'break the large vessel in learning to make pots.' Tell us then, what qualities you claim or do not claim. Make them tell you that, Lysimachus, and do not let them off.

LYSIMACHUS: I very much approve of the words of Socrates, my friends; but you, Nicias and Laches, must determine whether you will be questioned, and give an explanation about matters of this sort. Assuredly, I and Melesias would be greatly pleased to hear you answer the questions which Socrates asks, if you will: for I began by saying that we took you into our counsels because we thought that you would have attended to the subject, especially as you have children who, like our own, are nearly of an age to be educated. Well, then, if you have no objection, suppose that you take Socrates into partnership; and do you and he ask and answer one another's questions: for, as he has well said, we are deliberating about the most important of our concerns. I hope that you will see fit to comply with our request.

NICIAS: I see very clearly, Lysimachus, that you have only known Socrates' father, and have no acquaintance with Socrates himself: at least, you can only have known him when he was a child, and

may have met him among his fellow-wardsmen, in company with his father, at a sacrifice, or at some other gathering. You clearly show that you have never known him since he arrived at manhood.

LYSIMACHUS: Why do you say that, Nicias?

NICIAS: Because you seem not to be aware that any one who has an intellectual affinity to Socrates and enters into conversation with him is liable to be drawn into an argument; and whatever subject he may start, he will be continually carried round and round by him, until at last he finds that he has to give an account both of his present and past life; and when he is once entangled, Socrates will not let him go until he has completely and thoroughly sifted him. Now I am used to his ways; and I know that he will certainly do as I say, and also that I myself shall be the sufferer; for I am fond of his conversation, Lysimachus. And I think that there is no harm in being reminded of any wrong thing which we are, or have been, doing: he who does not fly from reproof will be sure to take more heed of his after-life; as Solon says, he will wish and desire to be learning so long as he lives, and will not think that old age of itself brings wisdom. To me, to be cross-examined by Socrates is neither unusual nor unpleasant; indeed, I knew all along that where Socrates was, the argument would soon pass from our sons to ourselves; and therefore, I say that for my part, I am quite willing to discourse with Socrates in his own manner; but you had better ask our friend Laches what his feeling may be.

LACHES: I have but one feeling, Nicias, or (shall I say?) two feelings, about discussions. Some would think that I am a lover, and to others I may seem to be a hater of discourse; for when I hear a man discoursing of virtue, or of any sort of wisdom, who is a true man and worthy of his theme, I am delighted beyond measure: and I compare the man and his words, and note the harmony and correspondence of them. And such an one I deem to be the true musician, attuned to a fairer harmony than that of the lyre, or any pleasant instrument of music; for truly he has in his own life a harmony of words and deeds arranged, not in the Ionian, or in the Phrygian mode, nor yet in the Lydian, but in the true Hellenic mode, which is the Dorian, and no other. Such an one makes me merry with the sound of his voice; and when I hear him I am thought to be a lover of discourse; so eager am I in drinking in his words. But a man whose actions do not agree with his words is an annoyance to me; and the better he speaks the more I hate him, and then I seem to be a hater of discourse. As to Socrates, I have no knowledge of his words, but of old, as would seem, I have had experience of his deeds; and his deeds show that free and noble sentiments are natural to him. And if his words accord, then I am of one mind with him, and shall be delighted to be interrogated by a man such as he is, and shall not be annoyed at having to learn of him: for I too agree with Solon, 'that I would fain grow old, learning many things.' But I must be allowed to add 'of the good only.' Socrates must be willing to allow that he is a good teacher, or I shall be a dull and uncongenial pupil: but that the teacher is younger, or not as yet in repute—anything of that sort is of no account with me. And therefore, Socrates, I give you notice that you may teach and confute me as much as ever you like, and also learn of me anything which I know. So high is the opinion which I have entertained of you ever since the day on which you were my companion in danger, and gave a proof of your valour such as only the man of merit can give. Therefore, say whatever you like, and do not mind about the difference of our ages.

SOCRATES: I cannot say that either of you show any reluctance to take counsel and advise with me.

LYSIMACHUS: But this is our proper business; and yours as well as ours, for I reckon you as one of us. Please then to take my place, and find out from Nicias and Laches what we want to know, for the sake of the youths, and talk and consult with them: for I am old, and my memory is bad; and I do not remember the questions which I am going to ask, or the answers to them; and if there is any interruption I am quite lost. I will therefore beg of you to carry on the proposed discussion by your selves; and I will listen, and Melesias and I will act upon your conclusions.

SOCRATES: Let us, Nicias and Laches, comply with the request of Lysimachus and Melesias. There will be no harm in asking ourselves the question which was first proposed to us: 'Who have been our own instructors in this sort of training, and whom have we made better?' But the other mode of carrying on the enquiry will bring us equally to the same point, and will be more like proceeding from first principles. For if we knew that the addition of something would improve some other thing, and were able to make the addition, then, clearly, we must know how that about which we are advising may be best and most easily attained. Perhaps you do not understand what I mean. Then let me make my meaning plainer in this way. Suppose we knew that the addition of sight makes better the eyes which possess this gift, and also were able to impart sight to the eyes, then, clearly, we should know the nature of sight, and should be able to advise how this gift of sight may be best and most easily attained; but if we knew neither what sight is, nor what hearing is, we should not be very good medical advisers about the eyes or the ears, or about the best mode of giving sight and hearing to them.

LACHES: That is true, Socrates.

SOCRATES: And are not our two friends, Laches, at this very moment inviting us to consider in what way the gift of virtue may be imparted to their sons for the improvement of their minds?

LACHES: Very true.

SOCRATES: Then must we not first know the nature of virtue? For how can we advise any one about the best mode of attaining something of which we are wholly ignorant?

LACHES: I do not think that we can, Socrates.

SOCRATES: Then, Laches, we may presume that we know the nature of virtue?

LACHES: Yes.

SOCRATES: And that which we know we must surely be able to tell?

LACHES: Certainly.

SOCRATES: I would not have us begin, my friend, with enquiring about the whole of virtue; for that may be more than we can accomplish; let us first consider whether we have a sufficient knowledge of a part; the enquiry will thus probably be made easier to us.

LACHES: Let us do as you say, Socrates.

SOCRATES: Then which of the parts of virtue shall we select? Must we not select that to which the art of fighting in armour is supposed to conduce? And is not that generally thought to be courage?

LACHES: Yes, certainly.

SOCRATES: Then, Laches, suppose that we first set about determining the nature of courage, and in the second place proceed to enquire how the young men may attain this quality by the help of studies and pursuits. Tell me, if you can, what is courage.

LACHES: Indeed, Socrates, I see no difficulty in answering; he is a man of courage who does not run away, but remains at his post and fights against the enemy; there can be no mistake about that.

SOCRATES: Very good, Laches; and yet I fear that I did not express myself clearly; and therefore you have answered not the question which I intended to ask, but another.

LACHES: What do you mean, Socrates?

SOCRATES: I will endeavour to explain; you would call a man courageous who remains at his post, and fights with the enemy?

LACHES: Certainly I should.

SOCRATES: And so should I; but what would you say of another man, who fights flying, instead of remaining?

LACHES: How flying?

SOCRATES: Why, as the Scythians are said to fight, flying as well as pursuing; and as Homer says in praise of the horses of Aeneas, that they knew 'how to pursue, and fly quickly hither and thither'; and he passes an encomium on Aeneas himself, as having a knowledge of fear or flight, and calls him 'an author of fear or flight.'

LACHES: Yes, Socrates, and there Homer is right: for he was speaking of chariots, as you were speaking of the Scythian cavalry, who have that way of fighting; but the heavy-armed Greek fights, as I say, remaining in his rank.

SOCRATES: And yet, Laches, you must except the Lacedaemonians at Plataea, who, when they came upon the light shields of the Persians, are said not to have been willing to stand and fight, and to have fled; but when the ranks of the Persians were broken, they turned upon them like cavalry, and won the battle of Plataea.

LACHES: That is true.

SOCRATES: That was my meaning when I said that I was to blame in having put my question badly, and that this was the reason of your answering badly. For I meant to ask you not only about the courage of heavy-armed soldiers, but about the courage of cavalry and every other style of soldier;

and not only who are courageous in war, but who are courageous in perils by sea, and who in disease, or in poverty, or again in politics, are courageous; and not only who are courageous against pain or fear, but mighty to contend against desires and pleasures, either fixed in their rank or turning upon their enemy. There is this sort of courage—is there not, Laches?

LACHES: Certainly, Socrates.

SOCRATES: And all these are courageous, but some have courage in pleasures, and some in pains: some in desires, and some in fears, and some are cowards under the same conditions, as I should imagine.

LACHES: Very true.

SOCRATES: Now I was asking about courage and cowardice in general. And I will begin with courage, and once more ask, What is that common quality, which is the same in all these cases, and which is called courage? Do you now understand what I mean?

LACHES: Not over well.

SOCRATES: I mean this: As I might ask what is that quality which is called quickness, and which is found in running, in playing the lyre, in speaking, in learning, and in many other similar actions, or rather which we possess in nearly every action that is worth mentioning of arms, legs, mouth, voice, mind;—would you not apply the term quickness to all of them?

LACHES: Quite true.

SOCRATES: And suppose I were to be asked by some one: What is that common quality, Socrates, which, in all these uses of the word, you call quickness? I should say the quality which accomplishes much in a little time—whether in running, speaking, or in any other sort of action.

LACHES: You would be quite correct.

SOCRATES: And now, Laches, do you try and tell me in like manner, What is that common quality which is called courage, and which includes all the various uses of the term when applied both to pleasure and pain, and in all the cases to which I was just now referring?

LACHES: I should say that courage is a sort of endurance of the soul, if I am to speak of the universal nature which pervades them all.

SOCRATES: But that is what we must do if we are to answer the question. And yet I cannot say that every kind of endurance is, in my opinion, to be deemed courage. Hear my reason: I am sure, Laches, that you would consider courage to be a very noble quality.

LACHES: Most noble, certainly.

SOCRATES: And you would say that a wise endurance is also good and noble?

LACHES: Very noble.

SOCRATES: But what would you say of a foolish endurance? Is not that, on the other hand, to be regarded as evil and hurtful?

LACHES: True.

SOCRATES: And is anything noble which is evil and hurtful?

LACHES: I ought not to say that, Socrates.

SOCRATES: Then you would not admit that sort of endurance to be courage—for it is not noble, but courage is noble?

LACHES: You are right.

SOCRATES: Then, according to you, only the wise endurance is courage?

LACHES: True.

SOCRATES: But as to the epithet 'wise,'—wise in what? In all things small as well as great? For example, if a man shows the quality of endurance in spending his money wisely, knowing that by spending he will acquire more in the end, do you call him courageous?

LACHES: Assuredly not.

SOCRATES: Or, for example, if a man is a physician, and his son, or some patient of his, has inflammation of the lungs, and begs that he may be allowed to eat or drink something, and the other is firm and refuses; is that courage?

LACHES: No; that is not courage at all, any more than the last.

SOCRATES: Again, take the case of one who endures in war, and is willing to fight, and wisely calculates and knows that others will help him, and that there will be fewer and inferior men against him than there are with him; and suppose that he has also advantages of position; would you say of such a one who endures with all this wisdom and preparation, that he, or some man in the opposing army who is in the opposite circumstances to these and yet endures and remains at his post, is the braver?

LACHES: I should say that the latter, Socrates, was the braver.

SOCRATES: But, surely, this is a foolish endurance in comparison with the other?

LACHES: That is true.

SOCRATES: Then you would say that he who in an engagement of cavalry endures, having the knowledge of horsemanship, is not so courageous as he who endures, having no such knowledge?

LACHES: So I should say.

SOCRATES: And he who endures, having a knowledge of the use of the sling, or the bow, or of any other art, is not so courageous as he who endures, not having such a knowledge?

LACHES: True.

SOCRATES: And he who descends into a well, and dives, and holds out in this or any similar action, having no knowledge of diving, or the like, is, as you would say, more courageous than those who have this knowledge?

LACHES: Why, Socrates, what else can a man say?

SOCRATES: Nothing, if that be what he thinks.

LACHES: But that is what I do think.

SOCRATES: And yet men who thus run risks and endure are foolish, Laches, in comparison of those who do the same things, having the skill to do them.

LACHES: That is true.

SOCRATES: But foolish boldness and endurance appeared before to be base and hurtful to us.

LACHES: Quite true.

SOCRATES: Whereas courage was acknowledged to be a noble quality.

LACHES: True.

SOCRATES: And now on the contrary we are saying that the foolish endurance, which was before held in dishonour, is courage.

LACHES: Very true.

SOCRATES: And are we right in saying so?

LACHES: Indeed, Socrates, I am sure that we are not right.

SOCRATES: Then according to your statement, you and I, Laches, are not attuned to the Dorian mode, which is a harmony of words and deeds; for our deeds are not in accordance with our words. Any one would say that we had courage who saw us in action, but not, I imagine, he who heard us talking about courage just now.

LACHES: That is most true.

SOCRATES: And is this condition of ours satisfactory?

LACHES: Quite the reverse.

SOCRATES: Suppose, however, that we admit the principle of which we are speaking to a certain extent.

LACHES: To what extent and what principle do you mean?

SOCRATES: The principle of endurance. We too must endure and persevere in the enquiry, and then courage will not laugh at our faint-heartedness in searching for courage; which after all may, very likely, be endurance.

LACHES: I am ready to go on, Socrates; and yet I am unused to investigations of this sort. But the spirit of controversy has been aroused in me by what has been said; and I am really grieved at being thus unable to express my meaning. For I fancy that I do know the nature of courage; but, somehow or other, she has slipped away from me, and I cannot get hold of her and tell her nature.

SOCRATES: But, my dear friend, should not the good sportsman follow the track, and not be lazy?

LACHES: Certainly, he should.

SOCRATES: And shall we invite Nicias to join us? he may be better at the sport than we are. What do you say?

LACHES: I should like that.

SOCRATES: Come then, Nicias, and do what you can to help your friends, who are tossing on the waves of argument, and at the last gasp: you see our extremity, and may save us and also settle your own opinion, if you will tell us what you think about courage.

NICIAS: I have been thinking, Socrates, that you and Laches are not defining courage in the right way; for you have forgotten an excellent saying which I have heard from your own lips.

SOCRATES: What is it, Nicias?

NICIAS: I have often heard you say that 'Every man is good in that in which he is wise, and bad in that in which he is unwise.'

SOCRATES: That is certainly true, Nicias.

NICIAS: And therefore if the brave man is good, he is also wise.

SOCRATES: Do you hear him, Laches?

LACHES: Yes, I hear him, but I do not very well understand him.

SOCRATES: I think that I understand him; and he appears to me to mean that courage is a sort of wisdom.

LACHES: What can he possibly mean, Socrates?

SOCRATES: That is a question which you must ask of himself.

LACHES: Yes.

SOCRATES: Tell him then, Nicias, what you mean by this wisdom; for you surely do not mean the wisdom which plays the flute?

NICIAS: Certainly not.

SOCRATES: Nor the wisdom which plays the lyre?

NICIAS: No.

SOCRATES: But what is this knowledge then, and of what?

LACHES: I think that you put the question to him very well, Socrates; and I would like him to say what is the nature of this knowledge or wisdom.

NICIAS: I mean to say, Laches, that courage is the knowledge of that which inspires fear or confidence in war, or in anything.

LACHES: How strangely he is talking, Socrates.

SOCRATES: Why do you say so, Laches?

LACHES: Why, surely courage is one thing, and wisdom another.

SOCRATES: That is just what Nicias denies.

LACHES: Yes, that is what he denies; but he is so silly.

SOCRATES: Suppose that we instruct instead of abusing him?

NICIAS: Laches does not want to instruct me, Socrates; but having been proved to be talking nonsense himself, he wants to prove that I have been doing the same.

LACHES: Very true, Nicias; and you are talking nonsense, as I shall endeavour to show. Let me ask you a question: Do not physicians know the dangers of disease? or do the courageous know them? or are the physicians the same as the courageous?

NICIAS: Not at all.

LACHES: No more than the husbandmen who know the dangers of husbandry, or than other craftsmen, who have a knowledge of that which inspires them with fear or confidence in their own arts, and yet they are not courageous a whit the more for that.

SOCRATES: What is Laches saying, Nicias? He appears to be saying something of importance.

NICIAS: Yes, he is saying something, but it is not true.

SOCRATES: How so?

NICIAS: Why, because he does not see that the physician's knowledge only extends to the nature of health and disease: he can tell the sick man no more than this. Do you imagine, Laches, that the physician knows whether health or disease is the more terrible to a man? Had not many a man better never get up from a sick bed? I should like to know whether you think that life is always better than death. May not death often be the better of the two?

LACHES: Yes certainly so in my opinion.

NICIAS: And do you think that the same things are terrible to those who had better die, and to those who had better live?

LACHES: Certainly not.

NICIAS: And do you suppose that the physician or any other artist knows this, or any one indeed, except he who is skilled in the grounds of fear and hope? And him I call the courageous.

SOCRATES: Do you understand his meaning, Laches?

LACHES: Yes; I suppose that, in his way of speaking, the soothsayers are courageous. For who but one of them can know to whom to die or to live is better? And yet Nicias, would you allow that you are yourself a soothsayer, or are you neither a soothsayer nor courageous?

NICIAS: What! do you mean to say that the soothsayer ought to know the grounds of hope or fear?

LACHES: Indeed I do: who but he?

NICIAS: Much rather I should say he of whom I speak; for the soothsayer ought to know only the signs of things that are about to come to pass, whether death or disease, or loss of property, or victory, or defeat in war, or in any sort of contest; but to whom the suffering or not suffering of these things will be for the best, can no more be decided by the soothsayer than by one who is no soothsayer.

LACHES: I cannot understand what Nicias would be at, Socrates; for he represents the courageous man as neither a soothsayer, nor a physician, nor in any other character, unless he means to say that

he is a god. My opinion is that he does not like honestly to confess that he is talking nonsense, but that he shuffles up and down in order to conceal the difficulty into which he has got himself. You and I, Socrates, might have practised a similar shuffle just now, if we had only wanted to avoid the appearance of inconsistency. And if we had been arguing in a court of law there might have been reason in so doing; but why should a man deck himself out with vain words at a meeting of friends such as this?

SOCRATES: I quite agree with you, Laches, that he should not. But perhaps Nicias is serious, and not merely talking for the sake of talking. Let us ask him just to explain what he means, and if he has reason on his side we will agree with him; if not, we will instruct him.

LACHES: Do you, Socrates, if you like, ask him: I think that I have asked enough.

SOCRATES: I do not see why I should not; and my question will do for both of us.

LACHES: Very good.

SOCRATES: Then tell me, Nicias, or rather tell us, for Laches and I are partners in the argument: Do you mean to affirm that courage is the knowledge of the grounds of hope and fear?

NICIAS: I do.

SOCRATES: And not every man has this knowledge; the physician and the soothsayer have it not; and they will not be courageous unless they acquire it—that is what you were saying?

NICIAS: I was.

SOCRATES: Then this is certainly not a thing which every pig would know, as the proverb says, and therefore he could not be courageous.

NICIAS: I think not.

SOCRATES: Clearly not, Nicias; not even such a big pig as the Crommyonian sow would be called by you courageous. And this I say not as a joke, but because I think that he who assents to your doctrine, that courage is the knowledge of the grounds of fear and hope, cannot allow that any wild beast is courageous, unless he admits that a lion, or a leopard, or perhaps a boar, or any other animal, has such a degree of wisdom that he knows things which but a few human beings ever know by reason of their difficulty. He who takes your view of courage must affirm that a lion, and a stag, and a bull, and a monkey, have equally little pretensions to courage.

LACHES: Capital, Socrates; by the gods, that is truly good. And I hope, Nicias, that you will tell us whether these animals, which we all admit to be courageous, are really wiser than mankind; or whether you will have the boldness, in the face of universal opinion, to deny their courage.

NICIAS: Why, Laches, I do not call animals or any other things which have no fear of dangers, because they are ignorant of them, courageous, but only fearless and senseless. Do you imagine that

I should call little children courageous, which fear no dangers because they know none? There is a difference, to my way of thinking, between fearlessness and courage. I am of opinion that thoughtful courage is a quality possessed by very few, but that rashness and boldness, and fearlessness, which has no forethought, are very common qualities possessed by many men, many women, many children, many animals. And you, and men in general, call by the term 'courageous' actions which I call rash;—my courageous actions are wise actions.

LACHES: Behold, Socrates, how admirably, as he thinks, he dresses himself out in words, while seeking to deprive of the honour of courage those whom all the world acknowledges to be courageous.

NICIAS: Not so, Laches, but do not be alarmed; for I am quite willing to say of you and also of Lamachus, and of many other Athenians, that you are courageous and therefore wise.

LACHES: I could answer that; but I would not have you cast in my teeth that I am a haughty Aexonian.

SOCRATES: Do not answer him, Laches; I rather fancy that you are not aware of the source from which his wisdom is derived. He has got all this from my friend Damon, and Damon is always with Prodicus, who, of all the Sophists, is considered to be the best puller to pieces of words of this sort.

LACHES: Yes, Socrates; and the examination of such niceties is a much more suitable employment for a Sophist than for a great statesman whom the city chooses to preside over her.

SOCRATES: Yes, my sweet friend, but a great statesman is likely to have a great intelligence. And I think that the view which is implied in Nicias' definition of courage is worthy of examination.

LACHES: Then examine for yourself, Socrates.

SOCRATES: That is what I am going to do, my dear friend. Do not, however, suppose I shall let you out of the partnership; for I shall expect you to apply your mind, and join with me in the consideration of the question.

LACHES: I will if you think that I ought.

SOCRATES: Yes, I do; but I must beg of you, Nicias, to begin again. You remember that we originally considered courage to be a part of virtue.

NICIAS: Very true.

SOCRATES: And you yourself said that it was a part; and there were many other parts, all of which taken together are called virtue.

NICIAS: Certainly.

SOCRATES: Do you agree with me about the parts? For I say that justice, temperance, and the like, are all of them parts of virtue as well as courage. Would you not say the same?

NICIAS: Certainly.

SOCRATES: Well then, so far we are agreed. And now let us proceed a step, and try to arrive at a similar agreement about the fearful and the hopeful: I do not want you to be thinking one thing and myself another. Let me then tell you my own opinion, and if I am wrong you shall set me right: in my opinion the terrible and the hopeful are the things which do or do not create fear, and fear is not of the present, nor of the past, but is of future and expected evil. Do you not agree to that, Laches?

LACHES: Yes, Socrates, entirely.

SOCRATES: That is my view, Nicias; the terrible things, as I should say, are the evils which are future; and the hopeful are the good or not evil things which are future. Do you or do you not agree with me?

NICIAS: I agree.

SOCRATES: And the knowledge of these things you call courage?

NICIAS: Precisely.

SOCRATES: And now let me see whether you agree with Laches and myself as to a third point.

NICIAS: What is that?

SOCRATES: I will tell you. He and I have a notion that there is not one knowledge or science of the past, another of the present, a third of what is likely to be best and what will be best in the future; but that of all three there is one science only: for example, there is one science of medicine which is concerned with the inspection of health equally in all times, present, past, and future; and one science of husbandry in like manner, which is concerned with the productions of the earth in all times. As to the art of the general, you yourselves will be my witnesses that he has an excellent foreknowledge of the future, and that he claims to be the master and not the servant of the soothsayer, because he knows better what is happening or is likely to happen in war: and accordingly the law places the soothsayer under the general, and not the general under the soothsayer. Am I not correct in saying so, Laches?

LACHES: Quite correct.

SOCRATES: And do you, Nicias, also acknowledge that the same science has understanding of the same things, whether future, present, or past?

NICIAS: Yes, indeed Socrates; that is my opinion.

SOCRATES: And courage, my friend, is, as you say, a knowledge of the fearful and of the hopeful?

NICIAS: Yes.

SOCRATES: And the fearful, and the hopeful, are admitted to be future goods and future evils?

NICIAS: True.

SOCRATES: And the same science has to do with the same things in the future or at any time?

NICIAS: That is true.

SOCRATES: Then courage is not the science which is concerned with the fearful and hopeful, for they are future only; courage, like the other sciences, is concerned not only with good and evil of the future, but of the present and past, and of any time?

NICIAS: That, as I suppose, is true.

SOCRATES: Then the answer which you have given, Nicias, includes only a third part of courage; but our question extended to the whole nature of courage: and according to your view, that is, according to your present view, courage is not only the knowledge of the hopeful and the fearful, but seems to include nearly every good and evil without reference to time. What do you say to that alteration in your statement?

NICIAS: I agree, Socrates.

SOCRATES: But then, my dear friend, if a man knew all good and evil, and how they are, and have been, and will be produced, would he not be perfect, and wanting in no virtue, whether justice, or temperance, or holiness? He would possess them all, and he would know which were dangers and which were not, and guard against them whether they were supernatural or natural; and he would provide the good, as he would know how to deal both with gods or men.

NICIAS: I think, Socrates, that there is a great deal of truth in what you say.

SOCRATES: But then, Nicias, courage, according to this new definition of yours, instead of being a part of virtue only, will be all virtue?

NICIAS: It would seem so.

SOCRATES: But we were saying that courage is one of the parts of virtue?

NICIAS: Yes, that was what we were saying.

SOCRATES: And that is in contradiction with our present view?

NICIAS: That appears to be the case.

SOCRATES: Then, Nicias, we have not discovered what courage is.

NICIAS: We have not.

LACHES: And yet, friend Nicias, I imagined that you would have made the discovery, when you were so contemptuous of the answers which I made to Socrates. I had very great hopes that you would have been enlightened by the wisdom of Damon.

NICIAS: I perceive, Laches, that you think nothing of having displayed your ignorance of the nature of courage, but you look only to see whether I have not made a similar display; and if we are both equally ignorant of the things which a man who is good for anything should know, that, I suppose, will be of no consequence. You certainly appear to me very like the rest of the world, looking at your neighbour and not at yourself. I am of opinion that enough has been said on the subject which we have been discussing; and if anything has been imperfectly said, that may be hereafter corrected by the help of Damon, whom you think to laugh down, although you have never seen him, and with the help of others. And when I am satisfied myself, I will freely impart my satisfaction to you, for I think that you are very much in want of knowledge.

LACHES: You are a philosopher, Nicias; of that I am aware: nevertheless I would recommend Lysimachus and Melesias not to take you and me as advisers about the education of their children; but, as I said at first, they should ask Socrates and not let him off; if my own sons were old enough, I would have asked him myself.

NICIAS: To that I quite agree, if Socrates is willing to take them under his charge. I should not wish for any one else to be the tutor of Niceratus. But I observe that when I mention the matter to him he recommends to me some other tutor and refuses himself. Perhaps he may be more ready to listen to you, Lysimachus.

LYSIMACHUS: He ought, Nicias: for certainly I would do things for him which I would not do for many others. What do you say, Socrates—will you comply? And are you ready to give assistance in the improvement of the youths?

SOCRATES: Indeed, Lysimachus, I should be very wrong in refusing to aid in the improvement of anybody. And if I had shown in this conversation that I had a knowledge which Nicias and Laches have not, then I admit that you would be right in inviting me to perform this duty; but as we are all in the same perplexity, why should one of us be preferred to another? I certainly think that no one should; and under these circumstances, let me offer you a piece of advice (and this need not go further than ourselves). I maintain, my friends, that every one of us should seek out the best teacher whom he can find, first for ourselves, who are greatly in need of one, and then for the youth, regardless of expense or anything. But I cannot advise that we remain as we are. And if any one laughs at us for going to school at our age, I would quote to them the authority of Homer, who says, that

'Modesty is not good for a needy man.'

Let us then, regardless of what may be said of us, make the education of the youths our own education.

LYSIMACHUS: I like your proposal, Socrates; and as I am the oldest, I am also the most eager to go to school with the boys. Let me beg a favour of you: Come to my house to-morrow at dawn, and we will advise about these matters. For the present, let us make an end of the conversation.

SOCRATES: I will come to you to-morrow, Lysimachus, as you propose, God willing.

LAWS

By Plato

Translated By Benjamin Jowett

INTRODUCTION AND ANALYSIS.

The genuineness of the Laws is sufficiently proved (1) by more than twenty citations of them in the writings of Aristotle, who was residing at Athens during the last twenty years of the life of Plato, and who, having left it after his death (B.C. 347), returned thither twelve years later (B.C. 335); (2) by the allusion of Isocrates

(Oratio ad Philippum missa, p.84: To men tais paneguresin enochlein kai pros apantas legein tous sunprechontas en autais pros oudena legein estin, all omoios oi toioutoi ton logon (sc. speeches in the assembly) akuroi tugchanousin ontes tois nomois kai tais politeiais tais upo ton sophiston gegrammenais.) —writing 346 B.C., a year after the death of Plato, and probably not more than three or four years after the composition of the Laws—who speaks of the Laws and Republics written by philosophers (upo ton sophiston); (3) by the reference (Athen.) of the comic poet Alexis, a younger contemporary of Plato (fl. B.C 356-306), to the enactment about prices, which occurs in Laws xi., viz that the same goods should not be offered at two prices on the same day

(Ou gegone kreitton nomothetes tou plousiou
Aristonikou tithesi gar nuni nomon,
ton ichthuopolon ostis an polon tini
ichthun upotimesas apodot elattonos
es eipe times, eis to desmoterion

tes axias agaposin, e tes esperas
saprous apantas apopherosin oikade.

Meineke, Frag. Com. Graec.); (4) by the unanimous voice of later antiquity and the absence of any suspicion among ancient writers worth speaking of to the contrary; for it is not said of Philippus of Opus that he composed any part of the Laws, but only that he copied them out of the waxen tablets, and was thought by some to have written the Epinomis (Diog. Laert.) That the longest and one of the best writings bearing the name of Plato should be a forgery, even if its genuineness were unsupported by external testimony, would be a singular phenomenon in ancient literature; and although the critical worth of the consensus of late writers is generally not to be compared with the express testimony of contemporaries, yet a somewhat greater value may be attributed to their consent in the present instance, because the admission of the Laws is combined with doubts about the Epinomis, a spurious writing, which is a kind of epilogue to the larger work probably of a much later date. This shows that the reception of the Laws was not altogether undiscriminating.

The suspicion which has attached to the Laws of Plato in the judgment of some modern writers appears to rest partly (1) on differences in the style and form of the work, and (2) on differences of thought and opinion which they observe in them. Their suspicion is increased by the fact that these differences are accompanied by resemblances as striking to passages in other Platonic writings. They are sensible of a want of point in the dialogue and a general inferiority in the ideas, plan, manners, and style. They miss the poetical flow, the dramatic verisimilitude, the life and variety of the characters, the dialectic subtlety, the Attic purity, the luminous order, the exquisite urbanity; instead of which they find tautology, obscurity, self-sufficiency, sermonizing, rhetorical declamation, pedantry, egotism, uncouth forms of sentences, and peculiarities in the use of words and idioms. They are unable to discover any unity in the patched, irregular structure. The speculative element both in

government and education is superseded by a narrow economical or religious vein. The grace and cheerfulness of Athenian life have disappeared; and a spirit of moroseness and religious intolerance has taken their place. The charm of youth is no longer there; the mannerism of age makes itself unpleasantly felt. The connection is often imperfect; and there is a want of arrangement, exhibited especially in the enumeration of the laws towards the end of the work. The Laws are full of flaws and repetitions. The Greek is in places very ungrammatical and intractable. A cynical levity is displayed in some passages, and a tone of disappointment and lamentation over human things in others. The critics seem also to observe in them bad imitations of thoughts which are better expressed in Plato's other writings. Lastly, they wonder how the mind which conceived the Republic could have left the Critias, Hermocrates, and Philosophus incomplete or unwritten, and have devoted the last years of life to the Laws.

The questions which have been thus indirectly suggested may be considered by us under five or six heads: I, the characters; II, the plan; III, the style; IV, the imitations of other writings of Plato; V; the more general relation of the Laws to the Republic and the other dialogues; and VI, to the existing Athenian and Spartan states.

I. Already in the Philebus the distinctive character of Socrates has disappeared; and in the Timaeus, Sophist, and Statesman his function of chief speaker is handed over to the Pythagorean philosopher Timaeus, and to the Eleatic Stranger, at whose feet he sits, and is silent. More and more Plato seems to have felt in his later writings that the character and method of Socrates were no longer suited to be the vehicle of his own philosophy. He is no longer interrogative but dogmatic; not 'a hesitating enquirer,' but one who speaks with the authority of a legislator. Even in the Republic we have seen that the argument which is carried on by Socrates in the old style with Thrasymachus in the first book, soon passes into the form of exposition. In the Laws he is nowhere mentioned. Yet so completely in the tradition of antiquity is Socrates identified with Plato, that in the criticism of the Laws which we find in the so-called Politics of Aristotle he is supposed by the writer still to be playing his part of the chief speaker (compare Pol.).

The Laws are discussed by three representatives of Athens, Crete, and Sparta. The Athenian, as might be expected, is the protagonist or chief speaker, while the second place is assigned to the Cretan, who, as one of the leaders of a new colony, has a special interest in the conversation. At least four-fifths of the answers are put into his mouth. The Spartan is every inch a soldier, a man of few words himself, better at deeds than words. The Athenian talks to the two others, although they are his equals in age, in the style of a master discoursing to his scholars; he frequently praises himself; he entertains a very poor opinion of the understanding of his companions. Certainly the boastfulness and rudeness of the Laws is the reverse of the refined irony and courtesy which characterize the earlier dialogues. We are no longer in such good company as in the Phaedrus and Symposium. Manners are lost sight of in the earnestness of the speakers, and dogmatic assertions take the place of poetical fancies.

The scene is laid in Crete, and the conversation is held in the course of a walk from Cnosus to the cave and temple of Zeus, which takes place on one of the longest and hottest days of the year. The companions start at dawn, and arrive at the point in their conversation which terminates the fourth book, about noon. The God to whose temple they are going is the lawgiver of Crete, and this may be supposed to be the very cave at which he gave his oracles to Minos. But the externals of the scene,

which are briefly and inartistically described, soon disappear, and we plunge abruptly into the subject of the dialogue. We are reminded by contrast of the higher art of the Phaedrus, in which the summer's day, and the cool stream, and the chirping of the grasshoppers, and the fragrance of the agnus castus, and the legends of the place are present to the imagination throughout the discourse.

The typical Athenian apologizes for the tendency of his countrymen 'to spin a long discussion out of slender materials,' and in a similar spirit the Lacedaemonian Megillus apologizes for the Spartan brevity (compare Thucydid.), acknowledging at the same time that there may be occasions when long discourses are necessary. The family of Megillus is the proxenus of Athens at Sparta; and he pays a beautiful compliment to the Athenian, significant of the character of the work, which, though borrowing many elements from Sparta, is also pervaded by an Athenian spirit. A good Athenian, he says, is more than ordinarily good, because he is inspired by nature and not manufactured by law. The love of listening which is attributed to the Timocrat in the Republic is also exhibited in him. The Athenian on his side has a pleasure in speaking to the Lacedaemonian of the struggle in which their ancestors were jointly engaged against the Persians. A connexion with Athens is likewise intimated by the Cretan Cleinias. He is the relative of Epimenides, whom, by an anachronism of a century,—perhaps arising as Zeller suggests (Plat. Stud.) out of a confusion of the visit of Epimenides and Diotima (Symp.),—he describes as coming to Athens, not after the attempt of Cylon, but ten years before the Persian war. The Cretan and Lacedaemonian hardly contribute at all to the argument of which the Athenian is the expounder; they only supply information when asked about the institutions of their respective countries. A kind of simplicity or stupidity is ascribed to them. At first, they are dissatisfied with the free criticisms which the Athenian passes upon the laws of Minos and Lycurgus, but they acquiesce in his greater experience and knowledge of the world. They admit that there can be no objection to the enquiry; for in the spirit of the legislator himself, they are discussing his laws when there are no young men present to listen. They are unwilling to allow that the Spartan and Cretan lawgivers can have been mistaken in honouring courage as the first part of virtue, and are puzzled at hearing for the first time that 'Goods are only evil to the evil.' Several times they are on the point of quarrelling, and by an effort learn to restrain their natural feeling (compare Shakespeare, Henry V, act iii. sc. 2). In Book vii., the Lacedaemonian expresses a momentary irritation at the accusation which the Athenian brings against the Spartan institutions, of encouraging licentiousness in their women, but he is reminded by the Cretan that the permission to criticize them freely has been given, and cannot be retracted. His only criterion of truth is the authority of the Spartan lawgiver; he is 'interested,' in the novel speculations of the Athenian, but inclines to prefer the ordinances of Lycurgus.

The three interlocutors all of them speak in the character of old men, which forms a pleasant bond of union between them. They have the feelings of old age about youth, about the state, about human things in general. Nothing in life seems to be of much importance to them; they are spectators rather than actors, and men in general appear to the Athenian speaker to be the playthings of the Gods and of circumstances. Still they have a fatherly care of the young, and are deeply impressed by sentiments of religion. They would give confidence to the aged by an increasing use of wine, which, as they get older, is to unloose their tongues and make them sing. The prospect of the existence of the soul after death is constantly present to them; though they can hardly be said to have the cheerful hope and resignation which animates Socrates in the Phaedo or Cephalus in the Republic. Plato appears to be expressing his own feelings in remarks of this sort. For at the time of writing the first book of the Laws he was at least seventy-four years of age, if we suppose him to allude to the victory

of the Syracusans under Dionysius the Younger over the Locrians, which occurred in the year 356. Such a sadness was the natural effect of declining years and failing powers, which make men ask, 'After all, what profit is there in life?' They feel that their work is beginning to be over, and are ready to say, 'All the world is a stage;' or, in the actual words of Plato, 'Let us play as good plays as we can,' though 'we must be sometimes serious, which is not agreeable, but necessary.' These are feelings which have crossed the minds of reflective persons in all ages, and there is no reason to connect the Laws any more than other parts of Plato's writings with the very uncertain narrative of his life, or to imagine that this melancholy tone is attributable to disappointment at having failed to convert a Sicilian tyrant into a philosopher.

II. The plan of the Laws is more irregular and has less connexion than any other of the writings of Plato. As Aristotle says in the Politics, 'The greater part consists of laws'; in Books v, vi, xi, xii the dialogue almost entirely disappears. Large portions of them are rather the materials for a work than a finished composition which may rank with the other Platonic dialogues. To use his own image, 'Some stones are regularly inserted in the building; others are lying on the ground ready for use.' There is probably truth in the tradition that the Laws were not published until after the death of Plato. We can easily believe that he has left imperfections, which would have been removed if he had lived a few years longer. The arrangement might have been improved; the connexion of the argument might have been made plainer, and the sentences more accurately framed. Something also may be attributed to the feebleness of old age. Even a rough sketch of the Phaedrus or Symposium would have had a very different look. There is, however, an interest in possessing one writing of Plato which is in the process of creation.

We must endeavour to find a thread of order which will carry us through this comparative disorder. The first four books are described by Plato himself as the preface or preamble. Having arrived at the conclusion that each law should have a preamble, the lucky thought occurs to him at the end of the fourth book that the preceding discourse is the preamble of the whole. This preamble or introduction may be abridged as follows:—

The institutions of Sparta and Crete are admitted by the Lacedaemonian and Cretan to have one aim only: they were intended by the legislator to inspire courage in war. To this the Athenian objects that the true lawgiver should frame his laws with a view to all the virtues and not to one only. Better is he who has temperance as well as courage, than he who has courage only; better is he who is faithful in civil broils, than he who is a good soldier only. Better, too, is peace than war; the reconciliation than the defeat of an enemy. And he who would attain all virtue should be trained amid pleasures as well as pains. Hence there should be convivial intercourse among the citizens, and a man's temperance should be tested in his cups, as we test his courage amid dangers. He should have a fear of the right sort, as well as a courage of the right sort.

At the beginning of the second book the subject of pleasure leads to education, which in the early years of life is wholly a discipline imparted by the means of pleasure and pain. The discipline of pleasure is implanted chiefly by the practice of the song and the dance. Of these the forms should be fixed, and not allowed to depend on the fickle breath of the multitude. There will be choruses of boys, girls, and grown-up persons, and all will be heard repeating the same strain, that 'virtue is happiness.' One of them will give the law to the rest; this will be the chorus of aged minstrels, who will sing the

most beautiful and the most useful of songs. They will require a little wine, to mellow the austerity of age, and make them amenable to the laws.

After having laid down as the first principle of politics, that peace, and not war, is the true aim of the legislator, and briefly discussed music and festive intercourse, at the commencement of the third book Plato makes a digression, in which he speaks of the origin of society. He describes, first of all, the family; secondly, the patriarchal stage, which is an aggregation of families; thirdly, the founding of regular cities, like Ilium; fourthly, the establishment of a military and political system, like that of Sparta, with which he identifies Argos and Messene, dating from the return of the Heraclidae. But the aims of states should be good, or else, like the prayer of Theseus, they may be ruinous to themselves. This was the case in two out of three of the Heracleid kingdoms. They did not understand that the powers in a state should be balanced. The balance of powers saved Sparta, while the excess of tyranny in Persia and the excess of liberty at Athens have been the ruin of both...This discourse on politics is suddenly discovered to have an immediate practical use; for Cleinias the Cretan is about to give laws to a new colony.

At the beginning of the fourth book, after enquiring into the circumstances and situation of the colony, the Athenian proceeds to make further reflections. Chance, and God, and the skill of the legislator, all co-operate in the formation of states. And the most favourable condition for the foundation of a new one is when the government is in the hands of a virtuous tyrant who has the good fortune to be the contemporary of a great legislator. But a virtuous tyrant is a contradiction in terms; we can at best only hope to have magistrates who are the servants of reason and the law. This leads to the enquiry, what is to be the polity of our new state. And the answer is, that we are to fear God, and honour our parents, and to cultivate virtue and justice; these are to be our first principles. Laws must be definite, and we should create in the citizens a predisposition to obey them. The legislator will teach as well as command; and with this view he will prefix preambles to his principal laws.

The fifth book commences in a sort of dithyramb with another and higher preamble about the honour due to the soul, whence are deduced the duties of a man to his parents and his friends, to the suppliant and stranger. He should be true and just, free from envy and excess of all sorts, forgiving to crimes which are not incurable and are partly involuntary; and he should have a true taste. The noblest life has the greatest pleasures and the fewest pains...Having finished the preamble, and touched on some other preliminary considerations, we proceed to the Laws, beginning with the constitution of the state. This is not the best or ideal state, having all things common, but only the second-best, in which the land and houses are to be distributed among 5040 citizens divided into four classes. There is to be no gold or silver among them, and they are to have moderate wealth, and to respect number and numerical order in all things.

In the first part of the sixth book, Plato completes his sketch of the constitution by the appointment of officers. He explains the manner in which guardians of the law, generals, priests, wardens of town and country, ministers of education, and other magistrates are to be appointed; and also in what way courts of appeal are to be constituted, and omissions in the law to be supplied. Next—and at this point the Laws strictly speaking begin—there follow enactments respecting marriage and the procreation of children, respecting property in slaves as well as of other kinds, respecting houses, married life, common tables for men and women. The question of age in marriage suggests the

consideration of a similar question about the time for holding offices, and for military service, which had been previously omitted.

Resuming the order of the discussion, which was indicated in the previous book, from marriage and birth we proceed to education in the seventh book. Education is to begin at or rather before birth; to be continued for a time by mothers and nurses under the supervision of the state; finally, to comprehend music and gymnastics. Under music is included reading, writing, playing on the lyre, arithmetic, geometry, and a knowledge of astronomy sufficient to preserve the minds of the citizens from impiety in after-life. Gymnastics are to be practised chiefly with a view to their use in war. The discussion of education, which was lightly touched upon in Book ii, is here completed.

The eighth book contains regulations for civil life, beginning with festivals, games, and contests, military exercises and the like. On such occasions Plato seems to see young men and maidens meeting together, and hence he is led into discussing the relations of the sexes, the evil consequences which arise out of the indulgence of the passions, and the remedies for them. Then he proceeds to speak of agriculture, of arts and trades, of buying and selling, and of foreign commerce.

The remaining books of the Laws, ix-xii, are chiefly concerned with criminal offences. In the first class are placed offences against the Gods, especially sacrilege or robbery of temples: next follow offences against the state,—conspiracy, treason, theft. The mention of thefts suggests a distinction between voluntary and involuntary, curable and incurable offences. Proceeding to the greater crime of homicide, Plato distinguishes between mere homicide, manslaughter, which is partly voluntary and partly involuntary, and murder, which arises from avarice, ambition, fear. He also enumerates murders by kindred, murders by slaves, wounds with or without intent to kill, wounds inflicted in anger, crimes of or against slaves, insults to parents. To these, various modes of purification or degrees of punishment are assigned, and the terrors of another world are also invoked against them.

At the beginning of Book x, all acts of violence, including sacrilege, are summed up in a single law. The law is preceded by an admonition, in which the offenders are informed that no one ever did an unholy act or said an unlawful word while he retained his belief in the existence of the Gods; but either he denied their existence, or he believed that they took no care of man, or that they might be turned from their course by sacrifices and prayers. The remainder of the book is devoted to the refutation of these three classes of unbelievers, and concludes with the means to be taken for their reformation, and the announcement of their punishments if they continue obstinate and impenitent.

The eleventh book is taken up with laws and with admonitions relating to individuals, which follow one another without any exact order. There are laws concerning deposits and the finding of treasure; concerning slaves and freedmen; concerning retail trade, bequests, divorces, enchantments, poisonings, magical arts, and the like. In the twelfth book the same subjects are continued. Laws are passed concerning violations of military discipline, concerning the high office of the examiners and their burial; concerning oaths and the violation of them, and the punishments of those who neglect their duties as citizens. Foreign travel is then discussed, and the permission to be accorded to citizens of journeying in foreign parts; the strangers who may come to visit the city are also spoken of, and the manner in which they are to be received. Laws are added respecting sureties, searches for property, right of possession by prescription, abduction of witnesses, theatrical competition, waging of private warfare, and bribery in offices. Rules are laid down respecting taxation, respecting economy in

sacred rites, respecting judges, their duties and sentences, and respecting sepulchral places and ceremonies. Here the Laws end. Lastly, a Nocturnal Council is instituted for the preservation of the state, consisting of older and younger members, who are to exhibit in their lives that virtue which is the basis of the state, to know the one in many, and to be educated in divine and every other kind of knowledge which will enable them to fulfil their office.

III. The style of the Laws differs in several important respects from that of the other dialogues of Plato: (1) in the want of character, power, and lively illustration; (2) in the frequency of mannerisms (compare Introduction to the Philebus); (3) in the form and rhythm of the sentences; (4) in the use of words. On the other hand, there are many passages (5) which are characterized by a sort of ethical grandeur; and (6) in which, perhaps, a greater insight into human nature, and a greater reach of practical wisdom is shown, than in any other of Plato's writings.

1. The discourse of the three old men is described by themselves as an old man's game of play. Yet there is little of the liveliness of a game in their mode of treating the subject. They do not throw the ball to and fro, but two out of the three are listeners to the third, who is constantly asserting his superior wisdom and opportunities of knowledge, and apologizing (not without reason) for his own want of clearness of speech. He will 'carry them over the stream;' he will answer for them when the argument is beyond their comprehension; he is afraid of their ignorance of mathematics, and thinks that gymnastic is likely to be more intelligible to them;—he has repeated his words several times, and yet they cannot understand him. The subject did not properly take the form of dialogue, and also the literary vigour of Plato had passed away. The old men speak as they might be expected to speak, and in this there is a touch of dramatic truth. Plato has given the Laws that form or want of form which indicates the failure of natural power. There is no regular plan—none of that consciousness of what has preceded and what is to follow, which makes a perfect style,—but there are several attempts at a plan; the argument is 'pulled up,' and frequent explanations are offered why a particular topic was introduced.

The fictions of the Laws have no longer the verisimilitude which is characteristic of the Phaedrus and the Timaeus, or even of the Statesman. We can hardly suppose that an educated Athenian would have placed the visit of Epimenides to Athens ten years before the Persian war, or have imagined that a war with Messene prevented the Lacedaemonians from coming to the rescue of Hellas. The narrative of the origin of the Dorian institutions, which are said to have been due to a fear of the growing power of the Assyrians, is a plausible invention, which may be compared with the tale of the island of Atlantis and the poem of Solon, but is not accredited by similar arts of deception. The other statement that the Dorians were Achaean exiles assembled by Dorieus, and the assertion that Troy was included in the Assyrian Empire, have some foundation (compare for the latter point, Diod. Sicul.). Nor is there anywhere in the Laws that lively enargeia, that vivid mise en scene, which is as characteristic of Plato as of some modern novelists.

The old men are afraid of the ridicule which 'will fall on their heads more than enough,' and they do not often indulge in a joke. In one of the few which occur, the book of the Laws, if left incomplete, is compared to a monster wandering about without a head. But we no longer breathe the atmosphere of humour which pervades the Symposium and the Euthydemus, in which we pass within a few sentences from the broadest Aristophanic joke to the subtlest refinement of wit and fancy; instead of this, in the Laws an impression of baldness and feebleness is often left upon our minds. Some of the

most amusing descriptions, as, for example, of children roaring for the first three years of life; or of the Athenians walking into the country with fighting-cocks under their arms; or of the slave doctor who knocks about his patients finely; and the gentleman doctor who courteously persuades them; or of the way of keeping order in the theatre, 'by a hint from a stick,' are narrated with a commonplace gravity; but where we find this sort of dry humour we shall not be far wrong in thinking that the writer intended to make us laugh. The seriousness of age takes the place of the jollity of youth. Life should have holidays and festivals; yet we rebuke ourselves when we laugh, and take our pleasures sadly. The irony of the earlier dialogues, of which some traces occur in the tenth book, is replaced by a severity which hardly condescends to regard human things. 'Let us say, if you please, that man is of some account, but I was speaking of him in comparison with God.'

The imagery and illustrations are poor in themselves, and are not assisted by the surrounding phraseology. We have seen how in the Republic, and in the earlier dialogues, figures of speech such as 'the wave,' 'the drone,' 'the chase,' 'the bride,' appear and reappear at intervals. Notes are struck which are repeated from time to time, as in a strain of music. There is none of this subtle art in the Laws. The illustrations, such as the two kinds of doctors, 'the three kinds of funerals,' the fear potion, the puppet, the painter leaving a successor to restore his picture, the 'person stopping to consider where three ways meet,' the 'old laws about water of which he will not divert the course,' can hardly be said to do much credit to Plato's invention. The citations from the poets have lost that fanciful character which gave them their charm in the earlier dialogues. We are tired of images taken from the arts of navigation, or archery, or weaving, or painting, or medicine, or music. Yet the comparisons of life to a tragedy, or of the working of mind to the revolution of the self-moved, or of the aged parent to the image of a God dwelling in the house, or the reflection that 'man is made to be the plaything of God, and that this rightly considered is the best of him,' have great beauty.

2. The clumsiness of the style is exhibited in frequent mannerisms and repetitions. The perfection of the Platonic dialogue consists in the accuracy with which the question and answer are fitted into one another, and the regularity with which the steps of the argument succeed one another. This finish of style is no longer discernible in the Laws. There is a want of variety in the answers; nothing can be drawn out of the respondents but 'Yes' or 'No,' 'True,' 'To be sure,' etc.; the insipid forms, 'What do you mean?' 'To what are you referring?' are constantly returning. Again and again the speaker is charged, or charges himself, with obscurity; and he repeats again and again that he will explain his views more clearly. The process of thought which should be latent in the mind of the writer appears on the surface. In several passages the Athenian praises himself in the most unblushing manner, very unlike the irony of the earlier dialogues, as when he declares that 'the laws are a divine work given by some inspiration of the Gods,' and that 'youth should commit them to memory instead of the compositions of the poets.' The prosopopoeia which is adopted by Plato in the Protagoras and other dialogues is repeated until we grow weary of it. The legislator is always addressing the speakers or the youth of the state, and the speakers are constantly making addresses to the legislator. A tendency to a paradoxical manner of statement is also observable. 'We must have drinking,' 'we must have a virtuous tyrant'—this is too much for the duller wits of the Lacedaemonian and Cretan, who at first start back in surprise. More than in any other writing of Plato the tone is hortatory; the laws are sermons as well as laws; they are considered to have a religious sanction, and to rest upon a religious sentiment in the mind of the citizens. The words of the Athenian are attributed to the Lacedaemonian and Cretan, who are supposed to have made them their own, after the manner of the earlier dialogues. Resumptions of subjects which have been half disposed of in a previous passage

constantly occur: the arrangement has neither the clearness of art nor the freedom of nature. Irrelevant remarks are made here and there, or illustrations used which are not properly fitted in. The dialogue is generally weak and laboured, and is in the later books fairly given up, apparently, because unsuited to the subject of the work. The long speeches or sermons of the Athenian, often extending over several pages, have never the grace and harmony which are exhibited in the earlier dialogues. For Plato is incapable of sustained composition; his genius is dramatic rather than oratorical; he can converse, but he cannot make a speech. Even the Timaeus, which is one of his most finished works, is full of abrupt transitions. There is the same kind of difference between the dialogue and the continuous discourse of Plato as between the narrative and speeches of Thucydides.

3. The perfection of style is variety in unity, freedom, ease, clearness, the power of saying anything, and of striking any note in the scale of human feelings without impropriety; and such is the divine gift of language possessed by Plato in the Symposium and Phaedrus. From this there are many fallings-off in the Laws: first, in the structure of the sentences, which are rhythmical and monotonous,—the formal and sophistical manner of the age is superseding the natural genius of Plato: secondly, many of them are of enormous length, and the latter end often forgets the beginning of them,—they seem never to have received the second thoughts of the author; either the emphasis is wrongly placed, or there is a want of point in a clause; or an absolute case occurs which is not properly separated from the rest of the sentence; or words are aggregated in a manner which fails to show their relation to one another; or the connecting particles are omitted at the beginning of sentences; the uses of the relative and antecedent are more indistinct, the changes of person and number more frequent, examples of pleonasm, tautology, and periphrasis, antitheses of positive and negative, false emphasis, and other affectations, are more numerous than in the other writings of Plato; there is also a more common and sometimes unmeaning use of qualifying formulae, os epos eipein, kata dunamin, and of double expressions, pante pantos, oudame oudamos, opos kai ope—these are too numerous to be attributed to errors in the text; again, there is an over-curious adjustment of verb and participle, noun and epithet, and other artificial forms of cadence and expression take the place of natural variety: thirdly, the absence of metaphorical language is remarkable—the style is not devoid of ornament, but the ornament is of a debased rhetorical kind, patched on to instead of growing out of the subject; there is a great command of words, and a laboured use of them; forced attempts at metaphor occur in several passages,—e.g. parocheteuein logois; ta men os tithemena ta d os paratithemena; oinos kolazomenos upo nephontos eterou theou; the plays on the word nomos = nou dianome, ode etara: fourthly, there is a foolish extravagance of language in other passages,—'the swinish ignorance of arithmetic;' 'the justice and suitableness of the discourse on laws;' over-emphasis; 'best of Greeks,' said of all the Greeks, and the like: fifthly, poor and insipid illustrations are also common: sixthly, we may observe an excessive use of climax and hyperbole, aischron legein chre pros autous doulon te kai doulen kai paida kai ei pos oion te olen ten oikian: dokei touto to epitedeuma kata phusin tas peri ta aphrodisia edonas ou monon anthropon alla kai therion diephtharkenai.

4. The peculiarities in the use of words which occur in the Laws have been collected by Zeller (Platonische Studien) and Stallbaum (Legg.): first, in the use of nouns, such as allodemia, apeniautesis, glukuthumia, diatheter, thrasuxenia, koros, megalonoia, paidourgia: secondly, in the use of adjectives, such as aistor, biodotes, echthodopos, eitheos, chronios, and of adverbs, such as aniditi, anatei, nepoivei: thirdly, in the use of verbs, such as athurein, aissein (aixeien eipein), euthemoneisthai, parapodizesthai, sebein, temelein, tetan. These words however, as Stallbaum

remarks, are formed according to analogy, and nearly all of them have the support of some poetical or other authority.

Zeller and Stallbaum have also collected forms of words in the Laws, differing from the forms of the same words which occur in other places: e.g. blabos for blabe, abios for abiotos, acharistos for acharis, douleios for doulikos, paidelos for paidikos, exagrio for exagriaino, ileoumai for ilaskomai, and the Ionic word sophronistus, meaning 'correction.' Zeller has noted a fondness for substantives ending in -ma and -sis, such as georgema, diapauma, epithumema, zemioma, komodema, omilema; blapsis, loidoresis, paraggelsis, and others; also a use of substantives in the plural, which are commonly found only in the singular, maniai, atheotetes, phthonoi, phoboi, phuseis; also, a peculiar use of prepositions in composition, as in eneirgo, apoblapto, dianomotheteo, dieiretai, dieulabeisthai, and other words; also, a frequent occurrence of the Ionic datives plural in -aisi and -oisi, perhaps used for the sake of giving an ancient or archaic effect.

To these peculiarities of words he has added a list of peculiar expressions and constructions. Among the most characteristic are the following: athuta pallakon spermata; amorphoi edrai; osa axiomata pros archontas; oi kata polin kairoi; muthos, used in several places of 'the discourse about laws;' and connected with this the frequent use of paramuthion and paramutheisthai in the general sense of 'address,' 'addressing'; aimulos eros; ataphoi praxeis; muthos akephalos; ethos euthuporon. He remarks also on the frequent employment of the abstract for the concrete; e.g. uperesia for uperetai, phugai for phugades, mechanai in the sense of 'contrivers,' douleia for douloi, basileiai for basileis, mainomena kedeumata for ganaika mainomenen; e chreia ton paidon in the sense of 'indigent children,' and paidon ikanotes; to ethos tes apeirias for e eiothuia apeiria; kuparitton upse te kai kalle thaumasia for kuparittoi mala upselai kai kalai. He further notes some curious uses of the genitive case, e.g. philias omologiai, maniai orges, laimargiai edones, cheimonon anupodesiai, anosioi plegon tolmai; and of the dative, omiliai echthrois, nomothesiai, anosioi plegon tolmai; and of the dative omiliai echthrois, nomothesiai epitropois; and also some rather uncommon periphrases, thremmata Neilou, xuggennetor teknon for alochos, Mouses lexis for poiesis, zographon paides, anthropon spermata and the like; the fondness for particles of limitation, especially tis and ge, sun tisi charisi, tois ge dunamenois and the like; the pleonastic use of tanun, of os, of os eros eipein, of ekastote; and the periphrastic use of the preposition peri. Lastly, he observes the tendency to hyperbata or transpositions of words, and to rhythmical uniformity as well as grammatical irregularity in the structure of the sentences.

For nearly all the expressions which are adduced by Zeller as arguments against the genuineness of the Laws, Stallbaum finds some sort of authority. There is no real ground for doubting that the work was written by Plato, merely because several words occur in it which are not found in his other writings. An imitator may preserve the usual phraseology of a writer better than he would himself. But, on the other hand, the fact that authorities may be quoted in support of most of these uses of words, does not show that the diction is not peculiar. Several of them seem to be poetical or dialectical, and exhibit an attempt to enlarge the limits of Greek prose by the introduction of Homeric and tragic expressions. Most of them do not appear to have retained any hold on the later language of Greece. Like several experiments in language of the writers of the Elizabethan age, they were afterwards lost; and though occasionally found in Plutarch and imitators of Plato, they have not been accepted by Aristotle or passed into the common dialect of Greece.

5. Unequal as the Laws are in style, they contain a few passages which are very grand and noble. For example, the address to the poets: 'Best of strangers, we also are poets of the best and noblest tragedy; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy.' Or again, the sight of young men and maidens in friendly intercourse with one another, suggesting the dangers to which youth is liable from the violence of passion; or the eloquent denunciation of unnatural lusts in the same passage; or the charming thought that the best legislator 'orders war for the sake of peace and not peace for the sake of war;' or the pleasant allusion, 'O Athenian—inhabitant of Attica, I will not say, for you seem to me worthy to be named after the Goddess Athene because you go back to first principles;' or the pithy saying, 'Many a victory has been and will be suicidal to the victors, but education is never suicidal;' or the fine expression that 'the walls of a city should be allowed to sleep in the earth, and that we should not attempt to disinter them;' or the remark that 'God is the measure of all things in a sense far higher than any man can be;' or that 'a man should be from the first a partaker of the truth, that he may live a true man as long as possible;' or the principle repeatedly laid down, that 'the sins of the fathers are not to be visited on the children;' or the description of the funeral rites of those priestly sages who depart in innocence; or the noble sentiment, that we should do more justice to slaves than to equals; or the curious observation, founded, perhaps, on his own experience, that there are a few 'divine men in every state however corrupt, whose conversation is of inestimable value;' or the acute remark, that public opinion is to be respected, because the judgments of mankind about virtue are better than their practice; or the deep religious and also modern feeling which pervades the tenth book (whatever may be thought of the arguments); the sense of the duty of living as a part of a whole, and in dependence on the will of God, who takes care of the least things as well as the greatest; and the picture of parents praying for their children—not as we may say, slightly altering the words of Plato, as if there were no truth or reality in the Gentile religions, but as if there were the greatest—are very striking to us. We must remember that the Laws, unlike the Republic, do not exhibit an ideal state, but are supposed to be on the level of human motives and feelings; they are also on the level of the popular religion, though elevated and purified: hence there is an attempt made to show that the pleasant is also just. But, on the other hand, the priority of the soul to the body, and of God to the soul, is always insisted upon as the true incentive to virtue; especially with great force and eloquence at the commencement of Book v. And the work of legislation is carried back to the first principles of morals.

6. No other writing of Plato shows so profound an insight into the world and into human nature as the Laws. That 'cities will never cease from ill until they are better governed,' is the text of the Laws as well as of the Statesman and Republic. The principle that the balance of power preserves states; the reflection that no one ever passed his whole life in disbelief of the Gods; the remark that the characters of men are best seen in convivial intercourse; the observation that the people must be allowed to share not only in the government, but in the administration of justice; the desire to make laws, not with a view to courage only, but to all virtue; the clear perception that education begins with birth, or even, as he would say, before birth; the attempt to purify religion; the modern reflections, that punishment is not vindictive, and that limits must be set to the power of bequest; the impossibility of undeceiving the victims of quacks and jugglers; the provision for water, and for other requirements of health, and for concealing the bodies of the dead with as little hurt as possible to the living; above all, perhaps, the distinct consciousness that under the actual circumstances of mankind the ideal cannot be carried out, and yet may be a guiding principle—will appear to us, if we remember that we are still in the dawn of politics, to show a great depth of political wisdom.

IV. The Laws of Plato contain numerous passages which closely resemble other passages in his writings. And at first sight a suspicion arises that the repetition shows the unequal hand of the imitator. For why should a writer say over again, in a more imperfect form, what he had already said in his most finished style and manner? And yet it may be urged on the other side that an author whose original powers are beginning to decay will be very liable to repeat himself, as in conversation, so in books. He may have forgotten what he had written before; he may be unconscious of the decline of his own powers. Hence arises a question of great interest, bearing on the genuineness of ancient writers. Is there any criterion by which we can distinguish the genuine resemblance from the spurious, or, in other words, the repetition of a thought or passage by an author himself from the appropriation of it by another? The question has, perhaps, never been fully discussed; and, though a real one, does not admit of a precise answer. A few general considerations on the subject may be offered:—

(a) Is the difference such as might be expected to arise at different times of life or under different circumstances?—There would be nothing surprising in a writer, as he grew older, losing something of his own originality, and falling more and more under the spirit of his age. 'What a genius I had when I wrote that book!' was the pathetic exclamation of a famous English author, when in old age he chanced to take up one of his early works. There would be nothing surprising again in his losing somewhat of his powers of expression, and becoming less capable of framing language into a harmonious whole. There would also be a strong presumption that if the variation of style was uniform, it was attributable to some natural cause, and not to the arts of the imitator. The inferiority might be the result of feebleness and of want of activity of mind. But the natural weakness of a great author would commonly be different from the artificial weakness of an imitator; it would be continuous and uniform. The latter would be apt to fill his work with irregular patches, sometimes taken verbally from the writings of the author whom he personated, but rarely acquiring his spirit. His imitation would be obvious, irregular, superficial. The patches of purple would be easily detected among his threadbare and tattered garments. He would rarely take the pains to put the same thought into other words. There were many forgeries in English literature which attained a considerable degree of success 50 or 100 years ago; but it is doubtful whether attempts such as these could now escape detection, if there were any writings of the same author or of the same age to be compared with them. And ancient forgers were much less skilful than modern; they were far from being masters in the art of deception, and had rarely any motive for being so.

(b) But, secondly, the imitator will commonly be least capable of understanding or imitating that part of a great writer which is most characteristic of him. In every man's writings there is something like himself and unlike others, which gives individuality. To appreciate this latent quality would require a kindred mind, and minute study and observation. There are a class of similarities which may be called undesigned coincidences, which are so remote as to be incapable of being borrowed from one another, and yet, when they are compared, find a natural explanation in their being the work of the same mind. The imitator might copy the turns of style—he might repeat images or illustrations, but he could not enter into the inner circle of Platonic philosophy. He would understand that part of it which became popular in the next generation, as for example, the doctrine of ideas or of numbers: he might approve of communism. But the higher flights of Plato about the science of dialectic, or the unity of virtue, or a person who is above the law, would be unintelligible to him.

(c) The argument from imitation assumes a different character when the supposed imitations are associated with other passages having the impress of original genius. The strength of the argument from undesigned coincidences of style is much increased when they are found side by side with thoughts and expressions which can only have come from a great original writer. The great excellence, not only of the whole, but even of the parts of writings, is a strong proof of their genuineness—for although the great writer may fall below, the forger or imitator cannot rise much above himself. Whether we can attribute the worst parts of a work to a forger and the best to a great writer,—as for example, in the case of some of Shakespeare's plays,—depends upon the probability that they have been interpolated, or have been the joint work of two writers; and this can only be established either by express evidence or by a comparison of other writings of the same class. If the interpolation or double authorship of Greek writings in the time of Plato could be shown to be common, then a question, perhaps insoluble, would arise, not whether the whole, but whether parts of the Platonic dialogues are genuine, and, if parts only, which parts. Hebrew prophecies and Homeric poems and Laws of Manu may have grown together in early times, but there is no reason to think that any of the dialogues of Plato is the result of a similar process of accumulation. It is therefore rash to say with Oncken (Die Staatslehre des Aristoteles) that the form in which Aristotle knew the Laws of Plato must have been different from that in which they have come down to us.

It must be admitted that these principles are difficult of application. Yet a criticism may be worth making which rests only on probabilities or impressions. Great disputes will arise about the merits of different passages, about what is truly characteristic and original or trivial and borrowed. Many have thought the Laws to be one of the greatest of Platonic writings, while in the judgment of Mr. Grote they hardly rise above the level of the forged epistles. The manner in which a writer would or would not have written at a particular time of life must be acknowledged to be a matter of conjecture. But enough has been said to show that similarities of a certain kind, whether criticism is able to detect them or not, may be such as must be attributed to an original writer, and not to a mere imitator.

(d) Applying these principles to the case of the Laws, we have now to point out that they contain the class of refined or unconscious similarities which are indicative of genuineness. The parallelisms are like the repetitions of favourite thoughts into which every one is apt to fall unawares in conversation or in writing. They are found in a work which contains many beautiful and remarkable passages. We may therefore begin by claiming this presumption in their favour. Such undesigned coincidences, as we may venture to call them, are the following. The conception of justice as the union of temperance, wisdom, courage (Laws; Republic): the latent idea of dialectic implied in the notion of dividing laws after the kinds of virtue (Laws); the approval of the method of looking at one idea gathered from many things, 'than which a truer was never discovered by any man' (compare Republic): or again the description of the Laws as parents (Laws; Republic): the assumption that religion has been already settled by the oracle of Delphi (Laws; Republic), to which an appeal is also made in special cases (Laws): the notion of the battle with self, a paradox for which Plato in a manner apologizes both in the Laws and the Republic: the remark (Laws) that just men, even when they are deformed in body, may still be perfectly beautiful in respect of the excellent justice of their minds (compare Republic): the argument that ideals are none the worse because they cannot be carried out (Laws; Republic): the near approach to the idea of good in 'the principle which is common to all the four virtues,' a truth which the guardians must be compelled to recognize (Laws; compare Republic): or again the recognition by reason of the right pleasure and pain, which had previously been matter of habit (Laws; Republic): or the blasphemy of saying that the excellency of music is to give pleasure (Laws;

Republic): again the story of the Sidonian Cadmus (Laws), which is a variation of the Phoenician tale of the earth-born men (Republic): the comparison of philosophy to a yelping she-dog, both in the Republic and in the Laws: the remark that no man can practise two trades (Laws; Republic): or the advantage of the middle condition (Laws; Republic): the tendency to speak of principles as moulds or forms; compare the ekmageia of song (Laws), and the tupoi of religion (Republic): or the remark (Laws) that 'the relaxation of justice makes many cities out of one,' which may be compared with the Republic: or the description of lawlessness 'creeping in little by little in the fashions of music and overturning all things,'—to us a paradox, but to Plato's mind a fixed idea, which is found in the Laws as well as in the Republic: or the figure of the parts of the human body under which the parts of the state are described (Laws; Republic): the apology for delay and diffuseness, which occurs not unfrequently in the Republic, is carried to an excess in the Laws (compare Theaet.): the remarkable thought (Laws) that the soul of the sun is better than the sun, agrees with the relation in which the idea of good stands to the sun in the Republic, and with the substitution of mind for the idea of good in the Philebus: the passage about the tragic poets (Laws) agrees generally with the treatment of them in the Republic, but is more finely conceived, and worked out in a nobler spirit. Some lesser similarities of thought and manner should not be omitted, such as the mention of the thirty years' old students in the Republic, and the fifty years' old choristers in the Laws; or the making of the citizens out of wax (Laws) compared with the other image (Republic); or the number of the tyrant (729), which is NEARLY equal with the number of days and nights in the year (730), compared with the 'slight correction' of the sacred number 5040, which is divisible by all the numbers from 1 to 12 except 11, and divisible by 11, if two families be deducted; or once more, we may compare the ignorance of solid geometry of which he complains in the Republic and the puzzle about fractions with the difficulty in the Laws about commensurable and incommensurable quantities—and the malicious emphasis on the word gunaikeios (Laws) with the use of the same word (Republic). These and similar passages tend to show that the author of the Republic is also the author of the Laws. They are echoes of the same voice, expressions of the same mind, coincidences too subtle to have been invented by the ingenuity of any imitator. The force of the argument is increased, if we remember that no passage in the Laws is exactly copied,—nowhere do five or six words occur together which are found together elsewhere in Plato's writings.

In other dialogues of Plato, as well as in the Republic, there are to be found parallels with the Laws. Such resemblances, as we might expect, occur chiefly (but not exclusively) in the dialogues which, on other grounds, we may suppose to be of later date. The punishment of evil is to be like evil men (Laws), as he says also in the Theaetetus. Compare again the dependence of tragedy and comedy on one another, of which he gives the reason in the Laws—'For serious things cannot be understood without laughable, nor opposites at all without opposites, if a man is really to have intelligence of either'; here he puts forward the principle which is the groundwork of the thesis of Socrates in the Symposium, 'that the genius of tragedy is the same as that of comedy, and that the writer of comedy ought to be a writer of tragedy also.' There is a truth and right which is above Law (Laws), as we learn also from the Statesman. That men are the possession of the Gods (Laws), is a reflection which likewise occurs in the Phaedo. The remark, whether serious or ironical (Laws), that 'the sons of the Gods naturally believed in the Gods, because they had the means of knowing about them,' is found in the Timaeus. The reign of Cronos, who is the divine ruler (Laws), is a reminiscence of the Statesman. It is remarkable that in the Sophist and Statesman (Soph.), Plato, speaking in the character of the Eleatic Stranger, has already put on the old man. The madness of the poets, again, is a favourite notion of Plato's, which occurs also in the Laws, as well as in the Phaedrus, Ion, and elsewhere.

There are traces in the Laws of the same desire to base speculation upon history which we find in the Critias. Once more, there is a striking parallel with the paradox of the Gorgias, that 'if you do evil, it is better to be punished than to be unpunished,' in the Laws: 'To live having all goods without justice and virtue is the greatest of evils if life be immortal, but not so great if the bad man lives but a short time.'

The point to be considered is whether these are the kind of parallels which would be the work of an imitator. Would a forger have had the wit to select the most peculiar and characteristic thoughts of Plato; would he have caught the spirit of his philosophy; would he, instead of openly borrowing, have half concealed his favourite ideas; would he have formed them into a whole such as the Laws; would he have given another the credit which he might have obtained for himself; would he have remembered and made use of other passages of the Platonic writings and have never deviated into the phraseology of them? Without pressing such arguments as absolutely certain, we must acknowledge that such a comparison affords a new ground of real weight for believing the Laws to be a genuine writing of Plato.

V. The relation of the Republic to the Laws is clearly set forth by Plato in the Laws. The Republic is the best state, the Laws is the best possible under the existing conditions of the Greek world. The Republic is the ideal, in which no man calls anything his own, which may or may not have existed in some remote clime, under the rule of some God, or son of a God (who can say?), but is, at any rate, the pattern of all other states and the exemplar of human life. The Laws distinctly acknowledge what the Republic partly admits, that the ideal is inimitable by us, but that we should 'lift up our eyes to the heavens' and try to regulate our lives according to the divine image. The citizens are no longer to have wives and children in common, and are no longer to be under the government of philosophers. But the spirit of communism or communion is to continue among them, though reverence for the sacredness of the family, and respect of children for parents, not promiscuous hymeneals, are now the foundation of the state; the sexes are to be as nearly on an equality as possible; they are to meet at common tables, and to share warlike pursuits (if the women will consent), and to have a common education. The legislator has taken the place of the philosopher, but a council of elders is retained, who are to fulfil the duties of the legislator when he has passed out of life. The addition of younger persons to this council by co-optation is an improvement on the governing body of the Republic. The scheme of education in the Laws is of a far lower kind than that which Plato had conceived in the Republic. There he would have his rulers trained in all knowledge meeting in the idea of good, of which the different branches of mathematical science are but the hand-maidens or ministers; here he treats chiefly of popular education, stopping short with the preliminary sciences,—these are to be studied partly with a view to their practical usefulness, which in the Republic he holds cheap, and even more with a view to avoiding impiety, of which in the Republic he says nothing; he touches very lightly on dialectic, which is still to be retained for the rulers. Yet in the Laws there remain traces of the old educational ideas. He is still for banishing the poets; and as he finds the works of prose writers equally dangerous, he would substitute for them the study of his own laws. He insists strongly on the importance of mathematics as an educational instrument. He is no more reconciled to the Greek mythology than in the Republic, though he would rather say nothing about it out of a reverence for antiquity; and he is equally willing to have recourse to fictions, if they have a moral tendency. His thoughts recur to a golden age in which the sanctity of oaths was respected and in which men living nearer the Gods were more disposed to believe in them; but we must legislate for the world as it is, now that the old beliefs have passed away. Though he is no longer fired with dialectical enthusiasm,

he would compel the guardians to 'look at one idea gathered from many things,' and to 'perceive the principle which is the same in all the four virtues.' He still recognizes the enormous influence of music, in which every youth is to be trained for three years; and he seems to attribute the existing degeneracy of the Athenian state and the laxity of morals partly to musical innovation, manifested in the unnatural divorce of the instrument and the voice, of the rhythm from the words, and partly to the influence of the mob who ruled at the theatres. He assimilates the education of the two sexes, as far as possible, both in music and gymnastic, and, as in the Republic, he would give to gymnastic a purely military character. In marriage, his object is still to produce the finest children for the state. As in the Statesman, he would unite in wedlock dissimilar natures—the passionate with the dull, the courageous with the gentle. And the virtuous tyrant of the Statesman, who has no place in the Republic, again appears. In this, as in all his writings, he has the strongest sense of the degeneracy and incapacity of the rulers of his own time.

In the Laws, the philosophers, if not banished, like the poets, are at least ignored; and religion takes the place of philosophy in the regulation of human life. It must however be remembered that the religion of Plato is co-extensive with morality, and is that purified religion and mythology of which he speaks in the second book of the Republic. There is no real discrepancy in the two works. In a practical treatise, he speaks of religion rather than of philosophy; just as he appears to identify virtue with pleasure, and rather seeks to find the common element of the virtues than to maintain his old paradoxical theses that they are one, or that they are identical with knowledge. The dialectic and the idea of good, which even Glaucon in the Republic could not understand, would be out of place in a less ideal work. There may also be a change in his own mind, the purely intellectual aspect of philosophy having a diminishing interest to him in his old age.

Some confusion occurs in the passage in which Plato speaks of the Republic, occasioned by his reference to a third state, which he proposes (D.V.) hereafter to expound. Like many other thoughts in the Laws, the allusion is obscure from not being worked out. Aristotle (Polit.) speaks of a state which is neither the best absolutely, nor the best under existing conditions, but an imaginary state, inferior to either, destitute, as he supposes, of the necessaries of life—apparently such a beginning of primitive society as is described in Laws iii. But it is not clear that by this the third state of Plato is intended. It is possible that Plato may have meant by his third state an historical sketch, bearing the same relation to the Laws which the unfinished Critias would have borne to the Republic; or he may, perhaps, have intended to describe a state more nearly approximating than the Laws to existing Greek states.

The Statesman is a mere fragment when compared with the Laws, yet combining a second interest of dialectic as well as politics, which is wanting in the larger work. Several points of similarity and contrast may be observed between them. In some respects the Statesman is even more ideal than the Republic, looking back to a former state of paradisiacal life, in which the Gods ruled over mankind, as the Republic looks forward to a coming kingdom of philosophers. Of this kingdom of Cronos there is also mention in the Laws. Again, in the Statesman, the Eleatic Stranger rises above law to the conception of the living voice of the lawgiver, who is able to provide for individual cases. A similar thought is repeated in the Laws: 'If in the order of nature, and by divine destiny, a man were able to apprehend the truth about these things, he would have no need of laws to rule over him; for there is no law or order above knowledge, nor can mind without impiety be deemed the subject or slave of any, but rather the lord of all.' The union of opposite natures, who form the warp and the woof of the political web, is a favourite thought which occurs in both dialogues (Laws; Statesman).

The Laws are confessedly a Second-best, an inferior Ideal, to which Plato has recourse, when he finds that the city of Philosophers is no longer 'within the horizon of practical politics.' But it is curious to observe that the higher Ideal is always returning (compare Arist. Polit.), and that he is not much nearer the actual fact, nor more on the level of ordinary life in the Laws than in the Republic. It is also interesting to remark that the new Ideal is always falling away, and that he hardly supposes the one to be more capable of being realized than the other. Human beings are troublesome to manage; and the legislator cannot adapt his enactments to the infinite variety of circumstances; after all he must leave the administration of them to his successors; and though he would have liked to make them as permanent as they are in Egypt, he cannot escape from the necessity of change. At length Plato is obliged to institute a Nocturnal Council which is supposed to retain the mind of the legislator, and of which some of the members are even supposed to go abroad and inspect the institutions of foreign countries, as a foundation for changes in their own. The spirit of such changes, though avoiding the extravagance of a popular assembly, being only so much change as the conservative temper of old members is likely to allow, is nevertheless inconsistent with the fixedness of Egypt which Plato wishes to impress upon Hellenic institutions. He is inconsistent with himself as the truth begins to dawn upon him that 'in the execution things for the most part fall short of our conception of them' (Republic).

And is not this true of ideals of government in general? We are always disappointed in them. Nothing great can be accomplished in the short space of human life; wherefore also we look forward to another (Republic). As we grow old, we are sensible that we have no power actively to pursue our ideals any longer. We have had our opportunity and do not aspire to be more than men: we have received our 'wages and are going home.' Neither do we despair of the future of mankind, because we have been able to do so little in comparison of the whole. We look in vain for consistency either in men or things. But we have seen enough of improvement in our own time to justify us in the belief that the world is worth working for and that a good man's life is not thrown away. Such reflections may help us to bring home to ourselves by inward sympathy the language of Plato in the Laws, and to combine into something like a whole his various and at first sight inconsistent utterances.

VI. The Republic may be described as the Spartan constitution appended to a government of philosophers. But in the Laws an Athenian element is also introduced. Many enactments are taken from the Athenian; the four classes are borrowed from the constitution of Cleisthenes, which Plato regards as the best form of Athenian government, and the guardians of the law bear a certain resemblance to the archons. In the constitution of the Laws nearly all officers are elected by a vote more or less popular and by lot. But the assembly only exists for the purposes of election, and has no legislative or executive powers. The Nocturnal Council, which is the highest body in the state, has several of the functions of the ancient Athenian Areopagus, after which it appears to be modelled. Life is to wear, as at Athens, a joyous and festive look; there are to be Bacchic choruses, and men of mature age are encouraged in moderate potations. On the other hand, the common meals, the public education, the crypteia are borrowed from Sparta and not from Athens, and the superintendence of private life, which was to be practised by the governors, has also its prototype in Sparta. The extravagant dislike which Plato shows both to a naval power and to extreme democracy is the reverse of Athenian.

The best-governed Hellenic states traced the origin of their laws to individual lawgivers. These were real persons, though we are uncertain how far they originated or only modified the institutions which

are ascribed to them. But the lawgiver, though not a myth, was a fixed idea in the mind of the Greek,—as fixed as the Trojan war or the earth-born Cadmus. 'This was what Solon meant or said'—was the form in which the Athenian expressed his own conception of right and justice, or argued a disputed point of law. And the constant reference in the Laws of Plato to the lawgiver is altogether in accordance with Greek modes of thinking and speaking.

There is also, as in the Republic, a Pythagorean element. The highest branch of education is arithmetic; to know the order of the heavenly bodies, and to reconcile the apparent contradiction of their movements, is an important part of religion; the lives of the citizens are to have a common measure, as also their vessels and coins; the great blessing of the state is the number 5040. Plato is deeply impressed by the antiquity of Egypt, and the unchangeableness of her ancient forms of song and dance. And he is also struck by the progress which the Egyptians had made in the mathematical sciences—in comparison of them the Greeks appeared to him to be little better than swine. Yet he censures the Egyptian meanness and inhospitality to strangers. He has traced the growth of states from their rude beginnings in a philosophical spirit; but of any life or growth of the Hellenic world in future ages he is silent. He has made the reflection that past time is the maker of states (Book iii.); but he does not argue from the past to the future, that the process is always going on, or that the institutions of nations are relative to their stage of civilization. If he could have stamped indelibly upon Hellenic states the will of the legislator, he would have been satisfied. The utmost which he expects of future generations is that they should supply the omissions, or correct the errors which younger statesmen detect in his enactments. When institutions have been once subjected to this process of criticism, he would have them fixed for ever.

THE PREAMBLE.

BOOK I. Strangers, let me ask a question of you—Was a God or a man the author of your laws? 'A God, Stranger. In Crete, Zeus is said to have been the author of them; in Sparta, as Megillus will tell you, Apollo.' You Cretans believe, as Homer says, that Minos went every ninth year to converse with his Olympian sire, and gave you laws which he brought from him. 'Yes; and there was Rhadamanthus, his brother, who is reputed among us to have been a most righteous judge.' That is a reputation worthy of the son of Zeus. And as you and Megillus have been trained under these laws, I may ask you to give me an account of them. We can talk about them in our walk from Cnosus to the cave and temple of Zeus. I am told that the distance is considerable, but probably there are shady places under the trees, where, being no longer young, we may often rest and converse. 'Yes, Stranger, a little onward there are beautiful groves of cypresses, and green meadows in which we may repose.'

My first question is, Why has the law ordained that you should have common meals, and practise gymnastics, and bear arms? 'My answer is, that all our institutions are of a military character. We lead the life of the camp even in time of peace, keeping up the organization of an army, and having meals in common; and as our country, owing to its ruggedness, is ill-suited for heavy-armed cavalry or infantry, our soldiers are archers, equipped with bows and arrows. The legislator was under the idea that war was the natural state of all mankind, and that peace is only a pretence; he thought that no possessions had any value which were not secured against enemies.' And do you think that superiority in war is the proper aim of government? 'Certainly I do, and my Spartan friend will agree with me.' And are there wars, not only of state against state, but of village against village, of family

against family, of individual against individual? 'Yes.' And is a man his own enemy? 'There you come to first principles, like a true votary of the goddess Athene; and this is all the better, for you will the sooner recognize the truth of what I am saying—that all men everywhere are the enemies of all, and each individual of every other and of himself; and, further, that there is a victory and defeat—the best and the worst—which each man sustains, not at the hands of another, but of himself.' And does this extend to states and villages as well as to individuals? 'Certainly; there is a better in them which conquers or is conquered by the worse.' Whether the worse ever really conquers the better, is a question which may be left for the present; but your meaning is, that bad citizens do sometimes overcome the good, and that the state is then conquered by herself, and that when they are defeated the state is victorious over herself. Or, again, in a family there may be several brothers, and the bad may be a majority; and when the bad majority conquer the good minority, the family are worse than themselves. The use of the terms 'better or worse than himself or themselves' may be doubtful, but about the thing meant there can be no dispute. 'Very true.' Such a struggle might be determined by a judge. And which will be the better judge—he who destroys the worse and lets the better rule, or he who lets the better rule and makes the others voluntarily obey; or, thirdly, he who destroys no one, but reconciles the two parties? 'The last, clearly.' But the object of such a judge or legislator would not be war. 'True.' And as there are two kinds of war, one without and one within a state, of which the internal is by far the worse, will not the legislator chiefly direct his attention to this latter? He will reconcile the contending factions, and unite them against their external enemies. 'Certainly.' Every legislator will aim at the greatest good, and the greatest good is not victory in war, whether civil or external, but mutual peace and good-will, as in the body health is preferable to the purgation of disease. He who makes war his object instead of peace, or who pursues war except for the sake of peace, is not a true statesman. 'And yet, Stranger, the laws both of Crete and Sparta aim entirely at war.' Perhaps so; but do not let us quarrel about your legislators—let us be gentle; they were in earnest quite as much as we are, and we must try to discover their meaning. The poet Tyrtaeus (you know his poems in Crete, and my Lacedaemonian friend is only too familiar with them)—he was an Athenian by birth, and a Spartan citizen:—'Well,' he says, 'I sing not, I care not about any man, however rich or happy, unless he is brave in war.' Now I should like, in the name of us all, to ask the poet a question. Oh Tyrtaeus, I would say to him, we agree with you in praising those who excel in war, but which kind of war do you mean?—that dreadful war which is termed civil, or the milder sort which is waged against foreign enemies? You say that you abominate 'those who are not eager to taste their enemies' blood,' and you seem to mean chiefly their foreign enemies. 'Certainly he does.' But we contend that there are men better far than your heroes, Tyrtaeus, concerning whom another poet, Theognis the Sicilian, says that 'in a civil broil they are worth their weight in gold and silver.' For in a civil war, not only courage, but justice and temperance and wisdom are required, and all virtue is better than a part. The mercenary soldier is ready to die at his post; yet he is commonly a violent, senseless creature. And the legislator, whether inspired or uninspired, will make laws with a view to the highest virtue; and this is not brute courage, but loyalty in the hour of danger. The virtue of Tyrtaeus, although needful enough in his own time, is really of a fourth-rate description. 'You are degrading our legislator to a very low level.' Nay, we degrade not him, but ourselves, if we believe that the laws of Lycurgus and Minos had a view to war only. A divine lawgiver would have had regard to all the different kinds of virtue, and have arranged his laws in corresponding classes, and not in the modern fashion, which only makes them after the want of them is felt,—about inheritances and heiresses and assaults, and the like. As you truly said, virtue is the business of the legislator; but you went wrong when you referred all legislation to a part of virtue, and to an inferior part. For the object of laws, whether the Cretan or any other, is to make men happy. Now happiness or good is of two

kinds—there are divine and there are human goods. He who has the divine has the human added to him; but he who has lost the greater is deprived of both. The lesser goods are health, beauty, strength, and, lastly, wealth; not the blind God, Pluto, but one who has eyes to see and follow wisdom. For mind or wisdom is the most divine of all goods; and next comes temperance, and justice springs from the union of wisdom and temperance with courage, which is the fourth or last. These four precede other goods, and the legislator will arrange all his ordinances accordingly, the human going back to the divine, and the divine to their leader mind. There will be enactments about marriage, about education, about all the states and feelings and experiences of men and women, at every age, in weal and woe, in war and peace; upon all the law will fix a stamp of praise and blame. There will also be regulations about property and expenditure, about contracts, about rewards and punishments, and finally about funeral rites and honours of the dead. The lawgiver will appoint guardians to preside over these things; and mind will harmonize his ordinances, and show them to be in agreement with temperance and justice. Now I want to know whether the same principles are observed in the laws of Lycurgus and Minos, or, as I should rather say, of Apollo and Zeus. We must go through the virtues, beginning with courage, and then we will show that what has preceded has relation to virtue.

'I wish,' says the Lacedaemonian, 'that you, Stranger, would first criticize Cleinias and the Cretan laws.' Yes, is the reply, and I will criticize you and myself, as well as him. Tell me, Megillus, were not the common meals and gymnastic training instituted by your legislator with a view to war? 'Yes; and next in the order of importance comes hunting, and fourth the endurance of pain in boxing contests, and in the beatings which are the punishment of theft. There is, too, the so-called Crypteia or secret service, in which our youth wander about the country night and day unattended, and even in winter go unshod and have no beds to lie on. Moreover they wrestle and exercise under a blazing sun, and they have many similar customs.' Well, but is courage only a combat against fear and pain, and not against pleasure and flattery? 'Against both, I should say.' And which is worse,—to be overcome by pain, or by pleasure? 'The latter.' But did the lawgivers of Crete and Sparta legislate for a courage which is lame of one leg,—able to meet the attacks of pain but not those of pleasure, or for one which can meet both? 'For a courage which can meet both, I should say.' But if so, where are the institutions which train your citizens to be equally brave against pleasure and pain, and superior to enemies within as well as without? 'We confess that we have no institutions worth mentioning which are of this character.' I am not surprised, and will therefore only request forbearance on the part of us all, in case the love of truth should lead any of us to censure the laws of the others. Remember that I am more in the way of hearing criticisms of your laws than you can be; for in well-ordered states like Crete and Sparta, although an old man may sometimes speak of them in private to a ruler or elder, a similar liberty is not allowed to the young. But now being alone we shall not offend your legislator by a friendly examination of his laws. 'Take any freedom which you like.'

My first observation is, that your lawgiver ordered you to endure hardships, because he thought that those who had not this discipline would run away from those who had. But he ought to have considered further, that those who had never learned to resist pleasure would be equally at the mercy of those who had, and these are often among the worst of mankind. Pleasure, like fear, would overcome them and take away their courage and freedom. 'Perhaps; but I must not be hasty in giving my assent.'

Next as to temperance: what institutions have you which are adapted to promote temperance? 'There are the common meals and gymnastic exercises.' These are partly good and partly bad, and, as in medicine, what is good at one time and for one person, is bad at another time and for another person. Now although gymnastics and common meals do good, they are also a cause of evil in civil troubles, and they appear to encourage unnatural love, as has been shown at Miletus, in Boeotia, and at Thurii. And the Cretans are said to have invented the tale of Zeus and Ganymede in order to justify their evil practices by the example of the God who was their lawgiver. Leaving the story, we may observe that all law has to do with pleasure and pain; these are two fountains which are ever flowing in human nature, and he who drinks of them when and as much as he ought, is happy, and he who indulges in them to excess, is miserable. 'You may be right, but I still incline to think that the Lacedaemonian lawgiver did well in forbidding pleasure, if I may judge from the result. For there is no drunken revelry in Sparta, and any one found in a state of intoxication is severely punished; he is not excused as an Athenian would be at Athens on account of a festival. I myself have seen the Athenians drunk at the Dionysia—and at our colony, Tarentum, on a similar occasion, I have beheld the whole city in a state of intoxication.' I admit that these festivals should be properly regulated. Yet I might reply, 'Yes, Spartans, that is not your vice; but look at home and remember the licentiousness of your women.' And to all such accusations every one of us may reply in turn:—'Wonder not, Stranger; there are different customs in different countries.' Now this may be a sufficient answer; but we are speaking about the wisdom of lawgivers and not about the customs of men. To return to the question of drinking: shall we have total abstinence, as you have, or hard drinking, like the Scythians and Thracians, or moderate potations like the Persians? 'Give us arms, and we send all these nations flying before us.' My good friend, be modest; victories and defeats often arise from unknown causes, and afford no proof of the goodness or badness of institutions. The stronger overcomes the weaker, as the Athenians have overcome the Ceans, or the Syracusans the Locrians, who are, perhaps, the best governed state in that part of the world. People are apt to praise or censure practices without enquiring into the nature of them. This is the way with drink: one person brings many witnesses, who sing the praises of wine; another declares that sober men defeat drunkards in battle; and he again is refuted in turn. I should like to conduct the argument on some other method; for if you regard numbers, there are two cities on one side, and ten thousand on the other. 'I am ready to pursue any method which is likely to lead us to the truth.' Let me put the matter thus: Somebody praises the useful qualities of a goat; another has seen goats running about wild in a garden, and blames a goat or any other animal which happens to be without a keeper. 'How absurd!' Would a pilot who is sea-sick be a good pilot? 'No.' Or a general who is sick and drunk with fear and ignorant of war a good general? 'A general of old women he ought to be.' But can any one form an estimate of any society, which is intended to have a ruler, and which he only sees in an unruly and lawless state? 'No.' There is a convivial form of society—is there not? 'Yes.' And has this convivial society ever been rightly ordered? Of course you Spartans and Cretans have never seen anything of the kind, but I have had wide experience, and made many enquiries about such societies, and have hardly ever found anything right or good in them. 'We acknowledge our want of experience, and desire to learn of you.' Will you admit that in all societies there must be a leader? 'Yes.' And in time of war he must be a man of courage and absolutely devoid of fear, if this be possible? 'Certainly.' But we are talking now of a general who shall preside at meetings of friends—and as these have a tendency to be uproarious, they ought above all others to have a governor. 'Very good.' He should be a sober man and a man of the world, who will keep, make, and increase the peace of the society; a drunkard in charge of drunkards would be singularly fortunate if he avoided doing a serious mischief. 'Indeed he would.' Suppose a person to censure such meetings—he may be right, but also he may have known them

only in their disorderly state, under a drunken master of the feast; and a drunken general or pilot cannot save his army or his ships. 'True; but although I see the advantage of an army having a good general, I do not equally see the good of a feast being well managed.' If you mean to ask what good accrues to the state from the right training of a single youth or a single chorus, I should reply, 'Not much'; but if you ask what is the good of education in general, I answer, that education makes good men, and that good men act nobly and overcome their enemies in battle. Victory is often suicidal to the victors, because it creates forgetfulness of education, but education itself is never suicidal. 'You imply that the regulation of convivial meetings is a part of education; how will you prove this?' I will tell you. But first let me offer a word of apology. We Athenians are always thought to be fond of talking, whereas the Lacedaemonian is celebrated for brevity, and the Cretan is considered to be sagacious and reserved. Now I fear that I may be charged with spinning a long discourse out of slender materials. For drinking cannot be rightly ordered without correct principles of music, and music runs up into education generally, and to discuss all these matters may be tedious; if you like, therefore, we will pass on to another part of our subject. 'Are you aware, Athenian, that our family is your proxenus at Sparta, and that from my boyhood I have regarded Athens as a second country, and having often fought your battles in my youth, I have become attached to you, and love the sound of the Attic dialect? The saying is true, that the best Athenians are more than ordinarily good, because they are good by nature; therefore, be assured that I shall be glad to hear you talk as much as you please.' 'I, too,' adds Cleinias, 'have a tie which binds me to you. You know that Epimenides, the Cretan prophet, came and offered sacrifices in your city by the command of an oracle ten years before the Persian war. He told the Athenians that the Persian host would not come for ten years, and would go away again, having suffered more harm than they had inflicted. Now Epimenides was of my family, and when he visited Athens he entered into friendship with your forefathers.' I see that you are willing to listen, and I have the will to speak, if I had only the ability. But, first, I must define the nature and power of education, and by this road we will travel on to the God Dionysus. The man who is to be good at anything must have early training;—the future builder must play at building, and the husbandman at digging; the soldier must learn to ride, and the carpenter to measure and use the rule,—all the thoughts and pleasures of children should bear on their after-profession.—Do you agree with me? 'Certainly.' And we must remember further that we are speaking of the education, not of a trainer, or of the captain of a ship, but of a perfect citizen who knows how to rule and how to obey; and such an education aims at virtue, and not at wealth or strength or mere cleverness. To the good man, education is of all things the most precious, and is also in constant need of renovation. 'We agree.' And we have before agreed that good men are those who are able to control themselves, and bad men are those who are not. Let me offer you an illustration which will assist our argument. Man is one; but in one and the same man are two foolish counsellors who contend within him—pleasure and pain, and of either he has expectations which we call hope and fear; and he is able to reason about good and evil, and reason, when affirmed by the state, becomes law. 'We cannot follow you.' Let me put the matter in another way: Every creature is a puppet of the Gods—whether he is a mere plaything or has any serious use we do not know; but this we do know, that he is drawn different ways by cords and strings. There is a soft golden cord which draws him towards virtue—this is the law of the state; and there are other cords made of iron and hard materials drawing him other ways. The golden reasoning influence has nothing of the nature of force, and therefore requires ministers in order to vanquish the other principles. This explains the doctrine that cities and citizens both conquer and are conquered by themselves. The individual follows reason, and the city law, which is embodied reason, either derived from the Gods or from the legislator. When virtue and vice are thus distinguished, education will be better understood, and in particular the relation of education to

convivial intercourse. And now let us set wine before the puppet. You admit that wine stimulates the passions? 'Yes.' And does wine equally stimulate the reasoning faculties? 'No; it brings the soul back to a state of childhood.' In such a state a man has the least control over himself, and is, therefore, worst. 'Very true.' Then how can we believe that drinking should be encouraged? 'You seem to think that it ought to be.' And I am ready to maintain my position. 'We should like to hear you prove that a man ought to make a beast of himself.' You are speaking of the degradation of the soul: but how about the body? Would any man willingly degrade or weaken that? 'Certainly not.' And yet if he goes to a doctor or a gymnastic master, does he not make himself ill in the hope of getting well? for no one would like to be always taking medicine, or always to be in training. 'True.' And may not convivial meetings have a similar remedial use? And if so, are they not to be preferred to other modes of training because they are painless? 'But have they any such use?' Let us see: Are there not two kinds of fear—fear of evil and fear of an evil reputation? 'There are.' The latter kind of fear is opposed both to the fear of pain and to the love of pleasure. This is called by the legislator reverence, and is greatly honoured by him and by every good man; whereas confidence, which is the opposite quality, is the worst fault both of individuals and of states. This sort of fear or reverence is one of the two chief causes of victory in war, fearlessness of enemies being the other. 'True.' Then every one should be both fearful and fearless? 'Yes.' The right sort of fear is infused into a man when he comes face to face with shame, or cowardice, or the temptations of pleasure, and has to conquer them. He must learn by many trials to win the victory over himself, if he is ever to be made perfect. 'That is reasonable enough.' And now, suppose that the Gods had given mankind a drug, of which the effect was to exaggerate every sort of evil and danger, so that the bravest man entirely lost his presence of mind and became a coward for a time:—would such a drug have any value? 'But is there such a drug?' No; but suppose that there were; might not the legislator use such a mode of testing courage and cowardice? 'To be sure.' The legislator would induce fear in order to implant fearlessness; and would give rewards or punishments to those who behaved well or the reverse, under the influence of the drug? 'Certainly.' And this mode of training, whether practised in the case of one or many, whether in solitude or in the presence of a large company—if a man have sufficient confidence in himself to drink the potion amid his boon companions, leaving off in time and not taking too much,—would be an equally good test of temperance? 'Very true.' Let us return to the lawgiver and say to him, 'Well, lawgiver, no such fear-producing potion has been given by God or invented by man, but there is a potion which will make men fearless.' 'You mean wine.' Yes; has not wine an effect the contrary of that which I was just now describing,—first mellowing and humanizing a man, and then filling him with confidence, making him ready to say or do anything? 'Certainly.' Let us not forget that there are two qualities which should be cultivated in the soul—first, the greatest fearlessness, and, secondly, the greatest fear, which are both parts of reverence. Courage and fearlessness are trained amid dangers; but we have still to consider how fear is to be trained. We desire to attain fearlessness and confidence without the insolence and boldness which commonly attend them. For do not love, ignorance, avarice, wealth, beauty, strength, while they stimulate courage, also madden and intoxicate the soul? What better and more innocent test of character is there than festive intercourse? Would you make a bargain with a man in order to try whether he is honest? Or would you ascertain whether he is licentious by putting your wife or daughter into his hands? No one would deny that the test proposed is fairer, speedier, and safer than any other. And such a test will be particularly useful in the political science, which desires to know human natures and characters. 'Very true.'

BOOK II. And are there any other uses of well-ordered potations? There are; but in order to explain them, I must repeat what I mean by right education; which, if I am not mistaken, depends on the due

regulation of convivial intercourse. 'A high assumption.' I believe that virtue and vice are originally present to the mind of children in the form of pleasure and pain; reason and fixed principles come later, and happy is he who acquires them even in declining years; for he who possesses them is the perfect man. When pleasure and pain, and love and hate, are rightly implanted in the yet unconscious soul, and after the attainment of reason are discovered to be in harmony with her, this harmony of the soul is virtue, and the preparatory stage, anticipating reason, I call education. But the finer sense of pleasure and pain is apt to be impaired in the course of life; and therefore the Gods, pitying the toils and sorrows of mortals, have allowed them to have holidays, and given them the Muses and Apollo and Dionysus for leaders and playfellows. All young creatures love motion and frolic, and utter sounds of delight; but man only is capable of taking pleasure in rhythmical and harmonious movements. With these education begins; and the uneducated is he who has never known the discipline of the chorus, and the educated is he who has. The chorus is partly dance and partly song, and therefore the well-educated must sing and dance well. But when we say, 'He sings and dances well,' we mean that he sings and dances what is good. And if he thinks that to be good which is really good, he will have a much higher music and harmony in him, and be a far greater master of imitation in sound and gesture than he who is not of this opinion. 'True.' Then, if we know what is good and bad in song and dance, we shall know what education is? 'Very true.' Let us now consider the beauty of figure, melody, song, and dance. Will the same figures or sounds be equally well adapted to the manly and the cowardly when they are in trouble? 'How can they be, when the very colours of their faces are different?' Figures and melodies have a rhythm and harmony which are adapted to the expression of different feelings (I may remark, by the way, that the term 'colour,' which is a favourite word of music-masters, is not really applicable to music). And one class of harmonies is akin to courage and all virtue, the other to cowardice and all vice. 'We agree.' And do all men equally like all dances? 'Far otherwise.' Do some figures, then, appear to be beautiful which are not? For no one will admit that the forms of vice are more beautiful than the forms of virtue, or that he prefers the first kind to the second. And yet most persons say that the merit of music is to give pleasure. But this is impiety. There is, however, a more plausible account of the matter given by others, who make their likes or dislikes the criterion of excellence. Sometimes nature crosses habit, or conversely, and then they say that such and such fashions or gestures are pleasant, but they do not like to exhibit them before men of sense, although they enjoy them in private. 'Very true.' And do vicious measures and strains do any harm, or good measures any good to the lovers of them? 'Probably.' Say, rather 'Certainly': for the gentle indulgence which we often show to vicious men inevitably makes us become like them. And what can be worse than this? 'Nothing.' Then in a well-administered city, the poet will not be allowed to make the songs of the people just as he pleases, or to train his choruses without regard to virtue and vice. 'Certainly not.' And yet he may do this anywhere except in Egypt; for there ages ago they discovered the great truth which I am now asserting, that the young should be educated in forms and strains of virtue. These they fixed and consecrated in their temples; and no artist or musician is allowed to deviate from them. They are literally the same which they were ten thousand years ago. And this practice of theirs suggests the reflection that legislation about music is not an impossible thing. But the particular enactments must be the work of God or of some God-inspired man, as in Egypt their ancient chants are said to be the composition of the goddess Isis. The melodies which have a natural truth and correctness should be embodied in a law, and then the desire of novelty is not strong enough to change the old fashions. Is not the origin of music as follows? We rejoice when we think that we prosper, and we think that we prosper when we rejoice, and at such times we cannot rest, but our young men dance dances and sing songs, and our old men, who have lost the elasticity of youth, regale themselves with the memory of the past, while they

contemplate the life and activity of the young. 'Most true.' People say that he who gives us most pleasure at such festivals is to win the palm: are they right? 'Possibly.' Let us not be hasty in deciding, but first imagine a festival at which the lord of the festival, having assembled the citizens, makes a proclamation that he shall be crowned victor who gives the most pleasure, from whatever source derived. We will further suppose that there are exhibitions of rhapsodists and musicians, tragic and comic poets, and even marionette-players—which of the pleasure-makers will win? Shall I answer for you?—the marionette-players will please the children; youths will decide for comedy; young men, educated women, and people in general will prefer tragedy; we old men are lovers of Homer and Hesiod. Now which of them is right? If you and I are asked, we shall certainly say that the old men's way of thinking ought to prevail. 'Very true.' So far I agree with the many that the excellence of music is to be measured by pleasure; but then the pleasure must be that of the good and educated, or better still, of one supremely virtuous and educated man. The true judge must have both wisdom and courage. For he must lead the multitude and not be led by them, and must not weakly yield to the uproar of the theatre, nor give false judgment out of that mouth which has just appealed to the Gods. The ancient custom of Hellas, which still prevails in Italy and Sicily, left the judgment to the spectators, but this custom has been the ruin of the poets, who seek only to please their patrons, and has degraded the audience by the representation of inferior characters. What is the inference? The same which we have often drawn, that education is the training of the young idea in what the law affirms and the elders approve. And as the soul of a child is too young to be trained in earnest, a kind of education has been invented which tempts him with plays and songs, as the sick are tempted by pleasant meats and drinks. And the wise legislator will compel the poet to express in his poems noble thoughts in fitting words and rhythms. 'But is this the practice elsewhere than in Crete and Lacedaemon? In other states, as far as I know, dances and music are constantly changed at the pleasure of the hearers.' I am afraid that I misled you; not liking to be always finding fault with mankind as they are, I described them as they ought to be. But let me understand: you say that such customs exist among the Cretans and Lacedaemonians, and that the rest of the world would be improved by adopting them? 'Much improved.' And you compel your poets to declare that the righteous are happy, and that the wicked man, even if he be as rich as Midas, is unhappy? Or, in the words of Tyrtaeus, 'I sing not, I care not about him' who is a great warrior not having justice; if he be unjust, 'I would not have him look calmly upon death or be swifter than the wind'; and may he be deprived of every good—that is, of every true good. For even if he have the goods which men regard, these are not really goods: first health; beauty next; thirdly wealth; and there are others. A man may have every sense purged and improved; he may be a tyrant, and do what he likes, and live for ever: but you and I will maintain that all these things are goods to the just, but to the unjust the greatest of evils, if life be immortal; not so great if he live for a short time only. If a man had health and wealth, and power, and was insolent and unjust, his life would still be miserable; he might be fair and rich, and do what he liked, but he would live basely, and if basely evilly, and if evilly painfully. 'There I cannot agree with you.' Then may heaven give us the spirit of agreement, for I am as convinced of the truth of what I say as that Crete is an island; and, if I were a lawgiver, I would exercise a censorship over the poets, and I would punish them if they said that the wicked are happy, or that injustice is profitable. And these are not the only matters in which I should make my citizens talk in a different way to the world in general. If I asked Zeus and Apollo, the divine legislators of Crete and Sparta,—'Are the just and pleasant life the same or not the same'?—and they replied,—'Not the same'; and I asked again—'Which is the happier'? And they said'—'The pleasant life,' this is an answer not fit for a God to utter, and therefore I ought rather to put the same question to some legislator. And if he replies 'The pleasant,' then I should say to him, 'O my father, did you not tell me

that I should live as justly as possible'? and if to be just is to be happy, what is that principle of happiness or good which is superior to pleasure? Is the approval of gods and men to be deemed good and honourable, but unpleasant, and their disapproval the reverse? Or is the neither doing nor suffering evil good and honourable, although not pleasant? But you cannot make men like what is not pleasant, and therefore you must make them believe that the just is pleasant. The business of the legislator is to clear up this confusion. He will show that the just and the unjust are identical with the pleasurable and the painful, from the point of view of the just man, of the unjust the reverse. And which is the truer judgment? Surely that of the better soul. For if not the truth, it is the best and most moral of fictions; and the legislator who desires to propagate this useful lie, may be encouraged by remarking that mankind have believed the story of Cadmus and the dragon's teeth, and therefore he may be assured that he can make them believe anything, and need only consider what fiction will do the greatest good. That the happiest is also the holiest, this shall be our strain, which shall be sung by all three choruses alike. First will enter the choir of children, who will lift up their voices on high; and after them the young men, who will pray the God Paean to be gracious to the youth, and to testify to the truth of their words; then will come the chorus of elder men, between thirty and sixty; and, lastly, there will be the old men, and they will tell stories enforcing the same virtues, as with the voice of an oracle. 'Whom do you mean by the third chorus?' You remember how I spoke at first of the restless nature of young creatures, who jumped about and called out in a disorderly manner, and I said that no other animal attained any perception of rhythm; but that to us the Gods gave Apollo and the Muses and Dionysus to be our playfellows. Of the two first choruses I have already spoken, and I have now to speak of the third, or Dionysian chorus, which is composed of those who are between thirty and sixty years old. 'Let us hear.' We are agreed (are we not?) that men, women, and children should be always charming themselves with strains of virtue, and that there should be a variety in the strains, that they may not weary of them? Now the fairest and most useful of strains will be uttered by the elder men, and therefore we cannot let them off. But how can we make them sing? For a discreet elderly man is ashamed to hear the sound of his own voice in private, and still more in public. The only way is to give them drink; this will mellow the sourness of age. No one should be allowed to taste wine until they are eighteen; from eighteen to thirty they may take a little; but when they have reached forty years, they may be initiated into the mystery of drinking. Thus they will become softer and more impressible; and when a man's heart is warm within him, he will be more ready to charm himself and others with song. And what songs shall he sing? 'At Crete and Lacedaemon we only know choral songs.' Yes; that is because your way of life is military. Your young men are like wild colts feeding in a herd together; no one takes the individual colt and trains him apart, and tries to give him the qualities of a statesman as well as of a soldier. He who was thus trained would be a greater warrior than those of whom Tyrtaeus speaks, for he would be courageous, and yet he would know that courage was only fourth in the scale of virtue. 'Once more, I must say, Stranger, that you run down our lawgivers.' Not intentionally, my good friend, but whither the argument leads I follow; and I am trying to find some style of poetry suitable for those who dislike the common sort. 'Very good.' In all things which have a charm, either this charm is their good, or they have some accompanying truth or advantage. For example, in eating and drinking there is pleasure and also profit, that is to say, health; and in learning there is a pleasure and also truth. There is a pleasure or charm, too, in the imitative arts, as well as a law of proportion or equality; but the pleasure which they afford, however innocent, is not the criterion of their truth. The test of pleasure cannot be applied except to that which has no other good or evil, no truth or falsehood. But that which has truth must be judged of by the standard of truth, and therefore imitation and proportion are to be judged of by their truth alone. 'Certainly.' And as music is imitative, it is not to be judged by the criterion of pleasure, and the Muse whom we seek is the muse not of

pleasure but of truth, for imitation has a truth. 'Doubtless.' And if so, the judge must know what is being imitated before he decides on the quality of the imitation, and he who does not know what is true will not know what is good. 'He will not.' Will any one be able to imitate the human body, if he does not know the number, proportion, colour, or figure of the limbs? 'How can he?' But suppose we know some picture or figure to be an exact resemblance of a man, should we not also require to know whether the picture is beautiful or not? 'Quite right.' The judge of the imitation is required to know, therefore, first the original, secondly the truth, and thirdly the merit of the execution? 'True.' Then let us not weary in the attempt to bring music to the standard of the Muses and of truth. The Muses are not like human poets; they never spoil or mix rhythms or scales, or mingle instruments and human voices, or confuse the manners and strains of men and women, or of freemen and slaves, or of rational beings and brute animals. They do not practise the baser sorts of musical arts, such as the 'matured judgments,' of whom Orpheus speaks, would ridicule. But modern poets separate metre from music, and melody and rhythm from words, and use the instrument alone without the voice. The consequence is, that the meaning of the rhythm and of the time are not understood. I am endeavouring to show how our fifty-year-old choristers are to be trained, and what they are to avoid. The opinion of the multitude about these matters is worthless; they who are only made to step in time by sheer force cannot be critics of music. 'Impossible.' Then our newly-appointed minstrels must be trained in music sufficiently to understand the nature of rhythms and systems; and they should select such as are suitable to men of their age, and will enable them to give and receive innocent pleasure. This is a knowledge which goes beyond that either of the poets or of their auditors in general. For although the poet must understand rhythm and music, he need not necessarily know whether the imitation is good or not, which was the third point required in a judge; but our chorus of elders must know all three, if they are to be the instructors of youth.

And now we will resume the original argument, which may be summed up as follows: A convivial meeting is apt to grow tumultuous as the drinking proceeds; every man becomes light-headed, and fancies that he can rule the whole world. 'Doubtless.' And did we not say that the souls of the drinkers, when subdued by wine, are made softer and more malleable at the hand of the legislator? the docility of childhood returns to them. At times however they become too valiant and disorderly, drinking out of their turn, and interrupting one another. And the business of the legislator is to infuse into them that divine fear, which we call shame, in opposition to this disorderly boldness. But in order to discipline them there must be guardians of the law of drinking, and sober generals who shall take charge of the private soldiers; they are as necessary in drinking as in fighting, and he who disobeys these Dionysiac commanders will be equally disgraced. 'Very good.' If a drinking festival were well regulated, men would go away, not as they now do, greater enemies, but better friends. Of the greatest gift of Dionysus I hardly like to speak, lest I should be misunderstood. 'What is that?' According to tradition Dionysus was driven mad by his stepmother Here, and in order to revenge himself he inspired mankind with Bacchic madness. But these are stories which I would rather not repeat. However I do acknowledge that all men are born in an imperfect state, and are at first restless, irrational creatures: this, as you will remember, has been already said by us. 'I remember.' And that Apollo and the Muses and Dionysus gave us harmony and rhythm? 'Very true.' The other story implies that wine was given to punish us and make us mad; but we contend that wine is a balm and a cure; a spring of modesty in the soul, and of health and strength in the body. Again, the work of the chorus is co-extensive with the work of education; rhythm and melody answer to the voice, and the motions of the body correspond to all three, and the sound enters in and educates the soul in virtue. 'Yes.' And the movement which, when pursued as an amusement, is termed dancing, when

studied with a view to the improvement of the body, becomes gymnastic. Shall we now proceed to speak of this? 'What Cretan or Lacedaemonian would approve of your omitting gymnastic?' Your question implies assent; and you will easily understand a subject which is familiar to you. Gymnastic is based on the natural tendency of every animal to rapid motion; and man adds a sense of rhythm, which is awakened by music; music and dancing together form the choral art. But before proceeding I must add a crowning word about drinking. Like other pleasures, it has a lawful use; but if a state or an individual is inclined to drink at will, I cannot allow them. I would go further than Crete or Lacedaemon and have the law of the Carthaginians, that no slave of either sex should drink wine at all, and no soldier while he is on a campaign, and no magistrate or officer while he is on duty, and that no one should drink by daylight or on a bridal night. And there are so many other occasions on which wine ought to be prohibited, that there will not be many vines grown or vineyards required in the state.

BOOK III. If a man wants to know the origin of states and societies, he should behold them from the point of view of time. Thousands of cities have come into being and have passed away again in infinite ages, every one of them having had endless forms of government; and if we can ascertain the cause of these changes in states, that will probably explain their origin. What do you think of ancient traditions about deluges and destructions of mankind, and the preservation of a remnant? 'Every one believes in them.' Then let us suppose the world to have been destroyed by a deluge. The survivors would be hill-shepherds, small sparks of the human race, dwelling in isolation, and unacquainted with the arts and vices of civilization. We may further suppose that the cities on the plain and on the coast have been swept away, and that all inventions, and every sort of knowledge, have perished. 'Why, if all things were as they now are, nothing would have ever been invented. All our famous discoveries have been made within the last thousand years, and many of them are but of yesterday.' Yes, Cleinias, and you must not forget Epimenides, who was really of yesterday; he practised the lesson of moderation and abstinence which Hesiod only preached. 'True.' After the great destruction we may imagine that the earth was a desert, in which there were a herd or two of oxen and a few goats, hardly enough to support those who tended them; while of politics and governments the survivors would know nothing. And out of this state of things have arisen arts and laws, and a great deal of virtue and a great deal of vice; little by little the world has come to be what it is. At first, the few inhabitants would have had a natural fear of descending into the plains; although they would want to have intercourse with one another, they would have a difficulty in getting about, having lost the arts, and having no means of extracting metals from the earth, or of felling timber; for even if they had saved any tools, these would soon have been worn out, and they could get no more until the art of metallurgy had been again revived. Faction and war would be extinguished among them, for being solitary they would incline to be friendly; and having abundance of pasture and plenty of milk and flesh, they would have nothing to quarrel about. We may assume that they had also dwellings, clothes, pottery, for the weaving and plastic arts do not require the use of metals. In those days they were neither poor nor rich, and there was no insolence or injustice among them; for they were of noble natures, and lived up to their principles, and believed what they were told; knowing nothing of land or naval warfare, or of legal practices or party conflicts, they were simpler and more temperate, and also more just than the men of our day. 'Very true.' I am showing whence the need of lawgivers arises, for in primitive ages they neither had nor wanted them. Men lived according to the customs of their fathers, in a simple manner, under a patriarchal government, such as still exists both among Hellenes and barbarians, and is described in Homer as prevailing among the Cyclopes:—

'They have no laws, and they dwell in rocks or on the tops of mountains, and every one is the judge of his wife and children, and they do not trouble themselves about one another.'

'That is a charming poet of yours, though I know little of him, for in Crete foreign poets are not much read.' 'But he is well known in Sparta, though he describes Ionian rather than Dorian manners, and he seems to take your view of primitive society.' May we not suppose that government arose out of the union of single families who survived the destruction, and were under the rule of patriarchs, because they had originally descended from a single father and mother? 'That is very probable.' As time went on, men increased in number, and tilled the ground, living in a common habitation, which they protected by walls against wild beasts; but the several families retained the laws and customs which they separately received from their first parents. They would naturally like their own laws better than any others, and would be already formed by them when they met in a common society: thus legislation imperceptibly began among them. For in the next stage the associated families would appoint plenipotentiaries, who would select and present to the chiefs those of all their laws which they thought best. The chiefs in turn would make a further selection, and would thus become the lawgivers of the state, which they would form into an aristocracy or a monarchy. 'Probably.' In the third stage various other forms of government would arise. This state of society is described by Homer in speaking of the foundation of Dardania, which, he says,

'was built at the foot of many-fountained Ida, for Ilium,
the city of the plain, as yet was not.'

Here, as also in the account of the Cyclopes, the poet by some divine inspiration has attained truth. But to proceed with our tale. Ilium was built in a wide plain, on a low hill, which was surrounded by streams descending from Ida. This shows that many ages must have passed; for the men who remembered the deluge would never have placed their city at the mercy of the waters. When mankind began to multiply, many other cities were built in similar situations. These cities carried on a ten years' war against Troy, by sea as well as land, for men were ceasing to be afraid of the sea, and, in the meantime, while the chiefs of the army were at Troy, their homes fell into confusion. The youth revolted and refused to receive their own fathers; deaths, murders, exiles ensued. Under the new name of Dorians, which they received from their chief Dorieus, the exiles returned: the rest of the story is part of the history of Sparta.

Thus, after digressing from the subject of laws into music and drinking, we return to the settlement of Sparta, which in laws and institutions is the sister of Crete. We have seen the rise of a first, second, and third state, during the lapse of ages; and now we arrive at a fourth state, and out of the comparison of all four we propose to gather the nature of laws and governments, and the changes which may be desirable in them. 'If,' replies the Spartan, 'our new discussion is likely to be as good as the last, I would think the longest day too short for such an employment.'

Let us imagine the time when Lacedaemon, and Argos, and Messene were all subject, Megillus, to your ancestors. Afterwards, they distributed the army into three portions, and made three cities—Argos, Messene, Lacedaemon. 'Yes.' Temenus was the king of Argos, Cresphontes of Messene, Procles and Eurysthenes ruled at Lacedaemon. 'Just so.' And they all swore to assist any one of their number whose kingdom was subverted. 'Yes.' But did we not say that kingdoms or governments can only be subverted by themselves? 'That is true.' Yes, and the truth is now proved by facts: there were

certain conditions upon which the three kingdoms were to assist one another; the government was to be mild and the people obedient, and the kings and people were to unite in assisting either of the two others when they were wronged. This latter condition was a great security. 'Clearly.' Such a provision is in opposition to the common notion that the lawgiver should make only such laws as the people like; but we say that he should rather be like a physician, prepared to effect a cure even at the cost of considerable suffering. 'Very true.' The early lawgivers had another great advantage—they were saved from the reproach which attends a division of land and the abolition of debts. No one could quarrel with the Dorians for dividing the territory, and they had no debts of long standing. 'They had not.' Then what was the reason why their legislation signally failed? For there were three kingdoms, two of them quickly lost their original constitution. That is a question which we cannot refuse to answer, if we mean to proceed with our old man's game of enquiring into laws and institutions. And the Dorian institutions are more worthy of consideration than any other, having been evidently intended to be a protection not only to the Peloponnese, but to all the Hellenes against the Barbarians. For the capture of Troy by the Achaeans had given great offence to the Assyrians, of whose empire it then formed part, and they were likely to retaliate. Accordingly the royal Heraclid brothers devised their military constitution, which was organised on a far better plan than the old Trojan expedition; and the Dorians themselves were far superior to the Achaeans, who had taken part in that expedition, and had been conquered by them. Such a scheme, undertaken by men who had shared with one another toils and dangers, sanctioned by the Delphian oracle, under the guidance of the Heraclidae, seemed to have a promise of permanence. 'Naturally.' Yet this has not proved to be the case. Instead of the three being one, they have always been at war; had they been united, in accordance with the original intention, they would have been invincible.

And what caused their ruin? Did you ever observe that there are beautiful things of which men often say, 'What wonders they would have effected if rightly used?' and yet, after all, this may be a mistake. And so I say of the Heraclidae and their expedition, which I may perhaps have been justified in admiring, but which nevertheless suggests to me the general reflection,—'What wonders might not strength and military resources have accomplished, if the possessor had only known how to use them!' For consider: if the generals of the army had only known how to arrange their forces, might they not have given their subjects everlasting freedom, and the power of doing what they would in all the world? 'Very true.' Suppose a person to express his admiration of wealth or rank, does he not do so under the idea that by the help of these he can attain his desires? All men wish to obtain the control of all things, and they are always praying for what they desire. 'Certainly.' And we ask for our friends what they ask for themselves. 'Yes.' Dear is the son to the father, and yet the son, if he is young and foolish, will often pray to obtain what the father will pray that he may not obtain. 'True.' And when the father, in the heat of youth or the dotage of age, makes some rash prayer, the son, like Hippolytus, may have reason to pray that the word of his father may be ineffectual. 'You mean that a man should pray to have right desires, before he prays that his desires may be fulfilled; and that wisdom should be the first object of our prayers?' Yes; and you will remember my saying that wisdom should be the principal aim of the legislator; but you said that defence in war came first. And I replied, that there were four virtues, whereas you acknowledged one only—courage, and not wisdom which is the guide of all the rest. And I repeat—in jest if you like, but I am willing that you should receive my words in earnest—that 'the prayer of a fool is full of danger.' I will prove to you, if you will allow me, that the ruin of those states was not caused by cowardice or ignorance in war, but by ignorance of human affairs. 'Pray proceed: our attention will show better than compliments that we prize your words.' I maintain that ignorance is, and always has been, the ruin of states; wherefore the legislator

should seek to banish it from the state; and the greatest ignorance is the love of what is known to be evil, and the hatred of what is known to be good; this is the last and greatest conflict of pleasure and reason in the soul. I say the greatest, because affecting the greater part of the soul; for the passions are in the individual what the people are in a state. And when they become opposed to reason or law, and instruction no longer avails—that is the last and greatest ignorance of states and men. 'I agree.' Let this, then, be our first principle:—That the citizen who does not know how to choose between good and evil must not have authority, although he possess great mental gifts, and many accomplishments; for he is really a fool. On the other hand, he who has this knowledge may be unable either to read or swim; nevertheless, he shall be counted wise and permitted to rule. For how can there be wisdom where there is no harmony?—the wise man is the saviour, and he who is devoid of wisdom is the destroyer of states and households. There are rulers and there are subjects in states. And the first claim to rule is that of parents to rule over their children; the second, that of the noble to rule over the ignoble; thirdly, the elder must govern the younger; in the fourth place, the slave must obey his master; fifthly, there is the power of the stronger, which the poet Pindar declares to be according to nature; sixthly, there is the rule of the wiser, which is also according to nature, as I must inform Pindar, if he does not know, and is the rule of law over obedient subjects. 'Most true.' And there is a seventh kind of rule which the Gods love,—in this the ruler is elected by lot.

Then, now, we playfully say to him who fancies that it is easy to make laws:—You see, legislator, the many and inconsistent claims to authority; here is a spring of troubles which you must stay. And first of all you must help us to consider how the kings of Argos and Messene in olden days destroyed their famous empire—did they forget the saying of Hesiod, that 'the half is better than the whole'? And do we suppose that the ignorance of this truth is less fatal to kings than to peoples? 'Probably the evil is increased by their way of life.' The kings of those days transgressed the laws and violated their oaths. Their deeds were not in harmony with their words, and their folly, which seemed to them wisdom, was the ruin of the state. And how could the legislator have prevented this evil?—the remedy is easy to see now, but was not easy to foresee at the time. 'What is the remedy?' The institutions of Sparta may teach you, Megillus. Wherever there is excess, whether the vessel has too large a sail, or the body too much food, or the mind too much power, there destruction is certain. And similarly, a man who possesses arbitrary power is soon corrupted, and grows hateful to his dearest friends. In order to guard against this evil, the God who watched over Sparta gave you two kings instead of one, that they might balance one another; and further to lower the pulse of your body politic, some human wisdom, mingled with divine power, tempered the strength and self-sufficiency of youth with the moderation of age in the institution of your senate. A third saviour bridled your rising and swelling power by ephors, whom he assimilated to officers elected by lot: and thus the kingly power was preserved, and became the preserver of all the rest. Had the constitution been arranged by the original legislators, not even the portion of Aristodemus would have been saved; for they had no political experience, and imagined that a youthful spirit invested with power could be restrained by oaths. Now that God has instructed us in the arts of legislation, there is no merit in seeing all this, or in learning wisdom after the event. But if the coming danger could have been foreseen, and the union preserved, then no Persian or other enemy would have dared to attack Hellas; and indeed there was not so much credit to us in defeating the enemy, as discredit in our disloyalty to one another. For of the three cities one only fought on behalf of Hellas; and of the two others, Argos refused her aid; and Messenia was actually at war with Sparta: and if the Lacedaemonians and Athenians had not united, the Hellenes would have been absorbed in the Persian empire, and dispersed among the barbarians. We make these reflections upon past and present legislators because we desire to find out what

other course could have been followed. We were saying just now, that a state can only be free and wise and harmonious when there is a balance of powers. There are many words by which we express the aims of the legislator,—temperance, wisdom, friendship; but we need not be disturbed by the variety of expression,—these words have all the same meaning. 'I should like to know at what in your opinion the legislator should aim.' Hear me, then. There are two mother forms of states—one monarchy, and the other democracy: the Persians have the first in the highest form, and the Athenians the second; and no government can be well administered which does not include both. There was a time when both the Persians and Athenians had more the character of a constitutional state than they now have. In the days of Cyrus the Persians were freemen as well as lords of others, and their soldiers were free and equal, and the kings used and honoured all the talent which they could find, and so the nation waxed great, because there was freedom and friendship and communion of soul. But Cyrus, though a wise general, never troubled himself about the education of his family. He was a soldier from his youth upward, and left his children who were born in the purple to be educated by women, who humoured and spoilt them. 'A rare education, truly!' Yes, such an education as princesses who had recently grown rich might be expected to give them in a country where the men were solely occupied with warlike pursuits. 'Likely enough.' Their father had possessions of men and animals, and never considered that the race to whom he was about to make them over had been educated in a very different school, not like the Persian shepherd, who was well able to take care of himself and his own. He did not see that his children had been brought up in the Median fashion, by women and eunuchs. The end was that one of the sons of Cyrus slew the other, and lost the kingdom by his own folly. Observe, again, that Darius, who restored the kingdom, had not received a royal education. He was one of the seven chiefs, and when he came to the throne he divided the empire into seven provinces; and he made equal laws, and implanted friendship among the people. Hence his subjects were greatly attached to him, and cheerfully helped him to extend his empire. Next followed Xerxes, who had received the same royal education as Cambyses, and met with a similar fate. The reflection naturally occurs to us—How could Darius, with all his experience, have made such a mistake! The ruin of Xerxes was not a mere accident, but the evil life which is generally led by the sons of very rich and royal persons; and this is what the legislator has seriously to consider. Justly may the Lacedaemonians be praised for not giving special honour to birth or wealth; for such advantages are not to be highly esteemed without virtue, and not even virtue is to be esteemed unless it be accompanied by temperance. 'Explain.' No one would like to live in the same house with a courageous man who had no control over himself, nor with a clever artist who was a rogue. Nor can justice and wisdom ever be separated from temperance. But considering these qualities with reference to the honour and dishonour which is to be assigned to them in states, would you say, on the other hand, that temperance, if existing without the other virtues in the soul, is worth anything or nothing? 'I cannot tell.' You have answered well. It would be absurd to speak of temperance as belonging to the class of honourable or of dishonourable qualities, because all other virtues in their various classes require temperance to be added to them; having the addition, they are honoured not in proportion to that, but to their own excellence. And ought not the legislator to determine these classes? 'Certainly.' Suppose then that, without going into details, we make three great classes of them. Most honourable are the goods of the soul, always assuming temperance as a condition of them; secondly, those of the body; thirdly, external possessions. The legislator who puts them in another order is doing an unholy and unpatriotic thing.

These remarks were suggested by the history of the Persian kings; and to them I will now return. The ruin of their empire was caused by the loss of freedom and the growth of despotism; all community of

feeling disappeared. Hatred and spoliation took the place of friendship; the people no longer fought heartily for their masters; the rulers, finding their myriads useless on the field of battle, resorted to mercenaries as their only salvation, and were thus compelled by their circumstances to proclaim the stupidest of falsehoods—that virtue is a trifle in comparison of money.

But enough of the Persians: a different lesson is taught by the Athenians, whose example shows that a limited freedom is far better than an unlimited. Ancient Athens, at the time of the Persian invasion, had such a limited freedom. The people were divided into four classes, according to the amount of their property, and the universal love of order, as well as the fear of the approaching host, made them obedient and willing citizens. For Darius had sent Datis and Artaphernes, commanding them under pain of death to subjugate the Eretrians and Athenians. A report, whether true or not, came to Athens that all the Eretrians had been 'netted'; and the Athenians in terror sent all over Hellas for assistance. None came to their relief except the Lacedaemonians, and they arrived a day too late, when the battle of Marathon had been already fought. In process of time Xerxes came to the throne, and the Athenians heard of nothing but the bridge over the Hellespont, and the canal of Athos, and the innumerable host and fleet. They knew that these were intended to avenge the defeat of Marathon. Their case seemed desperate, for there was no Hellene likely to assist them by land, and at sea they were attacked by more than a thousand vessels;—their only hope, however slender, was in victory; so they relied upon themselves and upon the Gods. Their common danger, and the influence of their ancient constitution, greatly tended to promote harmony among them. Reverence and fear—that fear which the coward never knows—made them fight for their altars and their homes, and saved them from being dispersed all over the world. 'Your words, Athenian, are worthy of your country.' And you Megillus, who have inherited the virtues of your ancestors, are worthy to hear them. Let me ask you to take the moral of my tale. The Persians have lost their liberty in absolute slavery, and we in absolute freedom. In ancient times the Athenian people were not the masters, but the servants of the laws. 'Of what laws?' In the first place, there were laws about music, and the music was of various kinds: there was one kind which consisted of hymns, another of lamentations; there was also the paean and the dithyramb, and the so-called 'laws' (nomoi) or strains, which were played upon the harp. The regulation of such matters was not left to the whistling and clapping of the crowd; there was silence while the judges decided, and the boys, and the audience in general, were kept in order by raps of a stick. But after a while there arose a new race of poets, men of genius certainly, however careless of musical truth and propriety, who made pleasure the only criterion of excellence. That was a test which the spectators could apply for themselves; the whole audience, instead of being mute, became vociferous, and a theatrocracy took the place of an aristocracy. Could the judges have been free, there would have been no great harm done; a musical democracy would have been well enough—but conceit has been our ruin. Everybody knows everything, and is ready to say anything; the age of reverence is gone, and the age of irreverence and licentiousness has succeeded. 'Most true.' And with this freedom comes disobedience to rulers, parents, elders,—in the latter days to the law also; the end returns to the beginning, and the old Titanic nature reappears—men have no regard for the Gods or for oaths; and the evils of the human race seem as if they would never cease. Whither are we running away? Once more we must pull up the argument with bit and curb, lest, as the proverb says, we should fall off our ass. 'Good.' Our purpose in what we have been saying is to prove that the legislator ought to aim at securing for a state three things—freedom, friendship, wisdom. And we chose two states;—one was the type of freedom, and the other of despotism; and we showed that when in a mean they attained their highest perfection. In a similar spirit we spoke of the Dorian

expedition, and of the settlement on the hills and in the plains of Troy; and of music, and the use of wine, and of all that preceded.

And now, has our discussion been of any use? 'Yes, stranger; for by a singular coincidence the Cretans are about to send out a colony, of which the settlement has been confided to the Cnosians. Ten commissioners, of whom I am one, are to give laws to the colonists, and we may give any which we please—Cretan or foreign. And therefore let us make a selection from what has been said, and then proceed with the construction of the state.' Very good: I am quite at your service. 'And I too,' says Megillus.

BOOK IV. And now, what is this city? I do not want to know what is to be the name of the place (for some accident,—a river or a local deity, will determine that), but what the situation is, whether maritime or inland. 'The city will be about eleven miles from the sea.' Are there harbours? 'Excellent.' And is the surrounding country self-supporting? 'Almost.' Any neighbouring states? 'No; and that is the reason for choosing the place, which has been deserted from time immemorial.' And is there a fair proportion of hill and plain and wood? 'Like Crete in general, more hill than plain.' Then there is some hope for your citizens; had the city been on the sea, and dependent for support on other countries, no human power could have preserved you from corruption. Even the distance of eleven miles is hardly enough. For the sea, although an agreeable, is a dangerous companion, and a highway of strange morals and manners as well as of commerce. But as the country is only moderately fertile there will be no great export trade and no great returns of gold and silver, which are the ruin of states. Is there timber for ship-building? 'There is no pine, nor much cypress; and very little stone-pine or plane wood for the interior of ships.' That is good. 'Why?' Because the city will not be able to imitate the bad ways of her enemies. 'What is the bearing of that remark?' To explain my meaning, I would ask you to remember what we said about the Cretan laws, that they had an eye to war only; whereas I maintained that they ought to have included all virtue. And I hope that you in your turn will retaliate upon me if I am false to my own principle. For I consider that the lawgiver should go straight to the mark of virtue and justice, and disregard wealth and every other good when separated from virtue. What further I mean, when I speak of the imitation of enemies, I will illustrate by the story of Minos, if our Cretan friend will allow me to mention it. Minos, who was a great sea-king, imposed upon the Athenians a cruel tribute, for in those days they were not a maritime power; they had no timber for ship-building, and therefore they could not 'imitate their enemies'; and better far, as I maintain, would it have been for them to have lost many times over the lives which they devoted to the tribute than to have turned soldiers into sailors. Naval warfare is not a very praiseworthy art; men should not be taught to leap on shore, and then again to hurry back to their ships, or to find specious excuses for throwing away their arms; bad customs ought not to be gilded with fine words. And retreat is always bad, as we are taught in Homer, when he introduces Odysseus, setting forth to Agamemnon the danger of ships being at hand when soldiers are disposed to fly. An army of lions trained in such ways would fly before a herd of deer. Further, a city which owes its preservation to a crowd of pilots and oarsmen and other undeserving persons, cannot bestow rewards of honour properly; and this is the ruin of states. 'Still, in Crete we say that the battle of Salamis was the salvation of Hellas.' Such is the prevailing opinion. But I and Megillus say that the battle of Marathon began the deliverance, and that the battle of Plataea completed it; for these battles made men better, whereas the battles of Salamis and Artemisium made them no better. And we further affirm that mere existence is not the great political good of individuals or states, but the continuance of the best existence. 'Certainly.' Let us then endeavour to follow this principle in colonization and legislation.

And first, let me ask you who are to be the colonists? May any one come from any city of Crete? For you would surely not send a general invitation to all Hellas. Yet I observe that in Crete there are people who have come from Argos and Aegina and other places. 'Our recruits will be drawn from all Crete, and of other Hellenes we should prefer Peloponnesians. As you observe, there are Argives among the Cretans; moreover the Gortynians, who are the best of all Cretans, have come from Gortys in Peloponnesus.'

Colonization is in some ways easier when the colony goes out in a swarm from one country, owing to the pressure of population, or revolution, or war. In this case there is the advantage that the new colonists have a community of race, language, and laws. But then again, they are less obedient to the legislator; and often they are anxious to keep the very laws and customs which caused their ruin at home. A mixed multitude, on the other hand, is more tractable, although there is a difficulty in making them pull together. There is nothing, however, which perfects men's virtue more than legislation and colonization. And yet I have a word to say which may seem to be depreciatory of legislators. 'What is that?'

I was going to make the saddening reflection, that accidents of all sorts are the true legislators,—wars and pestilences and famines and the frequent recurrence of bad seasons. The observer will be inclined to say that almost all human things are chance; and this is certainly true about navigation and medicine, and the art of the general. But there is another thing which may equally be said. 'What is it?' That God governs all things, and that chance and opportunity co-operate with Him. And according to yet a third view, art has part with them, for surely in a storm it is well to have a pilot? And the same is true of legislation: even if circumstances are favourable, a skilful lawgiver is still necessary. 'Most true.' All artists would pray for certain conditions under which to exercise their art: and would not the legislator do the same? 'Certainly?' Come, legislator, let us say to him, and what are the conditions which you would have? He will answer, Grant me a city which is ruled by a tyrant; and let the tyrant be young, mindful, teachable, courageous, magnanimous; and let him have the inseparable condition of all virtue, which is temperance—not prudence, but that natural temperance which is the gift of children and animals, and is hardly reckoned among goods—with this he must be endowed, if the state is to acquire the form most conducive to happiness in the speediest manner. And I must add one other condition: the tyrant must be fortunate, and his good fortune must consist in his having the co-operation of a great legislator. When God has done all this, He has done the best which He can for a state; not so well if He has given them two legislators instead of one, and less and less well if He has given them a great many. An orderly tyranny most easily passes into the perfect state; in the second degree, a monarchy; in the third degree, a democracy; an oligarchy is worst of all. 'I do not understand.' I suppose that you have never seen a city which is subject to a tyranny? 'I have no desire to see one.' You would have seen what I am describing, if you ever had. The tyrant can speedily change the manners of a state, and affix the stamp of praise or blame on any action which he pleases; for the citizens readily follow the example which he sets. There is no quicker way of making changes; but there is a counterbalancing difficulty. It is hard to find the divine love of temperance and justice existing in any powerful form of government, whether in a monarchy or an oligarchy. In olden days there were chiefs like Nestor, who was the most eloquent and temperate of mankind, but there is no one his equal now. If such an one ever arises among us, blessed will he be, and blessed they who listen to his words. For where power and wisdom and temperance meet in one, there are the best laws and constitutions. I am endeavouring to show you how easy under the conditions supposed, and how difficult under any other, is the task of giving a city good laws. 'How do

you mean?' Let us old men attempt to mould in words a constitution for your new state, as children make figures out of wax. 'Proceed. What constitution shall we give—democracy, oligarchy, or aristocracy?' To which of these classes, Megillus, do you refer your own state? 'The Spartan constitution seems to me to contain all these elements. Our state is a democracy and also an aristocracy; the power of the Ephors is tyrannical, and we have an ancient monarchy.' 'Much the same,' adds Cleinias, 'may be said of Cnosus.' The reason is that you have polities, but other states are mere aggregations of men dwelling together, which are named after their several ruling powers; whereas a state, if an 'ocracy' at all, should be called a theocracy. A tale of old will explain my meaning. There is a tradition of a golden age, in which all things were spontaneous and abundant. Cronos, then lord of the world, knew that no mortal nature could endure the temptations of power, and therefore he appointed demons or demi-gods, who are of a superior race, to have dominion over man, as man has dominion over the animals. They took care of us with great ease and pleasure to themselves, and no less to us; and the tradition says that only when God, and not man, is the ruler, can the human race cease from ill. This was the manner of life which prevailed under Cronos, and which we must strive to follow so far as the principle of immortality still abides in us and we live according to law and the dictates of right reason. But in an oligarchy or democracy, when the governing principle is athirst for pleasure, the laws are trampled under foot, and there is no possibility of salvation. Is it not often said that there are as many forms of laws as there are governments, and that they have no concern either with any one virtue or with all virtue, but are relative to the will of the government? Which is as much as to say that 'might makes right.' 'What do you mean?' I mean that governments enact their own laws, and that every government makes self-preservation its principal aim. He who transgresses the laws is regarded as an evil-doer, and punished accordingly. This was one of the unjust principles of government which we mentioned when speaking of the different claims to rule. We were agreed that parents should rule their children, the elder the younger, the noble the ignoble. But there were also several other principles, and among them Pindar's 'law of violence.' To whom then is our state to be entrusted? For many a government is only a victorious faction which has a monopoly of power, and refuses any share to the conquered, lest when they get into office they should remember their wrongs. Such governments are not polities, but parties; nor are any laws good which are made in the interest of particular classes only, and not of the whole. And in our state I mean to protest against making any man a ruler because he is rich, or strong, or noble. But those who are obedient to the laws, and who win the victory of obedience, shall be promoted to the service of the Gods according to the degree of their obedience. When I call the ruler the servant or minister of the law, this is not a mere paradox, but I mean to say that upon a willingness to obey the law the existence of the state depends. 'Truly, Stranger, you have a keen vision.' Why, yes; every man when he is old has his intellectual vision most keen. And now shall we call in our colonists and make a speech to them? Friends, we say to them, God holds in His hand the beginning, middle, and end of all things, and He moves in a straight line towards the accomplishment of His will. Justice always bears Him company, and punishes those who fall short of His laws. He who would be happy follows humbly in her train; but he who is lifted up with pride, or wealth, or honour, or beauty, is soon deserted by God, and, being deserted, he lives in confusion and disorder. To many he seems a great man; but in a short time he comes to utter destruction. Wherefore, seeing these things, what ought we to do or think? 'Every man ought to follow God.' What life, then, is pleasing to God? There is an old saying that 'like agrees with like, measure with measure,' and God ought to be our measure in all things. The temperate man is the friend of God because he is like Him, and the intemperate man is not His friend, because he is not like Him. And the conclusion is, that the best of all things for a good man is to pray and sacrifice to the Gods; but the bad man has a polluted soul; and therefore his

service is wasted upon the Gods, while the good are accepted of them. I have told you the mark at which we ought to aim. You will say, How, and with what weapons? In the first place we affirm, that after the Olympian Gods and the Gods of the state, honour should be given to the Gods below, and to them should be offered everything in even numbers and of the second choice; the auspicious odd numbers and everything of the first choice are reserved for the Gods above. Next demi-gods or spirits must be honoured, and then heroes, and after them family gods, who will be worshipped at their local seats according to law. Further, the honour due to parents should not be forgotten; children owe all that they have to them, and the debt must be repaid by kindness and attention in old age. No unbecoming word must be uttered before them; for there is an avenging angel who hears them when they are angry, and the child should consider that the parent when he has been wronged has a right to be angry. After their death let them have a moderate funeral, such as their fathers have had before them; and there shall be an annual commemoration of them. Living on this wise, we shall be accepted of the Gods, and shall pass our days in good hope. The law will determine all our various duties towards relatives and friends and other citizens, and the whole state will be happy and prosperous. But if the legislator would persuade as well as command, he will add prefaces to his laws which will predispose the citizens to virtue. Even a little accomplished in the way of gaining the hearts of men is of great value. For most men are in no particular haste to become good. As Hesiod says:

'Long and steep is the first half of the way to virtue, But when you have reached the top the rest is easy.'

'Those are excellent words.' Yes; but may I tell you the effect which the preceding discourse has had upon me? I will express my meaning in an address to the lawgiver:—O lawgiver, if you know what we ought to do and say, you can surely tell us;—you are not like the poet, who, as you were just now saying, does not know the effect of his own words. And the poet may reply, that when he sits down on the tripod of the Muses he is not in his right mind, and that being a mere imitator he may be allowed to say all sorts of opposite things, and cannot tell which of them is true. But this licence cannot be allowed to the lawgiver. For example, there are three kinds of funerals; one of them is excessive, another mean, a third moderate, and you say that the last is right. Now if I had a rich wife, and she told me to bury her, and I were to sing of her burial, I should praise the extravagant kind; a poor man would commend a funeral of the meaner sort, and a man of moderate means would prefer a moderate funeral. But you, as legislator, would have to say exactly what you meant by 'moderate.' 'Very true.' And is our lawgiver to have no preamble or interpretation of his laws, never offering a word of advice to his subjects, after the manner of some doctors? For of doctors are there not two kinds? The one gentle and the other rough, doctors who are freemen and learn themselves and teach their pupils scientifically, and doctor's assistants who get their knowledge empirically by attending on their masters? 'Of course there are.' And did you ever observe that the gentlemen doctors practise upon freemen, and that slave doctors confine themselves to slaves? The latter go about the country or wait for the slaves at the dispensaries. They hold no parley with their patients about their diseases or the remedies of them; they practise by the rule of thumb, and give their decrees in the most arbitrary manner. When they have doctored one patient they run off to another, whom they treat with equal assurance, their duty being to relieve the master of the care of his sick slaves. But the other doctor, who practises on freemen, proceeds in quite a different way. He takes counsel with his patient and learns from him, and never does anything until he has persuaded him of what he is doing. He trusts to influence rather than force. Now is not the use of both methods far better than the use of either alone? And both together may be advantageously employed by us in legislation.

We may illustrate our proposal by an example. The laws relating to marriage naturally come first, and therefore we may begin with them. The simple law would be as follows:—A man shall marry between the ages of thirty and thirty-five; if he do not, he shall be fined or deprived of certain privileges. The double law would add the reason why: Forasmuch as man desires immortality, which he attains by the procreation of children, no one should deprive himself of his share in this good. He who obeys the law is blameless, but he who disobeys must not be a gainer by his celibacy; and therefore he shall pay a yearly fine, and shall not be allowed to receive honour from the young. That is an example of what I call the double law, which may enable us to judge how far the addition of persuasion to threats is desirable. 'Lacedaemonians in general, Stranger, are in favour of brevity; in this case, however, I prefer length. But Cleinias is the real lawgiver, and he ought to be first consulted.' 'Thank you, Megillus.' Whether words are to be many or few, is a foolish question:—the best and not the shortest forms are always to be approved. And legislators have never thought of the advantages which they might gain by using persuasion as well as force, but trust to force only. And I have something else to say about the matter. Here have we been from early dawn until noon, discoursing about laws, and all that we have been saying is only the preamble of the laws which we are about to give. I tell you this, because I want you to observe that songs and strains have all of them preludes, but that laws, though called by the same name (nomoi), have never any prelude. Now I am disposed to give preludes to laws, dividing them into two parts—one containing the despotic command, which I described under the image of the slave doctor—the other the persuasive part, which I term the preamble. The legislator should give preludes or preambles to his laws. 'That shall be the way in my colony.' I am glad that you agree with me; this is a matter which it is important to remember. A preamble is not always necessary to a law: the lawgiver must determine when it is needed, as the musician determines when there is to be a prelude to a song. 'Most true: and now, having a preamble, let us recommence our discourse.' Enough has been said of Gods and parents, and we may proceed to consider what relates to the citizens—their souls, bodies, properties,—their occupations and amusements; and so arrive at the nature of education.

The first word of the Laws somewhat abruptly introduces the thought which is present to the mind of Plato throughout the work, namely, that Law is of divine origin. In the words of a great English writer—'Her seat is the bosom of God, her voice the harmony of the world.' Though the particular laws of Sparta and Crete had a narrow and imperfect aim, this is not true of divine laws, which are based upon the principles of human nature, and not framed to meet the exigencies of the moment. They have their natural divisions, too, answering to the kinds of virtue; very unlike the discordant enactments of an Athenian assembly or of an English Parliament. Yet we may observe two inconsistencies in Plato's treatment of the subject: first, a lesser, inasmuch as he does not clearly distinguish the Cretan and Spartan laws, of which the exclusive aim is war, from those other laws of Zeus and Apollo which are said to be divine, and to comprehend all virtue. Secondly, we may retort on him his own complaint against Sparta and Crete, that he has himself given us a code of laws, which for the most part have a military character; and that we cannot point to 'obvious examples of similar institutions which are concerned with pleasure;' at least there is only one such, that which relates to the regulation of convivial intercourse. The military spirit which is condemned by him in the beginning of the Laws, reappears in the seventh and eighth books.

The mention of Minos the great lawgiver, and of Rhadamanthus the righteous administrator of the law, suggests the two divisions of the laws into enactments and appointments of officers. The legislator and the judge stand side by side, and their functions cannot be wholly distinguished. For the

judge is in some sort a legislator, at any rate in small matters; and his decisions growing into precedents, must determine the innumerable details which arise out of the conflict of circumstances. These Plato proposes to leave to a younger generation of legislators. The action of courts of law in making law seems to have escaped him, probably because the Athenian law-courts were popular assemblies; and, except in a mythical form, he can hardly be said to have had before his eyes the ideal of a judge. In reading the Laws of Plato, or any other ancient writing about Laws, we should consider how gradual the process is by which not only a legal system, but the administration of a court of law, becomes perfected.

There are other subjects on which Plato breaks ground, as his manner is, early in the work. First, he gives a sketch of the subject of laws; they are to comprehend the whole of human life, from infancy to age, and from birth to death, although the proposed plan is far from being regularly executed in the books which follow, partly owing to the necessity of describing the constitution as well as the laws of his new colony. Secondly, he touches on the power of music, which may exercise so great an influence on the character of men for good or evil; he refers especially to the great offence—which he mentions again, and which he had condemned in the Republic—of varying the modes and rhythms, as well as to that of separating the words from the music. Thirdly, he reprobates the prevalence of unnatural loves in Sparta and Crete, which he attributes to the practice of syssitia and gymnastic exercises, and considers to be almost inseparable from them. To this subject he again returns in the eighth book. Fourthly, the virtues are affirmed to be inseparable from one another, even if not absolutely one; this, too, is a principle which he reasserts at the conclusion of the work. As in the beginnings of Plato's other writings, we have here several 'notes' struck, which form the preludes of longer discussions, although the hint is less ingeniously given, and the promise more imperfectly fulfilled than in the earlier dialogues.

The distinction between ethics and politics has not yet dawned upon Plato's mind. To him, law is still floating in a region between the two. He would have desired that all the acts and laws of a state should have regard to all virtue. But he did not see that politics and law are subject to their own conditions, and are distinguished from ethics by natural differences. The actions of which politics take cognisance are necessarily collective or representative; and law is limited to external acts which affect others as well as the agents. Ethics, on the other hand, include the whole duty of man in relation both to himself and others. But Plato has never reflected on these differences. He fancies that the life of the state can be as easily fashioned as that of the individual. He is favourable to a balance of power, but never seems to have considered that power might be so balanced as to produce an absolute immobility in the state. Nor is he alive to the evils of confounding vice and crime; or to the necessity of governments abstaining from excessive interference with their subjects.

Yet this confusion of ethics and politics has also a better and a truer side. If unable to grasp some important distinctions, Plato is at any rate seeking to elevate the lower to the higher; he does not pull down the principles of men to their practice, or narrow the conception of the state to the immediate necessities of politics. Political ideals of freedom and equality, of a divine government which has been or will be in some other age or country, have greatly tended to educate and ennoble the human race. And if not the first author of such ideals (for they are as old as Hesiod), Plato has done more than any other writer to impress them on the world. To those who censure his idealism we may reply in his own words—'He is not the worse painter who draws a perfectly beautiful figure, because no such figure of a man could ever have existed' (Republic).

A new thought about education suddenly occurs to him, and for a time exercises a sort of fascination over his mind, though in the later books of the Laws it is forgotten or overlooked. As true courage is allied to temperance, so there must be an education which shall train mankind to resist pleasure as well as to endure pain. No one can be on his guard against that of which he has no experience. The perfectly trained citizen should have been accustomed to look his enemy in the face, and to measure his strength against her. This education in pleasure is to be given, partly by festive intercourse, but chiefly by the song and dance. Youth are to learn music and gymnastics; their elders are to be trained and tested at drinking parties. According to the old proverb, in vino veritas, they will then be open and visible to the world in their true characters; and also they will be more amenable to the laws, and more easily moulded by the hand of the legislator. The first reason is curious enough, though not important; the second can hardly be thought deserving of much attention. Yet if Plato means to say that society is one of the principal instruments of education in after-life, he has expressed in an obscure fashion a principle which is true, and to his contemporaries was also new. That at a banquet a degree of moral discipline might be exercised is an original thought, but Plato has not yet learnt to express his meaning in an abstract form. He is sensible that moderation is better than total abstinence, and that asceticism is but a one-sided training. He makes the sagacious remark, that 'those who are able to resist pleasure may often be among the worst of mankind.' He is as much aware as any modern utilitarian that the love of pleasure is the great motive of human action. This cannot be eradicated, and must therefore be regulated,—the pleasure must be of the right sort. Such reflections seem to be the real, though imperfectly expressed, groundwork of the discussion. As in the juxtaposition of the Bacchic madness and the great gift of Dionysus, or where he speaks of the different senses in which pleasure is and is not the object of imitative art, or in the illustration of the failure of the Dorian institutions from the prayer of Theseus, we have to gather his meaning as well as we can from the connexion.

The feeling of old age is discernible in this as well as in several other passages of the Laws. Plato has arrived at the time when men sit still and look on at life; and he is willing to allow himself and others the few pleasures which remain to them. Wine is to cheer them now that their limbs are old and their blood runs cold. They are the best critics of dancing and music, but cannot be induced to join in song unless they have been enlivened by drinking. Youth has no need of the stimulus of wine, but age can only be made young again by its invigorating influence. Total abstinence for the young, moderate and increasing potations for the old, is Plato's principle. The fire, of which there is too much in the one, has to be brought to the other. Drunkenness, like madness, had a sacredness and mystery to the Greek; if, on the one hand, as in the case of the Tarentines, it degraded a whole population, it was also a mode of worshipping the god Dionysus, which was to be practised on certain occasions. Moreover, the intoxication produced by the fruit of the vine was very different from the grosser forms of drunkenness which prevail among some modern nations.

The physician in modern times would restrict the old man's use of wine within narrow limits. He would tell us that you cannot restore strength by a stimulus. Wine may call back the vital powers in disease, but cannot reinvigorate old age. In his maxims of health and longevity, though aware of the importance of a simple diet, Plato has omitted to dwell on the perfect rule of moderation. His commendation of wine is probably a passing fancy, and may have arisen out of his own habits or tastes. If so, he is not the only philosopher whose theory has been based upon his practice.

Plato's denial of wine to the young and his approval of it for their elders has some points of view which may be illustrated by the temperance controversy of our own times. Wine may be allowed to have a religious as well as a festive use; it is commended both in the Old and New Testament; it has been sung of by nearly all poets; and it may be truly said to have a healing influence both on body and mind. Yet it is also very liable to excess and abuse, and for this reason is prohibited by Mahometans, as well as of late years by many Christians, no less than by the ancient Spartans; and to sound its praises seriously seems to partake of the nature of a paradox. But we may rejoin with Plato that the abuse of a good thing does not take away the use of it. Total abstinence, as we often say, is not the best rule, but moderate indulgence; and it is probably true that a temperate use of wine may contribute some elements of character to social life which we can ill afford to lose. It draws men out of their reserve; it helps them to forget themselves and to appear as they by nature are when not on their guard, and therefore to make them more human and greater friends to their fellow-men. It gives them a new experience; it teaches them to combine self-control with a measure of indulgence; it may sometimes restore to them the simplicity of childhood. We entirely agree with Plato in forbidding the use of wine to the young; but when we are of mature age there are occasions on which we derive refreshment and strength from moderate potations. It is well to make abstinence the rule, but the rule may sometimes admit of an exception. We are in a higher, as well as in a lower sense, the better for the use of wine. The question runs up into wider ones—What is the general effect of asceticism on human nature? and, Must there not be a certain proportion between the aspirations of man and his powers?—questions which have been often discussed both by ancient and modern philosophers. So by comparing things old and new we may sometimes help to realize to ourselves the meaning of Plato in the altered circumstances of our own life.

Like the importance which he attaches to festive entertainments, his depreciation of courage to the fourth place in the scale of virtue appears to be somewhat rhetorical and exaggerated. But he is speaking of courage in the lower sense of the term, not as including loyalty or temperance. He does not insist in this passage, as in the Protagoras, on the unity of the virtues; or, as in the Laches, on the identity of wisdom and courage. But he says that they all depend upon their leader mind, and that, out of the union of wisdom and temperance with courage, springs justice. Elsewhere he is disposed to regard temperance rather as a condition of all virtue than as a particular virtue. He generalizes temperance, as in the Republic he generalizes justice. The nature of the virtues is to run up into one another, and in many passages Plato makes but a faint effort to distinguish them. He still quotes the poets, somewhat enlarging, as his manner is, or playing with their meaning. The martial poet Tyrtaeus, and the oligarch Theognis, furnish him with happy illustrations of the two sorts of courage. The fear of fear, the division of goods into human and divine, the acknowledgment that peace and reconciliation are better than the appeal to the sword, the analysis of temperance into resistance of pleasure as well as endurance of pain, the distinction between the education which is suitable for a trade or profession, and for the whole of life, are important and probably new ethical conceptions. Nor has Plato forgotten his old paradox (Gorgias) that to be punished is better than to be unpunished, when he says, that to the bad man death is the only mitigation of his evil. He is not less ideal in many passages of the Laws than in the Gorgias or Republic. But his wings are heavy, and he is unequal to any sustained flight.

There is more attempt at dramatic effect in the first book than in the later parts of the work. The outburst of martial spirit in the Lacedaemonian, 'O best of men'; the protest which the Cretan makes against the supposed insult to his lawgiver; the cordial acknowledgment on the part of both of them

that laws should not be discussed publicly by those who live under their rule; the difficulty which they alike experience in following the speculations of the Athenian, are highly characteristic.

In the second book, Plato pursues further his notion of educating by a right use of pleasure. He begins by conceiving an endless power of youthful life, which is to be reduced to rule and measure by harmony and rhythm. Men differ from the lower animals in that they are capable of musical discipline. But music, like all art, must be truly imitative, and imitative of what is true and good. Art and morality agree in rejecting pleasure as the criterion of good. True art is inseparable from the highest and most ennobling ideas. Plato only recognizes the identity of pleasure and good when the pleasure is of the higher kind. He is the enemy of 'songs without words,' which he supposes to have some confusing or enervating effect on the mind of the hearer; and he is also opposed to the modern degeneracy of the drama, which he would probably have illustrated, like Aristophanes, from Euripides and Agathon. From this passage may be gathered a more perfect conception of art than from any other of Plato's writings. He understands that art is at once imitative and ideal, an exact representation of truth, and also a representation of the highest truth. The same double view of art may be gathered from a comparison of the third and tenth books of the Republic, but is here more clearly and pointedly expressed.

We are inclined to suspect that both here and in the Republic Plato exaggerates the influence really exercised by the song and the dance. But we must remember also the susceptible nature of the Greek, and the perfection to which these arts were carried by him. Further, the music had a sacred and Pythagorean character; the dance too was part of a religious festival. And only at such festivals the sexes mingled in public, and the youths passed under the eyes of their elders.

At the beginning of the third book, Plato abruptly asks the question, What is the origin of states? The answer is, Infinite time. We have already seen—in the Theaetetus, where he supposes that in the course of ages every man has had numberless progenitors, kings and slaves, Greeks and barbarians; and in the Critias, where he says that nine thousand years have elapsed since the island of Atlantis fought with Athens—that Plato is no stranger to the conception of long periods of time. He imagines human society to have been interrupted by natural convulsions; and beginning from the last of these, he traces the steps by which the family has grown into the state, and the original scattered society, becoming more and more civilised, has finally passed into military organizations like those of Crete and Sparta. His conception of the origin of states is far truer in the Laws than in the Republic; but it must be remembered that here he is giving an historical, there an ideal picture of the growth of society.

Modern enquirers, like Plato, have found in infinite ages the explanation not only of states, but of languages, men, animals, the world itself; like him, also, they have detected in later institutions the vestiges of a patriarchal state still surviving. Thus far Plato speaks as 'the spectator of all time and all existence,' who may be thought by some divine instinct to have guessed at truths which were hereafter to be revealed. He is far above the vulgar notion that Hellas is the civilized world (Statesman), or that civilization only began when the Hellenes appeared on the scene. But he has no special knowledge of 'the days before the flood'; and when he approaches more historical times, in preparing the way for his own theory of mixed government, he argues partially and erroneously. He is desirous of showing that unlimited power is ruinous to any state, and hence he is led to attribute a tyrannical spirit to the first Dorian kings. The decay of Argos and the destruction of Messene are

adduced by him as a manifest proof of their failure; and Sparta, he thinks, was only preserved by the limitations which the wisdom of successive legislators introduced into the government. But there is no more reason to suppose that the Dorian rule of life which was followed at Sparta ever prevailed in Argos and Messene, than to assume that Dorian institutions were framed to protect the Greeks against the power of Assyria; or that the empire of Assyria was in any way affected by the Trojan war; or that the return of the Heraclidae was only the return of Achaean exiles, who received a new name from their leader Dorieus. Such fancies were chiefly based, as far as they had any foundation, on the use of analogy, which played a great part in the dawn of historical and geographical research. Because there was a Persian empire which was the natural enemy of the Greek, there must also have been an Assyrian empire, which had a similar hostility; and not only the fable of the island of Atlantis, but the Trojan war, in Plato's mind derived some features from the Persian struggle. So Herodotus makes the Nile answer to the Ister, and the valley of the Nile to the Red Sea. In the Republic, Plato is flying in the air regardless of fact and possibility—in the Laws, he is making history by analogy. In the former, he appears to be like some modern philosophers, absolutely devoid of historical sense; in the latter, he is on a level, not with Thucydides, or the critical historians of Greece, but with Herodotus, or even with Ctesias.

The chief object of Plato in tracing the origin of society is to show the point at which regular government superseded the patriarchical authority, and the separate customs of different families were systematized by legislators, and took the form of laws consented to by them all. According to Plato, the only sound principle on which any government could be based was a mixture or balance of power. The balance of power saved Sparta, when the two other Heraclid states fell into disorder. Here is probably the first trace of a political idea, which has exercised a vast influence both in ancient and modern times. And yet we might fairly ask, a little parodying the language of Plato—O legislator, is unanimity only 'the struggle for existence'; or is the balance of powers in a state better than the harmony of them?

In the fourth book we approach the realities of politics, and Plato begins to ascend to the height of his great argument. The reign of Cronos has passed away, and various forms of government have succeeded, which are all based on self-interest and self-preservation. Right and wrong, instead of being measured by the will of God, are created by the law of the state. The strongest assertions are made of the purely spiritual nature of religion—'Without holiness no man is accepted of God'; and of the duty of filial obedience,—'Honour thy parents.' The legislator must teach these precepts as well as command them. He is to be the educator as well as the lawgiver of future ages, and his laws are themselves to form a part of the education of the state. Unlike the poet, he must be definite and rational; he cannot be allowed to say one thing at one time, and another thing at another—he must know what he is about. And yet legislation has a poetical or rhetorical element, and must find words which will wing their way to the hearts of men. Laws must be promulgated before they are put in execution, and mankind must be reasoned with before they are punished. The legislator, when he promulgates a particular law, will courteously entreat those who are willing to hear his voice. Upon the rebellious only does the heavy blow descend. A sermon and a law in one, blending the secular punishment with the religious sanction, appeared to Plato a new idea which might have a great result in reforming the world. The experiment had never been tried of reasoning with mankind; the laws of others had never had any preambles, and Plato seems to have great pleasure in contemplating his discovery.

In these quaint forms of thought and language, great principles of morals and legislation are enunciated by him for the first time. They all go back to mind and God, who holds the beginning, middle, and end of all things in His hand. The adjustment of the divine and human elements in the world is conceived in the spirit of modern popular philosophy, differing not much in the mode of expression. At first sight the legislator appears to be impotent, for all things are the sport of chance. But we admit also that God governs all things, and that chance and opportunity co-operate with Him (compare the saying, that chance is the name of the unknown cause). Lastly, while we acknowledge that God and chance govern mankind and provide the conditions of human action, experience will not allow us to deny a place to art. We know that there is a use in having a pilot, though the storm may overwhelm him; and a legislator is required to provide for the happiness of a state, although he will pray for favourable conditions under which he may exercise his art.

BOOK V. Hear now, all ye who heard the laws about Gods and ancestors: Of all human possessions the soul is most divine, and most truly a man's own. For in every man there are two parts—a better which rules, and an inferior which serves; and the ruler is to be preferred to the servant. Wherefore I bid every one next after the Gods to honour his own soul, and he can only honour her by making her better. A man does not honour his soul by flattery, or gifts, or self-indulgence, or conceit of knowledge, nor when he blames others for his own errors; nor when he indulges in pleasure or refuses to bear pain; nor when he thinks that life at any price is a good, because he fears the world below, which, far from being an evil, may be the greatest good; nor when he prefers beauty to virtue—not reflecting that the soul, which came from heaven, is more honourable than the body, which is earth-born; nor when he covets dishonest gains, of which no amount is equal in value to virtue;—in a word, when he counts that which the legislator pronounces evil to be good, he degrades his soul, which is the divinest part of him. He does not consider that the real punishment of evil-doing is to grow like evil men, and to shun the conversation of the good: and that he who is joined to such men must do and suffer what they by nature do and say to one another, which suffering is not justice but retribution. For justice is noble, but retribution is only the companion of injustice. And whether a man escapes punishment or not, he is equally miserable; for in the one case he is not cured, and in the other case he perishes that the rest may be saved.

The glory of man is to follow the better and improve the inferior. And the soul is that part of man which is most inclined to avoid the evil and dwell with the good. Wherefore also the soul is second only to the Gods in honour, and in the third place the body is to be esteemed, which often has a false honour. For honour is not to be given to the fair or the strong, or the swift or the tall, or to the healthy, any more than to their opposites, but to the mean states of all these habits; and so of property and external goods. No man should heap up riches that he may leave them to his children. The best condition for them as for the state is a middle one, in which there is a freedom without luxury. And the best inheritance of children is modesty. But modesty cannot be implanted by admonition only—the elders must set the example. He who would train the young must first train himself.

He who honours his kindred and family may fairly expect that the Gods will give him children. He who would have friends must think much of their favours to him, and little of his to them. He who prefers to an Olympic, or any other victory, to win the palm of obedience to the laws, serves best both the state and his fellow-citizens. Engagements with strangers are to be deemed most sacred, because the stranger, having neither kindred nor friends, is immediately under the protection of Zeus, the God of

strangers. A prudent man will not sin against the stranger; and still more carefully will he avoid sinning against the suppliant, which is an offence never passed over by the Gods.

I will now speak of those particulars which are matters of praise and blame only, and which, although not enforced by the law, greatly affect the disposition to obey the law. Truth has the first place among the gifts of Gods and men, for truth begets trust; but he is not to be trusted who loves voluntary falsehood, and he who loves involuntary falsehood is a fool. Neither the ignorant nor the untrustworthy man is happy; for they have no friends in life, and die unlamented and untended. Good is he who does no injustice—better who prevents others from doing any—best of all who joins the rulers in punishing injustice. And this is true of goods and virtues in general; he who has and communicates them to others is the man of men; he who would, if he could, is second-best; he who has them and is jealous of imparting them to others is to be blamed, but the good or virtue which he has is to be valued still. Let every man contend in the race without envy; for the unenvious man increases the strength of the city; himself foremost in the race, he harms no one with calumny. Whereas the envious man is weak himself, and drives his rivals to despair with his slanders, thus depriving the whole city of incentives to the exercise of virtue, and tarnishing her glory. Every man should be gentle, but also passionate; for he must have the spirit to fight against incurable and malignant evil. But the evil which is remediable should be dealt with more in sorrow than anger. He who is unjust is to be pitied in any case; for no man voluntarily does evil or allows evil to exist in his soul. And therefore he who deals with the curable sort must be long-suffering and forbearing; but the incurable shall have the vials of our wrath poured out upon him. The greatest of all evils is self-love, which is thought to be natural and excusable, and is enforced as a duty, and yet is the cause of many errors. The lover is blinded about the beloved, and prefers his own interests to truth and right; but the truly great man seeks justice before all things. Self-love is the source of that ignorant conceit of knowledge which is always doing and never succeeding. Wherefore let every man avoid self-love, and follow the guidance of those who are better than himself. There are lesser matters which a man should recall to mind; for wisdom is like a stream, ever flowing in and out, and recollection flows in when knowledge is failing. Let no man either laugh or grieve overmuch; but let him control his feelings in the day of good- or ill-fortune, believing that the Gods will diminish the evils and increase the blessings of the righteous. These are thoughts which should ever occupy a good man's mind; he should remember them both in lighter and in more serious hours, and remind others of them.

So much of divine matters and the relation of man to God. But man is man, and dependent on pleasure and pain; and therefore to acquire a true taste respecting either is a great matter. And what is a true taste? This can only be explained by a comparison of one life with another. Pleasure is an object of desire, pain of avoidance; and the absence of pain is to be preferred to pain, but not to pleasure. There are infinite kinds and degrees of both of them, and we choose the life which has more pleasure and avoid that which has less; but we do not choose that life in which the elements of pleasure are either feeble or equally balanced with pain. All the lives which we desire are pleasant; the choice of any others is due to inexperience.

Now there are four lives—the temperate, the rational, the courageous, the healthful; and to these let us oppose four others—the intemperate, the foolish, the cowardly, the diseased. The temperate life has gentle pains and pleasures and placid desires, the intemperate life has violent delights, and still more violent desires. And the pleasures of the temperate exceed the pains, while the pains of the intemperate exceed the pleasures. But if this is true, none are voluntarily intemperate, but all who lack

temperance are either ignorant or wanting in self-control: for men always choose the life which (as they think) exceeds in pleasure. The wise, the healthful, the courageous life have a similar advantage—they also exceed their opposites in pleasure. And, generally speaking, the life of virtue is far more pleasurable and honourable, fairer and happier far, than the life of vice. Let this be the preamble of our laws; the strain will follow.

As in a web the warp is stronger than the woof, so should the rulers be stronger than their half-educated subjects. Let us suppose, then, that in the constitution of a state there are two parts, the appointment of the rulers, and the laws which they have to administer. But, before going further, there are some preliminary matters which have to be considered.

As of animals, so also of men, a selection must be made; the bad breed must be got rid of, and the good retained. The legislator must purify them, and if he be not a despot he will find this task to be a difficult one. The severer kinds of purification are practised when great offenders are punished by death or exile, but there is a milder process which is necessary when the poor show a disposition to attack the property of the rich, for then the legislator will send them off to another land, under the name of a colony. In our case, however, we shall only need to purify the streams before they meet. This is often a troublesome business, but in theory we may suppose the operation performed, and the desired purity attained. Evil men we will hinder from coming, and receive the good as friends.

Like the old Heraclid colony, we are fortunate in escaping the abolition of debts and the distribution of land, which are difficult and dangerous questions. But, perhaps, now that we are speaking of the subject, we ought to say how, if the danger existed, the legislator should try to avert it. He would have recourse to prayers, and trust to the healing influence of time. He would create a kindly spirit between creditors and debtors: those who have should give to those who have not, and poverty should be held to be rather the increase of a man's desires than the diminution of his property. Good-will is the only safe and enduring foundation of the political society; and upon this our city shall be built. The lawgiver, if he is wise, will not proceed with the arrangement of the state until all disputes about property are settled. And for him to introduce fresh grounds of quarrel would be madness.

Let us now proceed to the distribution of our state, and determine the size of the territory and the number of the allotments. The territory should be sufficient to maintain the citizens in moderation, and the population should be numerous enough to defend themselves, and sometimes to aid their neighbours. We will fix the number of citizens at 5040, to which the number of houses and portions of land shall correspond. Let the number be divided into two parts and then into three; for it is very convenient for the purposes of distribution, and is capable of fifty-nine divisions, ten of which proceed without interval from one to ten. Here are numbers enough for war and peace, and for all contracts and dealings. These properties of numbers are true, and should be ascertained with a view to use.

In carrying out the distribution of the land, a prudent legislator will be careful to respect any provision for religious worship which has been sanctioned by ancient tradition or by the oracles of Delphi, Dodona, or Ammon. All sacrifices, and altars, and temples, whatever may be their origin, should remain as they are. Every division should have a patron God or hero; to these a portion of the domain should be appropriated, and at their temples the inhabitants of the districts should meet together from time to time, for the sake of mutual help and friendship. All the citizens of a state should be known to one another; for where men are in the dark about each other's characters, there can be no justice or

right administration. Every man should be true and single-minded, and should not allow himself to be deceived by others.

And now the game opens, and we begin to move the pieces. At first sight, our constitution may appear singular and ill-adapted to a legislator who has not despotic power; but on second thoughts will be deemed to be, if not the very best, the second best. For there are three forms of government, a first, a second, and a third best, out of which Cleinias has now to choose. The first and highest form is that in which friends have all things in common, including wives and property,—in which they have common fears, hopes, desires, and do not even call their eyes or their hands their own. This is the ideal state; than which there never can be a truer or better—a state, whether inhabited by Gods or sons of Gods, which will make the dwellers therein blessed. Here is the pattern on which we must ever fix our eyes; but we are now concerned with another, which comes next to it, and we will afterwards proceed to a third.

Inasmuch as our citizens are not fitted either by nature or education to receive the saying, Friends have all things in common, let them retain their houses and private property, but use them in the service of their country, who is their God and parent, and of the Gods and demigods of the land. Their first care should be to preserve the number of their lots. This may be secured in the following manner: when the possessor of a lot dies, he shall leave his lot to his best-beloved child, who will become the heir of all duties and interests, and will minister to the Gods and to the family, to the living and to the dead. Of the remaining children, the females must be given in marriage according to the law to be hereafter enacted; the males may be assigned to citizens who have no children of their own. How to equalize families and allotments will be one of the chief cares of the guardians of the laws. When parents have too many children they may give to those who have none, or couples may abstain from having children, or, if there is a want of offspring, special care may be taken to obtain them; or if the number of citizens becomes excessive, we may send away the surplus to found a colony. If, on the other hand, a war or plague diminishes the number of inhabitants, new citizens must be introduced; and these ought not, if possible, to be men of low birth or inferior training; but even God, it is said, cannot always fight against necessity.

Wherefore we will thus address our citizens:—Good friends, honour order and equality, and above all the number 5040. Secondly, respect the original division of the lots, which must not be infringed by buying and selling, for the law says that the land which a man has is sacred and is given to him by God. And priests and priestesses will offer frequent sacrifices and pray that he who alienates either house or lot may receive the punishment which he deserves, and their prayers shall be inscribed on tablets of cypress-wood for the instruction of posterity. The guardians will keep a vigilant watch over the citizens, and they will punish those who disobey God and the law.

To appreciate the benefit of such an institution a man requires to be well educated; for he certainly will not make a fortune in our state, in which all illiberal occupations are forbidden to freemen. The law also provides that no private person shall have gold or silver, except a little coin for daily use, which will not pass current in other countries. The state must also possess a common Hellenic currency, but this is only to be used in defraying the expenses of expeditions, or of embassies, or while a man is on foreign travels; but in the latter case he must deliver up what is over, when he comes back, to the treasury in return for an equal amount of local currency, on pain of losing the sum in question; and he who does not inform against an offender is to be mulcted in a like sum. No money is to be given or

taken as a dowry, or to be lent on interest. The law will not protect a man in recovering either interest or principal. All these regulations imply that the aim of the legislator is not to make the city as rich or as mighty as possible, but the best and happiest. Now men can hardly be at the same time very virtuous and very rich. And why? Because he who makes twice as much and saves twice as much as he ought, receiving where he ought not and not spending where he ought, will be at least twice as rich as he who makes money where he ought, and spends where he ought. On the other hand, an utterly bad man is generally profligate and poor, while he who acquires honestly, and spends what he acquires on noble objects, can hardly be very rich. A very rich man is therefore not a good man, and therefore not a happy one. But the object of our laws is to make the citizens as friendly and happy as possible, which they cannot be if they are always at law and injuring each other in the pursuit of gain. And therefore we say that there is to be no silver or gold in the state, nor usury, nor the rearing of the meaner kinds of live-stock, but only agriculture, and only so much of this as will not lead men to neglect that for the sake of which money is made, first the soul and afterwards the body; neither of which are good for much without music and gymnastic. Money is to be held in honour last or third; the highest interests being those of the soul, and in the second class are to be ranked those of the body. This is the true order of legislation, which would be inverted by placing health before temperance, and wealth before health.

It might be well if every man could come to the colony having equal property; but equality is impossible, and therefore we must avoid causes of offence by having property valued and by equalizing taxation. To this end, let us make four classes in which the citizens may be placed according to the measure of their original property, and the changes of their fortune. The greatest of evils is revolution; and this, as the law will say, is caused by extremes of poverty or wealth. The limit of poverty shall be the lot, which must not be diminished, and may be increased fivefold, but not more. He who exceeds the limit must give up the excess to the state; but if he does not, and is informed against, the surplus shall be divided between the informer and the Gods, and he shall pay a sum equal to the surplus out Of his own property. All property other than the lot must be inscribed in a register, so that any disputes which arise may be easily determined.

The city shall be placed in a suitable situation, as nearly as possible in the centre of the country, and shall be divided into twelve wards. First, we will erect an acropolis, encircled by a wall, within which shall be placed the temples of Hestia, and Zeus, and Athene. From this shall be drawn lines dividing the city, and also the country, into twelve sections, and the country shall be subdivided into 5040 lots. Each lot shall contain two parts, one at a distance, the other near the city; and the distance of one part shall be compensated by the nearness of the other, the badness and goodness by the greater or less size. Twelve lots will be assigned to twelve Gods, and they will give their names to the tribes. The divisions of the city shall correspond to those of the country; and every man shall have two habitations, one near the centre of the country, the other at the extremity.

The objection will naturally arise, that all the advantages of which we have been speaking will never concur. The citizens will not tolerate a settlement in which they are deprived of gold and silver, and have the number of their families regulated, and the sites of their houses fixed by law. It will be said that our city is a mere image of wax. And the legislator will answer: 'I know it, but I maintain that we ought to set forth an ideal which is as perfect as possible. If difficulties arise in the execution of the plan, we must avoid them and carry out the remainder. But the legislator must first be allowed to complete his idea without interruption.'

The number twelve, which we have chosen for the number of division, must run through all parts of the state,—phratries, villages, ranks of soldiers, coins, and measures wet and dry, which are all to be made commensurable with one another. There is no meanness in requiring that the smallest vessels should have a common measure; for the divisions of number are useful in measuring height and depth, as well as sounds and motions, upwards or downwards, or round and round. The legislator should impress on his citizens the value of arithmetic. No instrument of education has so much power; nothing more tends to sharpen and inspire the dull intellect. But the legislator must be careful to instil a noble and generous spirit into the students, or they will tend to become cunning rather than wise. This may be proved by the example of the Egyptians and Phoenicians, who, notwithstanding their knowledge of arithmetic, are degraded in their general character; whether this defect in them is due to some natural cause or to a bad legislator. For it is clear that there are great differences in the power of regions to produce good men: heat and cold, and water and food, have great effects both on body and soul; and those spots are peculiarly fortunate in which the air is holy, and the Gods are pleased to dwell. To all this the legislator must attend, so far as in him lies.

BOOK VI. And now we are about to consider (1) the appointment of magistrates; (2) the laws which they will have to administer must be determined. I may observe by the way that laws, however good, are useless and even injurious unless the magistrates are capable of executing them. And therefore (1) the intended rulers of our imaginary state should be tested from their youth upwards until the time of their election; and (2) those who are to elect them ought to be trained in habits of law, that they may form a right judgment of good and bad men. But uneducated colonists, who are unacquainted with each other, will not be likely to choose well. What, then, shall we do? I will tell you: The colony will have to be intrusted to the ten commissioners, of whom you are one, and I will help you and them, which is my reason for inventing this romance. And I cannot bear that the tale should go wandering about the world without a head,—it will be such an ugly monster. 'Very good.' Yes; and I will be as good as my word, if God be gracious and old age permit. But let us not forget what a courageously mad creation this our city is. 'What makes you say so?' Why, surely our courage is shown in imagining that the new colonists will quietly receive our laws? For no man likes to receive laws when they are first imposed: could we only wait until those who had been educated under them were grown up, and of an age to vote in the public elections, there would be far greater reason to expect permanence in our institutions. 'Very true.' The Cnosian founders should take the utmost pains in the matter of the colony, and in the election of the higher officers, particularly of the guardians of the law. The latter should be appointed in this way: The Cnosians, who take the lead in the colony, together with the colonists, will choose thirty-seven persons, of whom nineteen will be colonists, and the remaining eighteen Cnosians—you must be one of the eighteen yourself, and become a citizen of the new state. 'Why do not you and Megillus join us?' Athens is proud, and Sparta too; and they are both a long way off. But let me proceed with my scheme. When the state is permanently established, the mode of election will be as follows: All who are serving, or have served, in the army will be electors; and the election will be held in the most sacred of the temples. The voter will place on the altar a tablet, inscribing thereupon the name of the candidate whom he prefers, and of his father, tribe, and ward, writing at the side of them his own name in like manner; and he may take away any tablet which does not appear written to his mind, and place it in the Agora for thirty days. The 300 who obtain the greatest number of votes will be publicly announced, and out of them there will be a second election of 100; and out of the 100 a third and final election of thirty-seven, accompanied by the solemnity of the electors passing through victims. But then who is to arrange all this? There is a common saying, that the beginning is half the whole; and I should say a good deal more than half.

'Most true.' The only way of making a beginning is from the parent city; and though in after ages the tie may be broken, and quarrels may arise between them, yet in early days the child naturally looks to the mother for care and education. And, as I said before, the Cnosians ought to take an interest in the colony, and select 100 elders of their own citizens, to whom shall be added 100 of the colonists, to arrange and supervise the first elections and scrutinies; and when the colony has been started, the Cnosians may return home and leave the colonists to themselves.

The thirty-seven magistrates who have been elected in the manner described, shall have the following duties: first, they shall be guardians of the law; secondly, of the registers of property in the four classes—not including the one, two, three, four minae, which are allowed as a surplus. He who is found to possess what is not entered in the registers, in addition to the confiscation of such property shall be proceeded against by law, and if he be cast he shall lose his share in the public property and in distributions of money; and his sentence shall be inscribed in some public place. The guardians are to continue in office twenty years only, and to commence holding office at fifty years, or if elected at sixty they are not to remain after seventy.

Generals have now to be elected, and commanders of horse and brigadiers of foot. The generals shall be natives of the city, proposed by the guardians of the law, and elected by those who are or have been of the age for military service. Any one may challenge the person nominated and start another candidate, whom he affirms upon oath to be better qualified. The three who obtain the greatest number of votes shall be elected. The generals thus elected shall propose the taxiarchs or brigadiers, and the challenge may be made, and the voting shall take place, in the same manner as before. The elective assembly will be presided over in the first instance, and until the prytanes and council come into being, by the guardians of the law in some holy place; and they shall divide the citizens into three divisions,—hoplites, cavalry, and the rest of the army—placing each of them by itself. All are to vote for generals and cavalry officers. The brigadiers are to be voted for only by the hoplites. Next, the cavalry are to choose phylarchs for the generals; but captains of archers and other irregular troops are to be appointed by the generals themselves. The cavalry-officers shall be proposed and voted upon by the same persons who vote for the generals. The two who have the greatest number of votes shall be leaders of all the horse. Disputes about the voting may be raised once or twice, but, if a third time, the presiding officers shall decide.

The council shall consist of 360, who may be conveniently divided into four sections, making ninety councillors of each class. In the first place, all the citizens shall select candidates from the first class; and they shall be compelled to vote under pain of a fine. This shall be the business of the first day. On the second day a similar selection shall be made from the second class under the same conditions. On the third day, candidates shall be selected from the third class; but the compulsion to vote shall only extend to the voters of the first three classes. On the fourth day, members of the council shall be selected from the fourth class; they shall be selected by all, but the compulsion to vote shall only extend to the second class, who, if they do not vote, shall pay a fine of triple the amount which was exacted at first, and to the first class, who shall pay a quadruple fine. On the fifth day, the names shall be exhibited, and out of them shall be chosen by all the citizens 180 of each class: these are severally to be reduced by lot to ninety, and 90 x 4 will form the council for the year.

The mode of election which has been described is a mean between monarchy and democracy, and such a mean should ever be observed in the state. For servants and masters cannot be friends, and,

although equality makes friendship, we must remember that there are two sorts of equality. One of them is the rule of number and measure; but there is also a higher equality, which is the judgment of Zeus. Of this he grants but little to mortal men; yet that little is the source of the greatest good to cities and individuals. It is proportioned to the nature of each man; it gives more to the better and less to the inferior, and is the true political justice; to this we in our state desire to look, as every legislator should, not to the interests either of tyrants or mobs. But justice cannot always be strictly enforced, and then equity and mercy have to be substituted: and for a similar reason, when true justice will not be endured, we must have recourse to the rougher justice of the lot, which God must be entreated to guide.

These are the principal means of preserving the state, but perpetual care will also be required. When a ship is sailing on the sea, vigilance must not be relaxed night or day; and the vessel of state is tossing in a political sea, and therefore watch must continually succeed watch, and rulers must join hands with rulers. A small body will best perform this duty, and therefore the greater part of the 360 senators may be permitted to go and manage their own affairs, but a twelfth portion must be set aside in each month for the administration of the state. Their business will be to receive information and answer embassies; also they must endeavour to prevent or heal internal disorders; and with this object they must have the control of all assemblies of the citizens.

Besides the council, there must be wardens of the city and of the agora, who will superintend houses, ways, harbours, markets, and fountains, in the city and the suburbs, and prevent any injury being done to them by man or beast. The temples, also, will require priests and priestesses. Those who hold the priestly office by hereditary tenure shall not be disturbed; but as there will probably be few or none such in a new colony, priests and priestesses shall be appointed for the Gods who have no servants. Some of these officers shall be elected by vote, some by lot; and all classes shall mingle in a friendly manner at the elections. The appointment of priests should be left to God,—that is, to the lot; but the person elected must prove that he is himself sound in body and of legitimate birth, and that his family has been free from homicide or any other stain of impurity. Priests and priestesses are to be not less than sixty years of age, and shall hold office for a year only. The laws which are to regulate matters of religion shall be brought from Delphi, and interpreters appointed to superintend their execution. These shall be elected in the following manner:—The twelve tribes shall be formed into three bodies of four, each of which shall select four candidates, and this shall be done three times: of each twelve thus selected the three who receive the largest number of votes, nine in all, after undergoing a scrutiny shall go to Delphi, in order that the God may elect one out of each triad. They shall be appointed for life; and when any of them dies, another shall be elected by the four tribes who made the original appointment. There shall also be treasurers of the temples; three for the greater temples, two for the lesser, and one for those of least importance.

The defence of the city should be committed to the generals and other officers of the army, and to the wardens of the city and agora. The defence of the country shall be on this wise:—The twelve tribes shall allot among themselves annually the twelve divisions of the country, and each tribe shall appoint five wardens and commanders of the watch. The five wardens in each division shall choose out of their own tribe twelve guards, who are to be between twenty-five and thirty years of age. Both the wardens and the guards are to serve two years; and they shall make a round of the divisions, staying a month in each. They shall go from West to East during the first year, and back from East to West during the second. Thus they will gain a perfect knowledge of the country at every season of the year.

While on service, their first duty will be to see that the country is well protected by means of fortifications and entrenchments; they will use the beasts of burden and the labourers whom they find on the spot, taking care however not to interfere with the regular course of agriculture. But while they thus render the country as inaccessible as possible to enemies, they will also make it as accessible as possible to friends by constructing and maintaining good roads. They will restrain and preserve the rain which comes down from heaven, making the barren places fertile, and the wet places dry. They will ornament the fountains with plantations and buildings, and provide water for irrigation at all seasons of the year. They will lead the streams to the temples and groves of the Gods; and in such spots the youth shall make gymnasia for themselves, and warm baths for the aged; there the rustic worn with toil will receive a kindly welcome, and be far better treated than at the hands of an unskilful doctor.

These works will be both useful and ornamental; but the sixty wardens must not fail to give serious attention to other duties. For they must watch over the districts assigned to them, and also act as judges. In small matters the five commanders shall decide: in greater matters up to three minae, the five commanders and the twelve guards. Like all other judges, except those who have the final decision, they shall be liable to give an account. If the wardens impose unjust tasks on the villagers, or take by force their crops or implements, or yield to flattery or bribes in deciding suits, let them be publicly dishonoured. In regard to any other wrong-doing, if the question be of a mina, let the neighbours decide; but if the accused person will not submit, trusting that his monthly removals will enable him to escape payment, and also in suits about a larger amount, the injured party may have recourse to the common court; in the former case, if successful, he may exact a double penalty.

The wardens and guards, while on their two years' service, shall live and eat together, and the guard who is absent from the daily meals without permission or sleeps out at night, shall be regarded as a deserter, and may be punished by any one who meets him. If any of the commanders is guilty of such an irregularity, the whole sixty shall have him punished; and he of them who screens him shall suffer a still heavier penalty than the offender himself. Now by service a man learns to rule; and he should pride himself upon serving well the laws and the Gods all his life, and upon having served ancient and honourable men in his youth. The twelve and the five should be their own servants, and use the labour of the villagers only for the good of the public. Let them search the country through, and acquire a perfect knowledge of every locality; with this view, hunting and field sports should be encouraged.

Next we have to speak of the elections of the wardens of the agora and of the city. The wardens of the city shall be three in number, and they shall have the care of the streets, roads, buildings, and also of the water-supply. They shall be chosen out of the highest class, and when the number of candidates has been reduced to six who have the greatest number of votes, three out of the six shall be taken by lot, and, after a scrutiny, shall be admitted to their office. The wardens of the agora shall be five in number—ten are to be first elected, and every one shall vote for all the vacant places; the ten shall be afterwards reduced to five by lot, as in the former election. The first and second class shall be compelled to go to the assembly, but not the third and fourth, unless they are specially summoned. The wardens of the agora shall have the care of the temples and fountains which are in the agora, and shall punish those who injure them by stripes and bonds, if they be slaves or strangers; and by fines, if they be citizens. And the wardens of the city shall have a similar power of inflicting punishment and fines in their own department.

In the next place, there must be directors of music and gymnastic; one class of them superintending gymnasia and schools, and the attendance and lodging of the boys and girls—the other having to do with contests of music and gymnastic. In musical contests there shall be one kind of judges of solo singing or playing, who will judge of rhapsodists, flute-players, harp-players and the like, and another of choruses. There shall be choruses of men and boys and maidens—one director will be enough to introduce them all, and he should not be less than forty years of age; secondly, of solos also there shall be one director, aged not less than thirty years; he will introduce the competitors and give judgment upon them. The director of the choruses is to be elected in an assembly at which all who take an interest in music are compelled to attend, and no one else. Candidates must only be proposed for their fitness, and opposed on the ground of unfitness. Ten are to be elected by vote, and the one of these on whom the lot falls shall be director for a year. Next shall be elected out of the second and third classes the judges of gymnastic contests, who are to be three in number, and are to be tested, after being chosen by lot out of twenty who have been elected by the three highest classes—these being compelled to attend at the election.

One minister remains, who will have the general superintendence of education. He must be not less than fifty years old, and be himself the father of children born in wedlock. His office must be regarded by all as the highest in the state. For the right growth of the first shoot in plants and animals is the chief cause of matured perfection. Man is supposed to be a tame animal, but he becomes either the gentlest or the fiercest of creatures, accordingly as he is well or ill educated. Wherefore he who is elected to preside over education should be the best man possible. He shall hold office for five years, and shall be elected out of the guardians of the law, by the votes of the other magistrates with the exception of the senate and prytanes; and the election shall be held by ballot in the temple of Apollo.

When a magistrate dies before his term of office has expired, another shall be elected in his place; and, if the guardian of an orphan dies, the relations shall appoint another within ten days, or be fined a drachma a day for neglect.

The city which has no courts of law will soon cease to be a city; and a judge who sits in silence and leaves the enquiry to the litigants, as in arbitrations, is not a good judge. A few judges are better than many, but the few must be good. The matter in dispute should be clearly elicited; time and examination will find out the truth. Causes should first be tried before a court of neighbours: if the decision is unsatisfactory, let them be referred to a higher court; or, if necessary, to a higher still, of which the decision shall be final.

Every magistrate is a judge, and every judge is a magistrate, on the day on which he is deciding the suit. This will therefore be an appropriate place to speak of judges and their functions. The supreme tribunal will be that on which the litigants agree; and let there be two other tribunals, one for public and the other for private causes. The high court of appeal shall be composed as follows:—All the officers of state shall meet on the last day but one of the year in some temple, and choose for a judge the best man out of every magistracy: and those who are elected, after they have undergone a scrutiny, shall be judges of appeal. They shall give their decisions openly, in the presence of the magistrates who have elected them; and the public may attend. If anybody charges one of them with having intentionally decided wrong, he shall lay his accusation before the guardians of the law, and if the judge be found guilty he shall pay damages to the extent of half the injury, unless the guardians of

the law deem that he deserves a severer punishment, in which case the judges shall assess the penalty.

As the whole people are injured by offences against the state, they should share in the trial of them. Such causes should originate with the people and be decided by them: the enquiry shall take place before any three of the highest magistrates upon whom the defendant and plaintiff can agree. Also in private suits all should judge as far as possible, and therefore there should be a court of law in every ward; for he who has no share in the administration of justice, believes that he has no share in the state. The judges in these courts shall be elected by lot and give their decision at once. The final judgment in all cases shall rest with the court of appeal. And so, having done with the appointment of courts and the election of officers, we will now make our laws.

'Your way of proceeding, Stranger, is admirable.'

Then so far our old man's game of play has gone off well.

'Say, rather, our serious and noble pursuit.'

Perhaps; but let me ask you whether you have ever observed the manner in which painters put in and rub out colour: yet their endless labour will last but a short time, unless they leave behind them some successor who will restore the picture and remove its defects. 'Certainly.' And have we not a similar object at the present moment? We are old ourselves, and therefore we must leave our work of legislation to be improved and perfected by the next generation; not only making laws for our guardians, but making them lawgivers. 'We must at least do our best.' Let us address them as follows. Beloved saviours of the laws, we give you an outline of legislation which you must fill up, according to a rule which we will prescribe for you. Megillus and Cleinias and I are agreed, and we hope that you will agree with us in thinking, that the whole energies of a man should be devoted to the attainment of manly virtue, whether this is to be gained by study, or habit, or desire, or opinion. And rather than accept institutions which tend to degrade and enslave him, he should fly his country and endure any hardship. These are our principles, and we would ask you to judge of our laws, and praise or blame them, accordingly as they are or are not capable of improving our citizens.

And first of laws concerning religion. We have already said that the number 5040 has many convenient divisions: and we took a twelfth part of this (420), which is itself divisible by twelve, for the number of the tribe. Every divisor is a gift of God, and corresponds to the months of the year and to the revolution of the universe. All cities have a number, but none is more fortunate than our own, which can be divided by all numbers up to 12, with the exception of 11, and even by 11, if two families are deducted. And now let us divide the state, assigning to each division some God or demigod, who shall have altars raised to them, and sacrifices offered twice a month; and assemblies shall be held in their honour, twelve for the tribes, and twelve for the city, corresponding to their divisions. The object of them will be first to promote religion, secondly to encourage friendship and intercourse between families; for families must be acquainted before they marry into one another, or great mistakes will occur. At these festivals there shall be innocent dances of young men and maidens, who may have the opportunity of seeing one another in modest undress. To the details of all this the masters of choruses and the guardians will attend, embodying in laws the results of their experience; and, after ten years, making the laws permanent, with the consent of the legislator, if he be alive, or, if he be not

alive, of the guardians of the law, who shall perfect them and settle them once for all. At least, if any further changes are required, the magistrates must take the whole people into counsel, and obtain the sanction of all the oracles.

Whenever any one who is between the ages of twenty-five and thirty-five wants to marry, let him do so; but first let him hear the strain which we will address to him:—

My son, you ought to marry, but not in order to gain wealth or to avoid poverty; neither should you, as men are wont to do, choose a wife who is like yourself in property and character. You ought to consult the interests of the state rather than your own pleasure; for by equal marriages a society becomes unequal. And yet to enact a law that the rich and mighty shall not marry the rich and mighty, that the quick shall be united to the slow, and the slow to the quick, will arouse anger in some persons and laughter in others; for they do not understand that opposite elements ought to be mingled in the state, as wine should be mingled with water. The object at which we aim must therefore be left to the influence of public opinion. And do not forget our former precept, that every one should seek to attain immortality and raise up a fair posterity to serve God.—Let this be the prelude of the law about the duty of marriage. But if a man will not listen, and at thirty-five years of age is still unmarried, he shall pay an annual fine: if he be of the first class, 100 drachmas; if of the second, 70; if of the third, 60; and if of the fourth, 30. This fine shall be sacred to Here; and if he refuse to pay, a tenfold penalty shall be exacted by the treasurer of Here, who shall be responsible for the payment. Further, the unmarried man shall receive no honour or obedience from the young, and he shall not retain the right of punishing others. A man is neither to give nor receive a dowry beyond a certain fixed sum; in our state, for his consolation, if he be poor, let him know that he need neither receive nor give one, for every citizen is provided with the necessaries of life. Again, if the woman is not rich, her husband will not be her humble servant. He who disobeys this law shall pay a fine according to his class, which shall be exacted by the treasurers of Here and Zeus.

The betrothal of the parties shall be made by the next of kin, or if there are none, by the guardians. The offerings and ceremonies of marriage shall be determined by the interpreters of sacred rites. Let the wedding party be moderate; five male and five female friends, and a like number of kinsmen, will be enough. The expense should not exceed, for the first class, a mina; and for the second, half a mina; and should be in like proportion for the other classes. Extravagance is to be regarded as vulgarity and ignorance of nuptial proprieties. Much wine is only to be drunk at the festivals of Dionysus, and certainly not on the occasion of a marriage. The bride and bridegroom, who are taking a great step in life, ought to have all their wits about them; they should be especially careful of the night on which God may give them increase, and which this will be none can say. Their bodies and souls should be in the most temperate condition; they should abstain from all that partakes of the nature of disease or vice, which will otherwise become hereditary. There is an original divinity in man which preserves all things, if used with proper respect. He who marries should make one of the two houses on the lot the nest and nursery of his young; he should leave his father and mother, and then his affection for them will be only increased by absence. He will go forth as to a colony, and will there rear up his offspring, handing on the torch of life to another generation.

About property in general there is little difficulty, with the exception of property in slaves, which is an institution of a very doubtful character. The slavery of the Helots is approved by some and condemned by others; and there is some doubt even about the slavery of the Mariandynians at

Heraclea and of the Thessalian Penestae. This makes us ask, What shall we do about slaves? To which every one would agree in replying,—Let us have the best and most attached whom we can get. All of us have heard stories of slaves who have been better to their masters than sons or brethren. Yet there is an opposite doctrine, that slaves are never to be trusted; as Homer says, 'Slavery takes away half a man's understanding.' And different persons treat them in different ways: there are some who never trust them, and beat them like dogs, until they make them many times more slavish than they were before; and others pursue the opposite plan. Man is a troublesome animal, as has been often shown, Megillus, notably in the revolts of the Messenians; and great mischiefs have arisen in countries where there are large bodies of slaves of one nationality. Two rules may be given for their management: first that they should not, if possible, be of the same country or have a common language; and secondly, that they should be treated by their master with more justice even than equals, out of regard to himself quite as much as to them. For he who is righteous in the treatment of his slaves, or of any inferiors, will sow in them the seed of virtue. Masters should never jest with their slaves: this, which is a common but foolish practice, increases the difficulty and painfulness of managing them.

Next as to habitations. These ought to have been spoken of before; for no man can marry a wife, and have slaves, who has not a house for them to live in. Let us supply the omission. The temples should be placed round the Agora, and the city built in a circle on the heights. Near the temples, which are holy places and the habitations of the Gods, should be buildings for the magistrates, and the courts of law, including those in which capital offences are to be tried. As to walls, Megillus, I agree with Sparta that they should sleep in the earth; 'cold steel is the best wall,' as the poet finely says. Besides, how absurd to be sending out our youth to fortify and guard the borders of our country, and then to build a city wall, which is very unhealthy, and is apt to make people fancy that they may run there and rest in idleness, not knowing that true repose comes from labour, and that idleness is only a renewal of trouble. If, however, there must be a wall, the private houses had better be so arranged as to form one wall; this will have an agreeable aspect, and the building will be safer and more defensible. These objects should be attended to at the foundation of the city. The wardens of the city must see that they are carried out; and they must also enforce cleanliness, and preserve the public buildings from encroachments. Moreover, they must take care to let the rain flow off easily, and must regulate other matters concerning the general administration of the city. If any further enactments prove to be necessary, the guardians of the law must supply them.

And now, having provided buildings, and having married our citizens, we will proceed to speak of their mode of life. In a well-constituted state, individuals cannot be allowed to live as they please. Why do I say this? Because I am going to enact that the bridegroom shall not absent himself from the common meals. They were instituted originally on the occasion of some war, and, though deemed singular when first founded, they have tended greatly to the security of states. There was a difficulty in introducing them, but there is no difficulty in them now. There is, however, another institution about which I would speak, if I dared. I may preface my proposal by remarking that disorder in a state is the source of all evil, and order of all good. Now in Sparta and Crete there are common meals for men, and this, as I was saying, is a divine and natural institution. But the women are left to themselves; they live in dark places, and, being weaker, and therefore wickeder, than men, they are at the bottom of a good deal more than half the evil of states. This must be corrected, and the institution of common meals extended to both sexes. But, in the present unfortunate state of opinion, who would dare to establish them? And still more, who can compel women to eat and drink in public? They will defy the

legislator to drag them out of their holes. And in any other state such a proposal would be drowned in clamour, but in our own I think that I can show the attempt to be just and reasonable. 'There is nothing which we should like to hear better.' Listen, then; having plenty of time, we will go back to the beginning of things, which is an old subject with us. 'Right.' Either the race of mankind never had a beginning and will never have an end, or the time which has elapsed since man first came into being is all but infinite. 'No doubt.' And in this infinity of time there have been changes of every kind, both in the order of the seasons and in the government of states and in the customs of eating and drinking. Vines and olives were at length discovered, and the blessings of Demeter and Persephone, of which one Triptolemus is said to have been the minister; before his time the animals had been eating one another. And there are nations in which mankind still sacrifice their fellow-men, and other nations in which they lead a kind of Orphic existence, and will not sacrifice animals, or so much as taste of a cow—they offer fruits or cakes moistened with honey. Perhaps you will ask me what is the bearing of these remarks? 'We would gladly hear.' I will endeavour to explain their drift. I see that the virtue of human life depends on the due regulation of three wants or desires. The first is the desire of meat, the second of drink; these begin with birth, and make us disobedient to any voice other than that of pleasure. The third and fiercest and greatest need is felt latest; this is love, which is a madness setting men's whole nature on fire. These three disorders of mankind we must endeavour to restrain by three mighty influences—fear, and law, and reason, which, with the aid of the Muses and the Gods of contests, may extinguish our lusts.

But to return. After marriage let us proceed to the generation of children, and then to their nurture and education—thus gradually approaching the subject of syssitia. There are, however, some other points which are suggested by the three words—meat, drink, love. 'Proceed,' the bride and bridegroom ought to set their mind on having a brave offspring. Now a man only succeeds when he takes pains; wherefore the bridegroom ought to take special care of the bride, and the bride of the bridegroom, at the time when their children are about to be born. And let there be a committee of matrons who shall meet every day at the temple of Eilithyia at a time fixed by the magistrates, and inform against any man or woman who does not observe the laws of married life. The time of begetting children and the supervision of the parents shall last for ten years only; if at the expiration of this period they have no children, they may part, with the consent of their relatives and the official matrons, and with a due regard to the interests of either; if a dispute arise, ten of the guardians of the law shall be chosen as arbiters. The matrons shall also have power to enter the houses of the young people, if necessary, and to advise and threaten them. If their efforts fail, let them go to the guardians of the law; and if they too fail, the offender, whether man or woman, shall be forbidden to be present at all family ceremonies. If when the time for begetting children has ceased, either husband or wife have connexion with others who are of an age to beget children, they shall be liable to the same penalties as those who are still having a family. But when both parties have ceased to beget children there shall be no penalties. If men and women live soberly, the enactments of law may be left to slumber; punishment is necessary only when there is great disorder of manners.

The first year of children's lives is to be registered in their ancestral temples; the name of the archon of the year is to be inscribed on a whited wall in every phratry, and the names of the living members of the phratry close to them, to be erased at their decease. The proper time of marriage for a woman shall be from sixteen years to twenty; for a man, from thirty to thirty-five (compare Republic). The age of holding office for a woman is to be forty, for a man thirty years. The time for military service for a

man is to be from twenty years to sixty; for a woman, from the time that she has ceased to bear children until fifty.

BOOK VII. Now that we have married our citizens and brought their children into the world, we have to find nurture and education for them. This is a matter of precept rather than of law, and cannot be precisely regulated by the legislator. For minute regulations are apt to be transgressed, and frequent transgressions impair the habit of obedience to the laws. I speak darkly, but I will also try to exhibit my wares in the light of day. Am I not right in saying that a good education tends to the improvement of body and mind? 'Certainly.' And the body is fairest which grows up straight and well-formed from the time of birth. 'Very true.' And we observe that the first shoot of every living thing is the greatest; many even contend that man is not at twenty-five twice the height that he was at five. 'True.' And growth without exercise of the limbs is the source of endless evils in the body. 'Yes.' The body should have the most exercise when growing most. 'What, the bodies of young infants?' Nay, the bodies of unborn infants. I should like to explain to you this singular kind of gymnastics. The Athenians are fond of cock-fighting, and the people who keep cocks carry them about in their hands or under their arms, and take long walks, to improve, not their own health, but the health of the birds. Here is a proof of the usefulness of motion, whether of rocking, swinging, riding, or tossing upon the wave; for all these kinds of motion greatly increase strength and the powers of digestion. Hence we infer that our women, when they are with child, should walk about and fashion the embryo; and the children, when born, should be carried by strong nurses,—there must be more than one of them,—and should not be suffered to walk until they are three years old. Shall we impose penalties for the neglect of these rules? The greatest penalty, that is, ridicule, and the difficulty of making the nurses do as we bid them, will be incurred by ourselves. 'Then why speak of such matters?' In the hope that heads of families may learn that the due regulation of them is the foundation of law and order in the state.

And now, leaving the body, let us proceed to the soul; but we must first repeat that perpetual motion by night and by day is good for the young creature. This is proved by the Corybantian cure of motion, and by the practice of nurses who rock children in their arms, lapping them at the same time in sweet strains. And the reason of this is obvious. The affections, both of the Bacchantes and of the children, arise from fear, and this fear is occasioned by something wrong which is going on within them. Now a violent external commotion tends to calm the violent internal one; it quiets the palpitation of the heart, giving to the children sleep, and bringing back the Bacchantes to their right minds by the help of dances and acceptable sacrifices. But if fear has such power, will not a child who is always in a state of terror grow up timid and cowardly, whereas if he learns from the first to resist fear he will develop a habit of courage? 'Very true.' And we may say that the use of motion will inspire the souls of children with cheerfulness and therefore with courage. 'Of course.' Softness enervates and irritates the temper of the young, and violence renders them mean and misanthropical. 'But how is the state to educate them when they are as yet unable to understand the meaning of words?' Why, surely they roar and cry, like the young of any other animal, and the nurse knows the meaning of these intimations of the child's likes or dislikes, and the occasions which call them forth. About three years is passed by children in a state of imperfect articulation, which is quite long enough time to make them either good- or ill-tempered. And, therefore, during these first three years, the infant should be as free as possible from fear and pain. 'Yes, and he should have as much pleasure as possible.' There, I think, you are wrong; for the influence of pleasure in the beginning of education is fatal. A man should neither pursue pleasure nor wholly avoid pain. He should embrace the mean, and cultivate that state of calm which mankind, taught by some inspiration, attribute to God; and he who would be like God should

neither be too fond of pleasure himself, nor should he permit any other to be thus given; above all, not the infant, whose character is just in the making. It may sound ridiculous, but I affirm that a woman in her pregnancy should be carefully tended, and kept from excessive pleasures and pains.

'I quite agree with you about the duty of avoiding extremes and following the mean.'

Let us consider a further point. The matters which are now in question are generally called customs rather than laws; and we have already made the reflection that, though they are not, properly speaking, laws, yet neither can they be neglected. For they fill up the interstices of law, and are the props and ligatures on which the strength of the whole building depends. Laws without customs never last; and we must not wonder if habit and custom sometimes lengthen out our laws. 'Very true.' Up to their third year, then, the life of children may be regulated by customs such as we have described. From three to six their minds have to be amused; but they must not be allowed to become self-willed and spoilt. If punishment is necessary, the same rule will hold as in the case of slaves; they must neither be punished in hot blood nor ruined by indulgence. The children of that age will have their own modes of amusing themselves; they should be brought for their play to the village temples, and placed under the care of nurses, who will be responsible to twelve matrons annually chosen by the women who have authority over marriage. These shall be appointed, one out of each tribe, and their duty shall be to keep order at the meetings: slaves who break the rules laid down by them, they shall punish by the help of some of the public slaves; but citizens who dispute their authority shall be brought before the magistrates. After six years of age there shall be a separation of the sexes; the boys will go to learn riding and the use of arms, and the girls may, if they please, also learn. Here I note a practical error in early training. Mothers and nurses foolishly believe that the left hand is by nature different from the right, whereas the left leg and foot are acknowledged to be the same as the right. But the truth is that nature made all things to balance, and the power of using the left hand, which is of little importance in the case of the plectrum of the lyre, may make a great difference in the art of the warrior, who should be a skilled gymnast and able to fight and balance himself in any position. If a man were a Briareus, he should use all his hundred hands at once; at any rate, let everybody employ the two which they have. To these matters the magistrates, male and female, should attend; the women superintending the nursing and amusement of the children, and the men superintending their education, that all of them, boys and girls alike, may be sound, wind and limb, and not spoil the gifts of nature by bad habits.

Education has two branches—gymnastic, which is concerned with the body; and music, which improves the soul. And gymnastic has two parts, dancing and wrestling. Of dancing one kind imitates musical recitation and aims at stateliness and freedom; another kind is concerned with the training of the body, and produces health, agility, and beauty. There is no military use in the complex systems of wrestling which pass under the names of Antaeus and Cercyon, or in the tricks of boxing, which are attributed to Amycus and Epeius; but good wrestling and the habit of extricating the neck, hands, and sides, should be diligently learnt and taught. In our dances imitations of war should be practised, as in the dances of the Curetes in Crete and of the Dioscuri at Sparta, or as in the dances in complete armour which were taught us Athenians by the goddess Athene. Youths who are not yet of an age to go to war should make religious processions armed and on horseback; and they should also engage in military games and contests. These exercises will be equally useful in peace and war, and will benefit both states and families.

Next follows music, to which we will once more return; and here I shall venture to repeat my old paradox, that amusements have great influence on laws. He who has been taught to play at the same games and with the same playthings will be content with the same laws. There is no greater evil in a state than the spirit of innovation. In the case of the seasons and winds, in the management of our bodies and in the habits of our minds, change is a dangerous thing. And in everything but what is bad the same rule holds. We all venerate and acquiesce in the laws to which we are accustomed; and if they have continued during long periods of time, and there is no remembrance of their ever having been otherwise, people are absolutely afraid to change them. Now how can we create this quality of immobility in the laws? I say, by not allowing innovations in the games and plays of children. The children who are always having new plays, when grown up will be always having new laws. Changes in mere fashions are not serious evils, but changes in our estimate of men's characters are most serious; and rhythms and music are representations of characters, and therefore we must avoid novelties in dance and song. For securing permanence no better method can be imagined than that of the Egyptians. 'What is their method?' They make a calendar for the year, arranging on what days the festivals of the various Gods shall be celebrated, and for each festival they consecrate an appropriate hymn and dance. In our state a similar arrangement shall in the first instance be framed by certain individuals, and afterwards solemnly ratified by all the citizens. He who introduces other hymns or dances shall be excluded by the priests and priestesses and the guardians of the law; and if he refuses to submit, he may be prosecuted for impiety. But we must not be too ready to speak about such great matters. Even a young man, when he hears something unaccustomed, stands and looks this way and that, like a traveller at a place where three ways meet; and at our age a man ought to be very sure of his ground in so singular an argument. 'Very true.' Then, leaving the subject for further examination at some future time, let us proceed with our laws about education, for in this manner we may probably throw light upon our present difficulty. 'Let us do as you say.' The ancients used the term nomoi to signify harmonious strains, and perhaps they fancied that there was a connexion between the songs and laws of a country. And we say—Whosoever shall transgress the strains by law established is a transgressor of the laws, and shall be punished by the guardians of the law and by the priests and priestesses. 'Very good.' How can we legislate about these consecrated strains without incurring ridicule? Moulds or types must be first framed, and one of the types shall be—Abstinence from evil words at sacrifices. When a son or brother blasphemes at a sacrifice there is a sound of ill-omen heard in the family; and many a chorus stands by the altar uttering inauspicious words, and he is crowned victor who excites the hearers most with lamentations. Such lamentations should be reserved for evil days, and should be uttered only by hired mourners; and let the singers not wear circlets or ornaments of gold. To avoid every evil word, then, shall be our first type. 'Agreed.' Our second law or type shall be, that prayers ever accompany sacrifices; and our third, that, inasmuch as all prayers are requests, they shall be only for good; this the poets must be made to understand. 'Certainly.' Have we not already decided that no gold or silver Plutus shall be allowed in our city? And did not this show that we were dissatisfied with the poets? And may we not fear that, if they are allowed to utter injudicious prayers, they will bring the greatest misfortunes on the state? And we must therefore make a law that the poet is not to contradict the laws or ideas of the state; nor is he to show his poems to any private persons until they have first received the imprimatur of the director of education. A fourth musical law will be to the effect that hymns and praises shall be offered to Gods, and to heroes and demigods. Still another law will permit eulogies of eminent citizens, whether men or women, but only after their death. As to songs and dances, we will enact as follows:—There shall be a selection made of the best ancient musical compositions and dances; these shall be chosen by judges, who ought not to be less than fifty years of age. They will accept some, and reject

or amend others, for which purpose they will call, if necessary, the poets themselves into council. The severe and orderly music is the style in which to educate children, who, if they are accustomed to this, will deem the opposite kind to be illiberal, but if they are accustomed to the other, will count this to be cold and unpleasing. 'True.' Further, a distinction should be made between the melodies of men and women. Nature herself teaches that the grand or manly style should be assigned to men, and to women the moderate and temperate. So much for the subjects of education. But to whom are they to be taught, and when? I must try, like the shipwright, who lays down the keel of a vessel, to build a secure foundation for the vessel of the soul in her voyage through life. Human affairs are hardly serious, and yet a sad necessity compels us to be serious about them. Let us, therefore, do our best to bring the matter to a conclusion. 'Very good.' I say then, that God is the object of a man's most serious endeavours. But man is created to be the plaything of the Gods; and therefore the aim of every one should be to pass through life, not in grim earnest, but playing at the noblest of pastimes, in another spirit from that which now prevails. For the common opinion is, that work is for the sake of play, war of peace; whereas in war there is neither amusement nor instruction worth speaking of. The life of peace is that which men should chiefly desire to lengthen out and improve. They should live sacrificing, singing, and dancing, with the view of propitiating Gods and heroes. I have already told you the types of song and dance which they should follow: and 'Some things,' as the poet well says, 'you will devise for yourself—others, God will suggest to you.'

These words of his may be applied to our pupils. They will partly teach themselves, and partly will be taught by God, the art of propitiating Him; for they are His puppets, and have only a small portion in truth. 'You have a poor opinion of man.' No wonder, when I compare him with God; but, if you are offended, I will place him a little higher.

Next follow the building for gymnasia and schools; these will be in the midst of the city, and outside will be riding-schools and archery-grounds. In all of them there ought to be instructors of the young, drawn from foreign parts by pay, and they will teach them music and war. Education shall be compulsory; the children must attend school, whether their parents like it or not; for they belong to the state more than to their parents. And I say further, without hesitation, that the same education in riding and gymnastic shall be given both to men and women. The ancient tradition about the Amazons confirms my view, and at the present day there are myriads of women, called Sauromatides, dwelling near the Pontus, who practise the art of riding as well as archery and the use of arms. But if I am right, nothing can be more foolish than our modern fashion of training men and women differently, whereby the power the city is reduced to a half. For reflect—if women are not to have the education of men, some other must be found for them, and what other can we propose? Shall they, like the women of Thrace, tend cattle and till the ground; or, like our own, spin and weave, and take care of the house? or shall they follow the Spartan custom, which is between the two?—there the maidens share in gymnastic exercises and in music; and the grown women, no longer engaged in spinning, weave the web of life, although they are not skilled in archery, like the Amazons, nor can they imitate our warrior goddess and carry shield or spear, even in the extremity of their country's need. Compared with our women, the Sauromatides are like men. But your legislators, Megillus, as I maintain, only half did their work; they took care of the men, and left the women to take care of themselves.

'Shall we suffer the Stranger, Cleinias, to run down Sparta in this way?'

'Why, yes; for we cannot withdraw the liberty which we have already conceded to him.'

What will be the manner of life of men in moderate circumstances, freed from the toils of agriculture and business, and having common tables for themselves and their families which are under the inspection of magistrates, male and female? Are men who have these institutions only to eat and fatten like beasts? If they do, how can they escape the fate of a fatted beast, which is to be torn in pieces by some other beast more valiant than himself? True, theirs is not the perfect way of life, for they have not all things in common; but the second best way of life also confers great blessings. Even those who live in the second state have a work to do twice as great as the work of any Pythian or Olympic victor; for their labour is for the body only, but ours both for body and soul. And this higher work ought to be pursued night and day to the exclusion of every other. The magistrates who keep the city should be wakeful, and the master of the household should be up early and before all his servants; and the mistress, too, should awaken her handmaidens, and not be awakened by them. Much sleep is not required either for our souls or bodies. When a man is asleep, he is no better than if he were dead; and he who loves life and wisdom will take no more sleep than is necessary for health. Magistrates who are wide awake at night are terrible to the bad; but they are honoured by the good, and are useful to themselves and the state.

When the morning dawns, let the boy go to school. As the sheep need the shepherd, so the boy needs a master; for he is at once the most cunning and the most insubordinate of creatures. Let him be taken away from mothers and nurses, and tamed with bit and bridle, being treated as a freeman in that he learns and is taught, but as a slave in that he may be chastised by all other freemen; and the freeman who neglects to chastise him shall be disgraced. All these matters will be under the supervision of the Director of Education.

Him we will address as follows: We have spoken to you, O illustrious teacher of youth, of the song, the time, and the dance, and of martial strains; but of the learning of letters and of prose writings, and of music, and of the use of calculation for military and domestic purposes we have not spoken, nor yet of the higher use of numbers in reckoning divine things—such as the revolutions of the stars, or the arrangements of days, months, and years, of which the true calculation is necessary in order that seasons and festivals may proceed in regular course, and arouse and enliven the city, rendering to the Gods their due, and making men know them better. There are, we say, many things about which we have not as yet instructed you—and first, as to reading and music: Shall the pupil be a perfect scholar and musician, or not even enter on these studies? He should certainly enter on both:—to letters he will apply himself from the age of ten to thirteen, and at thirteen he will begin to handle the lyre, and continue to learn music until he is sixteen; no shorter and no longer time will be allowed, however fond he or his parents may be of the pursuit. The study of letters he should carry to the extent of simple reading and writing, but he need not care for calligraphy and tachygraphy, if his natural gifts do not enable him to acquire them in the three years. And here arises a question as to the learning of compositions when unaccompanied with music, I mean, prose compositions. They are a dangerous species of literature. Speak then, O guardians of the law, and tell us what we shall do about them. 'You seem to be in a difficulty.' Yes; it is difficult to go against the opinion of all the world. 'But have we not often already done so?' Very true. And you imply that the road which we are taking, though disagreeable to many, is approved by those whose judgment is most worth having. 'Certainly.' Then I would first observe that we have many poets, comic as well as tragic, with whose compositions, as people say, youth are to be imbued and saturated. Some would have them learn by

heart entire poets; others prefer extracts. Now I believe, and the general opinion is, that some of the things which they learn are good, and some bad. 'Then how shall we reject some and select others?' A happy thought occurs to me; this long discourse of ours is a sample of what we want, and is moreover an inspired work and a kind of poem. I am naturally pleased in reflecting upon all our words, which appear to me to be just the thing for a young man to hear and learn. I would venture, then, to offer to the Director of Education this treatise of laws as a pattern for his guidance; and in case he should find any similar compositions, written or oral, I would have him carefully preserve them, and commit them in the first place to the teachers who are willing to learn them (he should turn off the teacher who refuses), and let them communicate the lesson to the young.

I have said enough to the teacher of letters; and now we will proceed to the teacher of the lyre. He must be reminded of the advice which we gave to the sexagenarian minstrels; like them he should be quick to perceive the rhythms suited to the expression of virtue, and to reject the opposite. With a view to the attainment of this object, the pupil and his instructor are to use the lyre because its notes are pure; the voice and string should coincide note for note: nor should there be complex harmonies and contrasts of intervals, or variations of times or rhythms. Three years' study is not long enough to give a knowledge of these intricacies; and our pupils will have many things of more importance to learn. The tunes and hymns which are to be consecrated for each festival have been already determined by us.

Having given these instructions to the Director of Music, let us now proceed to dancing and gymnastic, which must also be taught to boys and girls by masters and mistresses. Our minister of education will have a great deal to do; and being an old man, how will he get through so much work? There is no difficulty;—the law will provide him with assistants, male and female; and he will consider how important his office is, and how great the responsibility of choosing them. For if education prospers, the vessel of state sails merrily along; or if education fails, the consequences are not even to be mentioned. Of dancing and gymnastics something has been said already. We include under the latter military exercises, the various uses of arms, all that relates to horsemanship, and military evolutions and tactics. There should be public teachers of both arts, paid by the state, and women as well as men should be trained in them. The maidens should learn the armed dance, and the grown-up women be practised in drill and the use of arms, if only in case of extremity, when the men are gone out to battle, and they are left to guard their families. Birds and beasts defend their young, but women instead of fighting run to the altars, thus degrading man below the level of the animals. 'Such a lack of education, Stranger, is both unseemly and dangerous.'

Wrestling is to be pursued as a military exercise, but the meaning of this, and the nature of the art, can only be explained when action is combined with words. Next follows dancing, which is of two kinds; imitative, first, of the serious and beautiful; and, secondly, of the ludicrous and grotesque. The first kind may be further divided into the dance of war and the dance of peace. The former is called the Pyrrhic; in this the movements of attack and defence are imitated in a direct and manly style, which indicates strength and sufficiency of body and mind. The latter of the two, the dance of peace, is suitable to orderly and law-abiding men. These must be distinguished from the Bacchic dances which imitate drunken revelry, and also from the dances by which purifications are effected and mysteries celebrated. Such dances cannot be characterized either as warlike or peaceful, and are unsuited to a civilized state. Now the dances of peace are of two classes:—the first of them is the more violent, being an expression of joy and triumph after toil and danger; the other is more tranquil,

symbolizing the continuance and preservation of good. In speaking or singing we naturally move our bodies, and as we have more or less courage or self-control we become less or more violent and excited. Thus from the imitation of words in gestures the art of dancing arises. Now one man imitates in an orderly, another in a disorderly manner: and so the peaceful kinds of dance have been appropriately called Emmeleiai, or dances of order, as the warlike have been called Pyrrhic. In the latter a man imitates all sorts of blows and the hurling of weapons and the avoiding of them; in the former he learns to bear himself gracefully and like a gentleman. The types of these dances are to be fixed by the legislator, and when the guardians of the law have assigned them to the several festivals, and consecrated them in due order, no further change shall be allowed.

Thus much of the dances which are appropriate to fair forms and noble souls. Comedy, which is the opposite of them, remains to be considered. For the serious implies the ludicrous, and opposites cannot be understood without opposites. But a man of repute will desire to avoid doing what is ludicrous. He should leave such performances to slaves,—they are not fit for freemen; and there should be some element of novelty in them. Concerning tragedy, let our law be as follows: When the inspired poet comes to us with a request to be admitted into our state, we will reply in courteous words—We also are tragedians and your rivals; and the drama which we enact is the best and noblest, being the imitation of the truest and noblest life, with a view to which our state is ordered. And we cannot allow you to pitch your stage in the agora, and make your voices to be heard above ours, or suffer you to address our women and children and the common people on opposite principles to our own. Come then, ye children of the Lydian Muse, and present yourselves first to the magistrates, and if they decide that your hymns are as good or better than ours, you shall have your chorus; but if not, not.

There remain three kinds of knowledge which should be learnt by freemen—arithmetic, geometry of surfaces and of solids, and thirdly, astronomy. Few need make an accurate study of such sciences; and of special students we will speak at another time. But most persons must be content with the study of them which is absolutely necessary, and may be said to be a necessity of that nature against which God himself is unable to contend. 'What are these divine necessities of knowledge?' Necessities of a knowledge without which neither gods, nor demigods, can govern mankind. And far is he from being a divine man who cannot distinguish one, two, odd and even; who cannot number day and night, and is ignorant of the revolutions of the sun and stars; for to every higher knowledge a knowledge of number is necessary—a fool may see this; how much, is a matter requiring more careful consideration. 'Very true.' But the legislator cannot enter into such details, and therefore we must defer the more careful consideration of these matters to another occasion. 'You seem to fear our habitual want of training in these subjects.' Still more do I fear the danger of bad training, which is often worse than none at all. 'Very true.' I think that a gentleman and a freeman may be expected to know as much as an Egyptian child. In Egypt, arithmetic is taught to children in their sports by a distribution of apples or garlands among a greater or less number of people; or a calculation is made of the various combinations which are possible among a set of boxers or wrestlers; or they distribute cups among the children, sometimes of gold, brass, and silver intermingled, sometimes of one metal only. The knowledge of arithmetic which is thus acquired is a great help, either to the general or to the manager of a household; wherever measure is employed, men are more wide-awake in their dealings, and they get rid of their ridiculous ignorance. 'What do you mean?' I have observed this ignorance among my countrymen—they are like pigs—and I am heartily ashamed both on my own behalf and on that of all the Hellenes. 'In what respect?' Let me ask you a question. You know that

there are such things as length, breadth, and depth? 'Yes.' And the Hellenes imagine that they are commensurable (1) with themselves, and (2) with each other; whereas they are only commensurable with themselves. But if this is true, then we are in an unfortunate case, and may well say to our compatriots that not to possess necessary knowledge is a disgrace, though to possess such knowledge is nothing very grand. 'Certainly.' The discussion of arithmetical problems is a much better amusement for old men than their favourite game of draughts. 'True.' Mathematics, then, will be one of the subjects in which youth should be trained. They may be regarded as an amusement, as well as a useful and innocent branch of knowledge;—I think that we may include them provisionally. 'Yes; that will be the way.' The next question is, whether astronomy shall be made a part of education. About the stars there is a strange notion prevalent. Men often suppose that it is impious to enquire into the nature of God and the world, whereas the very reverse is the truth. 'How do you mean?' What I am going to say may seem absurd and at variance with the usual language of age, and yet if true and advantageous to the state, and pleasing to God, ought not to be withheld. 'Let us hear.' My dear friend, how falsely do we and all the Hellenes speak about the sun and moon! 'In what respect?' We are always saying that they and certain of the other stars do not keep the same path, and we term them planets. 'Yes; and I have seen the morning and evening stars go all manner of ways, and the sun and moon doing what we know that they always do. But I wish that you would explain your meaning further.' You will easily understand what I have had no difficulty in understanding myself, though we are both of us past the time of learning. 'True; but what is this marvellous knowledge which youth are to acquire, and of which we are ignorant?' Men say that the sun, moon, and stars are planets or wanderers; but this is the reverse of the fact. Each of them moves in one orbit only, which is circular, and not in many; nor is the swiftest of them the slowest, as appears to human eyes. What an insult should we offer to Olympian runners if we were to put the first last and the last first! And if that is a ridiculous error in speaking of men, how much more in speaking of the Gods? They cannot be pleased at our telling falsehoods about them. 'They cannot.' Then people should at least learn so much about them as will enable them to avoid impiety.

Enough of education. Hunting and similar pursuits now claim our attention. These require for their regulation that mixture of law and admonition of which we have often spoken; e.g., in what we were saying about the nurture of young children. And therefore the whole duty of the citizen will not consist in mere obedience to the laws; he must regard not only the enactments but also the precepts of the legislator. I will illustrate my meaning by an example. Of hunting there are many kinds—hunting of fish and fowl, man and beast, enemies and friends; and the legislator can neither omit to speak about these things, nor make penal ordinances about them all. 'What is he to do then?' He will praise and blame hunting, having in view the discipline and exercise of youth. And the young man will listen obediently and will regard his praises and censures; neither pleasure nor pain should hinder him. The legislator will express himself in the form of a pious wish for the welfare of the young:—O my friends, he will say, may you never be induced to hunt for fish in the waters, either by day or night; or for men, whether by sea or land. Never let the wish to steal enter into your minds; neither be ye fowlers, which is not an occupation for gentlemen. As to land animals, the legislator will discourage hunting by night, and also the use of nets and snares by day; for these are indolent and unmanly methods. The only mode of hunting which he can praise is with horses and dogs, running, shooting, striking at close quarters. Enough of the prelude: the law shall be as follows:—

Let no one hinder the holy order of huntsmen; but let the nightly hunters who lay snares and nets be everywhere prohibited. Let the fowler confine himself to waste places and to the mountains. The

fisherman is also permitted to exercise his calling, except in harbours and sacred streams, marshes and lakes; in all other places he may fish, provided he does not make use of poisonous mixtures.

BOOK VIII. Next, with the help of the Delphian Oracle, we will appoint festivals and sacrifices. There shall be 365 of them, one for every day in the year; and one magistrate, at least, shall offer sacrifice daily according to rites prescribed by a convocation of priests and interpreters, who shall co-operate with the guardians of the law, and supply what the legislator has omitted. Moreover there shall be twelve festivals to the twelve Gods after whom the twelve tribes are named: these shall be celebrated every month with appropriate musical and gymnastic contests. There shall also be festivals for women, to be distinguished from the men's festivals. Nor shall the Gods below be forgotten, but they must be separated from the Gods above—Pluto shall have his own in the twelfth month. He is not the enemy, but the friend of man, who releases the soul from the body, which is at least as good a work as to unite them. Further, those who have to regulate these matters should consider that our state has leisure and abundance, and wishing to be happy, like an individual, should lead a good life; for he who leads such a life neither does nor suffers injury, of which the first is very easy, and the second very difficult of attainment, and is only to be acquired by perfect virtue. A good city has peace, but the evil city is full of wars within and without. To guard against the danger of external enemies the citizens should practise war at least one day in every month; they should go out en masse, including their wives and children, or in divisions, as the magistrates determine, and have mimic contests, imitating in a lively manner real battles; they should also have prizes and encomiums of valour, both for the victors in these contests, and for the victors in the battle of life. The poet who celebrates the victors should be fifty years old at least, and himself a man who has done great deeds. Of such an one the poems may be sung, even though he is not the best of poets. To the director of education and the guardians of the law shall be committed the judgment, and no song, however sweet, which has not been licensed by them shall be recited. These regulations about poetry, and about military expeditions, apply equally to men and to women.

The legislator may be conceived to make the following address to himself:—With what object am I training my citizens? Are they not strivers for mastery in the greatest of combats? Certainly, will be the reply. And if they were boxers or wrestlers, would they think of entering the lists without many days' practice? Would they not as far as possible imitate all the circumstances of the contest; and if they had no one to box with, would they not practise on a lifeless image, heedless of the laughter of the spectators? And shall our soldiers go out to fight for life and kindred and property unprepared, because sham fights are thought to be ridiculous? Will not the legislator require that his citizens shall practise war daily, performing lesser exercises without arms, while the combatants on a greater scale will carry arms, and take up positions, and lie in ambuscade? And let their combats be not without danger, that opportunity may be given for distinction, and the brave man and the coward may receive their meed of honour or disgrace. If occasionally a man is killed, there is no great harm done—there are others as good as he is who will replace him; and the state can better afford to lose a few of her citizens than to lose the only means of testing them.

'We agree, Stranger, that such warlike exercises are necessary.' But why are they so rarely practised? Or rather, do we not all know the reasons? One of them (1) is the inordinate love of wealth. This absorbs the soul of a man, and leaves him no time for any other pursuit. Knowledge is valued by him only as it tends to the attainment of wealth. All is lost in the desire of heaping up gold and silver; anybody is ready to do anything, right or wrong, for the sake of eating and drinking, and

the indulgence of his animal passions. 'Most true.' This is one of the causes which prevents a man being a good soldier, or anything else which is good; it converts the temperate and orderly into shopkeepers or servants, and the brave into burglars or pirates. Many of these latter are men of ability, and are greatly to be pitied, because their souls are hungering and thirsting all their lives long. The bad forms of government (2) are another reason—democracy, oligarchy, tyranny, which, as I was saying, are not states, but states of discord, in which the rulers are afraid of their subjects, and therefore do not like them to become rich, or noble, or valiant. Now our state will escape both these causes of evil; the society is perfectly free, and has plenty of leisure, and is not allowed by the laws to be absorbed in the pursuit of wealth; hence we have an excellent field for a perfect education, and for the introduction of martial pastimes. Let us proceed to describe the character of these pastimes. All gymnastic exercises in our state must have a military character; no other will be allowed. Activity and quickness are most useful in war; and yet these qualities do not attain their greatest efficiency unless the competitors are armed. The runner should enter the lists in armour, and in the races which our heralds proclaim, no prize is to be given except to armed warriors. Let there be six courses—first, the stadium; secondly, the diaulos or double course; thirdly, the horse course; fourthly, the long course; fifthly, races (1) between heavy-armed soldiers who shall pass over sixty stadia and finish at a temple of Ares, and (2) between still more heavily-armed competitors who run over smoother ground; sixthly, a race for archers, who shall run over hill and dale a distance of a hundred stadia, and their goal shall be a temple of Apollo and Artemis. There shall be three contests of each kind—one for boys, another for youths, a third for men; the course for the boys we will fix at half, and that for the youths at two-thirds of the entire length. Women shall join in the races: young girls who are not grown up shall run naked; but after thirteen they shall be suitably dressed; from thirteen to eighteen they shall be obliged to share in these contests, and from eighteen to twenty they may if they please and if they are unmarried. As to trials of strength, single combats in armour, or battles between two and two, or of any number up to ten, shall take the place of wrestling and the heavy exercises. And there must be umpires, as there are now in wrestling, to determine what is a fair hit and who is conqueror. Instead of the pancratium, let there be contests in which the combatants carry bows and wear light shields and hurl javelins and throw stones. The next provision of the law will relate to horses, which, as we are in Crete, need be rarely used by us, and chariots never; our horse-racing prizes will only be given to single horses, whether colts, half-grown, or full-grown. Their riders are to wear armour, and there shall be a competition between mounted archers. Women, if they have a mind, may join in the exercises of men.

But enough of gymnastics, and nearly enough of music. All musical contests will take place at festivals, whether every third or every fifth year, which are to be fixed by the guardians of the law, the judges of the games, and the director of education, who for this purpose shall become legislators and arrange times and conditions. The principles on which such contests are to be ordered have been often repeated by the first legislator; no more need be said of them, nor are the details of them important. But there is another subject of the highest importance, which, if possible, should be determined by the laws, not of man, but of God; or, if a direct revelation is impossible, there is need of some bold man who, alone against the world, will speak plainly of the corruption of human nature, and go to war with the passions of mankind. 'We do not understand you.' I will try to make my meaning plainer. In speaking of education, I seemed to see young men and maidens in friendly intercourse with one another; and there arose in my mind a natural fear about a state, in which the young of either sex are well nurtured, and have little to do, and occupy themselves chiefly with festivals and dances. How can they be saved from those passions which reason forbids them to

indulge, and which are the ruin of so many? The prohibition of wealth, and the influence of education, and the all-seeing eye of the ruler, will alike help to promote temperance; but they will not wholly extirpate the unnatural loves which have been the destruction of states; and against this evil what remedy can be devised? Lacedaemon and Crete give no assistance here; on the subject of love, as I may whisper in your ear, they are against us. Suppose a person were to urge that you ought to restore the natural use which existed before the days of Laius; he would be quite right, but he would not be supported by public opinion in either of your states. Or try the matter by the test which we apply to all laws,—who will say that the permission of such things tends to virtue? Will he who is seduced learn the habit of courage; or will the seducer acquire temperance? And will any legislator be found to make such actions legal?

But to judge of this matter truly, we must understand the nature of love and friendship, which may take very different forms. For we speak of friendship, first, when there is some similarity or equality of virtue; secondly, when there is some want; and either of these, when in excess, is termed love. The first kind is gentle and sociable; the second is fierce and unmanageable; and there is also a third kind, which is akin to both, and is under the dominion of opposite principles. The one is of the body, and has no regard for the character of the beloved; but he who is under the influence of the other disregards the body, and is a looker rather than a lover, and desires only with his soul to be knit to the soul of his friend; while the intermediate sort is both of the body and of the soul. Here are three kinds of love: ought the legislator to prohibit all of them equally, or to allow the virtuous love to remain? 'The latter, clearly.' I expected to gain your approval; but I will reserve the task of convincing our friend Cleinias for another occasion. 'Very good.' To make right laws on this subject is in one point of view easy, and in another most difficult; for we know that in some cases most men abstain willingly from intercourse with the fair. The unwritten law which prohibits members of the same family from such intercourse is strictly obeyed, and no thought of anything else ever enters into the minds of men in general. A little word puts out the fire of their lusts. 'What is it?' The declaration that such things are hateful to the Gods, and most abominable and unholy. The reason is that everywhere, in jest and earnest alike, this is the doctrine which is repeated to all from their earliest youth. They see on the stage that an Oedipus or a Thyestes or a Macareus, when undeceived, are ready to kill themselves. There is an undoubted power in public opinion when no breath is heard adverse to the law; and the legislator who would enslave these enslaving passions must consecrate such a public opinion all through the city. 'Good: but how can you create it?' A fair objection; but I promised to try and find some means of restraining loves to their natural objects. A law which would extirpate unnatural love as effectually as incest is at present extirpated, would be the source of innumerable blessings, because it would be in accordance with nature, and would get rid of excess in eating and drinking and of adulteries and frenzies, making men love their wives, and having other excellent effects. I can imagine that some lusty youth overhears what we are saying, and roars out in abusive terms that we are legislating for impossibilities. And so a person might have said of the syssitia, or common meals; but this is refuted by facts, although even now they are not extended to women. 'True.' There is no impossibility or super-humanity in my proposed law, as I shall endeavour to prove. 'Do so.' Will not a man find abstinence more easy when his body is sound than when he is in ill-condition? 'Yes.' Have we not heard of Iccus of Tarentum and other wrestlers who abstained wholly for a time? Yet they were infinitely worse educated than our citizens, and far more lusty in their bodies. And shall they have abstained for the sake of an athletic contest, and our citizens be incapable of a similar endurance for the sake of a much nobler victory,—the victory over pleasure, which is true happiness? Will not the fear of impiety enable them to conquer that which many who were inferior to them have

conquered? 'I dare say.' And therefore the law must plainly declare that our citizens should not fall below the other animals, who live all together in flocks, and yet remain pure and chaste until the time of procreation comes, when they pair, and are ever after faithful to their compact. But if the corruption of public opinion is too great to allow our first law to be carried out, then our guardians of the law must turn legislators, and try their hand at a second law. They must minimize the appetites, diverting the vigour of youth into other channels, allowing the practice of love in secret, but making detection shameful. Three higher principles may be brought to bear on all these corrupt natures. 'What are they?' Religion, honour, and the love of the higher qualities of the soul. Perhaps this is a dream only, yet it is the best of dreams; and if not the whole, still, by the grace of God, a part of what we desire may be realized. Either men may learn to abstain wholly from any loves, natural or unnatural, except of their wedded wives; or, at least, they may give up unnatural loves; or, if detected, they shall be punished with loss of citizenship, as aliens from the state in their morals. 'I entirely agree with you,' said Megillus, 'but Cleinias must speak for himself.' 'I will give my opinion by-and-by.'

We were speaking of the syssitia, which will be a natural institution in a Cretan colony. Whether they shall be established after the model of Crete or Lacedaemon, or shall be different from either, is an unimportant question which may be determined without difficulty. We may, therefore, proceed to speak of the mode of life among our citizens, which will be far less complex than in other cities; a state which is inland and not maritime requires only half the number of laws. There is no trouble about trade and commerce, and a thousand other things. The legislator has only to regulate the affairs of husbandmen and shepherds, which will be easily arranged, now that the principal questions, such as marriage, education, and government, have been settled.

Let us begin with husbandry: First, let there be a law of Zeus against removing a neighbour's landmark, whether he be a citizen or stranger. For this is 'to move the immoveable'; and Zeus, the God of kindred, witnesses to the wrongs of citizens, and Zeus, the God of strangers, to the wrongs of strangers. The offence of removing a boundary shall receive two punishments—the first will be inflicted by the God himself; the second by the judges. In the next place, the differences between neighbours about encroachments must be guarded against. He who encroaches shall pay twofold the amount of the injury; of all such matters the wardens of the country shall be the judges, in lesser cases the officers, and in greater the whole number of them belonging to any one division. Any injury done by cattle, the decoying of bees, the careless firing of woods, the planting unduly near a neighbour's ground, shall all be visited with proper damages. Such details have been determined by previous legislators, and need not now be mixed up with greater matters. Husbandmen have had of old excellent rules about streams and waters; and we need not 'divert their course.' Anybody may take water from a common stream, if he does not thereby cut off a private spring; he may lead the water in any direction, except through a house or temple, but he must do no harm beyond the channel. If land is without water the occupier shall dig down to the clay, and if at this depth he find no water, he shall have a right of getting water from his neighbours for his household; and if their supply is limited, he shall receive from them a measure of water fixed by the wardens of the country. If there be heavy rains, the dweller on the higher ground must not recklessly suffer the water to flow down upon a neighbour beneath him, nor must he who lives upon lower ground or dwells in an adjoining house refuse an outlet. If the two parties cannot agree, they shall go before the wardens of the city or country, and if a man refuse to abide by their decision, he shall pay double the damage which he has caused.

In autumn God gives us two boons—one the joy of Dionysus not to be laid up—the other to be laid up. About the fruits of autumn let the law be as follows: He who gathers the storing fruits of autumn, whether grapes or figs, before the time of the vintage, which is the rising of Arcturus, shall pay fifty drachmas as a fine to Dionysus, if he gathers on his own ground; if on his neighbour's ground, a mina, and two-thirds of a mina if on that of any one else. The grapes or figs not used for storing a man may gather when he pleases on his own ground, but on that of others he must pay the penalty of removing what he has not laid down. If he be a slave who has gathered, he shall receive a stroke for every grape or fig. A metic must purchase the choice fruit; but a stranger may pluck for himself and his attendant. This right of hospitality, however, does not extend to storing grapes. A slave who eats of the storing grapes or figs shall be beaten, and the freeman be dismissed with a warning. Pears, apples, pomegranates, may be taken secretly, but he who is detected in the act of taking them shall be lightly beaten off, if he be not more than thirty years of age. The stranger and the elder may partake of them, but not carry any away; the latter, if he does not obey the law, shall fail in the competition of virtue, if anybody brings up his offence against him.

Water is also in need of protection, being the greatest element of nutrition, and, unlike the other elements—soil, air, and sun—which conspire in the growth of plants, easily polluted. And therefore he who spoils another's water, whether in springs or reservoirs, either by trenching, or theft, or by means of poisonous substances, shall pay the damage and purify the stream. At the getting-in of the harvest everybody shall have a right of way over his neighbour's ground, provided he is careful to do no damage beyond the trespass, or if he himself will gain three times as much as his neighbour loses. Of all this the magistrates are to take cognizance, and they are to assess the damage where the injury does not exceed three minae; cases of greater damage can be tried only in the public courts. A charge against a magistrate is to be referred to the public courts, and any one who is found guilty of deciding corruptly shall pay twofold to the aggrieved person. Matters of detail relating to punishments and modes of procedure, and summonses, and witnesses to summonses, do not require the mature wisdom of the aged legislator; the younger generation may determine them according to their experience; but when once determined, they shall remain unaltered.

The following are to be the regulations respecting handicrafts:—No citizen, or servant of a citizen, is to practise them. For the citizen has already an art and mystery, which is the care of the state; and no man can practise two arts, or practise one and superintend another. No smith should be a carpenter, and no carpenter, having many slaves who are smiths, should look after them himself; but let each man practise one art which shall be his means of livelihood. The wardens of the city should see to this, punishing the citizen who offends with temporary deprival of his rights—the foreigner shall be imprisoned, fined, exiled. Any disputes about contracts shall be determined by the wardens of the city up to fifty drachmae—above that sum by the public courts. No customs are to be exacted either on imports or exports. Nothing unnecessary is to be imported from abroad, whether for the service of the Gods or for the use of man—neither purple, nor other dyes, nor frankincense,—and nothing needed in the country is to be exported. These things are to be decided on by the twelve guardians of the law who are next in seniority to the five elders. Arms and the materials of war are to be imported and exported only with the consent of the generals, and then only by the state. There is to be no retail trade either in these or any other articles. For the distribution of the produce of the country, the Cretan laws afford a rule which may be usefully followed. All shall be required to distribute corn, grain, animals, and other valuable produce, into twelve portions. Each of these shall be subdivided into three parts—one for freemen, another for servants, and the third shall be sold for the supply of

artisans, strangers, and metics. These portions must be equal whether the produce be much or little; and the master of a household may distribute the two portions among his family and his slaves as he pleases—the remainder is to be measured out to the animals.

Next as to the houses in the country—there shall be twelve villages, one in the centre of each of the twelve portions; and in every village there shall be temples and an agora—also shrines for heroes or for any old Magnesian deities who linger about the place. In every division there shall be temples of Hestia, Zeus, and Athene, as well as of the local deity, surrounded by buildings on eminences, which will be the guard-houses of the rural police. The dwellings of the artisans will be thus arranged:—The artisans shall be formed into thirteen guilds, one of which will be divided into twelve parts and settled in the city; of the rest there shall be one in each division of the country. And the magistrates will fix them on the spots where they will cause the least inconvenience and be most serviceable in supplying the wants of the husbandmen.

The care of the agora will fall to the wardens of the agora. Their first duty will be the regulation of the temples which surround the market-place; and their second to see that the markets are orderly and that fair dealing is observed. They will also take care that the sales which the citizens are required to make to strangers are duly executed. The law shall be, that on the first day of each month the auctioneers to whom the sale is entrusted shall offer grain; and at this sale a twelfth part of the whole shall be exposed, and the foreigner shall supply his wants for a month. On the tenth, there shall be a sale of liquids, and on the twenty-third of animals, skins, woven or woollen stuffs, and other things which husbandmen have to sell and foreigners want to buy. None of these commodities, any more than barley or flour, or any other food, may be retailed by a citizen to a citizen; but foreigners may sell them to one another in the foreigners' market. There must also be butchers who will sell parts of animals to foreigners and craftsmen, and their servants; and foreigners may buy firewood wholesale of the commissioners of woods, and may sell retail to foreigners. All other goods must be sold in the market, at some place indicated by the magistrates, and shall be paid for on the spot. He who gives credit, and is cheated, will have no redress. In buying or selling, any excess or diminution of what the law allows shall be registered. The same rule is to be observed about the property of metics. Anybody who practises a handicraft may come and remain twenty years from the day on which he is enrolled; at the expiration of this time he shall take what he has and depart. The only condition which is to be imposed upon him as the tax of his sojourn is good conduct; and he is not to pay any tax for being allowed to buy or sell. But if he wants to extend the time of his sojourn, and has done any service to the state, and he can persuade the council and assembly to grant his request, he may remain. The children of metics may also be metics; and the period of twenty years, during which they are permitted to sojourn, is to count, in their case, from their fifteenth year.

No mention occurs in the Laws of the doctrine of Ideas. The will of God, the authority of the legislator, and the dignity of the soul, have taken their place in the mind of Plato. If we ask what is that truth or principle which, towards the end of his life, seems to have absorbed him most, like the idea of good in the Republic, or of beauty in the Symposium, or of the unity of virtue in the Protagoras, we should answer—The priority of the soul to the body: his later system mainly hangs upon this. In the Laws, as in the Sophist and Statesman, we pass out of the region of metaphysical or transcendental ideas into that of psychology.

The opening of the fifth book, though abrupt and unconnected in style, is one of the most elevated passages in Plato. The religious feeling which he seeks to diffuse over the commonest actions of life, the blessedness of living in the truth, the great mistake of a man living for himself, the pity as well as anger which should be felt at evil, the kindness due to the suppliant and the stranger, have the temper of Christian philosophy. The remark that elder men, if they want to educate others, should begin by educating themselves; the necessity of creating a spirit of obedience in the citizens; the desirableness of limiting property; the importance of parochial districts, each to be placed under the protection of some God or demigod, have almost the tone of a modern writer. In many of his views of politics, Plato seems to us, like some politicians of our own time, to be half socialist, half conservative.

In the Laws, we remark a change in the place assigned by him to pleasure and pain. There are two ways in which even the ideal systems of morals may regard them: either like the Stoics, and other ascetics, we may say that pleasure must be eradicated; or if this seems unreal to us, we may affirm that virtue is the true pleasure; and then, as Aristotle says, 'to be brought up to take pleasure in what we ought, exercises a great and paramount influence on human life' (Arist. Eth. Nic.). Or as Plato says in the Laws, 'A man will recognize the noblest life as having the greatest pleasure and the least pain, if he have a true taste.' If we admit that pleasures differ in kind, the opposition between these two modes of speaking is rather verbal than real; and in the greater part of the writings of Plato they alternate with each other. In the Republic, the mere suggestion that pleasure may be the chief good, is received by Socrates with a cry of abhorrence; but in the Philebus, innocent pleasures vindicate their right to a place in the scale of goods. In the Protagoras, speaking in the person of Socrates rather than in his own, Plato admits the calculation of pleasure to be the true basis of ethics, while in the Phaedo he indignantly denies that the exchange of one pleasure for another is the exchange of virtue. So wide of the mark are they who would attribute to Plato entire consistency in thoughts or words.

He acknowledges that the second state is inferior to the first—in this, at any rate, he is consistent; and he still casts longing eyes upon the ideal. Several features of the first are retained in the second: the education of men and women is to be as far as possible the same; they are to have common meals, though separate, the men by themselves, the women with their children; and they are both to serve in the army; the citizens, if not actually communists, are in spirit communistic; they are to be lovers of equality; only a certain amount of wealth is permitted to them, and their burdens and also their privileges are to be proportioned to this. The constitution in the Laws is a timocracy of wealth, modified by an aristocracy of merit. Yet the political philosopher will observe that the first of these two principles is fixed and permanent, while the latter is uncertain and dependent on the opinion of the multitude. Wealth, after all, plays a great part in the Second Republic of Plato. Like other politicians, he deems that a property qualification will contribute stability to the state. The four classes are derived from the constitution of Athens, just as the form of the city, which is clustered around a citadel set on a hill, is suggested by the Acropolis at Athens. Plato, writing under Pythagorean influences, seems really to have supposed that the well-being of the city depended almost as much on the number 5040 as on justice and moderation. But he is not prevented by Pythagoreanism from observing the effects which climate and soil exercise on the characters of nations.

He was doubtful in the Republic whether the ideal or communistic state could be realized, but was at the same time prepared to maintain that whether it existed or not made no difference to the philosopher, who will in any case regulate his life by it (Republic). He has now lost faith in the

practicability of his scheme—he is speaking to 'men, and not to Gods or sons of Gods' (Laws). Yet he still maintains it to be the true pattern of the state, which we must approach as nearly as possible: as Aristotle says, 'After having created a more general form of state, he gradually brings it round to the other' (Pol.). He does not observe, either here or in the Republic, that in such a commonwealth there would be little room for the development of individual character. In several respects the second state is an improvement on the first, especially in being based more distinctly on the dignity of the soul. The standard of truth, justice, temperance, is as high as in the Republic;—in one respect higher, for temperance is now regarded, not as a virtue, but as the condition of all virtue. It is finally acknowledged that the virtues are all one and connected, and that if they are separated, courage is the lowest of them. The treatment of moral questions is less speculative but more human. The idea of good has disappeared; the excellences of individuals—of him who is faithful in a civil broil, of the examiner who is incorruptible, are the patterns to which the lives of the citizens are to conform. Plato is never weary of speaking of the honour of the soul, which can only be honoured truly by being improved. To make the soul as good as possible, and to prepare her for communion with the Gods in another world by communion with divine virtue in this, is the end of life. If the Republic is far superior to the Laws in form and style, and perhaps in reach of thought, the Laws leave on the mind of the modern reader much more strongly the impression of a struggle against evil, and an enthusiasm for human improvement. When Plato says that he must carry out that part of his ideal which is practicable, he does not appear to have reflected that part of an ideal cannot be detached from the whole.

The great defect of both his constitutions is the fixedness which he seeks to impress upon them. He had seen the Athenian empire, almost within the limits of his own life, wax and wane, but he never seems to have asked himself what would happen if, a century from the time at which he was writing, the Greek character should have as much changed as in the century which had preceded. He fails to perceive that the greater part of the political life of a nation is not that which is given them by their legislators, but that which they give themselves. He has never reflected that without progress there cannot be order, and that mere order can only be preserved by an unnatural and despotic repression. The possibility of a great nation or of an universal empire arising never occurred to him. He sees the enfeebled and distracted state of the Hellenic world in his own later life, and thinks that the remedy is to make the laws unchangeable. The same want of insight is apparent in his judgments about art. He would like to have the forms of sculpture and of music fixed as in Egypt. He does not consider that this would be fatal to the true principles of art, which, as Socrates had himself taught, was to give life (Xen. Mem.). We wonder how, familiar as he was with the statues of Pheidias, he could have endured the lifeless and half-monstrous works of Egyptian sculpture. The 'chants of Isis' (Laws), we might think, would have been barbarous in an Athenian ear. But although he is aware that there are some things which are not so well among 'the children of the Nile,' he is deeply struck with the stability of Egyptian institutions. Both in politics and in art Plato seems to have seen no way of bringing order out of disorder, except by taking a step backwards. Antiquity, compared with the world in which he lived, had a sacredness and authority for him: the men of a former age were supposed by him to have had a sense of reverence which was wanting among his contemporaries. He could imagine the early stages of civilization; he never thought of what the future might bring forth. His experience is confined to two or three centuries, to a few Greek states, and to an uncertain report of Egypt and the East. There are many ways in which the limitations of their knowledge affected the genius of the Greeks. In criticism they were like children, having an acute vision of things which were near to them, blind to possibilities which were in the distance.

The colony is to receive from the mother-country her original constitution, and some of the first guardians of the law. The guardians of the law are to be ministers of justice, and the president of education is to take precedence of them all. They are to keep the registers of property, to make regulations for trade, and they are to be superannuated at seventy years of age. Several questions of modern politics, such as the limitation of property, the enforcement of education, the relations of classes, are anticipated by Plato. He hopes that in his state will be found neither poverty nor riches; every man having the necessaries of life, he need not go fortune-hunting in marriage. Almost in the spirit of the Gospel he would say, 'How hardly can a rich man dwell in a perfect state.' For he cannot be a good man who is always gaining too much and spending too little (Laws; compare Arist. Eth. Nic.). Plato, though he admits wealth as a political element, would deny that material prosperity can be the foundation of a really great community. A man's soul, as he often says, is more to be esteemed than his body; and his body than external goods. He repeats the complaint which has been made in all ages, that the love of money is the corruption of states. He has a sympathy with thieves and burglars, 'many of whom are men of ability and greatly to be pitied, because their souls are hungering and thirsting all their lives long;' but he has little sympathy with shopkeepers or retailers, although he makes the reflection, which sometimes occurs to ourselves, that such occupations, if they were carried on honestly by the best men and women, would be delightful and honourable. For traders and artisans a moderate gain was, in his opinion, best. He has never, like modern writers, idealized the wealth of nations, any more than he has worked out the problems of political economy, which among the ancients had not yet grown into a science. The isolation of Greek states, their constant wars, the want of a free industrial population, and of the modern methods and instruments of 'credit,' prevented any great extension of commerce among them; and so hindered them from forming a theory of the laws which regulate the accumulation and distribution of wealth.

The constitution of the army is aristocratic and also democratic; official appointment is combined with popular election. The two principles are carried out as follows: The guardians of the law nominate generals out of whom three are chosen by those who are or have been of the age for military service; and the generals elected have the nomination of certain of the inferior officers. But if either in the case of generals or of the inferior officers any one is ready to swear that he knows of a better man than those nominated, he may put the claims of his candidate to the vote of the whole army, or of the division of the service which he will, if elected, command. There is a general assembly, but its functions, except at elections, are hardly noticed. In the election of the Boule, Plato again attempts to mix aristocracy and democracy. This is effected, first as in the Servian constitution, by balancing wealth and numbers; for it cannot be supposed that those who possessed a higher qualification were equal in number with those who had a lower, and yet they have an equal number of representatives. In the second place, all classes are compelled to vote in the election of senators from the first and second class; but the fourth class is not compelled to elect from the third, nor the third and fourth from the fourth. Thirdly, out of the 180 persons who are thus chosen from each of the four classes, 720 in all, 360 are to be taken by lot; these form the council for the year.

These political adjustments of Plato's will be criticised by the practical statesman as being for the most part fanciful and ineffectual. He will observe, first of all, that the only real check on democracy is the division into classes. The second of the three proposals, though ingenious, and receiving some light from the apathy to politics which is often shown by the higher classes in a democracy, would have little power in times of excitement and peril, when the precaution was most needed. At such political crises, all the lower classes would vote equally with the higher. The subtraction of half the

persons chosen at the first election by the chances of the lot would not raise the character of the senators, and is open to the objection of uncertainty, which necessarily attends this and similar schemes of double representative government. Nor can the voters be expected to retain the continuous political interest required for carrying out such a proposal as Plato's. Who could select 180 persons of each class, fitted to be senators? And whoever were chosen by the voter in the first instance, his wishes might be neutralized by the action of the lot. Yet the scheme of Plato is not really so extravagant as the actual constitution of Athens, in which all the senators appear to have been elected by lot (apo kuamou bouleutai), at least, after the revolution made by Cleisthenes; for the constitution of the senate which was established by Solon probably had some aristocratic features, though their precise nature is unknown to us. The ancients knew that election by lot was the most democratic of all modes of appointment, seeming to say in the objectionable sense, that 'one man is as good as another.' Plato, who is desirous of mingling different elements, makes a partial use of the lot, which he applies to candidates already elected by vote. He attempts also to devise a system of checks and balances such as he supposes to have been intended by the ancient legislators. We are disposed to say to him, as he himself says in a remarkable passage, that 'no man ever legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing laws.' And yet, as he adds, the true legislator is still required: he must co-operate with circumstances. Many things which are ascribed to human foresight are the result of chance. Ancient, and in a less degree modern political constitutions, are never consistent with themselves, because they are never framed on a single design, but are added to from time to time as new elements arise and gain the preponderance in the state. We often attribute to the wisdom of our ancestors great political effects which have sprung unforeseen from the accident of the situation. Power, not wisdom, is most commonly the source of political revolutions. And the result, as in the Roman Republic, of the co-existence of opposite elements in the same state is, not a balance of power or an equable progress of liberal principles, but a conflict of forces, of which one or other may happen to be in the ascendant. In Greek history, as well as in Plato's conception of it, this 'progression by antagonism' involves reaction: the aristocracy expands into democracy and returns again to tyranny.

The constitution of the Laws may be said to consist, besides the magistrates, mainly of three elements,—an administrative Council, the judiciary, and the Nocturnal Council, which is an intellectual aristocracy, composed of priests and the ten eldest guardians of the law and some younger co-opted members. To this latter chiefly are assigned the functions of legislation, but to be exercised with a sparing hand. The powers of the ordinary council are administrative rather than legislative. The whole number of 360, as in the Athenian constitution, is distributed among the months of the year according to the number of the tribes. Not more than one-twelfth is to be in office at once, so that the government would be made up of twelve administrations succeeding one another in the course of the year. They are to exercise a general superintendence, and, like the Athenian counsellors, are to preside in monthly divisions over all assemblies. Of the ecclesia over which they presided little is said, and that little relates to comparatively trifling duties. Nothing is less present to the mind of Plato than a House of Commons, carrying on year by year the work of legislation. For he supposes the laws to be already provided. As little would he approve of a body like the Roman Senate. The people and the aristocracy alike are to be represented, not by assemblies, but by officers elected for one or two years, except the guardians of the law, who are elected for twenty years.

The evils of this system are obvious. If in any state, as Plato says in the Statesman, it is easier to find fifty good draught-players than fifty good rulers, the greater part of the 360 who compose the council must be unfitted to rule. The unfitness would be increased by the short period during which they held office. There would be no traditions of government among them, as in a Greek or Italian oligarchy, and no individual would be responsible for any of their acts. Everything seems to have been sacrificed to a false notion of equality, according to which all have a turn of ruling and being ruled. In the constitution of the Magnesian state Plato has not emancipated himself from the limitations of ancient politics. His government may be described as a democracy of magistrates elected by the people. He never troubles himself about the political consistency of his scheme. He does indeed say that the greater part of the good of this world arises, not from equality, but from proportion, which he calls the judgment of Zeus (compare Aristotle's Distributive Justice), but he hardly makes any attempt to carry out the principle in practice. There is no attempt to proportion representation to merit; nor is there any body in his commonwealth which represents the life either of a class or of the whole state. The manner of appointing magistrates is taken chiefly from the old democratic constitution of Athens, of which it retains some of the worst features, such as the use of the lot, while by doing away with the political character of the popular assembly the mainspring of the machine is taken out. The guardians of the law, thirty-seven in number, of whom the ten eldest reappear as a part of the Nocturnal Council at the end of the twelfth book, are to be elected by the whole military class, but they are to hold office for twenty years, and would therefore have an oligarchical rather than a democratic character. Nothing is said of the manner in which the functions of the Nocturnal Council are to be harmonized with those of the guardians of the law, or as to how the ordinary council is related to it.

Similar principles are applied to inferior offices. To some the appointment is made by vote, to others by lot. In the elections to the priesthood, Plato endeavours to mix or balance in a friendly manner 'demus and not demus.' The commonwealth of the Laws, like the Republic, cannot dispense with a spiritual head, which is the same in both—the oracle of Delphi. From this the laws about all divine things are to be derived. The final selection of the Interpreters, the choice of an heir for a vacant lot, the punishment for removing a deposit, are also to be determined by it. Plato is not disposed to encourage amateur attempts to revive religion in states. For, as he says in the Laws, 'To institute religious rites is the work of a great intelligence.'

Though the council is framed on the model of the Athenian Boule, the law courts of Plato do not equally conform to the pattern of the Athenian dicasteries. Plato thinks that the judges should speak and ask questions:—this is not possible if they are numerous; he would, therefore, have a few judges only, but good ones. He is nevertheless aware that both in public and private suits there must be a popular element. He insists that the whole people must share in the administration of justice—in public causes they are to take the first step, and the final decision is to remain with them. In private suits they are also to retain a share; 'for the citizen who has no part in the administration of justice is apt to think that he has no share in the state. For this reason there is to be a court of law in every tribe (i.e. for about every 2,000 citizens), and the judges are to be chosen by lot.' Of the courts of law he gives what he calls a superficial sketch. Nor, indeed is it easy to reconcile his various accounts of them. It is however clear that although some officials, like the guardians of the law, the wardens of the agora, city, and country have power to inflict minor penalties, the administration of justice is in the main popular. The ingenious expedient of dividing the questions of law and fact between a judge and jury, which would have enabled Plato to combine the popular element with the judicial, did not occur to him or to any other ancient political philosopher. Though desirous of limiting the number of judges,

and thereby confining the office to persons specially fitted for it, he does not seem to have understood that a body of law must be formed by decisions as well as by legal enactments.

He would have men in the first place seek justice from their friends and neighbours, because, as he truly remarks, they know best the questions at issue; these are called in another passage arbiters rather than judges. But if they cannot settle the matter, it is to be referred to the courts of the tribes, and a higher penalty is to be paid by the party who is unsuccessful in the suit. There is a further appeal allowed to the select judges, with a further increase of penalty. The select judges are to be appointed by the magistrates, who are to choose one from every magistracy. They are to be elected annually, and therefore probably for a year only, and are liable to be called to account before the guardians of the law. In cases of which death is the penalty, the trial takes place before a special court, which is composed of the guardians of the law and of the judges of appeal.

In treating of the subject in Book ix, he proposes to leave for the most part the methods of procedure to a younger generation of legislators; the procedure in capital causes he determines himself. He insists that the vote of the judges shall be given openly, and before they vote they are to hear speeches from the plaintiff and defendant. They are then to take evidence in support of what has been said, and to examine witnesses. The eldest judge is to ask his questions first, and then the second, and then the third. The interrogatories are to continue for three days, and the evidence is to be written down. Apparently he does not expect the judges to be professional lawyers, any more than he expects the members of the council to be trained statesmen.

In forming marriage connexions, Plato supposes that the public interest will prevail over private inclination. There was nothing in this very shocking to the notions of Greeks, among whom the feeling of love towards the other sex was almost deprived of sentiment or romance. Married life is to be regulated solely with a view to the good of the state. The newly-married couple are not allowed to absent themselves from their respective syssitia, even during their honeymoon; they are to give their whole mind to the procreation of children; their duties to one another at a later period of life are not a matter about which the state is equally solicitous. Divorces are readily allowed for incompatibility of temper. As in the Republic, physical considerations seem almost to exclude moral and social ones. To modern feelings there is a degree of coarseness in Plato's treatment of the subject. Yet he also makes some shrewd remarks on marriage, as for example, that a man who does not marry for money will not be the humble servant of his wife. And he shows a true conception of the nature of the family, when he requires that the newly-married couple 'should leave their father and mother,' and have a separate home. He also provides against extravagance in marriage festivals, which in some states of society, for instance in the case of the Hindoos, has been a social evil of the first magnitude.

In treating of property, Plato takes occasion to speak of property in slaves. They are to be treated with perfect justice; but, for their own sake, to be kept at a distance. The motive is not so much humanity to the slave, of which there are hardly any traces (although Plato allows that many in the hour of peril have found a slave more attached than members of their own family), but the self-respect which the freeman and citizen owes to himself (compare Republic). If they commit crimes, they are doubly punished; if they inform against illegal practices of their masters, they are to receive a protection, which would probably be ineffectual, from the guardians of the law; in rare cases they are to be set free. Plato still breathes the spirit of the old Hellenic world, in which slavery was a necessity, because leisure must be provided for the citizen.

The education propounded in the Laws differs in several points from that of the Republic. Plato seems to have reflected as deeply and earnestly on the importance of infancy as Rousseau, or Jean Paul (compare the saying of the latter—'Not the moment of death, but the moment of birth, is probably the more important'). He would fix the amusements of children in the hope of fixing their characters in after-life. In the spirit of the statesman who said, 'Let me make the ballads of a country, and I care not who make their laws,' Plato would say, 'Let the amusements of children be unchanged, and they will not want to change the laws. The 'Goddess Harmonia' plays a great part in Plato's ideas of education. The natural restless force of life in children, 'who do nothing but roar until they are three years old,' is gradually to be reduced to law and order. As in the Republic, he fixes certain forms in which songs are to be composed: (1) they are to be strains of cheerfulness and good omen; (2) they are to be hymns or prayers addressed to the Gods; (3) they are to sing only of the lawful and good. The poets are again expelled or rather ironically invited to depart; and those who remain are required to submit their poems to the censorship of the magistrates. Youth are no longer compelled to commit to memory many thousand lyric and tragic Greek verses; yet, perhaps, a worse fate is in store for them. Plato has no belief in 'liberty of prophesying'; and having guarded against the dangers of lyric poetry, he remembers that there is an equal danger in other writings. He cannot leave his old enemies, the Sophists, in possession of the field; and therefore he proposes that youth shall learn by heart, instead of the compositions of poets or prose writers, his own inspired work on laws. These, and music and mathematics, are the chief parts of his education.

Mathematics are to be cultivated, not as in the Republic with a view to the science of the idea of good,—though the higher use of them is not altogether excluded,—but rather with a religious and political aim. They are a sacred study which teaches men how to distribute the portions of a state, and which is to be pursued in order that they may learn not to blaspheme about astronomy. Against three mathematical errors Plato is in profound earnest. First, the error of supposing that the three dimensions of length, breadth, and height, are really commensurable with one another. The difficulty which he feels is analogous to the difficulty which he formerly felt about the connexion of ideas, and is equally characteristic of ancient philosophy: he fixes his mind on the point of difference, and cannot at the same time take in the similarity. Secondly, he is puzzled about the nature of fractions: in the Republic, he is disposed to deny the possibility of their existence. Thirdly, his optimism leads him to insist (unlike the Spanish king who thought that he could have improved on the mechanism of the heavens) on the perfect or circular movement of the heavenly bodies. He appears to mean, that instead of regarding the stars as overtaking or being overtaken by one another, or as planets wandering in many paths, a more comprehensive survey of the heavens would enable us to infer that they all alike moved in a circle around a centre (compare Timaeus; Republic). He probably suspected, though unacquainted with the true cause, that the appearance of the heavens did not agree with the reality: at any rate, his notions of what was right or fitting easily overpowered the results of actual observation. To the early astronomers, who lived at the revival of science, as to Plato, there was nothing absurd in a priori astronomy, and they would probably have made fewer real discoveries of they had followed any other track. (Compare Introduction to the Republic.)

The science of dialectic is nowhere mentioned by name in the Laws, nor is anything said of the education of after-life. The child is to begin to learn at ten years of age: he is to be taught reading and writing for three years, from ten to thirteen, and no longer; and for three years more, from thirteen to sixteen, he is to be instructed in music. The great fault which Plato finds in the contemporary education is the almost total ignorance of arithmetic and astronomy, in which the Greeks would do

well to take a lesson from the Egyptians (compare Republic). Dancing and wrestling are to have a military character, and women as well as men are to be taught the use of arms. The military spirit which Plato has vainly endeavoured to expel in the first two books returns again in the seventh and eighth. He has evidently a sympathy with the soldier, as well as with the poet, and he is no mean master of the art, or at least of the theory, of war (compare Laws; Republic), though inclining rather to the Spartan than to the Athenian practice of it (Laws). Of a supreme or master science which was to be the 'coping-stone' of the rest, few traces appear in the Laws. He seems to have lost faith in it, or perhaps to have realized that the time for such a science had not yet come, and that he was unable to fill up the outline which he had sketched. There is no requirement that the guardians of the law shall be philosophers, although they are to know the unity of virtue, and the connexion of the sciences. Nor are we told that the leisure of the citizens, when they are grown up, is to be devoted to any intellectual employment. In this respect we note a falling off from the Republic, but also there is 'the returning to it' of which Aristotle speaks in the Politics. The public and family duties of the citizens are to be their main business, and these would, no doubt, take up a great deal more time than in the modern world we are willing to allow to either of them. Plato no longer entertains the idea of any regular training to be pursued under the superintendence of the state from eighteen to thirty, or from thirty to thirty-five; he has taken the first step downwards on 'Constitution Hill' (Republic). But he maintains as earnestly as ever that 'to men living under this second polity there remains the greatest of all works, the education of the soul,' and that no bye-work should be allowed to interfere with it. Night and day are not long enough for the consummation of it.

Few among us are either able or willing to carry education into later life; five or six years spent at school, three or four at a university, or in the preparation for a profession, an occasional attendance at a lecture to which we are invited by friends when we have an hour to spare from house-keeping or money-making—these comprise, as a matter of fact, the education even of the educated; and then the lamp is extinguished 'more truly than Heracleitus' sun, never to be lighted again' (Republic). The description which Plato gives in the Republic of the state of adult education among his contemporaries may be applied almost word for word to our own age. He does not however acquiesce in this widely-spread want of a higher education; he would rather seek to make every man something of a philosopher before he enters on the duties of active life. But in the Laws he no longer prescribes any regular course of study which is to be pursued in mature years. Nor does he remark that the education of after-life is of another kind, and must consist with the majority of the world rather in the improvement of character than in the acquirement of knowledge. It comes from the study of ourselves and other men: from moderation and experience: from reflection on circumstances: from the pursuit of high aims: from a right use of the opportunities of life. It is the preservation of what we have been, and the addition of something more. The power of abstract study or continuous thought is very rare, but such a training as this can be given by every one to himself.

The singular passage in Book vii., in which Plato describes life as a pastime, like many other passages in the Laws is imperfectly expressed. Two thoughts seem to be struggling in his mind: first, the reflection, to which he returns at the end of the passage, that men are playthings or puppets, and that God only is the serious aim of human endeavours; this suggests to him the afterthought that, although playthings, they are the playthings of the Gods, and that this is the best of them. The cynical, ironical fancy of the moment insensibly passes into a religious sentiment. In another passage he says that life is a game of which God, who is the player, shifts the pieces so as to procure the victory of good on the whole. Or once more: Tragedies are acted on the stage; but the best and

noblest of them is the imitation of the noblest life, which we affirm to be the life of our whole state. Again, life is a chorus, as well as a sort of mystery, in which we have the Gods for playmates. Men imagine that war is their serious pursuit, and they make war that they may return to their amusements. But neither wars nor amusements are the true satisfaction of men, which is to be found only in the society of the Gods, in sacrificing to them and propitiating them. Like a Christian ascetic, Plato seems to suppose that life should be passed wholly in the enjoyment of divine things. And after meditating in amazement on the sadness and unreality of the world, he adds, in a sort of parenthesis, 'Be cheerful, Sirs' (Shakespeare, Tempest.)

In one of the noblest passages of Plato, he speaks of the relation of the sexes. Natural relations between members of the same family have been established of old; a 'little word' has put a stop to incestuous connexions. But unnatural unions of another kind continued to prevail at Crete and Lacedaemon, and were even justified by the example of the Gods. They, too, might be banished, if the feeling that they were unholy and abominable could sink into the minds of men. The legislator is to cry aloud, and spare not, 'Let not men fall below the level of the beasts.' Plato does not shrink, like some modern philosophers, from 'carrying on war against the mightiest lusts of mankind;' neither does he expect to extirpate them, but only to confine them to their natural use and purpose, by the enactments of law, and by the influence of public opinion. He will not feed them by an over-luxurious diet, nor allow the healthier instincts of the soul to be corrupted by music and poetry. The prohibition of excessive wealth is, as he says, a very considerable gain in the way of temperance, nor does he allow of those enthusiastic friendships between older and younger persons which in his earlier writings appear to be alluded to with a certain degree of amusement and without reproof (compare Introduction to the Symposium). Sappho and Anacreon are celebrated by him in the Charmides and the Phaedrus; but they would have been expelled from the Magnesian state.

Yet he does not suppose that the rule of absolute purity can be enforced on all mankind. Something must be conceded to the weakness of human nature. He therefore adopts a 'second legal standard of honourable and dishonourable, having a second standard of right.' He would abolish altogether 'the connexion of men with men...As to women, if any man has to do with any but those who come into his house duly married by sacred rites, and he offends publicly in the face of all mankind, we shall be right in enacting that he be deprived of civic honours and privileges.' But feeling also that it is impossible wholly to control the mightiest passions of mankind,' Plato, like other legislators, makes a compromise. The offender must not be found out; decency, if not morality, must be respected. In this he appears to agree with the practice of all civilized ages and countries. Much may be truly said by the moralist on the comparative harm of open and concealed vice. Nor do we deny that some moral evils are better turned out to the light, because, like diseases, when exposed, they are more easily cured. And secrecy introduces mystery which enormously exaggerates their power; a mere animal want is thus elevated into a sentimental ideal. It may very well be that a word spoken in season about things which are commonly concealed may have an excellent effect. But having regard to the education of youth, to the innocence of children, to the sensibilities of women, to the decencies of society, Plato and the world in general are not wrong in insisting that some of the worst vices, if they must exist, should be kept out of sight; this, though only a second-best rule, is a support to the weakness of human nature. There are some things which may be whispered in the closet, but should not be shouted on the housetop. It may be said of this, as of many other things, that it is a great part of education to know to whom they are to be spoken of, and when, and where.

BOOK IX. Punishments of offences and modes of procedure come next in order. We have a sense of disgrace in making regulations for all the details of crime in a virtuous and well-ordered state. But seeing that we are legislating for men and not for Gods, there is no uncharitableness in apprehending that some one of our citizens may have a heart, like the seed which has touched the ox's horn, so hard as to be impenetrable to the law. Let our first enactment be directed against the robbing of temples. No well-educated citizen will be guilty of such a crime, but one of their servants, or some stranger, may, and with a view to him, and at the same time with a remoter eye to the general infirmity of human nature, I will lay down the law, beginning with a prelude. To the intending robber we will say—O sir, the complaint which troubles you is not human; but some curse has fallen upon you, inherited from the crimes of your ancestors, of which you must purge yourself: go and sacrifice to the Gods, associate with the good, avoid the wicked; and if you are cured of the fatal impulse, well; but if not, acknowledge death to be better than life, and depart.

These are the accents, soft and low, in which we address the would-be criminal. And if he will not listen, then cry aloud as with the sound of a trumpet: Whosoever robs a temple, if he be a slave or foreigner shall be branded in the face and hands, and scourged, and cast naked beyond the border. And perhaps this may improve him: for the law aims either at the reformation of the criminal, or the repression of crime. No punishment is designed to inflict useless injury. But if the offender be a citizen, he must be incurable, and for him death is the only fitting penalty. His iniquity, however, shall not be visited on his children, nor shall his property be confiscated.

As to the exaction of penalties, any person who is fined for an offence shall not be liable to pay the fine, unless he have property in excess of his lot. For the lots must never go uncultivated for lack of means; the guardians of the law are to provide against this. If a fine is inflicted upon a man which he cannot pay, and for which his friends are unwilling to give security, he shall be imprisoned and otherwise dishonoured. But no criminal shall go unpunished:—whether death, or imprisonment, or stripes, or fines, or the stocks, or banishment to a remote temple, be the penalty. Capital offences shall come under the cognizance of the guardians of the law, and a college of the best of the last year's magistrates. The order of suits and similar details we shall leave to the lawgivers of the future, and only determine the mode of voting. The judges are to sit in order of seniority, and the proceedings shall begin with the speeches of the plaintiff and the defendant; and then the judges, beginning with the eldest, shall ask questions and collect evidence during three days, which, at the end of each day, shall be deposited in writing under their seals on the altar of Hestia; and when they have evidence enough, after a solemn declaration that they will decide justly, they shall vote and end the case. The votes are to be given openly in the presence of the citizens.

Next to religion, the preservation of the constitution is the first object of the law. The greatest enemy of the state is he who attempts to set up a tyrant, or breeds plots and conspiracies; not far below him in guilt is a magistrate who either knowingly, or in ignorance, fails to bring the offender to justice. Any one who is good for anything will give information against traitors. The mode of proceeding at such trials will be the same as at trials for sacrilege; the penalty, death. But neither in this case nor in any other is the son to bear the iniquity of the father, unless father, grandfather, great-grandfather, have all of them been capitally convicted, and then the family of the criminal are to be sent off to the country of their ancestor, retaining their property, with the exception of the lot and its fixtures. And ten are to be selected from the younger sons of the other citizens—one of whom is to be chosen by the oracle of Delphi to be heir of the lot.

Our third law will be a general one, concerning the procedure and the judges in cases of treason. As regards the remaining or departure of the family of the offender, the same law shall apply equally to the traitor, the sacrilegious, and the conspirator.

A thief, whether he steals much or little, must refund twice the amount, if he can do so without impairing his lot; if he cannot, he must go to prison until he either pays the plaintiff, or in case of a public theft, the city, or they agree to forgive him. 'But should all kinds of theft incur the same penalty?' You remind me of what I know—that legislation is never perfect. The men for whom laws are now made may be compared to the slave who is being doctored, according to our old image, by the unscientific doctor. For the empirical practitioner, if he chance to meet the educated physician talking to his patient, and entering into the philosophy of his disease, would burst out laughing and say, as doctors delight in doing, 'Foolish fellow, instead of curing the patient you are educating him!' 'And would he not be right?' Perhaps; and he might add, that he who discourses in our fashion preaches to the citizens instead of legislating for them. 'True.' There is, however, one advantage which we possess—that being amateurs only, we may either take the most ideal, or the most necessary and utilitarian view. 'But why offer such an alternative? As if all our legislation must be done to-day, and nothing put off until the morrow. We may surely rough-hew our materials first, and shape and place them afterwards.' That will be the natural way of proceeding. There is a further point. Of all writings either in prose or verse the writings of the legislator are the most important. For it is he who has to determine the nature of good and evil, and how they should be studied with a view to our instruction. And is it not as disgraceful for Solon and Lycurgus to lay down false precepts about the institutions of life as for Homer and Tyrtaeus? The laws of states ought to be the models of writing, and what is at variance with them should be deemed ridiculous. And we may further imagine them to express the affection and good sense of a father or mother, and not to be the fiats of a tyrant. 'Very true.'

Let us enquire more particularly about sacrilege, theft and other crimes, for which we have already legislated in part. And this leads us to ask, first of all, whether we are agreed or disagreed about the nature of the honourable and just. 'To what are you referring?' I will endeavour to explain. All are agreed that justice is honourable, whether in men or things, and no one who maintains that a very ugly men who is just, is in his mind fair, would be thought extravagant. 'Very true.' But if honour is to be attributed to justice, are just sufferings honourable, or only just actions? 'What do you mean?' Our laws supply a case in point; for we enacted that the robber of temples and the traitor should die; and this was just, but the reverse of honourable. In this way does the language of the many rend asunder the just and honourable. 'That is true.' But is our own language consistent? I have already said that the evil are involuntarily evil; and the evil are the unjust. Now the voluntary cannot be the involuntary; and if you two come to me and say, 'Then shall we legislate for our city?' Of course, I shall reply.—'Then will you distinguish what crimes are voluntary and what involuntary, and shall we impose lighter penalties on the latter, and heavier on the former? Or shall we refuse to determine what is the meaning of voluntary and involuntary, and maintain that our words have come down from heaven, and that they should be at once embodied in a law?' All states legislate under the idea that there are two classes of actions, the voluntary and the involuntary, but there is great confusion about them in the minds of men; and the law can never act unless they are distinguished. Either we must abstain from affirming that unjust actions are involuntary, or explain the meaning of this statement. Believing, then, that acts of injustice cannot be divided into voluntary and involuntary, I must endeavour to find some other mode of classifying them. Hurts are voluntary and involuntary, but all hurts are not

injuries: on the other hand, a benefit when wrongly conferred may be an injury. An act which gives or takes away anything is not simply just; but the legislator who has to decide whether the case is one of hurt or injury, must consider the animus of the agent; and when there is hurt, he must as far as possible, provide a remedy and reparation: but if there is injustice, he must, when compensation has been made, further endeavour to reconcile the two parties. 'Excellent.' Where injustice, like disease, is remediable, there the remedy must be applied in word or deed, with the assistance of pleasures and pains, of bounties and penalties, or any other influence which may inspire man with the love of justice, or hatred of injustice; and this is the noblest work of law. But when the legislator perceives the evil to be incurable, he will consider that the death of the offender will be a good to himself, and in two ways a good to society: first, as he becomes an example to others; secondly, because the city will be quit of a rogue; and in such a case, but in no other, the legislator will punish with death. 'There is some truth in what you say. I wish, however, that you would distinguish more clearly the difference of injury and hurt, and the complications of voluntary and involuntary.' You will admit that anger is of a violent and destructive nature? 'Certainly.' And further, that pleasure is different from anger, and has an opposite power, working by persuasion and deceit? 'Yes.' Ignorance is the third source of crimes; this is of two kinds—simple ignorance and ignorance doubled by conceit of knowledge; the latter, when accompanied with power, is a source of terrible errors, but is excusable when only weak and childish. 'True.' We often say that one man masters, and another is mastered by pleasure and anger. 'Just so.' But no one says that one man masters, and another is mastered by ignorance. 'You are right.' All these motives actuate men and sometimes drive them in different ways. 'That is so.' Now, then, I am in a position to define the nature of just and unjust. By injustice I mean the dominion of anger and fear, pleasure and pain, envy and desire, in the soul, whether doing harm or not: by justice I mean the rule of the opinion of the best, whether in states or individuals, extending to the whole of life; although actions done in error are often thought to be involuntary injustice. No controversy need be raised about names at present; we are only desirous of fixing in our memories the heads of error. And the pain which is called fear and anger is our first head of error; the second is the class of pleasures and desires; and the third, of hopes which aim at true opinion about the best;—this latter falls into three divisions (i.e. (1) when accompanied by simple ignorance, (2) when accompanied by conceit of wisdom combined with power, or (3) with weakness), so that there are in all five. And the laws relating to them may be summed up under two heads, laws which deal with acts of open violence and with acts of deceit; to which may be added acts both violent and deceitful, and these last should be visited with the utmost rigour of the law. 'Very properly.'

Let us now return to the enactment of laws. We have treated of sacrilege, and of conspiracy, and of treason. Any of these crimes may be committed by a person not in his right mind, or in the second childhood of old age. If this is proved to be the fact before the judges, the person in question shall only have to pay for the injury, and not be punished further, unless he have on his hands the stain of blood. In this case he shall be exiled for a year, and if he return before the expiration of the year, he shall be retained in the public prison two years.

Homicides may be divided into voluntary and involuntary: and first of involuntary homicide. He who unintentionally kills another man at the games or in military exercises duly authorized by the magistrates, whether death follow immediately or after an interval, shall be acquitted, subject only to the purification required by the Delphian Oracle. Any physician whose patient dies against his will shall in like manner be acquitted. Any one who unintentionally kills the slave of another, believing that he is his own, with or without weapons, shall bear the master of the slave harmless, or pay a penalty

amounting to twice the value of the slave, and to this let him add a purification greater than in the case of homicide at the games. If a man kill his own slave, a purification only is required of him. If he kill a freeman unintentionally, let him also make purification; and let him remember the ancient tradition which says that the murdered man is indignant when he sees the murderer walk about in his own accustomed haunts, and that he terrifies him with the remembrance of his crime. And therefore the homicide should keep away from his native land for a year, or, if he have slain a stranger, let him avoid the land of the stranger for a like period. If he complies with this condition, the nearest kinsman of the deceased shall take pity upon him and be reconciled to him; but if he refuses to remain in exile, or visits the temples unpurified, then let the kinsman proceed against him, and demand a double penalty. The kinsman who neglects this duty shall himself incur the curse, and any one who likes may proceed against him, and compel him to leave his country for five years. If a stranger involuntarily kill a stranger, any one may proceed against him in the same manner: and the homicide, if he be a metic, shall be banished for a year; but if he be an entire stranger, whether he have murdered metic, citizen, or stranger, he shall be banished for ever; and if he return, he shall be punished with death, and his property shall go to the next of kin of the murdered man. If he come back by sea against his will, he shall remain on the seashore, wetting his feet in the water while he waits for a vessel to sail; or if he be brought back by land, the magistrates shall send him unharmed beyond the border.

Next follows murder done from anger, which is of two kinds—either arising out of a sudden impulse, and attended with remorse; or committed with premeditation, and unattended with remorse. The cause of both is anger, and both are intermediate between voluntary and involuntary. The one which is committed from sudden impulse, though not wholly involuntary, bears the image of the involuntary, and is therefore the more excusable of the two, and should receive a gentler punishment. The act of him who nurses his wrath is more voluntary, and therefore more culpable. The degree of culpability depends on the presence or absence of intention, to which the degree of punishment should correspond. For the first kind of murder, that which is done on a momentary impulse, let two years' exile be the penalty; for the second, that which is accompanied with malice prepense, three. When the time of any one's exile has expired, the guardians shall send twelve judges to the borders of the land, who shall have authority to decide whether he may return or not. He who after returning repeats the offence, shall be exiled and return no more, and, if he return, shall be put to death, like the stranger in a similar case. He who in a fit of anger kills his own slave, shall purify himself; and he who kills another man's slave, shall pay to his master double the value. Any one may proceed against the offender if he appear in public places, not having been purified; and may bring to trial both the next of kin to the dead man and the homicide, and compel the one to exact, and the other to pay, a double penalty. If a slave kill his master, or a freeman who is not his master, in anger, the kinsmen of the murdered person may do with the murderer whatever they please, but they must not spare his life. If a father or mother kill their son or daughter in anger, let the slayer remain in exile for three years; and on the return of the exile let the parents separate, and no longer continue to cohabit, or have the same sacred rites with those whom he or she has deprived of a brother or sister. The same penalty is decreed against the husband who murders his wife, and also against the wife who murders her husband. Let them be absent three years, and on their return never again share in the same sacred rites with their children, or sit at the same table with them. Nor is a brother or sister who have lifted up their hands against a brother or sister, ever to come under the same roof or share in the same rites with those whom they have robbed of a child. If a son feels such hatred against his father or mother as to take the life of either of them, then, if the parent before death forgive him, he shall only suffer the penalty due to involuntary homicide; but if he be unforgiven, there are many laws against which

he has offended; he is guilty of outrage, impiety, sacrilege all in one, and deserves to be put to death many times over. For if the law will not allow a man to kill the authors of his being even in self-defence, what other penalty than death can be inflicted upon him who in a fit of passion wilfully slays his father or mother? If a brother kill a brother in self-defence during a civil broil, or a citizen a citizen, or a slave a slave, or a stranger a stranger, let them be free from blame, as he is who slays an enemy in battle. But if a slave kill a freeman, let him be as a parricide. In all cases, however, the forgiveness of the injured party shall acquit the agents; and then they shall only be purified, and remain in exile for a year.

Enough of actions that are involuntary, or done in anger; let us proceed to voluntary and premeditated actions. The great source of voluntary crime is the desire of money, which is begotten by evil education; and this arises out of the false praise of riches, common both among Hellenes and barbarians; they think that to be the first of goods which is really the third. For the body is not for the sake of wealth, but wealth for the body, as the body is for the soul. If this were better understood, the crime of murder, of which avarice is the chief cause, would soon cease among men. Next to avarice, ambition is a source of crime, troublesome to the ambitious man himself, as well as to the chief men of the state. And next to ambition, base fear is a motive, which has led many an one to commit murder in order that he may get rid of the witnesses of his crimes. Let this be said as a prelude to all enactments about crimes of violence; and the tradition must not be forgotten, which tells that the murderer is punished in the world below, and that when he returns to this world he meets the fate which he has dealt out to others. If a man is deterred by the prelude and the fear of future punishment, he will have no need of the law; but in case he disobey, let the law be declared against him as follows:—He who of malice prepense kills one of his kindred, shall in the first place be outlawed; neither temple, harbour, nor agora shall be polluted by his presence. And if a kinsman of the deceased refuse to proceed against his slayer, he shall take the curse of pollution upon himself, and also be liable to be prosecuted by any one who will avenge the dead. The prosecutor, however, must observe the customary ceremonial before he proceeds against the offender. The details of these observances will be best determined by a conclave of prophets and interpreters and guardians of the law, and the judges of the cause itself shall be the same as in cases of sacrilege. He who is convicted shall be punished with death, and not be buried within the country of the murdered person. He who flies from the law shall undergo perpetual banishment; if he return, he may be put to death with impunity by any relative of the murdered man or by any other citizen, or bound and delivered to the magistrates. He who accuses a man of murder shall demand satisfactory bail of the accused, and if this is not forthcoming, the magistrate shall keep him in prison against the day of trial. If a man commit murder by the hand of another, he shall be tried in the same way as in the cases previously supposed, but if the offender be a citizen, his body after execution shall be buried within the land.

If a slave kill a freeman, either with his own hand or by contrivance, let him be led either to the grave or to a place whence he can see the grave of the murdered man, and there receive as many stripes at the hand of the public executioner as the person who took him pleases; and if he survive he shall be put to death. If a slave be put out of the way to prevent his informing of some crime, his death shall be punished like that of a citizen. If there are any of those horrible murders of kindred which sometimes occur even in well-regulated societies, and of which the legislator, however unwilling, cannot avoid taking cognizance, he will repeat the old myth of the divine vengeance against the perpetrators of such atrocities. The myth will say that the murderer must suffer what he has done: if he have slain his father, he must be slain by his children; if his mother, he must become a woman

and perish at the hands of his offspring in another age of the world. Such a preamble may terrify him; but if, notwithstanding, in some evil hour he murders father or mother or brethren or children, the mode of proceeding shall be as follows:—Him who is convicted, the officers of the judges shall lead to a spot without the city where three ways meet, and there slay him and expose his body naked; and each of the magistrates shall cast a stone upon his head and justify the city, and he shall be thrown unburied beyond the border. But what shall we say of him who takes the life which is dearest to him, that is to say, his own; and this not from any disgrace or calamity, but from cowardice and indolence? The manner of his burial and the purification of his crime is a matter for God and the interpreters to decide and for his kinsmen to execute. Let him, at any rate, be buried alone in some uncultivated and nameless spot, and be without name or monument. If a beast kill a man, not in a public contest, let it be prosecuted for murder, and after condemnation slain and cast without the border. Also inanimate things which have caused death, except in the case of lightning and other visitations from heaven, shall be carried without the border. If the body of a dead man be found, and the murderer remain unknown, the trial shall take place all the same, and the unknown murderer shall be warned not to set foot in the temples or come within the borders of the land; if discovered, he shall die, and his body shall be cast out. A man is justified in taking the life of a burglar, of a footpad, of a violator of women or youth; and he may take the life of another with impunity in defence of father, mother, brother, wife, or other relations.

The nurture and education which are necessary to the existence of men have been considered, and the punishment of acts of violence which destroy life. There remain maiming, wounding, and the like, which admit of a similar division into voluntary and involuntary. About this class of actions the preamble shall be: Whereas men would be like wild beasts unless they obeyed the laws, the first duty of citizens is the care of the public interests, which unite and preserve states, as private interests distract them. A man may know what is for the public good, but if he have absolute power, human nature will impel him to seek pleasure instead of virtue, and so darkness will come over his soul and over the state. If he had mind, he would have no need of law; for mind is the perfection of law. But such a freeman, 'whom the truth makes free,' is hardly to be found; and therefore law and order are necessary, which are the second-best, and they regulate things as they exist in part only, but cannot take in the whole. For actions have innumerable characteristics, which must be partly determined by the law and partly left to the judge. The judge must determine the fact; and to him also the punishment must sometimes be left. What shall the law prescribe, and what shall be left to the judge? A city is unfortunate in which the tribunals are either secret and speechless, or, what is worse, noisy and public, when the people, as if they were in a theatre, clap and hoot the various speakers. Such courts a legislator would rather not have; but if he is compelled to have them, he will speak distinctly, and leave as little as possible to their discretion. But where the courts are good, and presided over by well-trained judges, the penalties to be inflicted may be in a great measure left to them; and as there are to be good courts among our colonists, we need not determine beforehand the exact proportion of the penalty and the crime. Returning, then, to our legislator, let us indite a law about wounding, which shall run as follows:—He who wounds with intent to kill, and fails in his object, shall be tried as if he had succeeded. But since God has favoured both him and his victim, instead of being put to death, he shall be allowed to go into exile and take his property with him, the damage due to the sufferer having been previously estimated by the court, which shall be the same as would have tried the case if death had ensued. If a child should intentionally wound a parent, or a servant his master, or brother or sister wound brother or sister with malice prepense, the penalty shall be death. If a husband or wife wound one another with intent to kill, the penalty which is inflicted upon them shall be perpetual exile; and if

they have young children, the guardians shall take care of them and administer their property as if they were orphans. If they have no children, their kinsmen male and female shall meet, and after a consultation with the priests and guardians of the law, shall appoint an heir of the house; for the house and family belong to the state, being a 5040th portion of the whole. And the state is bound to preserve her families happy and holy; therefore, when the heir of a house has committed a capital offence, or is in exile for life, the house is to be purified, and then the kinsmen of the house and the guardians of the law are to find out a family which has a good name and in which there are many sons, and introduce one of them to be the heir and priest of the house. He shall assume the fathers and ancestors of the family, while the first son dies in dishonour and his name is blotted out.

Some actions are intermediate between the voluntary and involuntary. Those done from anger are of this class. If a man wound another in anger, let him pay double the damage, if the injury is curable; or fourfold, if curable, and at the same time dishonourable; and fourfold, if incurable; the amount is to be assessed by the judges. If the wounded person is rendered incapable of military service, the injurer, besides the other penalties, shall serve in his stead, or be liable to a suit for refusing to serve. If brother wounds brother, then their parents and kindred, of both sexes, shall meet and judge the crime. The damages shall be assessed by the parents; and if the amount fixed by them is disputed, an appeal shall be made to the male kindred; or in the last resort to the guardians of the law. Parents who wound their children are to be tried by judges of at least sixty years of age, who have children of their own; and they are to determine whether death, or some lesser punishment, is to be inflicted upon them—no relatives are to take part in the trial. If a slave in anger smite a freeman, he is to be delivered up by his master to the injured person. If the master suspect collusion between the slave and the injured person, he may bring the matter to trial: and if he fail he shall pay three times the injury; or if he obtain a conviction, the contriver of the conspiracy shall be liable to an action for kidnapping. He who wounds another unintentionally shall only pay for the actual harm done.

In all outrages and acts of violence, the elder is to be more regarded than the younger. An injury done by a younger man to an elder is abominable and hateful; but the younger man who is struck by an elder is to bear with him patiently, considering that he who is twenty years older is loco parentis, and remembering the reverence which is due to the Gods who preside over birth. Let him keep his hands, too, from the stranger; instead of taking upon himself to chastise him when he is insolent, he shall bring him before the wardens of the city, who shall examine into the case, and if they find him guilty, shall scourge him with as many blows as he has given; or if he be innocent, they shall warn and threaten his accuser. When an equal strikes an equal, whether an old man an old man, or a young man a young man, let them use only their fists and have no weapons. He who being above forty years of age commences a fight, or retaliates, shall be counted mean and base.

To this preamble, let the law be added: If a man smite another who is his elder by twenty years or more, let the bystander, in case he be older than the combatants, part them; or if he be younger than the person struck, or of the same age with him, let him defend him as he would a father or brother; and let the striker be brought to trial, and if convicted imprisoned for a year or more at the discretion of the judges. If a stranger smite one who is his elder by twenty years or more, he shall be imprisoned for two years, and a metic, in like case, shall suffer three years' imprisonment. He who is standing by and gives no assistance, shall be punished according to his class in one of four penalties—a mina, fifty, thirty, twenty drachmas. The generals and other superior officers of the army shall form the court which tries this class of offences.

Laws are made to instruct the good, and in the hope that there may be no need of them; also to control the bad, whose hardness of heart will not be hindered from crime. The uttermost penalty will fall upon those who lay violent hands upon a parent, having no fear of the Gods above, or of the punishments which will pursue them in the world below. They are too wise in their own conceits to believe in such things: wherefore the tortures which await them in another life must be anticipated in this. Let the law be as follows:—

If a man, being in his right mind, dare to smite his father and mother, or his grandfather and grandmother, let the passer-by come to the rescue; and if he be a metic or stranger who comes to the rescue, he shall have the first place at the games; or if he do not come to the rescue, he shall be a perpetual exile. Let the citizen in the like case be praised or blamed, and the slave receive freedom or a hundred stripes. The wardens of the agora, the city, or the country, as the case may be, shall see to the execution of the law. And he who is an inhabitant of the same place and is present shall come to the rescue, or he shall fall under a curse.

If a man be convicted of assaulting his parents, let him be banished for ever from the city into the country, and let him abstain from all sacred rites; and if he do not abstain, let him be punished by the wardens of the country; and if he return to the city, let him be put to death. If any freeman consort with him, let him be purified before he returns to the city. If a slave strike a freeman, whether citizen or stranger, let the bystander be obliged to seize and deliver him into the hands of the injured person, who may inflict upon him as many blows as he pleases, and shall then return him to his master. The law will be as follows:—The slave who strikes a freeman shall be bound by his master, and not set at liberty without the consent of the person whom he has injured. All these laws apply to women as well as to men.

BOOK X. The greatest wrongs arise out of youthful insolence, and the greatest of all are committed against public temples; they are in the second degree great when private rites and sepulchres are insulted; in the third degree, when committed against parents; in the fourth degree, when they are done against the authority or property of the rulers; in the fifth degree, when the rights of individuals are violated. Most of these offences have been already considered; but there remains the question of admonition and punishment of offences against the Gods. Let the admonition be in the following terms:—No man who ever intentionally did or said anything impious, had a true belief in the existence of the Gods; but either he thought that there were no Gods, or that they did not care about men, or that they were easily appeased by sacrifices and prayers. 'What shall we say or do to such persons?' My good sir, let us first hear the jests which they in their superiority will make upon us. 'What will they say?' Probably something of this kind:—'Strangers you are right in thinking that some of us do not believe in the existence of the Gods; while others assert that they do not care for us, and others that they are propitiated by prayers and offerings. But we want you to argue with us before you threaten; you should prove to us by reasonable evidence that there are Gods, and that they are too good to be bribed. Poets, priests, prophets, rhetoricians, even the best of them, speak to us of atoning for evil, and not of avoiding it. From legislators who profess to be gentle we ask for instruction, which may, at least, have the persuasive power of truth, if no other.' What have you to say? 'Well, there is no difficulty in proving the being of the Gods. The sun, and earth, and stars, moving in their courses, the recurring seasons, furnish proofs of their existence; and there is the general opinion of mankind.' I fear that the unbelievers—not that I care for their opinion—will despise us. You are not aware that their impiety proceeds, not from sensuality, but from ignorance taking the garb of wisdom. 'What do

you mean?' At Athens there are tales current both in prose and verse of a kind which are not tolerated in a well-regulated state like yours. The oldest of them relate the origin of the world, and the birth and life of the Gods. These narratives have a bad influence on family relations; but as they are old we will let them pass, and consider another kind of tales, invented by the wisdom of a younger generation, who, if any one argues for the existence of the Gods and claims that the stars have a divine being, insist that these are mere earth and stones, which can have no care of human things, and that all theology is a cooking up of words. Now what course ought we to take? Shall we suppose some impious man to charge us with assuming the existence of the Gods, and make a defence? Or shall we leave the preamble and go on to the laws? 'There is no hurry, and we have often said that the shorter and worse method should not be preferred to the longer and better. The proof that there are Gods who are good, and the friends of justice, is the best preamble of all our laws.' Come, let us talk with the impious, who have been brought up from their infancy in the belief of religion, and have heard their own fathers and mothers praying for them and talking with the Gods as if they were absolutely convinced of their existence; who have seen mankind prostrate in prayer at the rising and setting of the sun and moon and at every turn of fortune, and have dared to despise and disbelieve all this. Can we keep our temper with them, when they compel us to argue on such a theme? We must; or like them we shall go mad, though with more reason. Let us select one of them and address him as follows:

O my son, you are young; time and experience will make you change many of your opinions. Do not be hasty in forming a conclusion about the divine nature; and let me mention to you a fact which I know. You and your friends are not the first or the only persons who have had these notions about the Gods. There are always a considerable number who are infected by them: I have known many myself, and can assure you that no one who was an unbeliever in his youth ever persisted till he was old in denying the existence of the Gods. The two other opinions, first, that the Gods exist and have no care of men, secondly, that they care for men, but may be propitiated by sacrifices and prayers, may indeed last through life in a few instances, but even this is not common. I would beg of you to be patient, and learn the truth of the legislator and others; in the mean time abstain from impiety. 'So far, our discourse has gone well.'

I will now speak of a strange doctrine, which is regarded by many as the crown of philosophy. They affirm that all things come into being either by art or nature or chance, and that the greater things are done by nature and chance, and the lesser things by art, which receiving from nature the greater creations, moulds and fashions all those lesser works which are termed works of art. Their meaning is that fire, water, earth, and air all exist by nature and chance, and not by art; and that out of these, according to certain chance affinities of opposites, the sun, the moon, the stars, and the earth have been framed, not by any action of mind, but by nature and chance only. Thus, in their opinion, the heaven and earth were created, as well as the animals and plants. Art came later, and is of mortal birth; by her power were invented certain images and very partial imitations of the truth, of which kind are the creations of musicians and painters: but they say that there are other arts which combine with nature, and have a deeper truth, such as medicine, husbandry, gymnastic. Also the greater part of politics they imagine to co-operate with nature, but in a less degree, having more of art, while legislation is declared by them to be wholly a work of art. 'How do you mean?' In the first place, they say that the Gods exist neither by nature nor by art, but by the laws of states, which are different in different countries; and that virtue is one thing by nature and another by convention; and that justice is altogether conventional, made by law, and having authority for the moment only. This is repeated to

young men by sages and poets, and leads to impiety, and the pretended life according to nature and in disobedience to law; for nobody believes the Gods to be such as the law affirms. 'How true! and oh! how injurious to states and to families!' But then, what should the lawgiver do? Should he stand up in the state and threaten mankind with the severest penalties if they persist in their unbelief, while he makes no attempt to win them by persuasion? 'Nay, Stranger, the legislator ought never to weary of trying to persuade the world that there are Gods; and he should declare that law and art exist by nature.' Yes, Cleinias; but these are difficult and tedious questions. 'And shall our patience, which was not exhausted in the enquiry about music or drink, fail now that we are discoursing about the Gods? There may be a difficulty in framing laws, but when written down they remain, and time and diligence will make them clear; if they are useful there would be neither reason nor religion in rejecting them on account of their length.' Most true. And the general spread of unbelief shows that the legislator should do something in vindication of the laws, when they are being undermined by bad men. 'He should.' You agree with me, Cleinias, that the heresy consists in supposing earth, air, fire, and water to be the first of all things. These the heretics call nature, conceiving them to be prior to the soul. 'I agree.' You would further agree that natural philosophy is the source of this impiety—the study appears to be pursued in a wrong way. 'In what way do you mean?' The error consists in transposing first and second causes. They do not see that the soul is before the body, and before all other things, and the author and ruler of them all. And if the soul is prior to the body, then the things of the soul are prior to the things of the body. In other words, opinion, attention, mind, art, law, are prior to sensible qualities; and the first and greater works of creation are the results of art and mind, whereas the works of nature, as they are improperly termed, are secondary and subsequent. 'Why do you say "improperly"?' Because when they speak of nature they seem to mean the first creative power. But if the soul is first, and not fire and air, then the soul above all things may be said to exist by nature. And this can only be on the supposition that the soul is prior to the body. Shall we try to prove that it is so? 'By all means.' I fear that the greenness of our argument will ludicrously contrast with the ripeness of our ages. But as we must go into the water, and the stream is strong, I will first attempt to cross by myself, and if I arrive at the bank, you shall follow. Remembering that you are unaccustomed to such discussions, I will ask and answer the questions myself, while you listen in safety. But first I must pray the Gods to assist at the demonstration of their own existence—if ever we are to call upon them, now is the time. Let me hold fast to the rope, and enter into the depths: Shall I put the question to myself in this form?—Are all things at rest, and is nothing in motion? or are some things in motion, and some things at rest? 'The latter.' And do they move and rest, some in one place, some in more? 'Yes.' There may be (1) motion in the same place, as in revolution on an axis, which is imparted swiftly to the larger and slowly to the lesser circle; and there may be motion in different places, having sometimes (2) one centre of motion and sometimes (3) more. (4) When bodies in motion come against other bodies which are at rest, they are divided by them, and (5) when they are caught between other bodies coming from opposite directions they unite with them; and (6) they grow by union and (7) waste by dissolution while their constitution remains the same, but are (8) destroyed when their constitution fails. There is a growth from one dimension to two, and from a second to a third, which then becomes perceptible to sense; this process is called generation, and the opposite, destruction. We have now enumerated all possible motions with the exception of two. 'What are they?' Just the two with which our enquiry is concerned; for our enquiry relates to the soul. There is one kind of motion which is only able to move other things; there is another which can move itself as well, working in composition and decomposition, by increase and diminution, by generation and destruction. 'Granted.' (9) That which moves and is moved by another is the ninth kind of motion; (10) that which is self-moved and moves others is the tenth. And this tenth kind of motion is the mightiest,

and is really the first, and is followed by that which was improperly called the ninth. 'How do you mean?' Must not that which is moved by others finally depend upon that which is moved by itself? Nothing can be affected by any transition prior to self-motion. Then the first and eldest principle of motion, whether in things at rest or not at rest, will be the principle of self-motion; and that which is moved by others and can move others will be the second. 'True.' Let me ask another question:

What is the name which is given to self-motion when manifested in any material substance? 'Life.' And soul too is life? 'Very good.' And are there not three kinds of knowledge—a knowledge (1) of the essence, (2) of the definition, (3) of the name? And sometimes the name leads us to ask the definition, sometimes the definition to ask the name. For example, number can be divided into equal parts, and when thus divided is termed even, and the definition of even and the word 'even' refer to the same thing. 'Very true.' And what is the definition of the thing which is named 'soul'? Must we not reply, 'The self-moved'? And have we not proved that the self-moved is the source of motion in other things? 'Yes.' And the motion which is not self-moved will be inferior to this? 'True.' And if so, we shall be right in saying that the soul is prior and superior to the body, and the body by nature subject and inferior to the soul? 'Quite right.' And we agreed that if the soul was prior to the body, the things of the soul were prior to the things of the body? 'Certainly.' And therefore desires, and manners, and thoughts, and true opinions, and recollections, are prior to the length and breadth and force of bodies. 'To be sure.' In the next place, we acknowledge that the soul is the cause of good and evil, just and unjust, if we suppose her to be the cause of all things? 'Certainly.' And the soul which orders all things must also order the heavens? 'Of course.' One soul or more? More; for less than two are inconceivable, one good, the other evil. 'Most true.' The soul directs all things by her movements, which we call will, consideration, attention, deliberation, opinion true and false, joy, sorrow, courage, fear, hatred, love, and similar affections. These are the primary movements, and they receive the secondary movements of bodies, and guide all things to increase and diminution, separation and union, and to all the qualities which accompany them—cold, hot, heavy, light, hard, soft, white, black, sweet, bitter; these and other such qualities the soul, herself a goddess, uses, when truly receiving the divine mind she leads all things rightly to their happiness; but under the impulse of folly she works out an opposite result. For the controller of heaven and earth and the circle of the world is either the wise and good soul, or the foolish and vicious soul, working in them. 'What do you mean?' If we say that the whole course and motion of heaven and earth is in accordance with the workings and reasonings of mind, clearly the best soul must have the care of the heaven, and guide it along that better way. 'True.' But if the heavens move wildly and disorderly, then they must be under the guidance of the evil soul. 'True again.' What is the nature of the movement of the soul? We must not suppose that we can see and know the soul with our bodily eyes, any more than we can fix them on the midday sun; it will be safer to look at an image only. 'How do you mean?' Let us find among the ten kinds of motion an image of the motion of the mind. You remember, as we said, that all things are divided into two classes; and some of them were moved and some at rest. 'Yes.' And of those which were moved, some were moved in the same place, others in more places than one. 'Just so.' The motion which was in one place was circular, like the motion of a spherical body; and such a motion in the same place, and in the same relations, is an excellent image of the motion of mind. 'Very true.' The motion of the other sort, which has no fixed place or manner or relation or order or proportion, is akin to folly and nonsense. 'Very true.' After what has been said, it is clear that, since the soul carries round all things, some soul which is either very good or the opposite carries round the circumference of heaven. But that soul can be no other than the best. Again, the soul carries round the sun, moon, and stars, and if the sun has a soul, then either the soul of the sun is within and moves the sun as the

human soul moves the body; or, secondly, the sun is contained in some external air or fire, which the soul provides and through which she operates; or, thirdly, the course of the sun is guided by the soul acting in a wonderful manner without a body. 'Yes, in one of those ways the soul must guide all things.' And this soul of the sun, which is better than the sun, whether driving him in a chariot or employing any other agency, is by every man called a God? 'Yes, by every man who has any sense.' And of the seasons, stars, moon, and year, in like manner, it may be affirmed that the soul or souls from which they derive their excellence are divine; and without insisting on the manner of their working, no one can deny that all things are full of Gods. 'No one.' And now let us offer an alternative to him who denies that there are Gods. Either he must show that the soul is not the origin of all things, or he must live for the future in the belief that there are Gods.

Next, as to the man who believes in the Gods, but refuses to acknowledge that they take care of human things—let him too have a word of admonition. 'Best of men,' we will say to him, 'some affinity to the Gods leads you to honour them and to believe in them. But you have heard the happiness of wicked men sung by poets and admired by the world, and this has drawn you away from your natural piety. Or you have seen the wicked growing old in prosperity, and leaving great offices to their children; or you have watched the tyrant succeeding in his career of crime; and considering all these things you have been led to believe in an irrational way that the Gods take no care of human affairs. That your error may not increase, I will endeavour to purify your soul.' Do you, Megillus and Cleinias, make answer for the youth, and when we come to a difficulty, I will carry you over the water as I did before. 'Very good.' He will easily be convinced that the Gods care for the small as well as the great; for he heard what was said of their goodness and of their having all things under their care. 'He certainly heard.' Then now let us enquire what is meant by the virtue of the Gods. To possess mind belongs to virtue, and the contrary to vice. 'That is what we say.' And is not courage a part of virtue, and cowardice of vice? 'Certainly.' And to the Gods we ascribe virtues; but idleness and indolence are not virtues. 'Of course not.' And is God to be conceived of as a careless, indolent fellow, such as the poet would compare to a stingless drone? 'Impossible.' Can we be right in praising any one who cares for great matters and leaves the small to take care of themselves? Whether God or man, he who does so, must either think the neglect of such matters to be of no consequence, or he is indolent and careless. For surely neither of them can be charged with neglect if they fail to attend to something which is beyond their power? 'Certainly not.'

And now we will examine the two classes of offenders who admit that there are Gods, but say,—the one that they may be appeased, the other that they take no care of small matters: do they not acknowledge that the Gods are omnipotent and omniscient, and also good and perfect? 'Certainly.' Then they cannot be indolent, for indolence is the offspring of idleness, and idleness of cowardice, and there is no cowardice in God. 'True.' If the Gods neglect small matters, they must either know or not know that such things are not to be regarded. But of course they know that they should be regarded, and knowing, they cannot be supposed to neglect their duty, overcome by the seductions of pleasure or pain. 'Impossible.' And do not all human things share in soul, and is not man the most religious of animals and the possession of the Gods? And the Gods, who are the best of owners, will surely take care of their property, small or great. Consider further, that the greater the power of perception, the less the power of action. For it is harder to see and hear the small than the great, but easier to control them. Suppose a physician who had to cure a patient—would he ever succeed if he attended to the great and neglected the little? 'Impossible.' Is not life made up of littles?—the pilot, general, householder, statesman, all attend to small matters; and the builder will tell you that large

stones do not lie well without small ones. And God is not inferior to mortal craftsmen, who in proportion to their skill are careful in the details of their work; we must not imagine the best and wisest to be a lazy good-for-nothing, who wearies of his work and hurries over small and easy matters. 'Never, never!' He who charges the Gods with neglect has been forced to admit his error; but I should like further to persuade him that the author of all has made every part for the sake of the whole, and that the smallest part has an appointed state of action or passion, and that the least action or passion of any part has a presiding minister. You, we say to him, are a minute fraction of this universe, created with a view to the whole; the world is not made for you, but you for the world; for the good artist considers the whole first, and afterwards the parts. And you are annoyed at not seeing how you and the universe are all working together for the best, so far as the laws of the common creation admit. The soul undergoes many changes from her contact with bodies; and all that the player does is to put the pieces into their right places. 'What do you mean?' I mean that God acts in the way which is simplest and easiest. Had each thing been formed without any regard to the rest, the transposition of the Cosmos would have been endless; but now there is not much trouble in the government of the world. For when the king saw the actions of the living souls and bodies, and the virtue and vice which were in them, and the indestructibility of the soul and body (although they were not eternal), he contrived so to arrange them that virtue might conquer and vice be overcome as far as possible; giving them a seat and room adapted to them, but leaving the direction of their separate actions to men's own wills, which make our characters to be what they are. 'That is very probable.' All things which have a soul possess in themselves the principle of change, and in changing move according to fate and law; natures which have undergone lesser changes move on the surface; but those which have changed utterly for the worse, sink into Hades and the infernal world. And in all great changes for good and evil which are produced either by the will of the soul or the influence of others, there is a change of place. The good soul, which has intercourse with the divine nature, passes into a holier and better place; and the evil soul, as she grows worse, changes her place for the worse. This,—as we declare to the youth who fancies that he is neglected of the Gods,—is the law of divine justice—the worse to the worse, the better to the better, like to like, in life and in death. And from this law no man will ever boast that he has escaped. Even if you say—'I am small, and will creep into the earth,' or 'I am high, and will mount to heaven'—you are not so small or so high that you shall not pay the fitting penalty, either here or in the world below. This is also the explanation of the seeming prosperity of the wicked, in whose actions as in a mirror you imagined that you saw the neglect of the Gods, not considering that they make all things contribute to the whole. And how then could you form any idea of true happiness?—If Cleinias and Megillus and I have succeeded in persuading you that you know not what you say about the Gods, God will help you; but if there is still any deficiency of proof, hear our answer to the third opponent.

Enough has been said to prove that the Gods exist and care for us; that they can be propitiated, or that they receive gifts, is not to be allowed or admitted for an instant. 'Let us proceed with the argument.' Tell me, by the Gods, I say, how the Gods are to be propitiated by us? Are they not rulers, who may be compared to charioteers, pilots, perhaps generals, or physicians providing against the assaults of disease, husbandmen observing the perils of the seasons, shepherds watching their flocks? To whom shall we compare them? We acknowledged that the world is full both of good and evil, but having more of evil than of good. There is an immortal conflict going on, in which Gods and demigods are our allies, and we their property; for injustice and folly and wickedness make war in our souls upon justice and temperance and wisdom. There is little virtue to be found on earth; and evil natures fawn upon the Gods, like wild beasts upon their keepers, and believe that they can win them

over by flattery and prayers. And this sin, which is termed dishonesty, is to the soul what disease is to the body, what pestilence is to the seasons, what injustice is to states. 'Quite so.' And they who maintain that the Gods can be appeased must say that they forgive the sins of men, if they are allowed to share in their spoils; as you might suppose wolves to mollify the dogs by throwing them a portion of the prey. 'That is the argument.' But let us apply our images to the Gods—are they the pilots who are won by gifts to wreck their own ships—or the charioteers who are bribed to lose the race—or the generals, or doctors, or husbandmen, who are perverted from their duty—or the dogs who are silenced by wolves? 'God forbid.' Are they not rather our best guardians; and shall we suppose them to fall short even of a moderate degree of human or even canine virtue, which will not betray justice for reward? 'Impossible.' He, then, who maintains such a doctrine, is the most blasphemous of mankind.

And now our three points are proven; and we are agreed (1) that there are Gods, (2) that they care for men, (3) that they cannot be bribed to do injustice. I have spoken warmly, from a fear lest this impiety of theirs should lead to a perversion of life. And our warmth will not have been in vain, if we have succeeded in persuading these men to abominate themselves, and to change their ways. 'So let us hope.' Then now that the preamble is completed, we will make a proclamation commanding the impious to renounce their evil ways; and in case they refuse, the law shall be added:—If a man is guilty of impiety in word or deed, let the bystander inform the magistrates, and let the magistrates bring the offender before the court; and if any of the magistrates refuses to act, he likewise shall be tried for impiety. Any one who is found guilty of such an offence shall be fined at the discretion of the court, and shall also be punished by a term of imprisonment. There shall be three prisons—one for common offences against life and property; another, near by the spot where the Nocturnal Council will assemble, which is to be called the 'House of Reformation'; the third, to be situated in some desolate region in the centre of the country, shall be called by a name indicating retribution. There are three causes of impiety, and from each of them spring impieties of two kinds, six in all. First, there is the impiety of those who deny the existence of the Gods; these may be honest men, haters of evil, who are only dangerous because they talk loosely about the Gods and make others like themselves; but there is also a more vicious class, who are full of craft and licentiousness. To this latter belong diviners, jugglers, despots, demagogues, generals, hierophants of private mysteries, and sophists. The first class shall be only imprisoned and admonished. The second class should be put to death, if they could be, many times over. The two other sorts of impiety, first of those who deny the care of the Gods, and secondly, of those who affirm that they may be propitiated, have similar subdivisions, varying in degree of guilt. Those who have learnt to blaspheme from mere ignorance shall be imprisoned in the House of Reformation for five years at least, and not allowed to see any one but members of the Nocturnal Council, who shall converse with them touching their souls health. If any of the prisoners come to their right mind, at the end of five years let them be restored to sane company; but he who again offends shall die. As to that class of monstrous natures who not only believe that the Gods are negligent, or may be propitiated, but pretend to practise on the souls of quick and dead, and promise to charm the Gods, and to effect the ruin of houses and states—he, I say, who is guilty of these things, shall be bound in the central prison, and shall have no intercourse with any freeman, receiving only his daily rations of food from the public slaves; and when he dies, let him be cast beyond the border; and if any freeman assist to bury him, he shall be liable to a suit for impiety. But the sins of the father shall not be visited upon his children, who, like other orphans, shall be educated by the state. Further, let there be a general law which will have a tendency to repress impiety. No man shall have religious services in his house, but he shall go with his friends to pray and sacrifice in

the temples. The reason of this is, that religious institutions can only be framed by a great intelligence. But women and weak men are always consecrating the event of the moment; they are under the influence of dreams and apparitions, and they build altars and temples in every village and in any place where they have had a vision. The law is designed to prevent this, and also to deter men from attempting to propitiate the Gods by secret sacrifices, which only multiply their sins. Therefore let the law run:—No one shall have private religious rites; and if a man or woman who has not been previously noted for any impiety offend in this way, let them be admonished to remove their rites to a public temple; but if the offender be one of the obstinate sort, he shall be brought to trial before the guardians, and if he be found guilty, let him die.

BOOK XI. As to dealings between man and man, the principle of them is simple—Thou shalt not take what is not thine; and shalt do to others as thou wouldst that they should do to thee. First, of treasure trove:—May I never desire to find, or lift, if I find, or be induced by the counsel of diviners to lift, a treasure which one who was not my ancestor has laid down; for I shall not gain so much in money as I shall lose in virtue. The saying, 'Move not the immovable,' may be repeated in a new sense; and there is a common belief which asserts that such deeds prevent a man from having a family. To him who is careless of such consequences, and, despising the word of the wise, takes up a treasure which is not his—what will be done by the hand of the Gods, God only knows,—but I would have the first person who sees the offender, inform the wardens of the city or the country; and they shall send to Delphi for a decision, and whatever the oracle orders, they shall carry out. If the informer be a freeman, he shall be honoured, and if a slave, set free; but he who does not inform, if he be a freeman, shall be dishonoured, and if a slave, shall be put to death. If a man leave anywhere anything great or small, intentionally or unintentionally, let him who may find the property deem the deposit sacred to the Goddess of ways. And he who appropriates the same, if he be a slave, shall be beaten with many stripes; if a freeman, he shall pay tenfold, and be held to have done a dishonourable action. If a person says that another has something of his, and the other allows that he has the property in dispute, but maintains it to be his own, let the ownership be proved out of the registers of property. If the property is registered as belonging to some one who is absent, possession shall be given to him who offers sufficient security on behalf of the absentee; or if the property is not registered, let it remain with the three eldest magistrates, and if it should be an animal, the defeated party must pay the cost of its keep. A man may arrest his own slave, and he may also imprison for safe-keeping the runaway slave of a friend. Any one interfering with him must produce three sureties; otherwise, he will be liable to an action for violence, and if he be cast, must pay a double amount of damages to him from whom he has taken the slave. A freedman who does not pay due respect to his patron, may also be seized. Due respect consists in going three times a month to the house of his patron, and offering to perform any lawful service for him; he must also marry as his master pleases; and if his property be greater than his master's, he must hand over to him the excess. A freedman may not remain in the state, except with the consent of the magistrates and of his master, for more than twenty years; and whenever his census exceeds that of the third class, he must in any case leave the country within thirty days, taking his property with him. If he break this regulation, the penalty shall be death, and his property shall be confiscated. Suits about these matters are to be decided in the courts of the tribes, unless the parties have settled the matter before a court of neighbours or before arbiters. If anybody claim a beast, or anything else, let the possessor refer to the seller or giver of the property within thirty days, if the latter reside in the city, or, if the goods have been received from a stranger, within five months, of which the middle month shall include the summer solstice. All purchases and exchanges are to be made in the agora, and paid for on the spot;

the law will not allow credit to be given. No law shall protect the money subscribed for clubs. He who sells anything of greater value than fifty drachmas shall abide in the city for ten days, and let his whereabouts be known to the buyer, in case of any reclamation. When a slave is sold who is subject to epilepsy, stone, or any other invisible disorder, the buyer, if he be a physician or trainer, or if he be warned, shall have no redress; but in other cases within six months, or within twelve months in epileptic disorders, he may bring the matter before a jury of physicians to be agreed upon by both parties; and the seller who loses the suit, if he be an expert, shall pay twice the price; or if he be a private person, the bargain shall be rescinded, and he shall simply refund. If a person knowingly sells a homicide to another, who is informed of his character, there is no redress. But if the judges—who are to be the five youngest guardians of the law—decide that the purchaser was not aware, then the seller is to pay threefold, and to purify the house of the buyer.

He who exchanges money for money, or beast for beast, must warrant either of them to be sound and good. As in the case of other laws, let us have a preamble, relating to all this class of crime. Adulteration is a kind of falsehood about which the many commonly say that at proper times the practice may often be right, but they do not define at what times. But the legislator will tell them, that no man should invoke the Gods when he is practising deceit or fraud, in word or deed. For he is the enemy of heaven, first, who swears falsely, not thinking of the Gods by whom he swears, and secondly, he who lies to his superiors. (Now the superiors are the betters of inferiors,—the elder of the younger, parents of children, men of women, and rulers of subjects.) The trader who cheats in the agora is a liar and is perjured—he respects neither the name of God nor the regulations of the magistrates. If after hearing this he will still be dishonest, let him listen to the law:—The seller shall not have two prices on the same day, neither must he puff his goods, nor offer to swear about them. If he break the law, any citizen not less than thirty years of age may smite him. If he sell adulterated goods, the slave or metic who informs against him shall have the goods; the citizen who brings such a charge, if he prove it, shall offer up the goods in question to the Gods of the agora; or if he fail to prove it, shall be dishonoured. He who is detected in selling adulterated goods shall be deprived of them, and shall receive a stripe for every drachma of their value. The wardens of the agora and the guardians of the law shall take experienced persons into counsel, and draw up regulations for the agora. These shall be inscribed on a column in front of the court of the wardens of the agora.—As to the wardens of the city, enough has been said already. But if any omissions in the law are afterwards discovered, the wardens and the guardians shall supply them, and have them inscribed after the original regulations on a column before the court of the wardens of the city.

Next in order follows the subject of retail trades, which in their natural use are the reverse of mischievous; for every man is a benefactor who reduces what is unequal to symmetry and proportion. Money is the instrument by which this is accomplished, and the shop-keeper, the merchant, and hotel-keeper do but supply the wants and equalize the possessions of mankind. Why, then, does any dishonour attach to a beneficent occupation? Let us consider the nature of the accusation first, and then see whether it can be removed. 'What is your drift?' Dear Cleinias, there are few men who are so gifted by nature, and improved by education, as to be able to control the desire of making money; or who are sober in their wishes and prefer moderation to accumulation. The great majority think that they can never have enough, and the consequence is that retail trade has become a reproach. Whereas, however ludicrous the idea may seem, if noble men and noble women could be induced to open a shop, and to trade upon incorruptible principles, then the aspect of things would change, and retail traders would be regarded as nursing fathers and mothers. In our own day the trader goes and

settles in distant places, and receives the weary traveller hospitably at first, but in the end treats him as an enemy and a captive, whom he only liberates for an enormous ransom. This is what has brought retail trade into disrepute, and against this the legislator ought to provide. Men have said of old, that to fight against two opponents is hard; and the two opponents of whom I am thinking are wealth and poverty—the one corrupting men by luxury; the other, through misery, depriving them of the sense of shame. What remedies can a city find for this disease? First, to have as few retail traders as possible; secondly, to give retail trade over to a class whose corruption will not injure the state; and thirdly, to restrain the insolence and meanness of the retailers.

Let us make the following laws:—(1) In the city of the Magnetes none of the 5040 citizens shall be a retailer or merchant, or do any service to any private persons who do not equally serve him, except to his father and mother and their fathers and mothers, and generally to his elders who are freemen, and whom he serves as a freeman. He who follows an illiberal pursuit may be cited for dishonouring his family, and kept in bonds for a year; and if he offend again, he shall be bound for two years; and for every offence his punishment shall be doubled: (2) Every retailer shall be a metic or a foreigner: (3) The guardians of the law shall have a special care of this part of the community, whose calling exposes them to peculiar temptations. They shall consult with persons of experience, and find out what prices will yield the traders a moderate profit, and fix them.

When a man does not fulfil his contract, he being under no legal or other impediment, the case shall be brought before the court of the tribes, if not previously settled by arbitration. The class of artisans is consecrated to Hephaestus and Athene; the makers of weapons to Ares and Athene: all of whom, remembering that the Gods are their ancestors, should be ashamed to deceive in the practice of their craft. If any man is lazy in the fulfilment of his work, and fancies, foolish fellow, that his patron God will not deal hardly with him, he will be punished by the God; and let the law follow:—He who fails in his undertaking shall pay the value, and do the work gratis in a specified time. The contractor, like the seller, is enjoined by law to charge the simple value of his work; in a free city, art should be a true thing, and the artist must not practise on the ignorance of others. On the other hand, he who has ordered any work and does not pay the workman according to agreement, dishonours Zeus and Athene, and breaks the bonds of society. And if he does not pay at the time agreed, let him pay double; and although interest is forbidden in other cases, let the workman receive after the expiration of a year interest at the rate of an obol a month for every drachma (equal to 200 per cent. per ann.). And we may observe by the way, in speaking of craftsmen, that if our military craft do their work well, the state will praise those who honour them, and blame those who do not honour them. Not that the first place of honour is to be assigned to the warrior; a higher still is reserved for those who obey the laws.

Most of the dealings between man and man are now settled, with the exception of such as relate to orphans and guardianships. These lead us to speak of the intentions of the dying, about which we must make regulations. I say 'must'; for mankind cannot be allowed to dispose of their property as they please, in ways at variance with one another and with law and custom. But a dying person is a strange being, and is not easily managed; he wants to be master of all he has, and is apt to use angry words. He will say,—'May I not do what I will with my own, and give much to my friends, and little to my enemies?' 'There is reason in that.' O Cleinias, in my judgment the older lawgivers were too soft-hearted, and wanting in insight into human affairs. They were too ready to listen to the outcry of a dying man, and hence they were induced to give him an absolute power of bequest. But I would say

to him:—O creature of a day, you know neither what is yours nor yourself: for you and your property are not your own, but belong to your whole family, past and to come, and property and family alike belong to the State. And therefore I must take out of your hands the charge of what you leave behind you, with a view to the interests of all. And I hope that you will not quarrel with us, now that you are going the way of all mankind; we will do our best for you and yours when you are no longer here. Let this be our address to the living and dying, and let the law be as follows:—The father who has sons shall appoint one of them to be the heir of the lot; and if he has given any other son to be adopted by another, the adoption shall also be recorded; and if he has still a son who has no lot, and has a chance of going to a colony, he may give him what he has more than the lot; or if he has more than one son unprovided for, he may divide the money between them. A son who has a house of his own, and a daughter who is betrothed, are not to share in the bequest of money; and the son or daughter who, having inherited one lot, acquires another, is to bequeath the new inheritance to the next of kin. If a man have only daughters, he may adopt the husband of any one of them; or if he have lost a son, let him make mention of the circumstance in his will and adopt another. If he have no children, he may give away a tenth of his acquired property to whomsoever he likes; but he must adopt an heir to inherit the lot, and may leave the remainder to him. Also he may appoint guardians for his children; or if he die without appointing them or without making a will, the nearest kinsmen,—two on the father's and two on the mother's side,—and one friend of the departed, shall be appointed guardians. The fifteen eldest guardians of the law are to have special charge of all orphans, the whole number of fifteen being divided into bodies of three, who will succeed one another according to seniority every year for five years. If a man dying intestate leave daughters, he must pardon the law which marries them for looking, first to kinship, and secondly to the preservation of the lot. The legislator cannot regard the character of the heir, which to the father is the first consideration. The law will therefore run as follows:—If the intestate leave daughters, husbands are to be found for them among their kindred according to the following table of affinity: first, their father's brothers; secondly, the sons of their father's brothers; thirdly, of their father's sisters; fourthly, their great-uncles; fifthly, the sons of a great-uncle; sixthly, the sons of a great-aunt. The kindred in such cases shall always be reckoned in this way; the relationship shall proceed upwards through brothers and sisters and brothers' and sisters' children, and first the male line must be taken and then the female. If there is a dispute in regard to fitness of age for marriage, this the judge shall decide, after having made an inspection of the youth naked, and of the maiden naked down to the waist. If the maiden has no relations within the degree of third cousin, she may choose whom she likes, with the consent of her guardians; or she may even select some one who has gone to a colony, and he, if he be a kinsman, will take the lot by law; if not, he must have her guardians' consent, as well as hers. When a man dies without children and without a will, let a young man and a young woman go forth from the family and take up their abode in the desolate house. The woman shall be selected from the kindred in the following order of succession:—first, a sister of the deceased; second, a brother's daughter; third, a sister's daughter; fourth, a father's sister; fifth, a daughter of a father's brother; sixth, a daughter of a father's sister. For the man the same order shall be observed as in the preceding case. The legislator foresees that laws of this kind will sometimes press heavily, and that his intention cannot always be fulfilled; as for example, when there are mental and bodily defects in the persons who are enjoined to marry. But he must be excused for not being always able to reconcile the general principles of public interest with the particular circumstances of individuals; and he is willing to allow, in like manner, that the individual cannot always do what the lawgiver wishes. And then arbiters must be chosen, who will determine equitably the cases which may arise under the law: e.g. a rich cousin may sometimes desire a grander match, or the requirements of the law can only be fulfilled by marrying a madwoman. To

meet such cases let the following law be enacted:—If any one comes forward and says that the lawgiver, had he been alive, would not have required the carrying out of the law in a particular case, let him go to the fifteen eldest guardians of the law who have the care of orphans; but if he thinks that too much power is thus given to them, he may bring the case before the court of select judges.

Thus will orphans have a second birth. In order to make their sad condition as light as possible, the guardians of the law shall be their parents, and shall be admonished to take care of them. And what admonition can be more appropriate than the assurance which we formerly gave, that the souls of the dead watch over mortal affairs? About this there are many ancient traditions, which may be taken on trust from the legislator. Let men fear, in the first place, the Gods above; secondly, the souls of the departed, who naturally care for their own descendants; thirdly, the aged living, who are quick to hear of any neglect of family duties, especially in the case of orphans. For they are the holiest and most sacred of all deposits, and the peculiar care of guardians and magistrates; and those who try to bring them up well will contribute to their own good and to that of their families. He who listens to the preamble of the law will never know the severity of the legislator; but he who disobeys, and injures the orphan, will pay twice the penalty he would have paid if the parents had been alive. More laws might have been made about orphans, did we not suppose that the guardians have children and property of their own which are protected by the laws; and the duty of the guardian in our state is the same as that of a father, though his honour or disgrace is greater. A legal admonition and threat may, however, be of service: the guardian of the orphan and the guardian of the law who is over him, shall love the orphan as their own children, and take more care of his or her property than of their own. If the guardian of the child neglect his duty, the guardian of the law shall fine him; and the guardian may also have the magistrate tried for neglect in the court of select judges, and he shall pay, if convicted, a double penalty. Further, the guardian of the orphan who is careless or dishonest may be fined on the information of any of the citizens in a fourfold penalty, half to go to the orphan and half to the prosecutor of the suit. When the orphan is of age, if he thinks that he has been ill-used, his guardian may be brought to trial by him within five years, and the penalty shall be fixed by the court. Or if the magistrate has neglected the orphan, he shall pay damages to him; but if he have defrauded him, he shall make compensation and also be deposed from his office of guardian of the law.

If irremediable differences arise between fathers and sons, the father may want to renounce his son, or the son may indict his father for imbecility: such violent separations only take place when the family are 'a bad lot'; if only one of the two parties is bad, the differences do not grow to so great a height. But here arises a difficulty. Although in any other state a son who is disinherited does not cease to be a citizen, in ours he does; for the number of citizens cannot exceed 5040. And therefore he who is to suffer such a penalty ought to be abjured, not only by his father, but by the whole family. The law, then, should run as follows:—If any man's evil fortune or temper incline him to disinherit his son, let him not do so lightly or on the instant; but let him have a council of his own relations and of the maternal relations of his son, and set forth to them the propriety of disinheriting him, and allow his son to answer. And if more than half of the kindred male and female, being of full age, condemn the son, let him be disinherited. If any other citizen desires to adopt him, he may, for young men's characters often change in the course of life. But if, after ten years, he remains unadopted, let him be sent to a colony. If disease, or old age, or evil disposition cause a man to go out of his mind, and he is ruining his house and property, and his son doubts about indicting him for insanity, let him lay the case before the eldest guardians of the law, and consult with them. And if they advise him to proceed, and

the father is decided to be imbecile, he shall have no more control over his property, but shall live henceforward like a child in the house.

If a man and his wife are of incompatible tempers, ten guardians of the law and ten of the matrons who regulate marriage shall take their case in hand, and reconcile them, if possible. If, however, their swelling souls cannot be pacified, the wife may try and find a new husband, and the husband a new wife; probably they are not very gentle creatures, and should therefore be joined to milder natures. The younger of those who are separated should also select their partners with a view to the procreation of children; while the older should seek a companion for their declining years. If a woman dies, leaving children male or female, the law will advise, but not compel, the widower to abstain from a second marriage; if she leave no children, he shall be compelled to marry. Also a widow, if she is not old enough to live honestly without marriage, shall marry again; and in case she have no children, she should marry for the sake of them. There is sometimes an uncertainty which parent the offspring is to follow: in unions of a female slave with a male slave, or with a freedman or free man, or of a free woman with a male slave, the offspring is to belong to the master; but if the master or mistress be themselves the parent of the child, the slave and the child are to be sent away to another land.

Concerning duty to parents, let the preamble be as follows:—We honour the Gods in their lifeless images, and believe that we thus propitiate them. But he who has an aged father or mother has a living image, which if he cherish it will do him far more good than any statue. 'What do you mean by cherishing them?' I will tell you. Oedipus and Amyntor and Theseus cursed their children, and their curses took effect. This proves that the Gods hear the curses of parents who are wronged; and shall we doubt that they hear and fulfil their blessings too?' 'Surely not.' And, as we were saying, no image is more honoured by the Gods than an aged father and mother, to whom when honour is done, the God who hears their prayers is rejoiced, and their influence is greater than that of the lifeless statue; for they pray that good or evil may come to us in proportion as they are honoured or dishonoured, but the statue is silent. 'Excellent.' Good men are glad when their parents live to extreme old age, or if they depart early, lament their loss; but to bad man their parents are always terrible. Wherefore let every one honour his parents, and if this preamble fails of influencing him, let him hear the law:—If any one does not take sufficient care of his parents, let the aggrieved person inform the three eldest guardians of the law and three of the women who are concerned with marriages. Women up to forty years of age, and men up to thirty, who thus offend, shall be beaten and imprisoned. After that age they are to be brought before a court composed of the eldest citizens, who may inflict any punishment upon them which they please. If the injured party cannot inform, let any freeman who hears of the case inform; a slave who does so shall be set free,—if he be the slave of the one of the parties, by the magistrate,—if owned by another, at the cost of the state; and let the magistrates, take care that he is not wronged by any one out of revenge.

The injuries which one person does to another by the use of poisons are of two kinds;—one affects the body by the employment of drugs and potions; the other works on the mind by the practice of sorcery and magic. Fatal cases of either sort have been already mentioned; and now we must have a law respecting cases which are not fatal. There is no use in arguing with a man whose mind is disturbed by waxen images placed at his own door, or on the sepulchre of his father or mother, or at a spot where three ways meet. But to the wizards themselves we must address a solemn preamble, begging them not to treat the world as if they were children, or compel the legislator to expose them, and to show men that the poisoner who is not a physician and the wizard who is not a prophet or

diviner are equally ignorant of what they are doing. Let the law be as follows:—He who by the use of poison does any injury not fatal to a man or his servants, or any injury whether fatal or not to another's cattle or bees, is to be punished with death if he be a physician, and if he be not a physician he is to suffer the punishment awarded by the court: and he who injures another by sorcery, if he be a diviner or prophet, shall be put to death; and, if he be not a diviner, the court shall determine what he ought to pay or suffer.

Any one who injures another by theft or violence shall pay damages at least equal to the injury; and besides the compensation, a suitable punishment shall be inflicted. The foolish youth who is the victim of others is to have a lighter punishment; he whose folly is occasioned by his own jealousy or desire or anger is to suffer more heavily. Punishment is to be inflicted, not for the sake of vengeance, for what is done cannot be undone, but for the sake of prevention and reformation. And there should be a proportion between the punishment and the crime, in which the judge, having a discretion left him, must, by estimating the crime, second the legislator, who, like a painter, furnishes outlines for him to fill up.

A madman is not to go about at large in the city, but is to be taken care of by his relatives. Neglect on their part is to be punished in the first class by a fine of a hundred drachmas, and proportionally in the others. Now madness is of various kinds; in addition to that which arises from disease there is the madness which originates in a passionate temperament, and makes men when engaged in a quarrel use foul and abusive language against each other. This is intolerable in a well-ordered state; and therefore our law shall be as follows:—No one is to speak evil of another, but when men differ in opinion they are to instruct one another without speaking evil. Nor should any one seek to rouse the passions which education has calmed; for he who feeds and nurses his wrath is apt to make ribald jests at his opponent, with a loss of character or dignity to himself. And for this reason no one may use any abusive word in a temple, or at sacrifices, or games, or in any public assembly, and he who offends shall be censured by the proper magistrate; and the magistrate, if he fail to censure him, shall not claim the prize of virtue. In any other place the angry man who indulges in revilings, whether he be the beginner or not, may be chastised by an elder. The reviler is always trying to make his opponent ridiculous; and the use of ridicule in anger we cannot allow. We forbid the comic poet to ridicule our citizens, under a penalty of expulsion from the country or a fine of three minae. Jest in which there is no offence may be allowed; but the question of offence shall be determined by the director of education, who is to be the licenser of theatrical performances.

The righteous man who is in adversity will not be allowed to starve in a well-ordered city; he will never be a beggar. Nor is a man to be pitied, merely because he is hungry, unless he be temperate. Therefore let the law be as follows:—Let there be no beggars in our state; and he who begs shall be expelled by the magistrates both from town and country.

If a slave, male or female, does any harm to the property of another, who is not himself a party to the harm, the master shall compensate the injury or give up the offending slave. But if the master argue that the charge has arisen by collusion, with the view of obtaining the slave, he may put the plaintiff on his trial for malpractices, and recover from him twice the value of the slave; or if he is cast he must make good the damage and deliver up the slave. The injury done by a horse or other animal shall be compensated in like manner.

A witness who will not come of himself may be summoned, and if he fail in appearing, he shall be liable for any harm which may ensue: if he swears that he does not know, he may leave the court. A judge who is called upon as a witness must not vote. A free woman, if she is over forty, may bear witness and plead, and, if she have no husband, she may also bring an action. A slave, male or female, and a child may witness and plead only in case of murder, but they must give sureties that they will appear at the trial, if they should be charged with false witness. Such charges must be made pending the trial, and the accusations shall be sealed by both parties and kept by the magistrates until the trial for perjury comes off. If a man is twice convicted of perjury, he is not to be required, if three times, he is not to be allowed to bear witness, or, if he persists in bearing witness, is to be punished with death. When more than half the evidence is proved to be false there must be a new trial.

The best and noblest things in human life are liable to be defiled and perverted. Is not justice the civilizer of mankind? And yet upon the noble profession of the advocate has come an evil name. For he is said to make the worse appear the better cause, and only requires money in return for his services. Such an art will be forbidden by the legislator, and if existing among us will be requested to depart to another city. To the disobedient let the voice of the law be heard saying:—He who tries to pervert justice in the minds of the judges, or to increase litigation, shall be brought before the supreme court. If he does so from contentiousness, let him be silenced for a time, and, if he offend again, put to death. If he have acted from a love of gain, let him be sent out of the country if he be a foreigner, or if he be a citizen let him be put to death.

BOOK XII. If a false message be taken to or brought from other states, whether friendly or hostile, by ambassadors or heralds, they shall be indicted for having dishonoured their sacred office, and, if convicted, shall suffer a penalty.—Stealing is mean; robbery is shameless. Let no man deceive himself by the supposed example of the Gods, for no God or son of a God ever really practised either force or fraud. On this point the legislator is better informed than all the poets put together. He who listens to him shall be for ever happy, but he who will not listen shall have the following law directed against him:—He who steals much, or he who steals little of the public property is deserving of the same penalty; for they are both impelled by the same evil motive. When the law punishes one man more lightly than another, this is done under the idea, not that he is less guilty, but that he is more curable. Now a thief who is a foreigner or slave may be curable; but the thief who is a citizen, and has had the advantages of education, should be put to death, for he is incurable.

Much consideration and many regulations are necessary about military expeditions; the great principal of all is that no one, male or female, in war or peace, in great matters or small, shall be without a commander. Whether men stand or walk, or drill, or pursue, or retreat, or wash, or eat, they should all act together and in obedience to orders. We should practise from our youth upwards the habits of command and obedience. All dances, relaxations, endurances of meats and drinks, of cold and heat, and of hard couches, should have a view to war, and care should be taken not to destroy the natural covering and use of the head and feet by wearing shoes and caps; for the head is the lord of the body, and the feet are the best of servants. The soldier should have thoughts like these; and let him hear the law:—He who is enrolled shall serve, and if he absent himself without leave he shall be indicted for failure of service before his own branch of the army when the expedition returns, and if he be found guilty he shall suffer the penalty which the courts award, and never be allowed to contend for any prize of valour, or to accuse another of misbehaviour in military matters. Desertion shall also

be tried and punished in the same manner. After the courts for trying failure of service and desertion have been held, the generals shall hold another court, in which the several arms of the service will award prizes for the expedition which has just concluded. The prize is to be a crown of olive, which the victor shall offer up at the temple of his favourite war God...In any suit which a man brings, let the indictment be scrupulously true, for justice is an honourable maiden, to whom falsehood is naturally hateful. For example, when men are prosecuted for having lost their arms, great care should be taken by the witnesses to distinguish between cases in which they have been lost from necessity and from cowardice. If the hero Patroclus had not been killed but had been brought back alive from the field, he might have been reproached with having lost the divine armour. And a man may lose his arms in a storm at sea, or from a fall, and under many other circumstances. There is a distinction of language to be observed in the use of the two terms, 'thrower away of a shield' (ripsaspis), and 'loser of arms' (apoboleus oplon), one being the voluntary, the other the involuntary relinquishment of them. Let the law then be as follows:—If any one is overtaken by the enemy, having arms in his hands, and he leaves them behind him voluntarily, choosing base life instead of honourable death, let justice be done. The old legend of Caeneus, who was changed by Poseidon from a woman into a man, may teach by contraries the appropriate punishment. Let the thrower away of his shield be changed from a man into a woman—that is to say, let him be all his life out of danger, and never again be admitted by any commander into the ranks of his army; and let him pay a heavy fine according to his class. And any commander who permits him to serve shall also be punished by a fine.

All magistrates, whatever be their tenure of office, must give an account of their magistracy. But where shall we find the magistrate who is worthy to supervise them or look into their short-comings and crooked ways? The examiner must be more than man who is sufficient for these things. For the truth is that there are many causes of the dissolution of states; which, like ships or animals, have their cords, and girders, and sinews easily relaxed, and nothing tends more to their welfare and preservation than the supervision of them by examiners who are better than the magistrates; failing in this they fall to pieces, and each becomes many instead of one. Wherefore let the people meet after the summer solstice, in the precincts of Apollo and the Sun, and appoint three men of not less than fifty years of age. They shall proceed as follows:—Each citizen shall select some one, not himself, whom he thinks the best. The persons selected shall be reduced to one half, who have the greatest number of votes, if they are an even number; but if an odd number, he who has the smallest number of votes shall be previously withdrawn. The voting shall continue in the same manner until three only remain; and if the number of votes cast for them be equal, a distinction between the first, second, and third shall be made by lot. The three shall be crowned with an olive wreath, and proclamation made, that the city of the Magnetes, once more preserved by the Gods, presents her three best men to Apollo and the Sun, to whom she dedicates them as long as their lives answer to the judgment formed of them. They shall choose in the first year of their office twelve examiners, to continue until they are seventy-five years of age; afterwards three shall be added annually. While they hold office, they shall dwell within the precinct of the God. They are to divide all the magistracies into twelve classes, and may apply any methods of enquiry, and inflict any punishments which they please; in some cases singly, in other cases together, announcing the acquittal or punishment of the magistrate on a tablet which they will place in the agora. A magistrate who has been condemned by the examiners may appeal to the select judges, and, if he gain his suit, may in turn prosecute the examiners; but if the appellant is cast, his punishment shall be doubled, unless he was previously condemned to death.

And what honours shall be paid to these examiners, whom the whole state counts worthy of the rewards of virtue? They shall have the first place at all sacrifices and other ceremonies, and in all assemblies and public places; they shall go on sacred embassies, and have the exclusive privilege of wearing a crown of laurel. They are priests of Apollo and the Sun, and he of their number who is judged first shall be high priest, and give his name to the year. The manner of their burial, too, shall be different from that of the other citizens. The colour of their funeral array shall be white, and, instead of the voice of lamentation, around the bier shall stand a chorus of fifteen boys and fifteen maidens, chanting hymns in honour of the deceased in alternate strains during an entire day; and at dawn a band of a hundred youths shall carry the bier to the grave, marching in the garb of warriors, and the boys in front of the bier shall sing their national hymn, while the maidens and women past child-bearing follow after. Priests and priestesses may also follow, unless the Pythian oracle forbids. The sepulchre shall be a vault built underground, which will last for ever, having couches of stone placed side by side; on one of these they shall lay the departed saint, and then cover the tomb with a mound, and plant trees on every side except one, where an opening shall be left for other interments. Every year there shall be games—musical, gymnastic, or equestrian, in honour of those who have passed every ordeal. But if any of them, after having been acquitted on any occasion, begin to show the wickedness of human nature, he who pleases may bring them to trial before a court composed of the guardians of the law, and of the select judges, and of any of the examiners who are alive. If he be convicted he shall be deprived of his honours, and if the accuser do not obtain a fifth part of the votes, he shall pay a fine according to his class.

What is called the judgment of Rhadamanthus is suited to 'ages of faith,' but not to our days. He knew that his contemporaries believed in the Gods, for many of them were the sons of Gods; and he thought that the easiest and surest method of ending litigation was to commit the decision to Heaven. In our own day, men either deny the existence of Gods or their care of men, or maintain that they may be bribed by attentions and gifts; and the procedure of Rhadamanthus would therefore be out of date. When the religious ideas of mankind change, their laws should also change. Thus oaths should no longer be taken from plaintiff and defendant; simple statements of affirmation and denial should be substituted. For there is something dreadful in the thought, that nearly half the citizens of a state are perjured men. There is no objection to an oath, where a man has no interest in forswearing himself; as, for example, when a judge is about to give his decision, or in voting at an election, or in the judgment of games and contests. But where there would be a premium on perjury, oaths and imprecations should be prohibited as irrelevant, like appeals to feeling. Let the principles of justice be learned and taught without words of evil omen. The oaths of a stranger against a stranger may be allowed, because strangers are not permitted to become permanent residents in our state.

Trials in private causes are to be decided in the same manner as lesser offences against the state. The non-attendance at a chorus or sacrifice, or the omission to pay a war-tax, may be regarded as in the first instance remediable, and the defaulter may give security; but if he forfeits the security, the goods pledged shall be sold and the money given to the state. And for obstinate disobedience, the magistrate shall have the power of inflicting greater penalties.

A city which is without trade or commerce must consider what it will do about the going abroad of its own people and the admission of strangers. For out of intercourse with strangers there arises great confusion of manners, which in most states is not of any consequence, because the confusion exists already; but in a well-ordered state it may be a great evil. Yet the absolute prohibition of foreign travel,

or the exclusion of strangers, is impossible, and would appear barbarous to the rest of mankind. Public opinion should never be lightly regarded, for the many are not so far wrong in their judgments as in their lives. Even the worst of men have often a divine instinct, which enables them to judge of the differences between the good and bad. States are rightly advised when they desire to have the praise of men; and the greatest and truest praise is that of virtue. And our Cretan colony should, and probably will, have a character for virtue, such as few cities have. Let this, then, be our law about foreign travel and the reception of strangers:—No one shall be allowed to leave the country who is under forty years of age—of course military service abroad is not included in this regulation—and no one at all except in a public capacity. To the Olympic, and Pythian, and Nemean, and Isthmian games, shall be sent the fairest and best and bravest, who shall support the dignity of the city in time of peace. These, when they come home, shall teach the youth the inferiority of all other governments. Besides those who go on sacred missions, other persons shall be sent out by permission of the guardians to study the institutions of foreign countries. For a people which has no experience, and no knowledge of the characters of men or the reason of things, but lives by habit only, can never be perfectly civilized. Moreover, in all states, bad as well as good, there are holy and inspired men; these the citizen of a well-ordered city should be ever seeking out; he should go forth to find them over sea and over land, that he may more firmly establish institutions in his own state which are good already and amend the bad. 'What will be the best way of accomplishing such an object?' In the first place, let the visitor of foreign countries be between fifty and sixty years of age, and let him be a citizen of repute, especially in military matters. On his return he shall appear before the Nocturnal Council: this is a body which sits from dawn to sunrise, and includes amongst its members the priests who have gained the prize of virtue, and the ten oldest guardians of the law, and the director and past directors of education; each of whom has power to bring with him a younger friend of his own selection, who is between thirty and forty. The assembly thus constituted shall consider the laws of their own and other states, and gather information relating to them. Anything of the sort which is approved by the elder members of the council shall be studied with all diligence by the younger; who are to be specially watched by the rest of the citizens, and shall receive honour, if they are deserving of honour, or dishonour, if they prove inferior. This is the assembly to which the visitor of foreign countries shall come and tell anything which he has heard from others in the course of his travels, or which he has himself observed. If he be made neither better nor worse, let him at least be praised for his zeal; and let him receive still more praise, and special honour after death, if he be improved. But if he be deteriorated by his travels, let him be prohibited from speaking to any one; and if he submit, he may live as a private individual: but if he be convicted of attempting to make innovations in education and the laws, let him die.

Next, as to the reception of strangers. Of these there are four classes:—First, merchants, who, like birds of passage, find their way over the sea at a certain time of the year, that they may exhibit their wares. These should be received in markets and public buildings without the city, by proper officers, who shall see that justice is done them, and shall also watch against any political designs which they may entertain; no more intercourse is to be held with them than is absolutely necessary. Secondly, there are the visitors at the festivals, who shall be entertained by hospitable persons at the temples for a reasonable time; the priests and ministers of the temples shall have a care of them. In small suits brought by them or against them, the priests shall be the judges; but in the more important, the wardens of the agora. Thirdly, there are ambassadors of foreign states; these are to be honourably received by the generals and commanders, and placed under the care of the Prytanes and of the persons with whom they are lodged. Fourthly, there is the philosophical stranger, who, like our own

spectators, from time to time goes to see what is rich and rare in foreign countries. Like them he must be fifty years of age: and let him go unbidden to the doors of the wise and rich, that he may learn from them, and they from him.

These are the rules of missions into foreign countries, and of the reception of strangers. Let Zeus, the God of hospitality, be honoured; and let not the stranger be excluded, as in Egypt, from meals and sacrifices, or, (as at Sparta,) driven away by savage proclamations.

Let guarantees be clearly given in writing and before witnesses. The number of witnesses shall be three when the sum lent is under a thousand drachmas, or five when above. The agent and principal at a fraudulent sale shall be equally liable. He who would search another man's house for anything must swear that he expects to find it there; and he shall enter naked, or having on a single garment and no girdle. The owner shall place at the disposal of the searcher all his goods, sealed as well as unsealed; if he refuse, he shall be liable in double the value of the property, if it shall prove to be in his possession. If the owner be absent, the searcher may counter-seal the property which is under seal, and place watchers. If the owner remain absent more than five days, the searcher shall take the magistrates, and open the sealed property, and seal it up again in their presence. The recovery of goods disputed, except in the case of lands and houses, (about which there can be no dispute in our state), is to be barred by time. The public and unimpeached use of anything for a year in the city, or for five years in the country, or the private possession and domestic use for three years in the city, or for ten years in the country, is to give a right of ownership. But if the possessor have the property in a foreign country, there shall be no bar as to time. The proceedings of any trial are to be void, in which either the parties or the witnesses, whether bond or free, have been prevented by violence from attending:—if a slave be prevented, the suit shall be invalid; or if a freeman, he who is guilty of the violence shall be imprisoned for a year, and shall also be liable to an action for kidnapping. If one competitor forcibly prevents another from attending at the games, the other may be inscribed as victor in the temples, and the first, whether victor or not, shall be liable to an action for damages. The receiver of stolen goods shall undergo the same punishment as the thief. The receiver of an exile shall be punished with death. A man ought to have the same friends and enemies as his country; and he who makes war or peace for himself shall be put to death. And if a party in the state make war or peace, their leaders shall be indicted by the generals, and, if convicted, they shall be put to death. The ministers and officers of a country ought not to receive gifts, even as the reward of good deeds. He who disobeys shall die.

With a view to taxation a man should have his property and income valued: and the government may, at their discretion, levy the tax upon the annual return, or take a portion of the whole.

The good man will offer moderate gifts to the Gods; his land or hearth cannot be offered, because they are already consecrated to all Gods. Gold and silver, which arouse envy, and ivory, which is taken from the dead body of an animal, are unsuitable offerings; iron and brass are materials of war. Wood and stone of a single piece may be offered; also woven work which has not occupied one woman more than a month in making. White is a colour which is acceptable to the Gods; figures of birds and similar offerings are the best of gifts, but they must be such as the painter can execute in a day.

Next concerning lawsuits. Judges, or rather arbiters, may be agreed upon by the plaintiff and defendant; and if no decision is obtained from them, their fellow-tribesmen shall judge. At this stage there shall be an increase of the penalty: the defendant, if he be cast, shall pay a fifth more than the damages claimed. If he further persist, and appeal a second time, the case shall be heard before the select judges; and he shall pay, if defeated, the penalty and half as much again. And the pursuer, if on the first appeal he is defeated, shall pay one fifth of the damages claimed by him; and if on the second, one half. Other matters relating to trials, such as the assignment of judges to courts, the times of sitting, the number of judges, the modes of pleading and procedure, as we have already said, may be determined by younger legislators.

These are to be the rules of private courts. As regards public courts, many states have excellent modes of procedure which may serve for models; these, when duly tested by experience, should be ratified and made permanent by us.

Let the judge be accomplished in the laws. He should possess writings about them, and make a study of them; for laws are the highest instrument of mental improvement, and derive their name from mind (nous, nomos). They afford a measure of all censure and praise, whether in verse or prose, in conversation or in books, and are an antidote to the vain disputes of men and their equally vain acquiescence in each other's opinions. The just judge, who imbibes their spirit, makes the city and himself to stand upright. He establishes justice for the good, and cures the tempers of the bad, if they can be cured; but denounces death, which is the only remedy, to the incurable, the threads of whose life cannot be reversed.

When the suits of the year are completed, execution is to follow. The court is to award to the plaintiff the property of the defendant, if he is cast, reserving to him only his lot of land. If the plaintiff is not satisfied within a month, the court shall put into his hands the property of the defendant. If the defendant fails in payment to the amount of a drachma, he shall lose the use and protection of the court; or if he rebel against the authority of the court, he shall be brought before the guardians of the law, and if found guilty he shall be put to death.

Man having been born, educated, having begotten and brought up children, and gone to law, fulfils the debt of nature. The rites which are to be celebrated after death in honour of the Gods above and below shall be determined by the Interpreters. The dead shall be buried in uncultivated places, where they will be out of the way and do least injury to the living. For no one either in life or after death has any right to deprive other men of the sustenance which mother earth provides for them. No sepulchral mound is to be piled higher than five men can raise it in five days, and the grave-stone shall not be larger than is sufficient to contain an inscription of four heroic verses. The dead are only to be exposed for three days, which is long enough to test the reality of death. The legislator will instruct the people that the body is a mere shadow or image, and that the soul, which is our true being, is gone to give an account of herself before the Gods below. When they hear this, the good are full of hope, and the evil are terrified. It is also said that not much can be done for any one after death. And therefore while in life all man should be helped by their kindred to pass their days justly and holily, that they may depart in peace. When a man loses a son or a brother, he should consider that the beloved one has gone away to fulfil his destiny in another place, and should not waste money over his lifeless remains. Let the law then order a moderate funeral of five minae for the first class, of three for the second, of two for the third, of one for the fourth. One of the guardians of the law, to be selected by

the relatives, shall assist them in arranging the affairs of the deceased. There would be a want of delicacy in prescribing that there should or should not be mourning for the dead. But, at any rate, such mourning is to be confined to the house; there must be no processions in the streets, and the dead body shall be taken out of the city before daybreak. Regulations about other forms of burial and about the non-burial of parricides and other sacrilegious persons have already been laid down. The work of legislation is therefore nearly completed; its end will be finally accomplished when we have provided for the continuance of the state.

Do you remember the names of the Fates? Lachesis, the giver of the lots, is the first of them; Clotho, the spinster, the second; Atropos, the unchanging one, is the third and last, who makes the threads of the web irreversible. And we too want to make our laws irreversible, for the unchangeable quality in them will be the salvation of the state, and the source of health and order in the bodies and souls of our citizens. 'But can such a quality be implanted?' I think that it may; and at any rate we must try; for, after all our labour, to have been piling up a fabric which has no foundation would be too ridiculous. 'What foundation would you lay?' We have already instituted an assembly which was composed of the ten oldest guardians of the law, and secondly, of those who had received prizes of virtue, and thirdly, of the travellers who had gone abroad to enquire into the laws of other countries. Moreover, each of the members was to choose a young man, of not less than thirty years of age, to be approved by the rest; and they were to meet at dawn, when all the world is at leisure. This assembly will be an anchor to the vessel of state, and provide the means of permanence; for the constitutions of states, like all other things, have their proper saviours, which are to them what the head and soul are to the living being. 'How do you mean?' Mind in the soul, and sight and hearing in the head, or rather, the perfect union of mind and sense, may be justly called every man's salvation. 'Certainly.' Yes; but of what nature is this union? In the case of a ship, for example, the senses of the sailors are added to the intelligence of the pilot, and the two together save the ship and the men in the ship. Again, the physician and the general have their objects; and the object of the one is health, of the other victory. States, too, have their objects, and the ruler must understand, first, their nature, and secondly, the means of attaining them, whether in laws or men. The state which is wanting in this knowledge cannot be expected to be wise when the time for action arrives. Now what class or institution is there in our state which has such a saving power? 'I suspect that you are referring to the Nocturnal Council.' Yes, to that council which is to have all virtue, and which should aim directly at the mark. 'Very true.' The inconsistency of legislation in most states is not surprising, when the variety of their objects is considered. One of them makes their rule of justice the government of a class; another aims at wealth; another at freedom, or at freedom and power; and some who call themselves philosophers maintain that you should seek for all of them at once. But our object is unmistakeably virtue, and virtue is of four kinds. 'Yes; and we said that mind is the chief and ruler of the three other kinds of virtue and of all else.' True, Cleinias; and now, having already declared the object which is present to the mind of the pilot, the general, the physician, we will interrogate the mind of the statesman. Tell me, I say, as the physician and general have told us their object, what is the object of the statesman. Can you tell me? 'We cannot.' Did we not say that there are four virtues—courage, wisdom, and two others, all of which are called by the common name of virtue, and are in a sense one? 'Certainly we did.' The difficulty is, not in understanding the differences of the virtues, but in apprehending their unity. Why do we call virtue, which is a single thing, by the two names of wisdom and courage? The reason is that courage is concerned with fear, and is found both in children and in brutes; for the soul may be courageous without reason, but no soul was, or ever will be, wise without reason. 'That is true.' I have explained to you the difference, and do you in return explain to me the

unity. But first let us consider whether any one who knows the name of a thing without the definition has any real knowledge of it. Is not such knowledge a disgrace to a man of sense, especially where great and glorious truths are concerned? and can any subject be more worthy of the attention of our legislators than the four virtues of which we are speaking—courage, temperance, justice, wisdom? Ought not the magistrates and officers of the state to instruct the citizens in the nature of virtue and vice, instead of leaving them to be taught by some chance poet or sophist? A city which is without instruction suffers the usual fate of cities in our day. What then shall we do? How shall we perfect the ideas of our guardians about virtue? how shall we give our state a head and eyes? 'Yes, but how do you apply the figure?' The city will be the body or trunk; the best of our young men will mount into the head or acropolis and be our eyes; they will look about them, and inform the elders, who are the mind and use the younger men as their instruments: together they will save the state. Shall this be our constitution, or shall all be educated alike, and the special training be given up? 'That is impossible.' Let us then endeavour to attain to some more exact idea of education. Did we not say that the true artist or guardian ought to have an eye, not only to the many, but to the one, and to order all things with a view to the one? Can there be any more philosophical speculation than how to reduce many things which are unlike to one idea? 'Perhaps not.' Say rather, 'Certainly not.' And the rulers of our divine state ought to have an exact knowledge of the common principle in courage, temperance, justice, wisdom, which is called by the name of virtue; and unless we know whether virtue is one or many, we shall hardly know what virtue is. Shall we contrive some means of engrafting this knowledge on our state, or give the matter up? 'Anything rather than that.' Let us begin by making an agreement. 'By all means, if we can.' Well, are we not agreed that our guardians ought to know, not only how the good and the honourable are many, but also how they are one? 'Yes, certainly.' The true guardian of the laws ought to know their truth, and should also be able to interpret and execute them? 'He should.' And is there any higher knowledge than the knowledge of the existence and power of the Gods? The people may be excused for following tradition; but the guardian must be able to give a reason of the faith which is in him. And there are two great evidences of religion—the priority of the soul and the order of the heavens. For no man of sense, when he contemplates the universe, will be likely to substitute necessity for reason and will. Those who maintain that the sun and the stars are inanimate beings are utterly wrong in their opinions. The men of a former generation had a suspicion, which has been confirmed by later thinkers, that things inanimate could never without mind have attained such scientific accuracy; and some (Anaxagoras) even in those days ventured to assert that mind had ordered all things in heaven; but they had no idea of the priority of mind, and they turned the world, or more properly themselves, upside down, and filled the universe with stones, and earth, and other inanimate bodies. This led to great impiety, and the poets said many foolish things against the philosophers, whom they compared to 'yelping she-dogs,' besides making other abusive remarks. No man can now truly worship the Gods who does not believe that the soul is eternal, and prior to the body, and the ruler of all bodies, and does not perceive also that there is mind in the stars; or who has not heard the connexion of these things with music, and has not harmonized them with manners and laws, giving a reason of things which are matters of reason. He who is unable to acquire this knowledge, as well as the ordinary virtues of a citizen, can only be a servant, and not a ruler in the state.

Let us then add another law to the effect that the Nocturnal Council shall be a guard set for the salvation of the state. 'Very good.' To establish this will be our aim, and I hope that others besides myself will assist. 'Let us proceed along the road in which God seems to guide us.' We cannot, Megillus and Cleinias, anticipate the details which will hereafter be needed; they must be supplied by

experience. 'What do you mean?' First of all a register will have to be made of all those whose age, character, or education would qualify them to be guardians. The subjects which they are to learn, and the order in which they are to be learnt, are mysteries which cannot be explained beforehand, but not mysteries in any other sense. 'If that is the case, what is to be done?' We must stake our all on a lucky throw, and I will share the risk by stating my views on education. And I would have you, Cleinias, who are the founder of the Magnesian state, and will obtain the greatest glory if you succeed, and will at least be praised for your courage, if you fail, take especial heed of this matter. If we can only establish the Nocturnal Council, we will hand over the city to its keeping; none of the present company will hesitate about that. Our dream will then become a reality; and our citizens, if they are carefully chosen and well educated, will be saviours and guardians such as the world hitherto has never seen.

The want of completeness in the Laws becomes more apparent in the later books. There is less arrangement in them, and the transitions are more abrupt from one subject to another. Yet they contain several noble passages, such as the 'prelude to the discourse concerning the honour and dishonour of parents,' or the picture of the dangers attending the 'friendly intercourse of young men and maidens with one another,' or the soothing remonstrance which is addressed to the dying man respecting his right to do what he will with his own, or the fine description of the burial of the dead. The subject of religion in Book X is introduced as a prelude to offences against the Gods, and this portion of the work appears to be executed in Plato's best manner.

In the last four books, several questions occur for consideration: among them are (I) the detection and punishment of offences; (II) the nature of the voluntary and involuntary; (III) the arguments against atheism, and against the opinion that the Gods have no care of human affairs; (IV) the remarks upon retail trade; (V) the institution of the Nocturnal Council.

I. A weak point in the Laws of Plato is the amount of inquisition into private life which is to be made by the rulers. The magistrate is always watching and waylaying the citizens. He is constantly to receive information against improprieties of life. Plato does not seem to be aware that espionage can only have a negative effect. He has not yet discovered the boundary line which parts the domain of law from that of morality or social life. Men will not tell of one another; nor will he ever be the most honoured citizen, who gives the most frequent information about offenders to the magistrates.

As in some writers of fiction, so also in philosophers, we may observe the effect of age. Plato becomes more conservative as he grows older, and he would govern the world entirely by men like himself, who are above fifty years of age; for in them he hopes to find a principle of stability. He does not remark that, in destroying the freedom he is destroying also the life of the State. In reducing all the citizens to rule and measure, he would have been depriving the Magnesian colony of those great men 'whose acquaintance is beyond all price;' and he would have found that in the worst-governed Hellenic State, there was more of a carriere ouverte for extraordinary genius and virtue than in his own.

Plato has an evident dislike of the Athenian dicasteries; he prefers a few judges who take a leading part in the conduct of trials to a great number who only listen in silence. He allows of two appeals—in each case however with an increase of the penalty. Modern jurists would disapprove of the redress of injustice being purchased only at an increasing risk; though indirectly the burden of legal expenses,

which seems to have been little felt among the Athenians, has a similar effect. The love of litigation, which is a remnant of barbarism quite as much as a corruption of civilization, and was innate in the Athenian people, is diminished in the new state by the imposition of severe penalties. If persevered in, it is to be punished with death.

In the Laws murder and homicide besides being crimes, are also pollutions. Regarded from this point of view, the estimate of such offences is apt to depend on accidental circumstances, such as the shedding of blood, and not on the real guilt of the offender or the injury done to society. They are measured by the horror which they arouse in a barbarous age. For there is a superstition in law as well as in religion, and the feelings of a primitive age have a traditional hold on the mass of the people. On the other hand, Plato is innocent of the barbarity which would visit the sins of the fathers upon the children, and he is quite aware that punishment has an eye to the future, and not to the past. Compared with that of most European nations in the last century his penal code, though sometimes capricious, is reasonable and humane.

A defect in Plato's criminal jurisprudence is his remission of the punishment when the homicide has obtained the forgiveness of the murdered person; as if crime were a personal affair between individuals, and not an offence against the State. There is a ridiculous disproportion in his punishments. Because a slave may fairly receive a blow for stealing one fig or one bunch of grapes, or a tradesman for selling adulterated goods to the value of one drachma, it is rather hard upon the slave that he should receive as many blows as he has taken grapes or figs, or upon the tradesman who has sold adulterated goods to the value of a thousand drachmas that he should receive a thousand blows.

II. But before punishment can be inflicted at all, the legislator must determine the nature of the voluntary and involuntary. The great question of the freedom of the will, which in modern times has been worn threadbare with purely abstract discussion, was approached both by Plato and Aristotle—first, from the judicial; secondly, from the sophistical point of view. They were puzzled by the degrees and kinds of crime; they observed also that the law only punished hurts which are inflicted by a voluntary agent on an involuntary patient.

In attempting to distinguish between hurt and injury, Plato says that mere hurt is not injury; but that a benefit when done in a wrong spirit may sometimes injure, e.g. when conferred without regard to right and wrong, or to the good or evil consequences which may follow. He means to say that the good or evil disposition of the agent is the principle which characterizes actions; and this is not sufficiently described by the terms voluntary and involuntary. You may hurt another involuntarily, and no one would suppose that you had injured him; and you may hurt him voluntarily, as in inflicting punishment—neither is this injury; but if you hurt him from motives of avarice, ambition, or cowardly fear, this is injury. Injustice is also described as the victory of desire or passion or self-conceit over reason, as justice is the subordination of them to reason. In some paradoxical sense Plato is disposed to affirm all injustice to be involuntary; because no man would do injustice who knew that it never paid and could calculate the consequences of what he was doing. Yet, on the other hand, he admits that the distinction of voluntary and involuntary, taken in another and more obvious sense, is the basis of legislation. His conception of justice and injustice is complicated (1) by the want of a distinction between justice and virtue, that is to say, between the quality which primarily regards others, and the quality in which self and others are equally regarded; (2) by the confusion of doing

and suffering justice; (3) by the unwillingness to renounce the old Socratic paradox, that evil is involuntary.

III. The Laws rest on a religious foundation; in this respect they bear the stamp of primitive legislation. They do not escape the almost inevitable consequence of making irreligion penal. If laws are based upon religion, the greatest offence against them must be irreligion. Hence the necessity for what in modern language, and according to a distinction which Plato would scarcely have understood, might be termed persecution. But the spirit of persecution in Plato, unlike that of modern religious bodies, arises out of the desire to enforce a true and simple form of religion, and is directed against the superstitions which tend to degrade mankind. Sir Thomas More, in his Utopia, is in favour of tolerating all except the intolerant, though he would not promote to high offices those who disbelieved in the immortality of the soul. Plato has not advanced quite so far as this in the path of toleration. But in judging of his enlightenment, we must remember that the evils of necromancy and divination were far greater than those of intolerance in the ancient world. Human nature is always having recourse to the first; but only when organized into some form of priesthood falls into the other; although in primitive as in later ages the institution of a priesthood may claim probably to be an advance on some form of religion which preceded. The Laws would have rested on a sounder foundation, if Plato had ever distinctly realized to his mind the difference between crime and sin or vice. Of this, as of many other controversies, a clear definition might have been the end. But such a definition belongs to a later age of philosophy.

The arguments which Plato uses for the being of a God, have an extremely modern character: first, the consensus gentium; secondly, the argument which has already been adduced in the Phaedrus, of the priority of the self-moved. The answer to those who say that God 'cares not,' is, that He governs by general laws; and that he who takes care of the great will assuredly take care of the small. Plato did not feel, and has not attempted to consider, the difficulty of reconciling the special with the general providence of God. Yet he is on the road to a solution, when he regards the world as a whole, of which all the parts work together towards the final end.

We are surprised to find that the scepticism, which we attribute to young men in our own day, existed then (compare Republic); that the Epicureanism expressed in the line of Horace (borrowed from Lucretius)—

'Namque Deos didici securum agere aevum,'

was already prevalent in the age of Plato; and that the terrors of another world were freely used in order to gain advantages over other men in this. The same objection which struck the Psalmist—'when I saw the prosperity of the wicked'—is supposed to lie at the root of the better sort of unbelief. And the answer is substantially the same which the modern theologian would offer:—that the ways of God in this world cannot be justified unless there be a future state of rewards and punishments. Yet this future state of rewards and punishments is in Plato's view not any addition of happiness or suffering imposed from without, but the permanence of good and evil in the soul: here he is in advance of many modern theologians. The Greek, too, had his difficulty about the existence of evil, which in one solitary passage, remarkable for being inconsistent with his general system, Plato explains, after the Magian fashion, by a good and evil spirit (compare Theaet., Statesman). This

passage is also remarkable for being at variance with the general optimism of the Tenth Book—not 'all things are ordered by God for the best,' but some things by a good, others by an evil spirit.

The Tenth Book of the Laws presents a picture of the state of belief among the Greeks singularly like that of the world in which we live. Plato is disposed to attribute the incredulity of his own age to several causes. First, to the bad effect of mythological tales, of which he retains his disapproval; but he has a weak side for antiquity, and is unwilling, as in the Republic, wholly to proscribe them. Secondly, he remarks the self-conceit of a newly-fledged generation of philosophers, who declare that the sun, moon, and stars, are earth and stones only; and who also maintain that the Gods are made by the laws of the state. Thirdly, he notes a confusion in the minds of men arising out of their misinterpretation of the appearances of the world around them: they do not always see the righteous rewarded and the wicked punished. So in modern times there are some whose infidelity has arisen from doubts about the inspiration of ancient writings; others who have been made unbelievers by physical science, or again by the seemingly political character of religion; while there is a third class to whose minds the difficulty of 'justifying the ways of God to man' has been the chief stumblingblock. Plato is very much out of temper at the impiety of some of his contemporaries; yet he is determined to reason with the victims, as he regards them, of these illusions before he punishes them. His answer to the unbelievers is twofold: first, that the soul is prior to the body; secondly, that the ruler of the universe being perfect has made all things with a view to their perfection. The difficulties arising out of ancient sacred writings were far less serious in the age of Plato than in our own.

We too have our popular Epicureanism, which would allow the world to go on as if there were no God. When the belief in Him, whether of ancient or modern times, begins to fade away, men relegate Him, either in theory or practice, into a distant heaven. They do not like expressly to deny God when it is more convenient to forget Him; and so the theory of the Epicurean becomes the practice of mankind in general. Nor can we be said to be free from that which Plato justly considers to be the worst unbelief—of those who put superstition in the place of true religion. For the larger half of Christians continue to assert that the justice of God may be turned aside by gifts, and, if not by the 'odour of fat, and the sacrifice steaming to heaven,' still by another kind of sacrifice placed upon the altar—by masses for the quick and dead, by dispensations, by building churches, by rites and ceremonies—by the same means which the heathen used, taking other names and shapes. And the indifference of Epicureanism and unbelief is in two ways the parent of superstition, partly because it permits, and also because it creates, a necessity for its development in religious and enthusiastic temperaments. If men cannot have a rational belief, they will have an irrational. And hence the most superstitious countries are also at a certain point of civilization the most unbelieving, and the revolution which takes one direction is quickly followed by a reaction in the other. So we may read 'between the lines' ancient history and philosophy into modern, and modern into ancient. Whether we compare the theory of Greek philosophy with the Christian religion, or the practice of the Gentile world with the practice of the Christian world, they will be found to differ more in words and less in reality than we might have supposed. The greater opposition which is sometimes made between them seems to arise chiefly out of a comparison of the ideal of the one with the practice of the other.

To the errors of superstition and unbelief Plato opposes the simple and natural truth of religion; the best and highest, whether conceived in the form of a person or a principle—as the divine mind or as the idea of good—is believed by him to be the basis of human life. That all things are working together for good to the good and evil to the evil in this or in some other world to which human actions

are transferred, is the sum of his faith or theology. Unlike Socrates, he is absolutely free from superstition. Religion and morality are one and indivisible to him. He dislikes the 'heathen mythology,' which, as he significantly remarks, was not tolerated in Crete, and perhaps (for the meaning of his words is not quite clear) at Sparta. He gives no encouragement to individual enthusiasm; 'the establishment of religion could only be the work of a mighty intellect.' Like the Hebrews, he prohibits private rites; for the avoidance of superstition, he would transfer all worship of the Gods to the public temples. He would not have men and women consecrating the accidents of their lives. He trusts to human punishments and not to divine judgments; though he is not unwilling to repeat the old tradition that certain kinds of dishonesty 'prevent a man from having a family.' He considers that the 'ages of faith' have passed away and cannot now be recalled. Yet he is far from wishing to extirpate the sentiment of religion, which he sees to be common to all mankind—Barbarians as well as Hellenes. He remarks that no one passes through life without, sooner or later, experiencing its power. To which we may add the further remark that the greater the irreligion, the more violent has often been the religious reaction.

It is remarkable that Plato's account of mind at the end of the Laws goes beyond Anaxagoras, and beyond himself in any of his previous writings. Aristotle, in a well-known passage (Met.) which is an echo of the Phaedo, remarks on the inconsistency of Anaxagoras in introducing the agency of mind, and yet having recourse to other and inferior, probably material causes. But Plato makes the further criticism, that the error of Anaxagoras consisted, not in denying the universal agency of mind, but in denying the priority, or, as we should say, the eternity of it. Yet in the Timaeus he had himself allowed that God made the world out of pre-existing materials: in the Statesman he says that there were seeds of evil in the world arising out of the remains of a former chaos which could not be got rid of; and even in the Tenth Book of the Laws he has admitted that there are two souls, a good and evil. In the Meno, the Phaedrus, and the Phaedo, he had spoken of the recovery of ideas from a former state of existence. But now he has attained to a clearer point of view: he has discarded these fancies. From meditating on the priority of the human soul to the body, he has learnt the nature of soul absolutely. The power of the best, of which he gave an intimation in the Phaedo and in the Republic, now, as in the Philebus, takes the form of an intelligence or person. He no longer, like Anaxagoras, supposes mind to be introduced at a certain time into the world and to give order to a pre-existing chaos, but to be prior to the chaos, everlasting and evermoving, and the source of order and intelligence in all things. This appears to be the last form of Plato's religious philosophy, which might almost be summed up in the words of Kant, 'the starry heaven above and the moral law within.' Or rather, perhaps, 'the starry heaven above and mind prior to the world.'

IV. The remarks about retail trade, about adulteration, and about mendicity, have a very modern character. Greek social life was more like our own than we are apt to suppose. There was the same division of ranks, the same aristocratic and democratic feeling, and, even in a democracy, the same preference for land and for agricultural pursuits. Plato may be claimed as the first free trader, when he prohibits the imposition of customs on imports and exports, though he was clearly not aware of the importance of the principle which he enunciated. The discredit of retail trade he attributes to the rogueries of traders, and is inclined to believe that if a nobleman would keep a shop, which heaven forbid! retail trade might become honourable. He has hardly lighted upon the true reason, which appears to be the essential distinction between buyers and sellers, the one class being necessarily in some degree dependent on the other. When he proposes to fix prices 'which would allow a moderate gain,' and to regulate trade in several minute particulars, we must remember that this is by no means

so absurd in a city consisting of 5040 citizens, in which almost every one would know and become known to everybody else, as in our own vast population. Among ourselves we are very far from allowing every man to charge what he pleases. Of many things the prices are fixed by law. Do we not often hear of wages being adjusted in proportion to the profits of employers? The objection to regulating them by law and thus avoiding the conflicts which continually arise between the buyers and sellers of labour, is not so much the undesirableness as the impossibility of doing so. Wherever free competition is not reconcileable either with the order of society, or, as in the case of adulteration, with common honesty, the government may lawfully interfere. The only question is,—Whether the interference will be effectual, and whether the evil of interference may not be greater than the evil which is prevented by it.

He would prohibit beggars, because in a well-ordered state no good man would be left to starve. This again is a prohibition which might have been easily enforced, for there is no difficulty in maintaining the poor when the population is small. In our own times the difficulty of pauperism is rendered far greater, (1) by the enormous numbers, (2) by the facility of locomotion, (3) by the increasing tenderness for human life and suffering. And the only way of meeting the difficulty seems to be by modern nations subdividing themselves into small bodies having local knowledge and acting together in the spirit of ancient communities (compare Arist. Pol.)

V. Regarded as the framework of a polity the Laws are deemed by Plato to be a decline from the Republic, which is the dream of his earlier years. He nowhere imagines that he has reached a higher point of speculation. He is only descending to the level of human things, and he often returns to his original idea. For the guardians of the Republic, who were the elder citizens, and were all supposed to be philosophers, is now substituted a special body, who are to review and amend the laws, preserving the spirit of the legislator. These are the Nocturnal Council, who, although they are not specially trained in dialectic, are not wholly destitute of it; for they must know the relation of particular virtues to the general principle of virtue. Plato has been arguing throughout the Laws that temperance is higher than courage, peace than war, that the love of both must enter into the character of the good citizen. And at the end the same thought is summed up by him in an abstract form. The true artist or guardian must be able to reduce the many to the one, than which, as he says with an enthusiasm worthy of the Phaedrus or Philebus, 'no more philosophical method was ever devised by the wit of man.' But the sense of unity in difference can only be acquired by study; and Plato does not explain to us the nature of this study, which we may reasonably infer, though there is a remarkable omission of the word, to be akin to the dialectic of the Republic.

The Nocturnal Council is to consist of the priests who have obtained the rewards of virtue, of the ten eldest guardians of the law, and of the director and ex-directors of education; each of whom is to select for approval a younger coadjutor. To this council the 'Spectator,' who is sent to visit foreign countries, has to make his report. It is not an administrative body, but an assembly of sages who are to make legislation their study. Plato is not altogether disinclined to changes in the law where experience shows them to be necessary; but he is also anxious that the original spirit of the constitution should never be lost sight of.

The Laws of Plato contain the latest phase of his philosophy, showing in many respects an advance, and in others a decline, in his views of life and the world. His Theory of Ideas in the next generation passed into one of Numbers, the nature of which we gather chiefly from the Metaphysics of Aristotle.

Of the speculative side of this theory there are no traces in the Laws, but doubtless Plato found the practical value which he attributed to arithmetic greatly confirmed by the possibility of applying number and measure to the revolution of the heavens, and to the regulation of human life. In the return to a doctrine of numbers there is a retrogression rather than an advance; for the most barren logical abstraction is of a higher nature than number and figure. Philosophy fades away into the distance; in the Laws it is confined to the members of the Nocturnal Council. The speculative truth which was the food of the guardians in the Republic, is for the majority of the citizens to be superseded by practical virtues. The law, which is the expression of mind written down, takes the place of the living word of the philosopher. (Compare the contrast of Phaedrus, and Laws; also the plays on the words nous, nomos, nou dianome; and the discussion in the Statesman of the difference between the personal rule of a king and the impersonal reign of law.) The State is based on virtue and religion rather than on knowledge; and virtue is no longer identified with knowledge, being of the commoner sort, and spoken of in the sense generally understood. Yet there are many traces of advance as well as retrogression in the Laws of Plato. The attempt to reconcile the ideal with actual life is an advance; to 'have brought philosophy down from heaven to earth,' is a praise which may be claimed for him as well as for his master Socrates. And the members of the Nocturnal Council are to continue students of the 'one in many' and of the nature of God. Education is the last word with which Plato supposes the theory of the Laws to end and the reality to begin.

Plato's increasing appreciation of the difficulties of human affairs, and of the element of chance which so largely influences them, is an indication not of a narrower, but of a maturer mind, which had become more conversant with realities. Nor can we fairly attribute any want of originality to him, because he has borrowed many of his provisions from Sparta and Athens. Laws and institutions grow out of habits and customs; and they have 'better opinion, better confirmation,' if they have come down from antiquity and are not mere literary inventions. Plato would have been the first to acknowledge that the Book of Laws was not the creation of his fancy, but a collection of enactments which had been devised by inspired legislators, like Minos, Lycurgus, and Solon, to meet the actual needs of men, and had been approved by time and experience.

In order to do justice therefore to the design of the work, it is necessary to examine how far it rests on an historical foundation and coincides with the actual laws of Sparta and Athens. The consideration of the historical aspect of the Laws has been reserved for this place. In working out the comparison the writer has been greatly assisted by the excellent essays of C.F. Hermann ('De vestigiis institutorum veterum, imprimis Atticorum, per Platonis de Legibus libros indagandis,' and 'Juris domestici et familiaris apud Platonem in Legibus cum veteris Graeciae inque primis Athenarum institutis comparatio': Marburg, 1836), and by J.B. Telfy's 'Corpus Juris Attici' (Leipzig, 1868).

EXCURSUS ON THE RELATION OF THE LAWS OF PLATO TO THE INSTITUTIONS OF CRETE AND LACEDAEMON AND TO THE LAWS AND CONSTITUTION OF ATHENS.

The Laws of Plato are essentially Greek: unlike Xenophon's Cyropaedia, they contain nothing foreign or oriental. Their aim is to reconstruct the work of the great lawgivers of Hellas in a literary form. They partake both of an Athenian and a Spartan character. Some of them too are derived from Crete, and are appropriately transferred to a Cretan colony. But of Crete so little is known to us, that although, as Montesquieu (Esprit des Lois) remarks, 'the Laws of Crete are the original of those of Sparta and the Laws of Plato the correction of these latter,' there is only one point, viz. the common meals, in which they can be compared. Most of Plato's provisions resemble the laws and customs which prevailed in these three states (especially in the two former), and which the personifying instinct of the Greeks attributed to Minos, Lycurgus, and Solon. A very few particulars may have been borrowed from Zaleucus (Cic. de Legibus), and Charondas, who is said to have first made laws against perjury (Arist. Pol.) and to have forbidden credit (Stob. Florileg., Gaisford). Some enactments are Plato's own, and were suggested by his experience of defects in the Athenian and other Greek states. The Laws also contain many lesser provisions, which are not found in the ordinary codes of nations, because they cannot be properly defined, and are therefore better left to custom and common sense. 'The greater part of the work,' as Aristotle remarks (Pol.), 'is taken up with laws': yet this is not wholly true, and applies to the latter rather than to the first half of it. The book rests on an ethical and religious foundation: the actual laws begin with a hymn of praise in honour of the soul. And the same lofty aspiration after the good is perpetually recurring, especially in Books X, XI, XII, and whenever Plato's mind is filled with his highest themes. In prefixing to most of his laws a prooemium he has two ends in view, to persuade and also to threaten. They are to have the sanction of laws and the effect of sermons. And Plato's 'Book of Laws,' if described in the language of modern philosophy, may be said to be as much an ethical and educational, as a political or legal treatise.

But although the Laws partake both of an Athenian and a Spartan character, the elements which are borrowed from either state are necessarily very different, because the character and origin of the two governments themselves differed so widely. Sparta was the more ancient and primitive: Athens was suited to the wants of a later stage of society. The relation of the two states to the Laws may be conceived in this manner:—The foundation and ground-plan of the work are more Spartan, while the superstructure and details are more Athenian. At Athens the laws were written down and were voluminous; more than a thousand fragments of them have been collected by Telfy. Like the Roman or English law, they contained innumerable particulars. Those of them which regulated daily life were familiarly known to the Athenians; for every citizen was his own lawyer, and also a judge, who decided the rights of his fellow-citizens according to the laws, often after hearing speeches from the parties interested or from their advocates. It is to Rome and not to Athens that the invention of law, in the modern sense of the term, is commonly ascribed. But it must be remembered that long before the times of the Twelve Tables (B.C. 451), regular courts and forms of law had existed at Athens and probably in the Greek colonies. And we may reasonably suppose, though without any express proof of the fact, that many Roman institutions and customs, like Latin literature and mythology, were partly derived from Hellas and had imperceptibly drifted from one shore of the Ionian Sea to the other (compare especially the constitutions of Servius Tullius and of Solon).

It is not proved that the laws of Sparta were in ancient times either written down in books or engraved on tablets of marble or brass. Nor is it certain that, if they had been, the Spartans could have read them. They were ancient customs, some of them older probably than the settlement in Laconia, of which the origin is unknown; they occasionally received the sanction of the Delphic oracle, but there was a still stronger obligation by which they were enforced,—the necessity of self-defence: the

Spartans were always living in the presence of their enemies. They belonged to an age when written law had not yet taken the place of custom and tradition. The old constitution was very rarely affected by new enactments, and these only related to the duties of the Kings or Ephors, or the new relations of classes which arose as time went on. Hence there was as great a difference as could well be conceived between the Laws of Athens and Sparta: the one was the creation of a civilized state, and did not differ in principle from our modern legislation, the other of an age in which the people were held together and also kept down by force of arms, and which afterwards retained many traces of its barbaric origin 'surviving in culture.'

Nevertheless the Lacedaemonian was the ideal of a primitive Greek state. According to Thucydides it was the first which emerged out of confusion and became a regular government. It was also an army devoted to military exercises, but organized with a view to self-defence and not to conquest. It was not quick to move or easily excited; but stolid, cautious, unambitious, procrastinating. For many centuries it retained the same character which was impressed upon it by the hand of the legislator. This singular fabric was partly the result of circumstances, partly the invention of some unknown individual in prehistoric times, whose ideal of education was military discipline, and who, by the ascendency of his genius, made a small tribe into a nation which became famous in the world's history. The other Hellenes wondered at the strength and stability of his work. The rest of Hellas, says Thucydides, undertook the colonisation of Heraclea the more readily, having a feeling of security now that they saw the Lacedaemonians taking part in it. The Spartan state appears to us in the dawn of history as a vision of armed men, irresistible by any other power then existing in the world. It can hardly be said to have understood at all the rights or duties of nations to one another, or indeed to have had any moral principle except patriotism and obedience to commanders. Men were so trained to act together that they lost the freedom and spontaneity of human life in cultivating the qualities of the soldier and ruler. The Spartan state was a composite body in which kings, nobles, citizens, perioeci, artisans, slaves, had to find a 'modus vivendi' with one another. All of them were taught some use of arms. The strength of the family tie was diminished among them by an enforced absence from home and by common meals. Sparta had no life or growth; no poetry or tradition of the past; no art, no thought. The Athenians started on their great career some centuries later, but the Spartans would have been easily conquered by them, if Athens had not been deficient in the qualities which constituted the strength (and also the weakness) of her rival.

The ideal of Athens has been pictured for all time in the speech which Thucydides puts into the mouth of Pericles, called the Funeral Oration. He contrasts the activity and freedom and pleasantness of Athenian life with the immobility and severe looks and incessant drill of the Spartans. The citizens of no city were more versatile, or more readily changed from land to sea or more quickly moved about from place to place. They 'took their pleasures' merrily, and yet, when the time for fighting arrived, were not a whit behind the Spartans, who were like men living in a camp, and, though always keeping guard, were often too late for the fray. Any foreigner might visit Athens; her ships found a way to the most distant shores; the riches of the whole earth poured in upon her. Her citizens had their theatres and festivals; they 'provided their souls with many relaxations'; yet they were not less manly than the Spartans or less willing to sacrifice this enjoyable existence for their country's good. The Athenian was a nobler form of life than that of their rivals, a life of music as well as of gymnastic, the life of a citizen as well as of a soldier. Such is the picture which Thucydides has drawn of the Athenians in their glory. It is the spirit of this life which Plato would infuse into the Magnesian state and which he seeks to combine with the common meals and gymnastic discipline of Sparta.

The two great types of Athens and Sparta had deeply entered into his mind. He had heard of Sparta at a distance and from common Hellenic fame: he was a citizen of Athens and an Athenian of noble birth. He must often have sat in the law-courts, and may have had personal experience of the duties of offices such as he is establishing. There is no need to ask the question, whence he derived his knowledge of the Laws of Athens: they were a part of his daily life. Many of his enactments are recognized to be Athenian laws from the fragments preserved in the Orators and elsewhere: many more would be found to be so if we had better information. Probably also still more of them would have been incorporated in the Magnesian code, if the work had ever been finally completed. But it seems to have come down to us in a form which is partly finished and partly unfinished, having a beginning and end, but wanting arrangement in the middle. The Laws answer to Plato's own description of them, in the comparison which he makes of himself and his two friends to gatherers of stones or the beginners of some composite work, 'who are providing materials and partly putting them together:—having some of their laws, like stones, already fixed in their places, while others lie about.'

Plato's own life coincided with the period at which Athens rose to her greatest heights and sank to her lowest depths. It was impossible that he should regard the blessings of democracy in the same light as the men of a former generation, whose view was not intercepted by the evil shadow of the taking of Athens, and who had only the glories of Marathon and Salamis and the administration of Pericles to look back upon. On the other hand the fame and prestige of Sparta, which had outlived so many crimes and blunders, was not altogether lost at the end of the life of Plato. Hers was the only great Hellenic government which preserved something of its ancient form; and although the Spartan citizens were reduced to almost one-tenth of their original number (Arist. Pol.), she still retained, until the rise of Thebes and Macedon, a certain authority and predominance due to her final success in the struggle with Athens and to the victories which Agesilaus won in Asia Minor.

Plato, like Aristotle, had in his mind some form of a mean state which should escape the evils and secure the advantages of both aristocracy and democracy. It may however be doubted whether the creation of such a state is not beyond the legislator's art, although there have been examples in history of forms of government, which through some community of interest or of origin, through a balance of parties in the state itself, or through the fear of a common enemy, have for a while preserved such a character of moderation. But in general there arises a time in the history of a state when the struggle between the few and the many has to be fought out. No system of checks and balances, such as Plato has devised in the Laws, could have given equipoise and stability to an ancient state, any more than the skill of the legislator could have withstood the tide of democracy in England or France during the last hundred years, or have given life to China or India.

The basis of the Magnesian constitution is the equal division of land. In the new state, as in the Republic, there was to be neither poverty nor riches. Every citizen under all circumstances retained his lot, and as much money as was necessary for the cultivation of it, and no one was allowed to accumulate property to the amount of more than five times the value of the lot, inclusive of it. The equal division of land was a Spartan institution, not known to have existed elsewhere in Hellas. The mention of it in the Laws of Plato affords considerable presumption that it was of ancient origin, and not first introduced, as Mr. Grote and others have imagined, in the reformation of Cleomenes III. But at Sparta, if we may judge from the frequent complaints of the accumulation of property in the hands of a few persons (Arist. Pol.), no provision could have been made for the maintenance of the lot. Plutarch indeed speaks of a law introduced by the Ephor Epitadeus soon after the Peloponnesian

War, which first allowed the Spartans to sell their land (Agis): but from the manner in which Aristotle refers to the subject, we should imagine this evil in the state to be of a much older standing. Like some other countries in which small proprietors have been numerous, the original equality passed into inequality, and, instead of a large middle class, there was probably at Sparta greater disproportion in the property of the citizens than in any other state of Hellas. Plato was aware of the danger, and has improved on the Spartan custom. The land, as at Sparta, must have been tilled by slaves, since other occupations were found for the citizens. Bodies of young men between the ages of twenty-five and thirty were engaged in making biennial peregrinations of the country. They and their officers are to be the magistrates, police, engineers, aediles, of the twelve districts into which the colony was divided. Their way of life may be compared with that of the Spartan secret police or Crypteia, a name which Plato freely applies to them without apparently any consciousness of the odium which has attached to the word in history.

Another great institution which Plato borrowed from Sparta (or Crete) is the Syssitia or common meals. These were established in both states, and in some respects were considered by Aristotle to be better managed in Crete than at Lacedaemon (Pol.). In the Laws the Cretan custom appears to be adopted (This is not proved, as Hermann supposes ('De Vestigiis,' etc.)): that is to say, if we may interpret Plato by Aristotle, the cost of them was defrayed by the state and not by the individuals (Arist. Pol); so that the members of the mess, who could not pay their quota, still retained their rights of citizenship. But this explanation is hardly consistent with the Laws, where contributions to the Syssitia from private estates are expressly mentioned. Plato goes further than the legislators of Sparta and Crete, and would extend the common meals to women as well as men: he desires to curb the disorders, which existed among the female sex in both states, by the application to women of the same military discipline to which the men were already subject. It was an extension of the custom of Syssitia from which the ancient legislators shrank, and which Plato himself believed to be very difficult of enforcement.

Like Sparta, the new colony was not to be surrounded by walls,—a state should learn to depend upon the bravery of its citizens only—a fallacy or paradox, if it is not to be regarded as a poetical fancy, which is fairly enough ridiculed by Aristotle (Pol.). Women, too, must be ready to assist in the defence of their country: they are not to rush to the temples and altars, but to arm themselves with shield and spear. In the regulation of the Syssitia, in at least one of his enactments respecting property, and in the attempt to correct the licence of women, Plato shows, that while he borrowed from the institutions of Sparta and favoured the Spartan mode of life, he also sought to improve upon them.

The enmity to the sea is another Spartan feature which is transferred by Plato to the Magnesian state. He did not reflect that a non-maritime power would always be at the mercy of one which had a command of the great highway. Their many island homes, the vast extent of coast which had to be protected by them, their struggles first of all with the Phoenicians and Carthaginians, and secondly with the Persian fleets, forced the Greeks, mostly against their will, to devote themselves to the sea. The islanders before the inhabitants of the continent, the maritime cities before the inland, the Corinthians and Athenians before the Spartans, were compelled to fit out ships: last of all the Spartans, by the pressure of the Peloponnesian War, were driven to establish a naval force, which, after the battle of Aegospotami, for more than a generation commanded the Aegean. Plato, like the Spartans, had a prejudice against a navy, because he regarded it as the nursery of democracy. But he either never considered, or did not care to explain, how a city, set upon an island and 'distant not

more than ten miles from the sea, having a seaboard provided with excellent harbours,' could have safely subsisted without one.

Neither the Spartans nor the Magnesian colonists were permitted to engage in trade or commerce. In order to limit their dealings as far as possible to their own country, they had a separate coinage; the Magnesians were only allowed to use the common currency of Hellas when they travelled abroad, which they were forbidden to do unless they received permission from the government. Like the Spartans, Plato was afraid of the evils which might be introduced into his state by intercourse with foreigners; but he also shrinks from the utter exclusiveness of Sparta, and is not unwilling to allow visitors of a suitable age and rank to come from other states to his own, as he also allows citizens of his own state to go to foreign countries and bring back a report of them. Such international communication seemed to him both honourable and useful.

We may now notice some points in which the commonwealth of the Laws approximates to the Athenian model. These are much more numerous than the previous class of resemblances; we are better able to compare the laws of Plato with those of Athens, because a good deal more is known to us of Athens than of Sparta.

The information which we possess about Athenian law, though comparatively fuller, is still fragmentary. The sources from which our knowledge is derived are chiefly the following:—

(1) The Orators,—Antiphon, Andocides, Lysias, Isocrates, Demosthenes, Aeschines, Lycurgus, and others.

(2) Herodotus, Thucydides, Xenophon, Plato, Aristotle, as well as later writers, such as Cicero de Legibus, Plutarch, Aelian, Pausanias.

(3) Lexicographers, such as Harpocration, Pollux, Hesychius, Suidas, and the compiler of the Etymologicum Magnum, many of whom are of uncertain date, and to a great extent based upon one another. Their writings extend altogether over more than eight hundred years, from the second to the tenth century.

(4) The Scholia on Aristophanes, Plato, Demosthenes.

(5) A few inscriptions.

Our knowledge of a subject derived from such various sources and for the most part of uncertain date and origin, is necessarily precarious. No critic can separate the actual laws of Solon from those which passed under his name in later ages. Nor do the Scholiasts and Lexicographers attempt to distinguish how many of these laws were still in force at the time when they wrote, or when they fell into disuse and were to be found in books only. Nor can we hastily assume that enactments which occur in the Laws of Plato were also a part of Athenian law, however probable this may appear.

There are two classes of similarities between Plato's Laws and those of Athens: (i) of institutions (ii) of minor enactments.

(i) The constitution of the Laws in its general character resembles much more nearly the Athenian constitution of Solon's time than that which succeeded it, or the extreme democracy which prevailed in Plato's own day. It was a mean state which he hoped to create, equally unlike a Syracusan tyranny or the mob-government of the Athenian assembly. There are various expedients by which he sought to impart to it the quality of moderation. (1) The whole people were to be educated: they could not be all trained in philosophy, but they were to acquire the simple elements of music, arithmetic, geometry, astronomy; they were also to be subject to military discipline, archontes kai archomenoi. (2) The majority of them were, or had been at some time in their lives, magistrates, and had the experience which is given by office. (3) The persons who held the highest offices were to have a further education, not much inferior to that provided for the guardians in the Republic, though the range of their studies is narrowed to the nature and divisions of virtue: here their philosophy comes to an end. (4) The entire number of the citizens (5040) rarely, if ever, assembled, except for purposes of elections. The whole people were divided into four classes, each having the right to be represented by the same number of members in the Council. The result of such an arrangement would be, as in the constitution of Servius Tullius, to give a disproportionate share of power to the wealthier classes, who may be supposed to be always much fewer in number than the poorer. This tendency was qualified by the complicated system of selection by vote, previous to the final election by lot, of which the object seems to be to hand over to the wealthy few the power of selecting from the many poor, and vice versa. (5) The most important body in the state was the Nocturnal Council, which is borrowed from the Areopagus at Athens, as it existed, or was supposed to have existed, in the days before Ephialtes and the Eumenides of Aeschylus, when its power was undiminished. In some particulars Plato appears to have copied exactly the customs and procedure of the Areopagus: both assemblies sat at night (Telfy). There was a resemblance also in more important matters. Like the Areopagus, the Nocturnal Council was partly composed of magistrates and other state officials, whose term of office had expired. (7) The constitution included several diverse and even opposing elements, such as the Assembly and the Nocturnal Council. (8) There was much less exclusiveness than at Sparta; the citizens were to have an interest in the government of neighbouring states, and to know what was going on in the rest of the world.—All these were moderating influences.

A striking similarity between Athens and the constitution of the Magnesian colony is the use of the lot in the election of judges and other magistrates. That such a mode of election should have been resorted to in any civilized state, or that it should have been transferred by Plato to an ideal or imaginary one, is very singular to us. The most extreme democracy of modern times has never thought of leaving government wholly to chance. It was natural that Socrates should scoff at it, and ask, 'Who would choose a pilot or carpenter or flute-player by lot' (Xen. Mem.)? Yet there were many considerations which made this mode of choice attractive both to the oligarch and to the democrat:—(1) It seemed to recognize that one man was as good as another, and that all the members of the governing body, whether few or many, were on a perfect equality in every sense of the word. (2) To the pious mind it appeared to be a choice made, not by man, but by heaven (compare Laws). (3) It afforded a protection against corruption and intrigue...It must also be remembered that, although elected by lot, the persons so elected were subject to a scrutiny before they entered on their office, and were therefore liable, after election, if disqualified, to be rejected (Laws). They were, moreover, liable to be called to account after the expiration of their office. In the election of councillors Plato introduces a further check: they are not to be chosen directly by lot from all the citizens, but from a select body previously elected by vote. In Plato's state at least, as we may infer from his silence on this point, judges and magistrates performed their duties without pay, which was a guarantee both of

their disinterestedness and of their belonging probably to the higher class of citizens (compare Arist. Pol.). Hence we are not surprised that the use of the lot prevailed, not only in the election of the Athenian Council, but also in many oligarchies, and even in Plato's colony. The evil consequences of the lot are to a great extent avoided, if the magistrates so elected do not, like the dicasts at Athens, receive pay from the state.

Another parallel is that of the Popular Assembly, which at Athens was omnipotent, but in the Laws has only a faded and secondary existence. In Plato it was chiefly an elective body, having apparently no judicial and little political power entrusted to it. At Athens it was the mainspring of the democracy; it had the decision of war or peace, of life and death; the acts of generals or statesmen were authorized or condemned by it; no office or person was above its control. Plato was far from allowing such a despotic power to exist in his model community, and therefore he minimizes the importance of the Assembly and narrows its functions. He probably never asked himself a question, which naturally occurs to the modern reader, where was to be the central authority in this new community, and by what supreme power would the differences of inferior powers be decided. At the same time he magnifies and brings into prominence the Nocturnal Council (which is in many respects a reflection of the Areopagus), but does not make it the governing body of the state.

Between the judicial system of the Laws and that of Athens there was very great similarity, and a difference almost equally great. Plato not unfrequently adopts the details when he rejects the principle. At Athens any citizen might be a judge and member of the great court of the Heliaea. This was ordinarily subdivided into a number of inferior courts, but an occasion is recorded on which the whole body, in number six thousand, met in a single court (Andoc. de Myst.). Plato significantly remarks that a few judges, if they are good, are better than a great number. He also, at least in capital cases, confines the plaintiff and defendant to a single speech each, instead of allowing two apiece, as was the common practice at Athens. On the other hand, in all private suits he gives two appeals, from the arbiters to the courts of the tribes, and from the courts of the tribes to the final or supreme court. There was nothing answering to this at Athens. The three courts were appointed in the following manner:—the arbiters were to be agreed upon by the parties to the cause; the judges of the tribes to be elected by lot; the highest tribunal to be chosen at the end of each year by the great officers of state out of their own number—they were to serve for a year, to undergo a scrutiny, and, unlike the Athenian judges, to vote openly. Plato does not dwell upon methods of procedure: these are the lesser matters which he leaves to the younger legislators. In cases of murder and some other capital offences, the cause was to be tried by a special tribunal, as was the custom at Athens: military offences, too, as at Athens, were decided by the soldiers. Public causes in the Laws, as sometimes at Athens, were voted upon by the whole people: because, as Plato remarks, they are all equally concerned in them. They were to be previously investigated by three of the principal magistrates. He believes also that in private suits all should take part; 'for he who has no share in the administration of justice is apt to imagine that he has no share in the state at all.' The wardens of the country, like the Forty at Athens, also exercised judicial power in small matters, as well as the wardens of the agora and city. The department of justice is better organized in Plato than in an ordinary Greek state, proceeding more by regular methods, and being more restricted to distinct duties.

The executive of Plato's Laws, like the Athenian, was different from that of a modern civilized state. The difference chiefly consists in this, that whereas among ourselves there are certain persons or classes of persons set apart for the execution of the duties of government, in ancient Greece, as in all

other communities in the earlier stages of their development, they were not equally distinguished from the rest of the citizens. The machinery of government was never so well organized as in the best modern states. The judicial department was not so completely separated from the legislative, nor the executive from the judicial, nor the people at large from the professional soldier, lawyer, or priest. To Aristotle (Pol.) it was a question requiring serious consideration—Who should execute a sentence? There was probably no body of police to whom were entrusted the lives and properties of the citizens in any Hellenic state. Hence it might be reasonably expected that every man should be the watchman of every other, and in turn be watched by him. The ancients do not seem to have remembered the homely adage that, 'What is every man's business is no man's business,' or always to have thought of applying the principle of a division of labour to the administration of law and to government. Every Athenian was at some time or on some occasion in his life a magistrate, judge, advocate, soldier, sailor, policeman. He had not necessarily any private business; a good deal of his time was taken up with the duties of office and other public occupations. So, too, in Plato's Laws. A citizen was to interfere in a quarrel, if older than the combatants, or to defend the outraged party, if his junior. He was especially bound to come to the rescue of a parent who was ill-treated by his children. He was also required to prosecute the murderer of a kinsman. In certain cases he was allowed to arrest an offender. He might even use violence to an abusive person. Any citizen who was not less than thirty years of age at times exercised a magisterial authority, to be enforced even by blows. Both in the Magnesian state and at Athens many thousand persons must have shared in the highest duties of government, if a section only of the Council, consisting of thirty or of fifty persons, as in the Laws, or at Athens after the days of Cleisthenes, held office for a month, or for thirty-five days only. It was almost as if, in our own country, the Ministry or the Houses of Parliament were to change every month. The average ability of the Athenian and Magnesian councillors could not have been very high, considering there were so many of them. And yet they were entrusted with the performance of the most important executive duties. In these respects the constitution of the Laws resembles Athens far more than Sparta. All the citizens were to be, not merely soldiers, but politicians and administrators.

(ii) There are numerous minor particulars in which the Laws of Plato resemble those of Athens. These are less interesting than the preceding, but they show even more strikingly how closely in the composition of his work Plato has followed the laws and customs of his own country.

(1) Evidence. (a) At Athens a child was not allowed to give evidence (Telfy). Plato has a similar law: 'A child shall be allowed to give evidence only in cases of murder.' (b) At Athens an unwilling witness might be summoned; but he was not required to appear if he was ready to declare on oath that he knew nothing about the matter in question (Telfy). So in the Laws. (c) Athenian law enacted that when more than half the witnesses in a case had been convicted of perjury, there was to be a new trial (anadikos krisis—Telfy). There is a similar provision in the Laws. (d) False-witness was punished at Athens by atimia and a fine (Telfy). Plato is at once more lenient and more severe: 'If a man be twice convicted of false-witness, he shall not be required, and if thrice, he shall not be allowed to bear witness; and if he dare to witness after he has been convicted three times,...he shall be punished with death.'

(2) Murder. (a) Wilful murder was punished in Athenian law by death, perpetual exile, and confiscation of property (Telfy). Plato, too, has the alternative of death or exile, but he does not confiscate the murderer's property. (b) The Parricide was not allowed to escape by going into exile at Athens (Telfy), nor, apparently, in the Laws. (c) A homicide, if forgiven by his victim before death,

received no punishment, either at Athens (Telfy), or in the Magnesian state. In both (Telfy) the contriver of a murder is punished as severely as the doer; and persons accused of the crime are forbidden to enter temples or the agora until they have been tried (Telfy). (d) At Athens slaves who killed their masters and were caught red-handed, were not to be put to death by the relations of the murdered man, but to be handed over to the magistrates (Telfy). So in the Laws, the slave who is guilty of wilful murder has a public execution: but if the murder is committed in anger, it is punished by the kinsmen of the victim.

(3) Involuntary homicide. (a) The guilty person, according to the Athenian law, had to go into exile, and might not return, until the family of the man slain were conciliated. Then he must be purified (Telfy). If he is caught before he has obtained forgiveness, he may be put to death. These enactments reappear in the Laws. (b) The curious provision of Plato, that a stranger who has been banished for involuntary homicide and is subsequently wrecked upon the coast, must 'take up his abode on the sea-shore, wetting his feet in the sea, and watching for an opportunity of sailing,' recalls the procedure of the Judicium Phreatteum at Athens, according to which an involuntary homicide, who, having gone into exile, is accused of a wilful murder, was tried at Phreatto for this offence in a boat by magistrates on the shore. (c) A still more singular law, occurring both in the Athenian and Magnesian code, enacts that a stone or other inanimate object which kills a man is to be tried, and cast over the border (Telfy).

(4) Justifiable or excusable homicide. Plato and Athenian law agree in making homicide justifiable or excusable in the following cases:—(1) at the games (Telfy); (2) in war (Telfy); (3) if the person slain was found doing violence to a free woman (Telfy); (4) if a doctor's patient dies; (5) in the case of a robber (Telfy); (6) in self-defence (Telfy).

(5) Impiety. Death or expulsion was the Athenian penalty for impiety (Telfy). In the Laws it is punished in various cases by imprisonment for five years, for life, and by death.

(6) Sacrilege. Robbery of temples at Athens was punished by death, refusal of burial in the land, and confiscation of property (Telfy). In the Laws the citizen who is guilty of such a crime is to 'perish ingloriously and be cast beyond the borders of the land,' but his property is not confiscated.

(7) Sorcery. The sorcerer at Athens was to be executed (Telfy): compare Laws, where it is enacted that the physician who poisons and the professional sorcerer shall be punished with death.

(8) Treason. Both at Athens and in the Laws the penalty for treason was death (Telfy), and refusal of burial in the country (Telfy).

(9) Sheltering exiles. 'If a man receives an exile, he shall be punished with death.' So, too, in Athenian law (Telfy.).

(10) Wounding. Athenian law compelled a man who had wounded another to go into exile; if he returned, he was to be put to death (Telfy). Plato only punishes the offence with death when children wound their parents or one another, or a slave wounds his master.

(11) Bribery. Death was the punishment for taking a bribe, both at Athens (Telfy) and in the Laws; but Athenian law offered an alternative—the payment of a fine of ten times the amount of the bribe.

(12) Theft. Plato, like Athenian law (Telfy), punishes the theft of public property by death; the theft of private property in both involves a fine of double the value of the stolen goods (Telfy).

(13) Suicide. He 'who slays him who of all men, as they say, is his own best friend,' is regarded in the same spirit by Plato and by Athenian law. Plato would have him 'buried ingloriously on the borders of the twelve portions of the land, in such places as are uncultivated and nameless,' and 'no column or inscription is to mark the place of his interment.' Athenian law enacted that the hand which did the deed should be separated from the body and be buried apart (Telfy).

(14) Injury. In cases of wilful injury, Athenian law compelled the guilty person to pay double the damage; in cases of involuntary injury, simple damages (Telfy). Plato enacts that if a man wounds another in passion, and the wound is curable, he shall pay double the damage, if incurable or disfiguring, fourfold damages. If, however, the wounding is accidental, he shall simply pay for the harm done.

(15) Treatment of parents. Athenian law allowed any one to indict another for neglect or illtreatment of parents (Telfy). So Plato bids bystanders assist a father who is assaulted by his son, and allows any one to give information against children who neglect their parents.

(16) Execution of sentences. Both Plato and Athenian law give to the winner of a suit power to seize the goods of the loser, if he does not pay within the appointed time (Telfy). At Athens the penalty was also doubled (Telfy); not so in Plato. Plato however punishes contempt of court by death, which at Athens seems only to have been visited with a further fine (Telfy).

(17) Property. (a) Both at Athens and in the Laws a man who has disputed property in his possession must give the name of the person from whom he received it (Telfy); and any one searching for lost property must enter a house naked (Telfy), or, as Plato says, 'naked, or wearing only a short tunic and without a girdle. (b) Athenian law, as well as Plato, did not allow a father to disinherit his son without good reason and the consent of impartial persons (Telfy). Neither grants to the eldest son any special claim on the paternal estate (Telfy). In the law of inheritance both prefer males to females (Telfy). (c) Plato and Athenian law enacted that a tree should be planted at a fair distance from a neighbour's property (Telfy), and that when a man could not get water, his neighbour must supply him (Telfy). Both at Athens and in Plato there is a law about bees, the former providing that a beehive must be set up at not less a distance than 300 feet from a neighbour's (Telfy), and the latter forbidding the decoying of bees.

(18) Orphans. A ward must proceed against a guardian whom he suspects of fraud within five years of the expiration of the guardianship. This provision is common to Plato and to Athenian law (Telfy). Further, the latter enacted that the nearest male relation should marry or provide a husband for an heiress (Telfy),—a point in which Plato follows it closely.

(19) Contracts. Plato's law that 'when a man makes an agreement which he does not fulfil, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has

made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance,—the other party may go to law with him,' according to Pollux (quoted in Telfy's note) prevailed also at Athens.

(20) Trade regulations. (a) Lying was forbidden in the agora both by Plato and at Athens (Telfy). (b) Athenian law allowed an action of recovery against a man who sold an unsound slave as sound (Telfy). Plato's enactment is more explicit: he allows only an unskilled person (i.e. one who is not a trainer or physician) to take proceedings in such a case. (c) Plato diverges from Athenian practice in the disapproval of credit, and does not even allow the supply of goods on the deposit of a percentage of their value (Telfy). He enacts that 'when goods are exchanged by buying and selling, a man shall deliver them and receive the price of them at a fixed place in the agora, and have done with the matter,' and that 'he who gives credit must be satisfied whether he obtain his money or not, for in such exchanges he will not be protected by law. (d) Athenian law forbad an extortionate rate of interest (Telfy); Plato allows interest in one case only—if a contractor does not receive the price of his work within a year of the time agreed—and at the rate of 200 per cent. per annum for every drachma a monthly interest of an obol. (e) Both at Athens and in the Laws sales were to be registered (Telfy), as well as births (Telfy).

(21) Sumptuary laws. Extravagance at weddings (Telfy), and at funerals (Telfy) was forbidden at Athens and also in the Magnesian state.

There remains the subject of family life, which in Plato's Laws partakes both of an Athenian and Spartan character. Under this head may conveniently be included the condition of women and of slaves. To family life may be added citizenship.

As at Sparta, marriages are to be contracted for the good of the state; and they may be dissolved on the same ground, where there is a failure of issue,—the interest of the state requiring that every one of the 5040 lots should have an heir. Divorces are likewise permitted by Plato where there is an incompatibility of temper, as at Athens by mutual consent. The duty of having children is also enforced by a still higher motive, expressed by Plato in the noble words:—'A man should cling to immortality, and leave behind him children's children to be the servants of God in his place.' Again, as at Athens, the father is allowed to put away his undutiful son, but only with the consent of impartial persons (Telfy), and the only suit which may be brought by a son against a father is for imbecility. The class of elder and younger men and women are still to regard one another, as in the Republic, as standing in the relation of parents and children. This is a trait of Spartan character rather than of Athenian. A peculiar sanctity and tenderness was to be shown towards the aged; the parent or grandparent stricken with years was to be loved and worshipped like the image of a God, and was to be deemed far more able than any lifeless statue to bring good or ill to his descendants. Great care is to be taken of orphans: they are entrusted to the fifteen eldest Guardians of the Law, who are to be 'lawgivers and fathers to them not inferior to their natural fathers,' as at Athens they were entrusted to the Archons. Plato wishes to make the misfortune of orphanhood as little sad to them as possible.

Plato, seeing the disorder into which half the human race had fallen at Athens and Sparta, is minded to frame for them a new rule of life. He renounces his fanciful theory of communism, but still desires to place women as far as possible on an equality with men. They were to be trained in the use of arms, they are to live in public. Their time was partly taken up with gymnastic exercises; there could

have been little family or private life among them. Their lot was to be neither like that of Spartan women, who were made hard and common by excessive practice of gymnastic and the want of all other education,—nor yet like that of Athenian women, who, at least among the upper classes, retired into a sort of oriental seclusion,—but something better than either. They were to be the perfect mothers of perfect children, yet not wholly taken up with the duties of motherhood, which were to be made easy to them as far as possible (compare Republic), but able to share in the perils of war and to be the companions of their husbands. Here, more than anywhere else, the spirit of the Laws reverts to the Republic. In speaking of them as the companions of their husbands we must remember that it is an Athenian and not a Spartan way of life which they are invited to share, a life of gaiety and brightness, not of austerity and abstinence, which often by a reaction degenerated into licence and grossness.

In Plato's age the subject of slavery greatly interested the minds of thoughtful men; and how best to manage this 'troublesome piece of goods' exercised his own mind a good deal. He admits that they have often been found better than brethren or sons in the hour of danger, and are capable of rendering important public services by informing against offenders—for this they are to be rewarded; and the master who puts a slave to death for the sake of concealing some crime which he has committed, is held guilty of murder. But they are not always treated with equal consideration. The punishments inflicted on them bear no proportion to their crimes. They are to be addressed only in the language of command. Their masters are not to jest with them, lest they should increase the hardship of their lot. Some privileges were granted to them by Athenian law of which there is no mention in Plato; they were allowed to purchase their freedom from their master, and if they despaired of being liberated by him they could demand to be sold, on the chance of falling into better hands. But there is no suggestion in the Laws that a slave who tried to escape should be branded with the words—kateche me, pheugo, or that evidence should be extracted from him by torture, that the whole household was to be executed if the master was murdered and the perpetrator remained undetected: all these were provisions of Athenian law. Plato is more consistent than either the Athenians or the Spartans; for at Sparta too the Helots were treated in a manner almost unintelligible to us. On the one hand, they had arms put into their hands, and served in the army, not only, as at Plataea, in attendance on their masters, but, after they had been manumitted, as a separate body of troops called Neodamodes: on the other hand, they were the victims of one of the greatest crimes recorded in Greek history (Thucyd.). The two great philosophers of Hellas sought to extricate themselves from this cruel condition of human life, but acquiesced in the necessity of it. A noble and pathetic sentiment of Plato, suggested by the thought of their misery, may be quoted in this place:—'The right treatment of slaves is to behave properly to them, and to do to them, if possible, even more justice than to those who are our equals; for he who naturally and genuinely reverences justice, and hates injustice, is discovered in his dealings with any class of men to whom he can easily be unjust. And he who in regard to the natures and actions of his slaves is undefiled by impiety and injustice, will best sow the seeds of virtue in them; and this may be truly said of every master, and tyrant, and of every other having authority in relation to his inferiors.'

All the citizens of the Magnesian state were free and equal; there was no distinction of rank among them, such as is believed to have prevailed at Sparta. Their number was a fixed one, corresponding to the 5040 lots. One of the results of this is the requirement that younger sons or those who have been disinherited shall go out to a colony. At Athens, where there was not the same religious feeling against increasing the size of the city, the number of citizens must have been liable to considerable

fluctuations. Several classes of persons, who were not citizens by birth, were admitted to the privilege. Perpetual exiles from other countries, people who settled there to practise a trade (Telfy), any one who had shown distinguished valour in the cause of Athens, the Plataeans who escaped from the siege, metics and strangers who offered to serve in the army, the slaves who fought at Arginusae,—all these could or did become citizens. Even those who were only on one side of Athenian parentage were at more than one period accounted citizens. But at times there seems to have arisen a feeling against this promiscuous extension of the citizen body, an expression of which is to be found in the law of Pericles—monous Athenaious einai tous ek duoin Athenaion gegonotas (Plutarch, Pericles); and at no time did the adopted citizen enjoy the full rights of citizenship—e.g. he might not be elected archon or to the office of priest (Telfy), although this prohibition did not extend to his children, if born of a citizen wife. Plato never thinks of making the metic, much less the slave, a citizen. His treatment of the former class is at once more gentle and more severe than that which prevailed at Athens. He imposes upon them no tax but good behaviour, whereas at Athens they were required to pay twelve drachmae per annum, and to have a patron: on the other hand, he only allows them to reside in the Magnesian state on condition of following a trade; they were required to depart when their property exceeded that of the third class, and in any case after a residence of twenty years, unless they could show that they had conferred some great benefit on the state. This privileged position reflects that of the isoteleis at Athens, who were excused from the metoikion. It is Plato's greatest concession to the metic, as the bestowal of freedom is his greatest concession to the slave.

Lastly, there is a more general point of view under which the Laws of Plato may be considered,—the principles of Jurisprudence which are contained in them. These are not formally announced, but are scattered up and down, to be observed by the reflective reader for himself. Some of them are only the common principles which all courts of justice have gathered from experience; others are peculiar and characteristic. That judges should sit at fixed times and hear causes in a regular order, that evidence should be laid before them, that false witnesses should be disallowed, and corruption punished, that defendants should be heard before they are convicted,—these are the rules, not only of the Hellenic courts, but of courts of law in all ages and countries. But there are also points which are peculiar, and in which ancient jurisprudence differs considerably from modern; some of them are of great importance...It could not be said at Athens, nor was it ever contemplated by Plato, that all men, including metics and slaves, should be equal 'in the eye of the law.' There was some law for the slave, but not much; no adequate protection was given him against the cruelty of his master...It was a singular privilege granted, both by the Athenian and Magnesian law, to a murdered man, that he might, before he died, pardon his murderer, in which case no legal steps were afterwards to be taken against him. This law is the remnant of an age in which the punishment of offences against the person was the concern rather of the individual and his kinsmen than of the state...Plato's division of crimes into voluntary and involuntary and those done from passion, only partially agrees with the distinction which modern law has drawn between murder and manslaughter; his attempt to analyze them is confused by the Socratic paradox, that 'All vice is involuntary'...It is singular that both in the Laws and at Athens theft is commonly punished by a twofold restitution of the article stolen. The distinction between civil and criminal courts or suits was not yet recognized...Possession gives a right of property after a certain time...The religious aspect under which certain offences were regarded greatly interfered with a just and natural estimate of their guilt...As among ourselves, the intent to murder was distinguished by Plato from actual murder...We note that both in Plato and the laws of Athens, libel in the market-place and personality in the theatre were forbidden...Both in Plato and Athenian law, as in modern times, the accomplice of a crime is to be punished as well as the

principal...Plato does not allow a witness in a cause to act as a judge of it...Oaths are not to be taken by the parties to a suit...Both at Athens and in Plato's Laws capital punishment for murder was not to be inflicted, if the offender was willing to go into exile...Respect for the dead, duty towards parents, are to be enforced by the law as well as by public opinion...Plato proclaims the noble sentiment that the object of all punishment is the improvement of the offender... Finally, he repeats twice over, as with the voice of a prophet, that the crimes of the fathers are not to be visited upon the children. In this respect he is nobly distinguished from the Oriental, and indeed from the spirit of Athenian law (compare Telfy,—dei kai autous kai tous ek touton atimous einai), as the Hebrew in the age of Ezekial is from the Jewish people of former ages.

Of all Plato's provisions the object is to bring the practice of the law more into harmony with reason and philosophy; to secure impartiality, and while acknowledging that every citizen has a right to share in the administration of justice, to counteract the tendency of the courts to become mere popular assemblies.

...

Thus we have arrived at the end of the writings of Plato, and at the last stage of philosophy which was really his. For in what followed, which we chiefly gather from the uncertain intimations of Aristotle, the spirit of the master no longer survived. The doctrine of Ideas passed into one of numbers; instead of advancing from the abstract to the concrete, the theories of Plato were taken out of their context, and either asserted or refuted with a provoking literalism; the Socratic or Platonic element in his teaching was absorbed into the Pythagorean or Megarian. His poetry was converted into mysticism; his unsubstantial visions were assailed secundum artem by the rules of logic. His political speculations lost their interest when the freedom of Hellas had passed away. Of all his writings the Laws were the furthest removed from the traditions of the Platonic school in the next generation. Both his political and his metaphysical philosophy are for the most part misinterpreted by Aristotle. The best of him—his love of truth, and his 'contemplation of all time and all existence,' was soonest lost; and some of his greatest thoughts have slept in the ear of mankind almost ever since they were first uttered.

We have followed him during his forty or fifty years of authorship, from the beginning when he first attempted to depict the teaching of Socrates in a dramatic form, down to the time at which the character of Socrates had disappeared, and we have the latest reflections of Plato's own mind upon Hellas and upon philosophy. He, who was 'the last of the poets,' in his book of Laws writes prose only; he has himself partly fallen under the rhetorical influences which in his earlier dialogues he was combating. The progress of his writings is also the history of his life; we have no other authentic life of him. They are the true self of the philosopher, stripped of the accidents of time and place. The great effort which he makes is, first, to realize abstractions, secondly, to connect them. In the attempt to realize them, he was carried into a transcendental region in which he isolated them from experience, and we pass out of the range of science into poetry or fiction. The fancies of mythology for a time cast a veil over the gulf which divides phenomena from onta (Meno, Phaedrus, Symposium, Phaedo). In his return to earth Plato meets with a difficulty which has long ceased to be a difficulty to us. He cannot understand how these obstinate, unmanageable ideas, residing alone in their heaven of abstraction, can be either combined with one another, or adapted to phenomena (Parmenides, Philebus, Sophist). That which is the most familiar process of our own minds, to him appeared to be

the crowning achievement of the dialectical art. The difficulty which in his own generation threatened to be the destruction of philosophy, he has rendered unmeaning and ridiculous. For by his conquests in the world of mind our thoughts are widened, and he has furnished us with new dialectical instruments which are of greater compass and power. We have endeavoured to see him as he truly was, a great original genius struggling with unequal conditions of knowledge, not prepared with a system nor evolving in a series of dialogues ideas which he had long conceived, but contradictory, enquiring as he goes along, following the argument, first from one point of view and then from another, and therefore arriving at opposite conclusions, hovering around the light, and sometimes dazzled with excess of light, but always moving in the same element of ideal truth. We have seen him also in his decline, when the wings of his imagination have begun to droop, but his experience of life remains, and he turns away from the contemplation of the eternal to take a last sad look at human affairs.

...

And so having brought into the world 'noble children' (Phaedr.), he rests from the labours of authorship. More than two thousand two hundred years have passed away since he returned to the place of Apollo and the Muses. Yet the echo of his words continues to be heard among men, because of all philosophers he has the most melodious voice. He is the inspired prophet or teacher who can never die, the only one in whom the outward form adequately represents the fair soul within; in whom the thoughts of all who went before him are reflected and of all who come after him are partly anticipated. Other teachers of philosophy are dried up and withered,—after a few centuries they have become dust; but he is fresh and blooming, and is always begetting new ideas in the minds of men. They are one-sided and abstract; but he has many sides of wisdom. Nor is he always consistent with himself, because he is always moving onward, and knows that there are many more things in philosophy than can be expressed in words, and that truth is greater than consistency. He who approaches him in the most reverent spirit shall reap most of the fruit of his wisdom; he who reads him by the light of ancient commentators will have the least understanding of him.

We may see him with the eye of the mind in the groves of the Academy, or on the banks of the Ilissus, or in the streets of Athens, alone or walking with Socrates, full of those thoughts which have since become the common possession of mankind. Or we may compare him to a statue hid away in some temple of Zeus or Apollo, no longer existing on earth, a statue which has a look as of the God himself. Or we may once more imagine him following in another state of being the great company of heaven which he beheld of old in a vision (Phaedr.). So, 'partly trifling, but with a certain degree of seriousness' (Symp.), we linger around the memory of a world which has passed away (Phaedr.).

LAWS

BOOK I.

PERSONS OF THE DIALOGUE: An Athenian Stranger, Cleinias (a Cretan), Megillus (a Lacedaemonian).

ATHENIAN: Tell me, Strangers, is a God or some man supposed to be the author of your laws?

CLEINIAS: A God, Stranger; in very truth a God: among us Cretans he is said to have been Zeus, but in Lacedaemon, whence our friend here comes, I believe they would say that Apollo is their lawgiver: would they not, Megillus?

MEGILLUS: Certainly.

ATHENIAN: And do you, Cleinias, believe, as Homer tells, that every ninth year Minos went to converse with his Olympian sire, and was inspired by him to make laws for your cities?

CLEINIAS: Yes, that is our tradition; and there was Rhadamanthus, a brother of his, with whose name you are familiar; he is reputed to have been the justest of men, and we Cretans are of opinion that he earned this reputation from his righteous administration of justice when he was alive.

ATHENIAN: Yes, and a noble reputation it was, worthy of a son of Zeus. As you and Megillus have been trained in these institutions, I dare say that you will not be unwilling to give an account of your government and laws; on our way we can pass the time pleasantly in talking about them, for I am told that the distance from Cnosus to the cave and temple of Zeus is considerable; and doubtless there are shady places under the lofty trees, which will protect us from this scorching sun. Being no longer young, we may often stop to rest beneath them, and get over the whole journey without difficulty, beguiling the time by conversation.

CLEINIAS: Yes, Stranger, and if we proceed onward we shall come to groves of cypresses, which are of rare height and beauty, and there are green meadows, in which we may repose and converse.

ATHENIAN: Very good.

CLEINIAS: Very good, indeed; and still better when we see them; let us move on cheerily.

ATHENIAN: I am willing—And first, I want to know why the law has ordained that you shall have common meals and gymnastic exercises, and wear arms.

CLEINIAS: I think, Stranger, that the aim of our institutions is easily intelligible to any one. Look at the character of our country: Crete is not like Thessaly, a large plain; and for this reason they have horsemen in Thessaly, and we have runners—the inequality of the ground in our country is more

adapted to locomotion on foot; but then, if you have runners you must have light arms—no one can carry a heavy weight when running, and bows and arrows are convenient because they are light. Now all these regulations have been made with a view to war, and the legislator appears to me to have looked to this in all his arrangements:—the common meals, if I am not mistaken, were instituted by him for a similar reason, because he saw that while they are in the field the citizens are by the nature of the case compelled to take their meals together for the sake of mutual protection. He seems to me to have thought the world foolish in not understanding that all men are always at war with one another; and if in war there ought to be common meals and certain persons regularly appointed under others to protect an army, they should be continued in peace. For what men in general term peace would be said by him to be only a name; in reality every city is in a natural state of war with every other, not indeed proclaimed by heralds, but everlasting. And if you look closely, you will find that this was the intention of the Cretan legislator; all institutions, private as well as public, were arranged by him with a view to war; in giving them he was under the impression that no possessions or institutions are of any value to him who is defeated in battle; for all the good things of the conquered pass into the hands of the conquerors.

ATHENIAN: You appear to me, Stranger, to have been thoroughly trained in the Cretan institutions, and to be well informed about them; will you tell me a little more explicitly what is the principle of government which you would lay down? You seem to imagine that a well-governed state ought to be so ordered as to conquer all other states in war: am I right in supposing this to be your meaning?

CLEINIAS: Certainly; and our Lacedaemonian friend, if I am not mistaken, will agree with me.

MEGILLUS: Why, my good friend, how could any Lacedaemonian say anything else?

ATHENIAN: And is what you say applicable only to states, or also to villages?

CLEINIAS: To both alike.

ATHENIAN: The case is the same?

CLEINIAS: Yes.

ATHENIAN: And in the village will there be the same war of family against family, and of individual against individual?

CLEINIAS: The same.

ATHENIAN: And should each man conceive himself to be his own enemy:—what shall we say?

CLEINIAS: O Athenian Stranger—inhabitant of Attica I will not call you, for you seem to deserve rather to be named after the goddess herself, because you go back to first principles,—you have thrown a light upon the argument, and will now be better able to understand what I was just saying,—that all men are publicly one another's enemies, and each man privately his own.

(ATHENIAN: My good sir, what do you mean?)—

CLEINIAS:...Moreover, there is a victory and defeat—the first and best of victories, the lowest and worst of defeats—which each man gains or sustains at the hands, not of another, but of himself; this shows that there is a war against ourselves going on within every one of us.

ATHENIAN: Let us now reverse the order of the argument: Seeing that every individual is either his own superior or his own inferior, may we say that there is the same principle in the house, the village, and the state?

CLEINIAS: You mean that in each of them there is a principle of superiority or inferiority to self?

ATHENIAN: Yes.

CLEINIAS: You are quite right in asking the question, for there certainly is such a principle, and above all in states; and the state in which the better citizens win a victory over the mob and over the inferior classes may be truly said to be better than itself, and may be justly praised, where such a victory is gained, or censured in the opposite case.

ATHENIAN: Whether the better is ever really conquered by the worse, is a question which requires more discussion, and may be therefore left for the present. But I now quite understand your meaning when you say that citizens who are of the same race and live in the same cities may unjustly conspire, and having the superiority in numbers may overcome and enslave the few just; and when they prevail, the state may be truly called its own inferior and therefore bad; and when they are defeated, its own superior and therefore good.

CLEINIAS: Your remark, Stranger, is a paradox, and yet we cannot possibly deny it.

ATHENIAN: Here is another case for consideration;—in a family there may be several brothers, who are the offspring of a single pair; very possibly the majority of them may be unjust, and the just may be in a minority.

CLEINIAS: Very possibly.

ATHENIAN: And you and I ought not to raise a question of words as to whether this family and household are rightly said to be superior when they conquer, and inferior when they are conquered; for we are not now considering what may or may not be the proper or customary way of speaking, but we are considering the natural principles of right and wrong in laws.

CLEINIAS: What you say, Stranger, is most true.

MEGILLUS: Quite excellent, in my opinion, as far as we have gone.

ATHENIAN: Again; might there not be a judge over these brethren, of whom we were speaking?

CLEINIAS: Certainly.

ATHENIAN: Now, which would be the better judge—one who destroyed the bad and appointed the good to govern themselves; or one who, while allowing the good to govern, let the bad live, and made them voluntarily submit? Or third, I suppose, in the scale of excellence might be placed a judge, who, finding the family distracted, not only did not destroy any one, but reconciled them to one another for ever after, and gave them laws which they mutually observed, and was able to keep them friends.

CLEINIAS: The last would be by far the best sort of judge and legislator.

ATHENIAN: And yet the aim of all the laws which he gave would be the reverse of war.

CLEINIAS: Very true.

ATHENIAN: And will he who constitutes the state and orders the life of man have in view external war, or that kind of intestine war called civil, which no one, if he could prevent, would like to have occurring in his own state; and when occurring, every one would wish to be quit of as soon as possible?

CLEINIAS: He would have the latter chiefly in view.

ATHENIAN: And would he prefer that this civil war should be terminated by the destruction of one of the parties, and by the victory of the other, or that peace and friendship should be re-established, and that, being reconciled, they should give their attention to foreign enemies?

CLEINIAS: Every one would desire the latter in the case of his own state.

ATHENIAN: And would not that also be the desire of the legislator?

CLEINIAS: Certainly.

ATHENIAN: And would not every one always make laws for the sake of the best?

CLEINIAS: To be sure.

ATHENIAN: But war, whether external or civil, is not the best, and the need of either is to be deprecated; but peace with one another, and good will, are best. Nor is the victory of the state over itself to be regarded as a really good thing, but as a necessity; a man might as well say that the body was in the best state when sick and purged by medicine, forgetting that there is also a state of the body which needs no purge. And in like manner no one can be a true statesman, whether he aims at the happiness of the individual or state, who looks only, or first of all, to external warfare; nor will he ever be a sound legislator who orders peace for the sake of war, and not war for the sake of peace.

CLEINIAS: I suppose that there is truth, Stranger, in that remark of yours; and yet I am greatly mistaken if war is not the entire aim and object of our own institutions, and also of the Lacedaemonian.

ATHENIAN: I dare say; but there is no reason why we should rudely quarrel with one another about your legislators, instead of gently questioning them, seeing that both we and they are equally in earnest. Please follow me and the argument closely:—And first I will put forward Tyrtaeus, an Athenian by birth, but also a Spartan citizen, who of all men was most eager about war: Well, he says,

'I sing not, I care not, about any man,

even if he were the richest of men, and possessed every good (and then he gives a whole list of them), if he be not at all times a brave warrior.' I imagine that you, too, must have heard his poems; our Lacedaemonian friend has probably heard more than enough of them.

MEGILLUS: Very true.

CLEINIAS: And they have found their way from Lacedaemon to Crete.

ATHENIAN: Come now and let us all join in asking this question of Tyrtaeus: O most divine poet, we will say to him, the excellent praise which you have bestowed on those who excel in war sufficiently proves that you are wise and good, and I and Megillus and Cleinias of Cnosus do, as I believe, entirely agree with you. But we should like to be quite sure that we are speaking of the same men; tell us, then, do you agree with us in thinking that there are two kinds of war; or what would you say? A far inferior man to Tyrtaeus would have no difficulty in replying quite truly, that war is of two kinds,—one which is universally called civil war, and is, as we were just now saying, of all wars the worst; the other, as we should all admit, in which we fall out with other nations who are of a different race, is a far milder form of warfare.

CLEINIAS: Certainly, far milder.

ATHENIAN: Well, now, when you praise and blame war in this high-flown strain, whom are you praising or blaming, and to which kind of war are you referring? I suppose that you must mean foreign war, if I am to judge from expressions of yours in which you say that you abominate those

'Who refuse to look upon fields of blood, and will not draw near and strike at their enemies.'

And we shall naturally go on to say to him,—You, Tyrtaeus, as it seems, praise those who distinguish themselves in external and foreign war; and he must admit this.

CLEINIAS: Evidently.

ATHENIAN: They are good; but we say that there are still better men whose virtue is displayed in the greatest of all battles. And we too have a poet whom we summon as a witness, Theognis, citizen of Megara in Sicily:

'Cyrnus,' he says, 'he who is faithful in a civil broil is worth his weight in gold and silver.'

And such an one is far better, as we affirm, than the other in a more difficult kind of war, much in the same degree as justice and temperance and wisdom, when united with courage, are better than courage only; for a man cannot be faithful and good in civil strife without having all virtue. But in the war of which Tyrtaeus speaks, many a mercenary soldier will take his stand and be ready to die at his post, and yet they are generally and almost without exception insolent, unjust, violent men, and the most senseless of human beings. You will ask what the conclusion is, and what I am seeking to prove: I maintain that the divine legislator of Crete, like any other who is worthy of consideration, will always and above all things in making laws have regard to the greatest virtue; which, according to Theognis, is loyalty in the hour of danger, and may be truly called perfect justice. Whereas, that virtue which Tyrtaeus highly praises is well enough, and was praised by the poet at the right time, yet in place and dignity may be said to be only fourth rate (i.e., it ranks after justice, temperance, and wisdom.).

CLEINIAS: Stranger, we are degrading our inspired lawgiver to a rank which is far beneath him.

ATHENIAN: Nay, I think that we degrade not him but ourselves, if we imagine that Lycurgus and Minos laid down laws both in Lacedaemon and Crete mainly with a view to war.

CLEINIAS: What ought we to say then?

ATHENIAN: What truth and what justice require of us, if I am not mistaken, when speaking in behalf of divine excellence;—that the legislator when making his laws had in view not a part only, and this the lowest part of virtue, but all virtue, and that he devised classes of laws answering to the kinds of virtue; not in the way in which modern inventors of laws make the classes, for they only investigate and offer laws whenever a want is felt, and one man has a class of laws about allotments and heiresses, another about assaults; others about ten thousand other such matters. But we maintain that the right way of examining into laws is to proceed as we have now done, and I admired the spirit of your exposition; for you were quite right in beginning with virtue, and saying that this was the aim of the giver of the law, but I thought that you went wrong when you added that all his legislation had a view only to a part, and the least part of virtue, and this called forth my subsequent remarks. Will you allow me then to explain how I should have liked to have heard you expound the matter?

CLEINIAS: By all means.

ATHENIAN: You ought to have said, Stranger—The Cretan laws are with reason famous among the Hellenes; for they fulfil the object of laws, which is to make those who use them happy; and they confer every sort of good. Now goods are of two kinds: there are human and there are divine goods, and the human hang upon the divine; and the state which attains the greater, at the same time acquires the less, or, not having the greater, has neither. Of the lesser goods the first is health, the second beauty, the third strength, including swiftness in running and bodily agility generally, and the fourth is wealth, not the blind god (Pluto), but one who is keen of sight, if only he has wisdom for his companion. For wisdom is chief and leader of the divine class of goods, and next follows temperance; and from the union of these two with courage springs justice, and fourth in the scale of virtue is courage. All these naturally take precedence of the other goods, and this is the order in which the legislator must place them, and after them he will enjoin the rest of his ordinances on the citizens with a view to these, the human looking to the divine, and the divine looking to their leader mind. Some of

his ordinances will relate to contracts of marriage which they make one with another, and then to the procreation and education of children, both male and female; the duty of the lawgiver will be to take charge of his citizens, in youth and age, and at every time of life, and to give them punishments and rewards; and in reference to all their intercourse with one another, he ought to consider their pains and pleasures and desires, and the vehemence of all their passions; he should keep a watch over them, and blame and praise them rightly by the mouth of the laws themselves. Also with regard to anger and terror, and the other perturbations of the soul, which arise out of misfortune, and the deliverances from them which prosperity brings, and the experiences which come to men in diseases, or in war, or poverty, or the opposite of these; in all these states he should determine and teach what is the good and evil of the condition of each. In the next place, the legislator has to be careful how the citizens make their money and in what way they spend it, and to have an eye to their mutual contracts and dissolutions of contracts, whether voluntary or involuntary: he should see how they order all this, and consider where justice as well as injustice is found or is wanting in their several dealings with one another; and honour those who obey the law, and impose fixed penalties on those who disobey, until the round of civil life is ended, and the time has come for the consideration of the proper funeral rites and honours of the dead. And the lawgiver reviewing his work, will appoint guardians to preside over these things,—some who walk by intelligence, others by true opinion only, and then mind will bind together all his ordinances and show them to be in harmony with temperance and justice, and not with wealth or ambition. This is the spirit, Stranger, in which I was and am desirous that you should pursue the subject. And I want to know the nature of all these things, and how they are arranged in the laws of Zeus, as they are termed, and in those of the Pythian Apollo, which Minos and Lycurgus gave; and how the order of them is discovered to his eyes, who has experience in laws gained either by study or habit, although they are far from being self-evident to the rest of mankind like ourselves.

CLEINIAS: How shall we proceed, Stranger?

ATHENIAN: I think that we must begin again as before, and first consider the habit of courage; and then we will go on and discuss another and then another form of virtue, if you please. In this way we shall have a model of the whole; and with these and similar discourses we will beguile the way. And when we have gone through all the virtues, we will show, by the grace of God, that the institutions of which I was speaking look to virtue.

MEGILLUS: Very good; and suppose that you first criticize this praiser of Zeus and the laws of Crete.

ATHENIAN: I will try to criticize you and myself, as well as him, for the argument is a common concern. Tell me,—were not first the syssitia, and secondly the gymnasia, invented by your legislator with a view to war?

MEGILLUS: Yes.

ATHENIAN: And what comes third, and what fourth? For that, I think, is the sort of enumeration which ought to be made of the remaining parts of virtue, no matter whether you call them parts or what their name is, provided the meaning is clear.

MEGILLUS: Then I, or any other Lacedaemonian, would reply that hunting is third in order.

ATHENIAN: Let us see if we can discover what comes fourth and fifth.

MEGILLUS: I think that I can get as far as the fourth head, which is the frequent endurance of pain, exhibited among us Spartans in certain hand-to-hand fights; also in stealing with the prospect of getting a good beating; there is, too, the so-called Crypteia, or secret service, in which wonderful endurance is shown,—our people wander over the whole country by day and by night, and even in winter have not a shoe to their foot, and are without beds to lie upon, and have to attend upon themselves. Marvellous, too, is the endurance which our citizens show in their naked exercises, contending against the violent summer heat; and there are many similar practices, to speak of which in detail would be endless.

ATHENIAN: Excellent, O Lacedaemonian Stranger. But how ought we to define courage? Is it to be regarded only as a combat against fears and pains, or also against desires and pleasures, and against flatteries; which exercise such a tremendous power, that they make the hearts even of respectable citizens to melt like wax?

MEGILLUS: I should say the latter.

ATHENIAN: In what preceded, as you will remember, our Cnosian friend was speaking of a man or a city being inferior to themselves:—Were you not, Cleinias?

CLEINIAS: I was.

ATHENIAN: Now, which is in the truest sense inferior, the man who is overcome by pleasure or by pain?

CLEINIAS: I should say the man who is overcome by pleasure; for all men deem him to be inferior in a more disgraceful sense, than the other who is overcome by pain.

ATHENIAN: But surely the lawgivers of Crete and Lacedaemon have not legislated for a courage which is lame of one leg, able only to meet attacks which come from the left, but impotent against the insidious flatteries which come from the right?

CLEINIAS: Able to meet both, I should say.

ATHENIAN: Then let me once more ask, what institutions have you in either of your states which give a taste of pleasures, and do not avoid them any more than they avoid pains; but which set a person in the midst of them, and compel or induce him by the prospect of reward to get the better of them? Where is an ordinance about pleasure similar to that about pain to be found in your laws? Tell me what there is of this nature among you:—What is there which makes your citizen equally brave against pleasure and pain, conquering what they ought to conquer, and superior to the enemies who are most dangerous and nearest home?

MEGILLUS: I was able to tell you, Stranger, many laws which were directed against pain; but I do not know that I can point out any great or obvious examples of similar institutions which are concerned with pleasure; there are some lesser provisions, however, which I might mention.

CLEINIAS: Neither can I show anything of that sort which is at all equally prominent in the Cretan laws.

ATHENIAN: No wonder, my dear friends; and if, as is very likely, in our search after the true and good, one of us may have to censure the laws of the others, we must not be offended, but take kindly what another says.

CLEINIAS: You are quite right, Athenian Stranger, and we will do as you say.

ATHENIAN: At our time of life, Cleinias, there should be no feeling of irritation.

CLEINIAS: Certainly not.

ATHENIAN: I will not at present determine whether he who censures the Cretan or Lacedaemonian polities is right or wrong. But I believe that I can tell better than either of you what the many say about them. For assuming that you have reasonably good laws, one of the best of them will be the law forbidding any young men to enquire which of them are right or wrong; but with one mouth and one voice they must all agree that the laws are all good, for they came from God; and any one who says the contrary is not to be listened to. But an old man who remarks any defect in your laws may communicate his observation to a ruler or to an equal in years when no young man is present.

CLEINIAS: Exactly so, Stranger; and like a diviner, although not there at the time, you seem to me quite to have hit the meaning of the legislator, and to say what is most true.

ATHENIAN: As there are no young men present, and the legislator has given old men free licence, there will be no impropriety in our discussing these very matters now that we are alone.

CLEINIAS: True. And therefore you may be as free as you like in your censure of our laws, for there is no discredit in knowing what is wrong; he who receives what is said in a generous and friendly spirit will be all the better for it.

ATHENIAN: Very good; however, I am not going to say anything against your laws until to the best of my ability I have examined them, but I am going to raise doubts about them. For you are the only people known to us, whether Greek or barbarian, whom the legislator commanded to eschew all great pleasures and amusements and never to touch them; whereas in the matter of pains or fears which we have just been discussing, he thought that they who from infancy had always avoided pains and fears and sorrows, when they were compelled to face them would run away from those who were hardened in them, and would become their subjects. Now the legislator ought to have considered that this was equally true of pleasure; he should have said to himself, that if our citizens are from their youth upward unacquainted with the greatest pleasures, and unused to endure amid the temptations of pleasure, and are not disciplined to refrain from all things evil, the sweet feeling of pleasure will overcome them just as fear would overcome the former class; and in another, and even a worse manner, they will be the slaves of those who are able to endure amid pleasures, and have had the opportunity of enjoying them, they being often the worst of mankind. One half of their souls will be a slave, the other half free; and they will not be worthy to be called in the true sense men and freemen. Tell me whether you assent to my words?

CLEINIAS: On first hearing, what you say appears to be the truth; but to be hasty in coming to a conclusion about such important matters would be very childish and simple.

ATHENIAN: Suppose, Cleinias and Megillus, that we consider the virtue which follows next of those which we intended to discuss (for after courage comes temperance), what institutions shall we find relating to temperance, either in Crete or Lacedaemon, which, like your military institutions, differ from those of any ordinary state.

MEGILLUS: That is not an easy question to answer; still I should say that the common meals and gymnastic exercises have been excellently devised for the promotion both of temperance and courage.

ATHENIAN: There seems to be a difficulty, Stranger, with regard to states, in making words and facts coincide so that there can be no dispute about them. As in the human body, the regimen which does good in one way does harm in another; and we can hardly say that any one course of treatment is adapted to a particular constitution. Now the gymnasia and common meals do a great deal of good, and yet they are a source of evil in civil troubles; as is shown in the case of the Milesian, and Boeotian, and Thurian youth, among whom these institutions seem always to have had a tendency to degrade the ancient and natural custom of love below the level, not only of man, but of the beasts. The charge may be fairly brought against your cities above all others, and is true also of most other states which especially cultivate gymnastics. Whether such matters are to be regarded jestingly or seriously, I think that the pleasure is to be deemed natural which arises out of the intercourse between men and women; but that the intercourse of men with men, or of women with women, is contrary to nature, and that the bold attempt was originally due to unbridled lust. The Cretans are always accused of having invented the story of Ganymede and Zeus because they wanted to justify themselves in the enjoyment of unnatural pleasures by the practice of the god whom they believe to have been their lawgiver. Leaving the story, we may observe that any speculation about laws turns almost entirely on pleasure and pain, both in states and in individuals: these are two fountains which nature lets flow, and he who draws from them where and when, and as much as he ought, is happy; and this holds of men and animals—of individuals as well as states; and he who indulges in them ignorantly and at the wrong time, is the reverse of happy.

MEGILLUS: I admit, Stranger, that your words are well spoken, and I hardly know what to say in answer to you; but still I think that the Spartan lawgiver was quite right in forbidding pleasure. Of the Cretan laws, I shall leave the defence to my Cnosian friend. But the laws of Sparta, in as far as they relate to pleasure, appear to me to be the best in the world; for that which leads mankind in general into the wildest pleasure and licence, and every other folly, the law has clean driven out; and neither in the country nor in towns which are under the control of Sparta, will you find revelries and the many incitements of every kind of pleasure which accompany them; and any one who meets a drunken and disorderly person, will immediately have him most severely punished, and will not let him off on any pretence, not even at the time of a Dionysiac festival; although I have remarked that this may happen at your performances 'on the cart,' as they are called; and among our Tarentine colonists I have seen the whole city drunk at a Dionysiac festival; but nothing of the sort happens among us.

ATHENIAN: O Lacedaemonian Stranger, these festivities are praiseworthy where there is a spirit of endurance, but are very senseless when they are under no regulations. In order to retaliate, an

Athenian has only to point out the licence which exists among your women. To all such accusations, whether they are brought against the Tarentines, or us, or you, there is one answer which exonerates the practice in question from impropriety. When a stranger expresses wonder at the singularity of what he sees, any inhabitant will naturally answer him:—Wonder not, O stranger; this is our custom, and you may very likely have some other custom about the same things. Now we are speaking, my friends, not about men in general, but about the merits and defects of the lawgivers themselves. Let us then discourse a little more at length about intoxication, which is a very important subject, and will seriously task the discrimination of the legislator. I am not speaking of drinking, or not drinking, wine at all, but of intoxication. Are we to follow the custom of the Scythians, and Persians, and Carthaginians, and Celts, and Iberians, and Thracians, who are all warlike nations, or that of your countrymen, for they, as you say, altogether abstain? But the Scythians and Thracians, both men and women, drink unmixed wine, which they pour on their garments, and this they think a happy and glorious institution. The Persians, again, are much given to other practices of luxury which you reject, but they have more moderation in them than the Thracians and Scythians.

MEGILLUS: O best of men, we have only to take arms into our hands, and we send all these nations flying before us.

ATHENIAN: Nay, my good friend, do not say that; there have been, as there always will be, flights and pursuits of which no account can be given, and therefore we cannot say that victory or defeat in battle affords more than a doubtful proof of the goodness or badness of institutions. For when the greater states conquer and enslave the lesser, as the Syracusans have done the Locrians, who appear to be the best-governed people in their part of the world, or as the Athenians have done the Ceans (and there are ten thousand other instances of the same sort of thing), all this is not to the point; let us endeavour rather to form a conclusion about each institution in itself and say nothing, at present, of victories and defeats. Let us only say that such and such a custom is honourable, and another not. And first permit me to tell you how good and bad are to be estimated in reference to these very matters.

MEGILLUS: How do you mean?

ATHENIAN: All those who are ready at a moment's notice to praise or censure any practice which is matter of discussion, seem to me to proceed in a wrong way. Let me give you an illustration of what I mean:—You may suppose a person to be praising wheat as a good kind of food, whereupon another person instantly blames wheat, without ever enquiring into its effect or use, or in what way, or to whom, or with what, or in what state and how, wheat is to be given. And that is just what we are doing in this discussion. At the very mention of the word intoxication, one side is ready with their praises and the other with their censures; which is absurd. For either side adduce their witnesses and approvers, and some of us think that we speak with authority because we have many witnesses; and others because they see those who abstain conquering in battle, and this again is disputed by us. Now I cannot say that I shall be satisfied, if we go on discussing each of the remaining laws in the same way. And about this very point of intoxication I should like to speak in another way, which I hold to be the right one; for if number is to be the criterion, are there not myriads upon myriads of nations ready to dispute the point with you, who are only two cities?

MEGILLUS: I shall gladly welcome any method of enquiry which is right.

ATHENIAN: Let me put the matter thus:—Suppose a person to praise the keeping of goats, and the creatures themselves as capital things to have, and then some one who had seen goats feeding without a goatherd in cultivated spots, and doing mischief, were to censure a goat or any other animal who has no keeper, or a bad keeper, would there be any sense or justice in such censure?

MEGILLUS: Certainly not.

ATHENIAN: Does a captain require only to have nautical knowledge in order to be a good captain, whether he is sea-sick or not? What do you say?

MEGILLUS: I say that he is not a good captain if, although he have nautical skill, he is liable to sea-sickness.

ATHENIAN: And what would you say of the commander of an army? Will he be able to command merely because he has military skill if he be a coward, who, when danger comes, is sick and drunk with fear?

MEGILLUS: Impossible.

ATHENIAN: And what if besides being a coward he has no skill?

MEGILLUS: He is a miserable fellow, not fit to be a commander of men, but only of old women.

ATHENIAN: And what would you say of some one who blames or praises any sort of meeting which is intended by nature to have a ruler, and is well enough when under his presidency? The critic, however, has never seen the society meeting together at an orderly feast under the control of a president, but always without a ruler or with a bad one:—when observers of this class praise or blame such meetings, are we to suppose that what they say is of any value?

MEGILLUS: Certainly not, if they have never seen or been present at such a meeting when rightly ordered.

ATHENIAN: Reflect; may not banqueters and banquets be said to constitute a kind of meeting?

MEGILLUS: Of course.

ATHENIAN: And did any one ever see this sort of convivial meeting rightly ordered? Of course you two will answer that you have never seen them at all, because they are not customary or lawful in your country; but I have come across many of them in many different places, and moreover I have made enquiries about them wherever I went, as I may say, and never did I see or hear of anything of the kind which was carried on altogether rightly; in some few particulars they might be right, but in general they were utterly wrong.

CLEINIAS: What do you mean, Stranger, by this remark? Explain. For we, as you say, from our inexperience in such matters, might very likely not know, even if they came in our way, what was right or wrong in such societies.

ATHENIAN: Likely enough; then let me try to be your instructor: You would acknowledge, would you not, that in all gatherings of mankind, of whatever sort, there ought to be a leader?

CLEINIAS: Certainly I should.

ATHENIAN: And we were saying just now, that when men are at war the leader ought to be a brave man?

CLEINIAS: We were.

ATHENIAN: The brave man is less likely than the coward to be disturbed by fears?

CLEINIAS: That again is true.

ATHENIAN: And if there were a possibility of having a general of an army who was absolutely fearless and imperturbable, should we not by all means appoint him?

CLEINIAS: Assuredly.

ATHENIAN: Now, however, we are speaking not of a general who is to command an army, when foe meets foe in time of war, but of one who is to regulate meetings of another sort, when friend meets friend in time of peace.

CLEINIAS: True.

ATHENIAN: And that sort of meeting, if attended with drunkenness, is apt to be unquiet.

CLEINIAS: Certainly; the reverse of quiet.

ATHENIAN: In the first place, then, the revellers as well as the soldiers will require a ruler?

CLEINIAS: To be sure; no men more so.

ATHENIAN: And we ought, if possible, to provide them with a quiet ruler?

CLEINIAS: Of course.

ATHENIAN: And he should be a man who understands society; for his duty is to preserve the friendly feelings which exist among the company at the time, and to increase them for the future by his use of the occasion.

CLEINIAS: Very true.

ATHENIAN: Must we not appoint a sober man and a wise to be our master of the revels? For if the ruler of drinkers be himself young and drunken, and not over-wise, only by some special good fortune will he be saved from doing some great evil.

CLEINIAS: It will be by a singular good fortune that he is saved.

ATHENIAN: Now suppose such associations to be framed in the best way possible in states, and that some one blames the very fact of their existence—he may very likely be right. But if he blames a practice which he only sees very much mismanaged, he shows in the first place that he is not aware of the mismanagement, and also not aware that everything done in this way will turn out to be wrong, because done without the superintendence of a sober ruler. Do you not see that a drunken pilot or a drunken ruler of any sort will ruin ship, chariot, army—anything, in short, of which he has the direction?

CLEINIAS: The last remark is very true, Stranger; and I see quite clearly the advantage of an army having a good leader—he will give victory in war to his followers, which is a very great advantage; and so of other things. But I do not see any similar advantage which either individuals or states gain from the good management of a feast; and I want you to tell me what great good will be effected, supposing that this drinking ordinance is duly established.

ATHENIAN: If you mean to ask what great good accrues to the state from the right training of a single youth, or of a single chorus—when the question is put in that form, we cannot deny that the good is not very great in any particular instance. But if you ask what is the good of education in general, the answer is easy—that education makes good men, and that good men act nobly, and conquer their enemies in battle, because they are good. Education certainly gives victory, although victory sometimes produces forgetfulness of education; for many have grown insolent from victory in war, and this insolence has engendered in them innumerable evils; and many a victory has been and will be suicidal to the victors; but education is never suicidal.

CLEINIAS: You seem to imply, my friend, that convivial meetings, when rightly ordered, are an important element of education.

ATHENIAN: Certainly I do.

CLEINIAS: And can you show that what you have been saying is true?

ATHENIAN: To be absolutely sure of the truth of matters concerning which there are many opinions, is an attribute of the Gods not given to man, Stranger; but I shall be very happy to tell you what I think, especially as we are now proposing to enter on a discussion concerning laws and constitutions.

CLEINIAS: Your opinion, Stranger, about the questions which are now being raised, is precisely what we want to hear.

ATHENIAN: Very good; I will try to find a way of explaining my meaning, and you shall try to have the gift of understanding me. But first let me make an apology. The Athenian citizen is reputed among all the Hellenes to be a great talker, whereas Sparta is renowned for brevity, and the Cretans have more wit than words. Now I am afraid of appearing to elicit a very long discourse out of very small materials. For drinking indeed may appear to be a slight matter, and yet is one which cannot be rightly ordered according to nature, without correct principles of music; these are

necessary to any clear or satisfactory treatment of the subject, and music again runs up into education generally, and there is much to be said about all this. What would you say then to leaving these matters for the present, and passing on to some other question of law?

MEGILLUS: O Athenian Stranger, let me tell you what perhaps you do not know, that our family is the proxenus of your state. I imagine that from their earliest youth all boys, when they are told that they are the proxeni of a particular state, feel kindly towards their second country; and this has certainly been my own feeling. I can well remember from the days of my boyhood, how, when any Lacedaemonians praised or blamed the Athenians, they used to say to me,—'See, Megillus, how ill or how well,' as the case might be, 'has your state treated us'; and having always had to fight your battles against detractors when I heard you assailed, I became warmly attached to you. And I always like to hear the Athenian tongue spoken; the common saying is quite true, that a good Athenian is more than ordinarily good, for he is the only man who is freely and genuinely good by the divine inspiration of his own nature, and is not manufactured. Therefore be assured that I shall like to hear you say whatever you have to say.

CLEINIAS: Yes, Stranger; and when you have heard me speak, say boldly what is in your thoughts. Let me remind you of a tie which unites you to Crete. You must have heard here the story of the prophet Epimenides, who was of my family, and came to Athens ten years before the Persian war, in accordance with the response of the Oracle, and offered certain sacrifices which the God commanded. The Athenians were at that time in dread of the Persian invasion; and he said that for ten years they would not come, and that when they came, they would go away again without accomplishing any of their objects, and would suffer more evil than they inflicted. At that time my forefathers formed ties of hospitality with you; thus ancient is the friendship which I and my parents have had for you.

ATHENIAN: You seem to be quite ready to listen; and I am also ready to perform as much as I can of an almost impossible task, which I will nevertheless attempt. At the outset of the discussion, let me define the nature and power of education; for this is the way by which our argument must travel onwards to the God Dionysus.

CLEINIAS: Let us proceed, if you please.

ATHENIAN: Well, then, if I tell you what are my notions of education, will you consider whether they satisfy you?

CLEINIAS: Let us hear.

ATHENIAN: According to my view, any one who would be good at anything must practise that thing from his youth upwards, both in sport and earnest, in its several branches: for example, he who is to be a good builder, should play at building children's houses; he who is to be a good husbandman, at tilling the ground; and those who have the care of their education should provide them when young with mimic tools. They should learn beforehand the knowledge which they will afterwards require for their art. For example, the future carpenter should learn to measure or apply the line in play; and the future warrior should learn riding, or some other exercise, for amusement, and the teacher should endeavour to direct the children's inclinations and pleasures, by the help of amusements, to their final

aim in life. The most important part of education is right training in the nursery. The soul of the child in his play should be guided to the love of that sort of excellence in which when he grows up to manhood he will have to be perfected. Do you agree with me thus far?

CLEINIAS: Certainly.

ATHENIAN: Then let us not leave the meaning of education ambiguous or ill-defined. At present, when we speak in terms of praise or blame about the bringing-up of each person, we call one man educated and another uneducated, although the uneducated man may be sometimes very well educated for the calling of a retail trader, or of a captain of a ship, and the like. For we are not speaking of education in this narrower sense, but of that other education in virtue from youth upwards, which makes a man eagerly pursue the ideal perfection of citizenship, and teaches him how rightly to rule and how to obey. This is the only education which, upon our view, deserves the name; that other sort of training, which aims at the acquisition of wealth or bodily strength, or mere cleverness apart from intelligence and justice, is mean and illiberal, and is not worthy to be called education at all. But let us not quarrel with one another about a word, provided that the proposition which has just been granted hold good: to wit, that those who are rightly educated generally become good men. Neither must we cast a slight upon education, which is the first and fairest thing that the best of men can ever have, and which, though liable to take a wrong direction, is capable of reformation. And this work of reformation is the great business of every man while he lives.

CLEINIAS: Very true; and we entirely agree with you.

ATHENIAN: And we agreed before that they are good men who are able to rule themselves, and bad men who are not.

CLEINIAS: You are quite right.

ATHENIAN: Let me now proceed, if I can, to clear up the subject a little further by an illustration which I will offer you.

CLEINIAS: Proceed.

ATHENIAN: Do we not consider each of ourselves to be one?

CLEINIAS: We do.

ATHENIAN: And each one of us has in his bosom two counsellors, both foolish and also antagonistic; of which we call the one pleasure, and the other pain.

CLEINIAS: Exactly.

ATHENIAN: Also there are opinions about the future, which have the general name of expectations; and the specific name of fear, when the expectation is of pain; and of hope, when of pleasure; and further, there is reflection about the good or evil of them, and this, when embodied in a decree by the State, is called Law.

CLEINIAS: I am hardly able to follow you; proceed, however, as if I were.

MEGILLUS: I am in the like case.

ATHENIAN: Let us look at the matter thus: May we not conceive each of us living beings to be a puppet of the Gods, either their plaything only, or created with a purpose—which of the two we cannot certainly know? But we do know, that these affections in us are like cords and strings, which pull us different and opposite ways, and to opposite actions; and herein lies the difference between virtue and vice. According to the argument there is one among these cords which every man ought to grasp and never let go, but to pull with it against all the rest; and this is the sacred and golden cord of reason, called by us the common law of the State; there are others which are hard and of iron, but this one is soft because golden; and there are several other kinds. Now we ought always to cooperate with the lead of the best, which is law. For inasmuch as reason is beautiful and gentle, and not violent, her rule must needs have ministers in order to help the golden principle in vanquishing the other principles. And thus the moral of the tale about our being puppets will not have been lost, and the meaning of the expression 'superior or inferior to a man's self' will become clearer; and the individual, attaining to right reason in this matter of pulling the strings of the puppet, should live according to its rule; while the city, receiving the same from some god or from one who has knowledge of these things, should embody it in a law, to be her guide in her dealings with herself and with other states. In this way virtue and vice will be more clearly distinguished by us. And when they have become clearer, education and other institutions will in like manner become clearer; and in particular that question of convivial entertainment, which may seem, perhaps, to have been a very trifling matter, and to have taken a great many more words than were necessary.

CLEINIAS: Perhaps, however, the theme may turn out not to be unworthy of the length of discourse.

ATHENIAN: Very good; let us proceed with any enquiry which really bears on our present object.

CLEINIAS: Proceed.

ATHENIAN: Suppose that we give this puppet of ours drink,—what will be the effect on him?

CLEINIAS: Having what in view do you ask that question?

ATHENIAN: Nothing as yet; but I ask generally, when the puppet is brought to the drink, what sort of result is likely to follow. I will endeavour to explain my meaning more clearly: what I am now asking is this—Does the drinking of wine heighten and increase pleasures and pains, and passions and loves?

CLEINIAS: Very greatly.

ATHENIAN: And are perception and memory, and opinion and prudence, heightened and increased? Do not these qualities entirely desert a man if he becomes saturated with drink?

CLEINIAS: Yes, they entirely desert him.

ATHENIAN: Does he not return to the state of soul in which he was when a young child?

CLEINIAS: He does.

ATHENIAN: Then at that time he will have the least control over himself?

CLEINIAS: The least.

ATHENIAN: And will he not be in a most wretched plight?

CLEINIAS: Most wretched.

ATHENIAN: Then not only an old man but also a drunkard becomes a second time a child?

CLEINIAS: Well said, Stranger.

ATHENIAN: Is there any argument which will prove to us that we ought to encourage the taste for drinking instead of doing all we can to avoid it?

CLEINIAS: I suppose that there is; you at any rate, were just now saying that you were ready to maintain such a doctrine.

ATHENIAN: True, I was; and I am ready still, seeing that you have both declared that you are anxious to hear me.

CLEINIAS: To be sure we are, if only for the strangeness of the paradox, which asserts that a man ought of his own accord to plunge into utter degradation.

ATHENIAN: Are you speaking of the soul?

CLEINIAS: Yes.

ATHENIAN: And what would you say about the body, my friend? Are you not surprised at any one of his own accord bringing upon himself deformity, leanness, ugliness, decrepitude?

CLEINIAS: Certainly.

ATHENIAN: Yet when a man goes of his own accord to a doctor's shop, and takes medicine, is he not aware that soon, and for many days afterwards, he will be in a state of body which he would die rather than accept as the permanent condition of his life? Are not those who train in gymnasia, at first beginning reduced to a state of weakness?

CLEINIAS: Yes, all that is well known.

ATHENIAN: Also that they go of their own accord for the sake of the subsequent benefit?

CLEINIAS: Very good.

ATHENIAN: And we may conceive this to be true in the same way of other practices?

CLEINIAS: Certainly.

ATHENIAN: And the same view may be taken of the pastime of drinking wine, if we are right in supposing that the same good effect follows?

CLEINIAS: To be sure.

ATHENIAN: If such convivialities should turn out to have any advantage equal in importance to that of gymnastic, they are in their very nature to be preferred to mere bodily exercise, inasmuch as they have no accompaniment of pain.

CLEINIAS: True; but I hardly think that we shall be able to discover any such benefits to be derived from them.

ATHENIAN: That is just what we must endeavour to show. And let me ask you a question:—Do we not distinguish two kinds of fear, which are very different?

CLEINIAS: What are they?

ATHENIAN: There is the fear of expected evil.

CLEINIAS: Yes.

ATHENIAN: And there is the fear of an evil reputation; we are afraid of being thought evil, because we do or say some dishonourable thing, which fear we and all men term shame.

CLEINIAS: Certainly.

ATHENIAN: These are the two fears, as I called them; one of which is the opposite of pain and other fears, and the opposite also of the greatest and most numerous sort of pleasures.

CLEINIAS: Very true.

ATHENIAN: And does not the legislator and every one who is good for anything, hold this fear in the greatest honour? This is what he terms reverence, and the confidence which is the reverse of this he terms insolence; and the latter he always deems to be a very great evil both to individuals and to states.

CLEINIAS: True.

ATHENIAN: Does not this kind of fear preserve us in many important ways? What is there which so surely gives victory and safety in war? For there are two things which give victory—confidence before enemies, and fear of disgrace before friends.

CLEINIAS: There are.

ATHENIAN: Then each of us should be fearless and also fearful; and why we should be either has now been determined.

CLEINIAS: Certainly.

ATHENIAN: And when we want to make any one fearless, we and the law bring him face to face with many fears.

CLEINIAS: Clearly.

ATHENIAN: And when we want to make him rightly fearful, must we not introduce him to shameless pleasures, and train him to take up arms against them, and to overcome them? Or does this principle apply to courage only, and must he who would be perfect in valour fight against and overcome his own natural character,—since if he be unpractised and inexperienced in such conflicts, he will not be half the man which he might have been,—and are we to suppose, that with temperance it is otherwise, and that he who has never fought with the shameless and unrighteous temptations of his pleasures and lusts, and conquered them, in earnest and in play, by word, deed, and act, will still be perfectly temperate?

CLEINIAS: A most unlikely supposition.

ATHENIAN: Suppose that some God had given a fear-potion to men, and that the more a man drank of this the more he regarded himself at every draught as a child of misfortune, and that he feared everything happening or about to happen to him; and that at last the most courageous of men utterly lost his presence of mind for a time, and only came to himself again when he had slept off the influence of the draught.

CLEINIAS: But has such a draught, Stranger, ever really been known among men?

ATHENIAN: No; but, if there had been, might not such a draught have been of use to the legislator as a test of courage? Might we not go and say to him, 'O legislator, whether you are legislating for the Cretan, or for any other state, would you not like to have a touchstone of the courage and cowardice of your citizens?'

CLEINIAS: 'I should,' will be the answer of every one.

ATHENIAN: 'And you would rather have a touchstone in which there is no risk and no great danger than the reverse?'

CLEINIAS: In that proposition every one may safely agree.

ATHENIAN: 'And in order to make use of the draught, you would lead them amid these imaginary terrors, and prove them, when the affection of fear was working upon them, and compel them to be fearless, exhorting and admonishing them; and also honouring them, but dishonouring any one who

will not be persuaded by you to be in all respects such as you command him; and if he underwent the trial well and manfully, you would let him go unscathed; but if ill, you would inflict a punishment upon him? Or would you abstain from using the potion altogether, although you have no reason for abstaining?'

CLEINIAS: He would be certain, Stranger, to use the potion.

ATHENIAN: This would be a mode of testing and training which would be wonderfully easy in comparison with those now in use, and might be applied to a single person, or to a few, or indeed to any number; and he would do well who provided himself with the potion only, rather than with any number of other things, whether he preferred to be by himself in solitude, and there contend with his fears, because he was ashamed to be seen by the eye of man until he was perfect; or trusting to the force of his own nature and habits, and believing that he had been already disciplined sufficiently, he did not hesitate to train himself in company with any number of others, and display his power in conquering the irresistible change effected by the draught—his virtue being such, that he never in any instance fell into any great unseemliness, but was always himself, and left off before he arrived at the last cup, fearing that he, like all other men, might be overcome by the potion.

CLEINIAS: Yes, Stranger, in that last case, too, he might equally show his self-control.

ATHENIAN: Let us return to the lawgiver, and say to him:—'Well, lawgiver, there is certainly no such fear-potion which man has either received from the Gods or himself discovered; for witchcraft has no place at our board. But is there any potion which might serve as a test of overboldness and excessive and indiscreet boasting?

CLEINIAS: I suppose that he will say, Yes,—meaning that wine is such a potion.

ATHENIAN: Is not the effect of this quite the opposite of the effect of the other? When a man drinks wine he begins to be better pleased with himself, and the more he drinks the more he is filled full of brave hopes, and conceit of his power, and at last the string of his tongue is loosened, and fancying himself wise, he is brimming over with lawlessness, and has no more fear or respect, and is ready to do or say anything.

CLEINIAS: I think that every one will admit the truth of your description.

MEGILLUS: Certainly.

ATHENIAN: Now, let us remember, as we were saying, that there are two things which should be cultivated in the soul: first, the greatest courage; secondly, the greatest fear—

CLEINIAS: Which you said to be characteristic of reverence, if I am not mistaken.

ATHENIAN: Thank you for reminding me. But now, as the habit of courage and fearlessness is to be trained amid fears, let us consider whether the opposite quality is not also to be trained among opposites.

CLEINIAS: That is probably the case.

ATHENIAN: There are times and seasons at which we are by nature more than commonly valiant and bold; now we ought to train ourselves on these occasions to be as free from impudence and shamelessness as possible, and to be afraid to say or suffer or do anything that is base.

CLEINIAS: True.

ATHENIAN: Are not the moments in which we are apt to be bold and shameless such as these?—when we are under the influence of anger, love, pride, ignorance, avarice, cowardice? or when wealth, beauty, strength, and all the intoxicating workings of pleasure madden us? What is better adapted than the festive use of wine, in the first place to test, and in the second place to train the character of a man, if care be taken in the use of it? What is there cheaper, or more innocent? For do but consider which is the greater risk:—Would you rather test a man of a morose and savage nature, which is the source of ten thousand acts of injustice, by making bargains with him at a risk to yourself, or by having him as a companion at the festival of Dionysus? Or would you, if you wanted to apply a touchstone to a man who is prone to love, entrust your wife, or your sons, or daughters to him, perilling your dearest interests in order to have a view of the condition of his soul? I might mention numberless cases, in which the advantage would be manifest of getting to know a character in sport, and without paying dearly for experience. And I do not believe that either a Cretan, or any other man, will doubt that such a test is a fair test, and safer, cheaper, and speedier than any other.

CLEINIAS: That is certainly true.

ATHENIAN: And this knowledge of the natures and habits of men's souls will be of the greatest use in that art which has the management of them; and that art, if I am not mistaken, is politics.

CLEINIAS: Exactly so.

BOOK II.

ATHENIAN: And now we have to consider whether the insight into human nature is the only benefit derived from well-ordered potations, or whether there are not other advantages great and much to be desired. The argument seems to imply that there are. But how and in what way these are to be attained, will have to be considered attentively, or we may be entangled in error.

CLEINIAS: Proceed.

ATHENIAN: Let me once more recall our doctrine of right education; which, if I am not mistaken, depends on the due regulation of convivial intercourse.

CLEINIAS: You talk rather grandly.

ATHENIAN: Pleasure and pain I maintain to be the first perceptions of children, and I say that they are the forms under which virtue and vice are originally present to them. As to wisdom and true and fixed opinions, happy is the man who acquires them, even when declining in years; and we may say that he who possesses them, and the blessings which are contained in them, is a perfect man. Now I mean by education that training which is given by suitable habits to the first instincts of virtue in children;—when pleasure, and friendship, and pain, and hatred, are rightly implanted in souls not yet capable of understanding the nature of them, and who find them, after they have attained reason, to be in harmony with her. This harmony of the soul, taken as a whole, is virtue; but the particular training in respect of pleasure and pain, which leads you always to hate what you ought to hate, and love what you ought to love from the beginning of life to the end, may be separated off; and, in my view, will be rightly called education.

CLEINIAS: I think, Stranger, that you are quite right in all that you have said and are saying about education.

ATHENIAN: I am glad to hear that you agree with me; for, indeed, the discipline of pleasure and pain which, when rightly ordered, is a principle of education, has been often relaxed and corrupted in human life. And the Gods, pitying the toils which our race is born to undergo, have appointed holy festivals, wherein men alternate rest with labour; and have given them the Muses and Apollo, the leader of the Muses, and Dionysus, to be companions in their revels, that they may improve their education by taking part in the festivals of the Gods, and with their help. I should like to know whether a common saying is in our opinion true to nature or not. For men say that the young of all creatures cannot be quiet in their bodies or in their voices; they are always wanting to move and cry out; some leaping and skipping, and overflowing with sportiveness and delight at something, others uttering all sorts of cries. But, whereas the animals have no perception of order or disorder in their movements, that is, of rhythm or harmony, as they are called, to us, the Gods, who, as we say, have been appointed to be our companions in the dance, have given the pleasurable sense of harmony and rhythm; and so they stir us into life, and we follow them, joining hands together in dances and songs; and these they call choruses, which is a term naturally expressive of cheerfulness. Shall we begin, then, with the acknowledgment that education is first given through Apollo and the Muses? What do you say?

CLEINIAS: I assent.

ATHENIAN: And the uneducated is he who has not been trained in the chorus, and the educated is he who has been well trained?

CLEINIAS: Certainly.

ATHENIAN: And the chorus is made up of two parts, dance and song?

CLEINIAS: True.

ATHENIAN: Then he who is well educated will be able to sing and dance well?

CLEINIAS: I suppose that he will.

ATHENIAN: Let us see; what are we saying?

CLEINIAS: What?

ATHENIAN: He sings well and dances well; now must we add that he sings what is good and dances what is good?

CLEINIAS: Let us make the addition.

ATHENIAN: We will suppose that he knows the good to be good, and the bad to be bad, and makes use of them accordingly: which now is the better trained in dancing and music—he who is able to move his body and to use his voice in what is understood to be the right manner, but has no delight in good or hatred of evil; or he who is incorrect in gesture and voice, but is right in his sense of pleasure and pain, and welcomes what is good, and is offended at what is evil?

CLEINIAS: There is a great difference, Stranger, in the two kinds of education.

ATHENIAN: If we three know what is good in song and dance, then we truly know also who is educated and who is uneducated; but if not, then we certainly shall not know wherein lies the safeguard of education, and whether there is any or not.

CLEINIAS: True.

ATHENIAN: Let us follow the scent like hounds, and go in pursuit of beauty of figure, and melody, and song, and dance; if these escape us, there will be no use in talking about true education, whether Hellenic or barbarian.

CLEINIAS: Yes.

ATHENIAN: And what is beauty of figure, or beautiful melody? When a manly soul is in trouble, and when a cowardly soul is in similar case, are they likely to use the same figures and gestures, or to give utterance to the same sounds?

CLEINIAS: How can they, when the very colours of their faces differ?

ATHENIAN: Good, my friend; I may observe, however, in passing, that in music there certainly are figures and there are melodies: and music is concerned with harmony and rhythm, so that you may speak of a melody or figure having good rhythm or good harmony—the term is correct enough; but to speak metaphorically of a melody or figure having a 'good colour,' as the masters of choruses do, is not allowable, although you can speak of the melodies or figures of the brave and the coward, praising the one and censuring the other. And not to be tedious, let us say that the figures and melodies which are expressive of virtue of soul or body, or of images of virtue, are without exception good, and those which are expressive of vice are the reverse of good.

CLEINIAS: Your suggestion is excellent; and let us answer that these things are so.

ATHENIAN: Once more, are all of us equally delighted with every sort of dance?

CLEINIAS: Far otherwise.

ATHENIAN: What, then, leads us astray? Are beautiful things not the same to us all, or are they the same in themselves, but not in our opinion of them? For no one will admit that forms of vice in the dance are more beautiful than forms of virtue, or that he himself delights in the forms of vice, and others in a muse of another character. And yet most persons say, that the excellence of music is to give pleasure to our souls. But this is intolerable and blasphemous; there is, however, a much more plausible account of the delusion.

CLEINIAS: What?

ATHENIAN: The adaptation of art to the characters of men. Choric movements are imitations of manners occurring in various actions, fortunes, dispositions,—each particular is imitated, and those to whom the words, or songs, or dances are suited, either by nature or habit or both, cannot help feeling pleasure in them and applauding them, and calling them beautiful. But those whose natures, or ways, or habits are unsuited to them, cannot delight in them or applaud them, and they call them base. There are others, again, whose natures are right and their habits wrong, or whose habits are right and their natures wrong, and they praise one thing, but are pleased at another. For they say that all these imitations are pleasant, but not good. And in the presence of those whom they think wise, they are ashamed of dancing and singing in the baser manner, or of deliberately lending any countenance to such proceedings; and yet, they have a secret pleasure in them.

CLEINIAS: Very true.

ATHENIAN: And is any harm done to the lover of vicious dances or songs, or any good done to the approver of the opposite sort of pleasure?

CLEINIAS: I think that there is.

ATHENIAN: 'I think' is not the word, but I would say, rather, 'I am certain.' For must they not have the same effect as when a man associates with bad characters, whom he likes and approves rather than dislikes, and only censures playfully because he has a suspicion of his own badness? In that case, he who takes pleasure in them will surely become like those in whom he takes pleasure, even though he be ashamed to praise them. And what greater good or evil can any destiny ever make us undergo?

CLEINIAS: I know of none.

ATHENIAN: Then in a city which has good laws, or in future ages is to have them, bearing in mind the instruction and amusement which are given by music, can we suppose that the poets are to be allowed to teach in the dance anything which they themselves like, in the way of rhythm, or melody, or words, to the young children of any well-conditioned parents? Is the poet to train his choruses as he pleases, without reference to virtue or vice?

CLEINIAS: That is surely quite unreasonable, and is not to be thought of.

ATHENIAN: And yet he may do this in almost any state with the exception of Egypt.

CLEINIAS: And what are the laws about music and dancing in Egypt?

ATHENIAN: You will wonder when I tell you: Long ago they appear to have recognized the very principle of which we are now speaking—that their young citizens must be habituated to forms and strains of virtue. These they fixed, and exhibited the patterns of them in their temples; and no painter or artist is allowed to innovate upon them, or to leave the traditional forms and invent new ones. To this day, no alteration is allowed either in these arts, or in music at all. And you will find that their works of art are painted or moulded in the same forms which they had ten thousand years ago;—this is literally true and no exaggeration,—their ancient paintings and sculptures are not a whit better or worse than the work of to-day, but are made with just the same skill.

CLEINIAS: How extraordinary!

ATHENIAN: I should rather say, How statesmanlike, how worthy of a legislator! I know that other things in Egypt are not so well. But what I am telling you about music is true and deserving of consideration, because showing that a lawgiver may institute melodies which have a natural truth and correctness without any fear of failure. To do this, however, must be the work of God, or of a divine person; in Egypt they have a tradition that their ancient chants which have been preserved for so many ages are the composition of the Goddess Isis. And therefore, as I was saying, if a person can only find in any way the natural melodies, he may confidently embody them in a fixed and legal form. For the love of novelty which arises out of pleasure in the new and weariness of the old, has not strength enough to corrupt the consecrated song and dance, under the plea that they have become antiquated. At any rate, they are far from being corrupted in Egypt.

CLEINIAS: Your arguments seem to prove your point.

ATHENIAN: May we not confidently say that the true use of music and of choral festivities is as follows: We rejoice when we think that we prosper, and again we think that we prosper when we rejoice?

CLEINIAS: Exactly.

ATHENIAN: And when rejoicing in our good fortune, we are unable to be still?

CLEINIAS: True.

ATHENIAN: Our young men break forth into dancing and singing, and we who are their elders deem that we are fulfilling our part in life when we look on at them. Having lost our agility, we delight in their sports and merry-making, because we love to think of our former selves; and gladly institute contests for those who are able to awaken in us the memory of our youth.

CLEINIAS: Very true.

ATHENIAN: Is it altogether unmeaning to say, as the common people do about festivals, that he should be adjudged the wisest of men, and the winner of the palm, who gives us the greatest amount of pleasure and mirth? For on such occasions, and when mirth is the order of the day, ought not he to be honoured most, and, as I was saying, bear the palm, who gives most mirth to the greatest number? Now is this a true way of speaking or of acting?

CLEINIAS: Possibly.

ATHENIAN: But, my dear friend, let us distinguish between different cases, and not be hasty in forming a judgment: One way of considering the question will be to imagine a festival at which there are entertainments of all sorts, including gymnastic, musical, and equestrian contests: the citizens are assembled; prizes are offered, and proclamation is made that any one who likes may enter the lists, and that he is to bear the palm who gives the most pleasure to the spectators—there is to be no regulation about the manner how; but he who is most successful in giving pleasure is to be crowned victor, and deemed to be the pleasantest of the candidates: What is likely to be the result of such a proclamation?

CLEINIAS: In what respect?

ATHENIAN: There would be various exhibitions: one man, like Homer, will exhibit a rhapsody, another a performance on the lute; one will have a tragedy, and another a comedy. Nor would there be anything astonishing in some one imagining that he could gain the prize by exhibiting a puppet-show. Suppose these competitors to meet, and not these only, but innumerable others as well—can you tell me who ought to be the victor?

CLEINIAS: I do not see how any one can answer you, or pretend to know, unless he has heard with his own ears the several competitors; the question is absurd.

ATHENIAN: Well, then, if neither of you can answer, shall I answer this question which you deem so absurd?

CLEINIAS: By all means.

ATHENIAN: If very small children are to determine the question, they will decide for the puppet show.

CLEINIAS: Of course.

ATHENIAN: The older children will be advocates of comedy; educated women, and young men, and people in general, will favour tragedy.

CLEINIAS: Very likely.

ATHENIAN: And I believe that we old men would have the greatest pleasure in hearing a rhapsodist recite well the Iliad and Odyssey, or one of the Hesiodic poems, and would award the victory to him. But, who would really be the victor?—that is the question.

CLEINIAS: Yes.

ATHENIAN: Clearly you and I will have to declare that those whom we old men adjudge victors ought to win; for our ways are far and away better than any which at present exist anywhere in the world.

CLEINIAS: Certainly.

ATHENIAN: Thus far I too should agree with the many, that the excellence of music is to be measured by pleasure. But the pleasure must not be that of chance persons; the fairest music is that which delights the best and best educated, and especially that which delights the one man who is pre-eminent in virtue and education. And therefore the judges must be men of character, for they will require both wisdom and courage; the true judge must not draw his inspiration from the theatre, nor ought he to be unnerved by the clamour of the many and his own incapacity; nor again, knowing the truth, ought he through cowardice and unmanliness carelessly to deliver a lying judgment, with the very same lips which have just appealed to the Gods before he judged. He is sitting not as the disciple of the theatre, but, in his proper place, as their instructor, and he ought to be the enemy of all pandering to the pleasure of the spectators. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, did certainly leave the judgment to the body of spectators, who determined the victor by show of hands. But this custom has been the destruction of the poets; for they are now in the habit of composing with a view to please the bad taste of their judges, and the result is that the spectators instruct themselves;—and also it has been the ruin of the theatre; they ought to be having characters put before them better than their own, and so receiving a higher pleasure, but now by their own act the opposite result follows. What inference is to be drawn from all this? Shall I tell you?

CLEINIAS: What?

ATHENIAN: The inference at which we arrive for the third or fourth time is, that education is the constraining and directing of youth towards that right reason, which the law affirms, and which the experience of the eldest and best has agreed to be truly right. In order, then, that the soul of the child may not be habituated to feel joy and sorrow in a manner at variance with the law, and those who obey the law, but may rather follow the law and rejoice and sorrow at the same things as the aged—in order, I say, to produce this effect, chants appear to have been invented, which really enchant, and are designed to implant that harmony of which we speak. And, because the mind of the child is incapable of enduring serious training, they are called plays and songs, and are performed in play; just as when men are sick and ailing in their bodies, their attendants give them wholesome diet in pleasant meats and drinks, but unwholesome diet in disagreeable things, in order that they may learn, as they ought, to like the one, and to dislike the other. And similarly the true legislator will persuade, and, if he cannot persuade, will compel the poet to express, as he ought, by fair and noble words, in his rhythms, the figures, and in his melodies, the music of temperate and brave and in every way good men.

CLEINIAS: But do you really imagine, Stranger, that this is the way in which poets generally compose in States at the present day? As far as I can observe, except among us and among the Lacedaemonians, there are no regulations like those of which you speak; in other places novelties are always being introduced in dancing and in music, generally not under the authority of any law, but

at the instigation of lawless pleasures; and these pleasures are so far from being the same, as you describe the Egyptian to be, or having the same principles, that they are never the same.

ATHENIAN: Most true, Cleinias; and I daresay that I may have expressed myself obscurely, and so led you to imagine that I was speaking of some really existing state of things, whereas I was only saying what regulations I would like to have about music; and hence there occurred a misapprehension on your part. For when evils are far gone and irremediable, the task of censuring them is never pleasant, although at times necessary. But as we do not really differ, will you let me ask you whether you consider such institutions to be more prevalent among the Cretans and Lacedaemonians than among the other Hellenes?

CLEINIAS: Certainly they are.

ATHENIAN: And if they were extended to the other Hellenes, would it be an improvement on the present state of things?

CLEINIAS: A very great improvement, if the customs which prevail among them were such as prevail among us and the Lacedaemonians, and such as you were just now saying ought to prevail.

ATHENIAN: Let us see whether we understand one another:—Are not the principles of education and music which prevail among you as follows: you compel your poets to say that the good man, if he be temperate and just, is fortunate and happy; and this whether he be great and strong or small and weak, and whether he be rich or poor; and, on the other hand, if he have a wealth passing that of Cinyras or Midas, and be unjust, he is wretched and lives in misery? As the poet says, and with truth: I sing not, I care not about him who accomplishes all noble things, not having justice; let him who 'draws near and stretches out his hand against his enemies be a just man.' But if he be unjust, I would not have him 'look calmly upon bloody death,' nor 'surpass in swiftness the Thracian Boreas;' and let no other thing that is called good ever be his. For the goods of which the many speak are not really good: first in the catalogue is placed health, beauty next, wealth third; and then innumerable others, as for example to have a keen eye or a quick ear, and in general to have all the senses perfect; or, again, to be a tyrant and do as you like; and the final consummation of happiness is to have acquired all these things, and when you have acquired them to become at once immortal. But you and I say, that while to the just and holy all these things are the best of possessions, to the unjust they are all, including even health, the greatest of evils. For in truth, to have sight, and hearing, and the use of the senses, or to live at all without justice and virtue, even though a man be rich in all the so-called goods of fortune, is the greatest of evils, if life be immortal; but not so great, if the bad man lives only a very short time. These are the truths which, if I am not mistaken, you will persuade or compel your poets to utter with suitable accompaniments of harmony and rhythm, and in these they must train up your youth. Am I not right? For I plainly declare that evils as they are termed are goods to the unjust, and only evils to the just, and that goods are truly good to the good, but evil to the evil. Let me ask again, Are you and I agreed about this?

CLEINIAS: I think that we partly agree and partly do not.

ATHENIAN: When a man has health and wealth and a tyranny which lasts, and when he is pre-eminent in strength and courage, and has the gift of immortality, and none of the so-called evils which

counter-balance these goods, but only the injustice and insolence of his own nature—of such an one you are, I suspect, unwilling to believe that he is miserable rather than happy.

CLEINIAS: That is quite true.

ATHENIAN: Once more: Suppose that he be valiant and strong, and handsome and rich, and does throughout his whole life whatever he likes, still, if he be unrighteous and insolent, would not both of you agree that he will of necessity live basely? You will surely grant so much?

CLEINIAS: Certainly.

ATHENIAN: And an evil life too?

CLEINIAS: I am not equally disposed to grant that.

ATHENIAN: Will he not live painfully and to his own disadvantage?

CLEINIAS: How can I possibly say so?

ATHENIAN: How! Then may Heaven make us to be of one mind, for now we are of two. To me, dear Cleinias, the truth of what I am saying is as plain as the fact that Crete is an island. And, if I were a lawgiver, I would try to make the poets and all the citizens speak in this strain, and I would inflict the heaviest penalties on any one in all the land who should dare to say that there are bad men who lead pleasant lives, or that the profitable and gainful is one thing, and the just another; and there are many other matters about which I should make my citizens speak in a manner different from the Cretans and Lacedaemonians of this age, and I may say, indeed, from the world in general. For tell me, my good friends, by Zeus and Apollo tell me, if I were to ask these same Gods who were your legislators,—Is not the most just life also the pleasantest? or are there two lives, one of which is the justest and the other the pleasantest?—and they were to reply that there are two; and thereupon I proceeded to ask, (that would be the right way of pursuing the enquiry), Which are the happier—those who lead the justest, or those who lead the pleasantest life? and they replied, Those who lead the pleasantest—that would be a very strange answer, which I should not like to put into the mouth of the Gods. The words will come with more propriety from the lips of fathers and legislators, and therefore I will repeat my former questions to one of them, and suppose him to say again that he who leads the pleasantest life is the happiest. And to that I rejoin:—O my father, did you not wish me to live as happily as possible? And yet you also never ceased telling me that I should live as justly as possible. Now, here the giver of the rule, whether he be legislator or father, will be in a dilemma, and will in vain endeavour to be consistent with himself. But if he were to declare that the justest life is also the happiest, every one hearing him would enquire, if I am not mistaken, what is that good and noble principle in life which the law approves, and which is superior to pleasure. For what good can the just man have which is separated from pleasure? Shall we say that glory and fame, coming from Gods and men, though good and noble, are nevertheless unpleasant, and infamy pleasant? Certainly not, sweet legislator. Or shall we say that the not-doing of wrong and there being no wrong done is good and honourable, although there is no pleasure in it, and that the doing wrong is pleasant, but evil and base?

CLEINIAS: Impossible.

ATHENIAN: The view which identifies the pleasant and the pleasant and the just and the good and the noble has an excellent moral and religious tendency. And the opposite view is most at variance with the designs of the legislator, and is, in his opinion, infamous; for no one, if he can help, will be persuaded to do that which gives him more pain than pleasure. But as distant prospects are apt to make us dizzy, especially in childhood, the legislator will try to purge away the darkness and exhibit the truth; he will persuade the citizens, in some way or other, by customs and praises and words, that just and unjust are shadows only, and that injustice, which seems opposed to justice, when contemplated by the unjust and evil man appears pleasant and the just most unpleasant; but that from the just man's point of view, the very opposite is the appearance of both of them.

CLEINIAS: True.

ATHENIAN: And which may be supposed to be the truer judgment—that of the inferior or of the better soul?

CLEINIAS: Surely, that of the better soul.

ATHENIAN: Then the unjust life must not only be more base and depraved, but also more unpleasant than the just and holy life?

CLEINIAS: That seems to be implied in the present argument.

ATHENIAN: And even supposing this were otherwise, and not as the argument has proven, still the lawgiver, who is worth anything, if he ever ventures to tell a lie to the young for their good, could not invent a more useful lie than this, or one which will have a better effect in making them do what is right, not on compulsion but voluntarily.

CLEINIAS: Truth, Stranger, is a noble thing and a lasting, but a thing of which men are hard to be persuaded.

ATHENIAN: And yet the story of the Sidonian Cadmus, which is so improbable, has been readily believed, and also innumerable other tales.

CLEINIAS: What is that story?

ATHENIAN: The story of armed men springing up after the sowing of teeth, which the legislator may take as a proof that he can persuade the minds of the young of anything; so that he has only to reflect and find out what belief will be of the greatest public advantage, and then use all his efforts to make the whole community utter one and the same word in their songs and tales and discourses all their life long. But if you do not agree with me, there is no reason why you should not argue on the other side.

CLEINIAS: I do not see that any argument can fairly be raised by either of us against what you are now saying.

ATHENIAN: The next suggestion which I have to offer is, that all our three choruses shall sing to the young and tender souls of children, reciting in their strains all the noble thoughts of which we have already spoken, or are about to speak; and the sum of them shall be, that the life which is by the Gods deemed to be the happiest is also the best;—we shall affirm this to be a most certain truth; and the minds of our young disciples will be more likely to receive these words of ours than any others which we might address to them.

CLEINIAS: I assent to what you say.

ATHENIAN: First will enter in their natural order the sacred choir composed of children, which is to sing lustily the heaven-taught lay to the whole city. Next will follow the choir of young men under the age of thirty, who will call upon the God Paean to testify to the truth of their words, and will pray him to be gracious to the youth and to turn their hearts. Thirdly, the choir of elder men, who are from thirty to sixty years of age, will also sing. There remain those who are too old to sing, and they will tell stories, illustrating the same virtues, as with the voice of an oracle.

CLEINIAS: Who are those who compose the third choir, Stranger? for I do not clearly understand what you mean to say about them.

ATHENIAN: And yet almost all that I have been saying has been said with a view to them.

CLEINIAS: Will you try to be a little plainer?

ATHENIAN: I was speaking at the commencement of our discourse, as you will remember, of the fiery nature of young creatures: I said that they were unable to keep quiet either in limb or voice, and that they called out and jumped about in a disorderly manner; and that no other animal attained to any perception of order, but man only. Now the order of motion is called rhythm, and the order of the voice, in which high and low are duly mingled, is called harmony; and both together are termed choric song. And I said that the Gods had pity on us, and gave us Apollo and the Muses to be our playfellows and leaders in the dance; and Dionysus, as I dare say that you will remember, was the third.

CLEINIAS: I quite remember.

ATHENIAN: Thus far I have spoken of the chorus of Apollo and the Muses, and I have still to speak of the remaining chorus, which is that of Dionysus.

CLEINIAS: How is that arranged? There is something strange, at any rate on first hearing, in a Dionysiac chorus of old men, if you really mean that those who are above thirty, and may be fifty, or from fifty to sixty years of age, are to dance in his honour.

ATHENIAN: Very true; and therefore it must be shown that there is good reason for the proposal.

CLEINIAS: Certainly.

ATHENIAN: Are we agreed thus far?

CLEINIAS: About what?

ATHENIAN: That every man and boy, slave and free, both sexes, and the whole city, should never cease charming themselves with the strains of which we have spoken; and that there should be every sort of change and variation of them in order to take away the effect of sameness, so that the singers may always receive pleasure from their hymns, and may never weary of them?

CLEINIAS: Every one will agree.

ATHENIAN: Where, then, will that best part of our city which, by reason of age and intelligence, has the greatest influence, sing these fairest of strains, which are to do so much good? Shall we be so foolish as to let them off who would give us the most beautiful and also the most useful of songs?

CLEINIAS: But, says the argument, we cannot let them off.

ATHENIAN: Then how can we carry out our purpose with decorum? Will this be the way?

CLEINIAS: What?

ATHENIAN: When a man is advancing in years, he is afraid and reluctant to sing;—he has no pleasure in his own performances; and if compulsion is used, he will be more and more ashamed, the older and more discreet he grows;—is not this true?

CLEINIAS: Certainly.

ATHENIAN: Well, and will he not be yet more ashamed if he has to stand up and sing in the theatre to a mixed audience?—and if moreover when he is required to do so, like the other choirs who contend for prizes, and have been trained under a singing master, he is pinched and hungry, he will certainly have a feeling of shame and discomfort which will make him very unwilling to exhibit.

CLEINIAS: No doubt.

ATHENIAN: How, then, shall we reassure him, and get him to sing? Shall we begin by enacting that boys shall not taste wine at all until they are eighteen years of age; we will tell them that fire must not be poured upon fire, whether in the body or in the soul, until they begin to go to work—this is a precaution which has to be taken against the excitableness of youth;—afterwards they may taste wine in moderation up to the age of thirty, but while a man is young he should abstain altogether from intoxication and from excess of wine; when, at length, he has reached forty years, after dinner at a public mess, he may invite not only the other Gods, but Dionysus above all, to the mystery and festivity of the elder men, making use of the wine which he has given men to lighten the sourness of old age; that in age we may renew our youth, and forget our sorrows; and also in order that the nature of the soul, like iron melted in the fire, may become softer and so more impressible. In the first place, will not any one who is thus mellowed be more ready and less ashamed to sing—I do not say before a large audience, but before a moderate company; nor yet among strangers, but among his familiars, and, as we have often said, to chant, and to enchant?

CLEINIAS: He will be far more ready.

ATHENIAN: There will be no impropriety in our using such a method of persuading them to join with us in song.

CLEINIAS: None at all.

ATHENIAN: And what strain will they sing, and what muse will they hymn? The strain should clearly be one suitable to them.

CLEINIAS: Certainly.

ATHENIAN: And what strain is suitable for heroes? Shall they sing a choric strain?

CLEINIAS: Truly, Stranger, we of Crete and Lacedaemon know no strain other than that which we have learnt and been accustomed to sing in our chorus.

ATHENIAN: I dare say; for you have never acquired the knowledge of the most beautiful kind of song, in your military way of life, which is modelled after the camp, and is not like that of dwellers in cities; and you have your young men herding and feeding together like young colts. No one takes his own individual colt and drags him away from his fellows against his will, raging and foaming, and gives him a groom to attend to him alone, and trains and rubs him down privately, and gives him the qualities in education which will make him not only a good soldier, but also a governor of a state and of cities. Such an one, as we said at first, would be a greater warrior than he of whom Tyrtaeus sings; and he would honour courage everywhere, but always as the fourth, and not as the first part of virtue, either in individuals or states.

CLEINIAS: Once more, Stranger, I must complain that you depreciate our lawgivers.

ATHENIAN: Not intentionally, if at all, my good friend; but whither the argument leads, thither let us follow; for if there be indeed some strain of song more beautiful than that of the choruses or the public theatres, I should like to impart it to those who, as we say, are ashamed of these, and want to have the best.

CLEINIAS: Certainly.

ATHENIAN: When things have an accompanying charm, either the best thing in them is this very charm, or there is some rightness or utility possessed by them;—for example, I should say that eating and drinking, and the use of food in general, have an accompanying charm which we call pleasure; but that this rightness and utility is just the healthfulness of the things served up to us, which is their true rightness.

CLEINIAS: Just so.

ATHENIAN: Thus, too, I should say that learning has a certain accompanying charm which is the pleasure; but that the right and the profitable, the good and the noble, are qualities which the truth gives to it.

CLEINIAS: Exactly.

ATHENIAN: And so in the imitative arts—if they succeed in making likenesses, and are accompanied by pleasure, may not their works be said to have a charm?

CLEINIAS: Yes.

ATHENIAN: But equal proportions, whether of quality or quantity, and not pleasure, speaking generally, would give them truth or rightness.

CLEINIAS: Yes.

ATHENIAN: Then that only can be rightly judged by the standard of pleasure, which makes or furnishes no utility or truth or likeness, nor on the other hand is productive of any hurtful quality, but exists solely for the sake of the accompanying charm; and the term 'pleasure' is most appropriately applied to it when these other qualities are absent.

CLEINIAS: You are speaking of harmless pleasure, are you not?

ATHENIAN: Yes; and this I term amusement, when doing neither harm nor good in any degree worth speaking of.

CLEINIAS: Very true.

ATHENIAN: Then, if such be our principles, we must assert that imitation is not to be judged of by pleasure and false opinion; and this is true of all equality, for the equal is not equal or the symmetrical symmetrical, because somebody thinks or likes something, but they are to be judged of by the standard of truth, and by no other whatever.

CLEINIAS: Quite true.

ATHENIAN: Do we not regard all music as representative and imitative?

CLEINIAS: Certainly.

ATHENIAN: Then, when any one says that music is to be judged of by pleasure, his doctrine cannot be admitted; and if there be any music of which pleasure is the criterion, such music is not to be sought out or deemed to have any real excellence, but only that other kind of music which is an imitation of the good.

CLEINIAS: Very true.

ATHENIAN: And those who seek for the best kind of song and music ought not to seek for that which is pleasant, but for that which is true; and the truth of imitation consists, as we were saying, in rendering the thing imitated according to quantity and quality.

CLEINIAS: Certainly.

ATHENIAN: And every one will admit that musical compositions are all imitative and representative. Will not poets and spectators and actors all agree in this?

CLEINIAS: They will.

ATHENIAN: Surely then he who would judge correctly must know what each composition is; for if he does not know what is the character and meaning of the piece, and what it represents, he will never discern whether the intention is true or false.

CLEINIAS: Certainly not.

ATHENIAN: And will he who does not know what is true be able to distinguish what is good and bad? My statement is not very clear; but perhaps you will understand me better if I put the matter in another way.

CLEINIAS: How?

ATHENIAN: There are ten thousand likenesses of objects of sight?

CLEINIAS: Yes.

ATHENIAN: And can he who does not know what the exact object is which is imitated, ever know whether the resemblance is truthfully executed? I mean, for example, whether a statue has the proportions of a body, and the true situation of the parts; what those proportions are, and how the parts fit into one another in due order; also their colours and conformations, or whether this is all confused in the execution: do you think that any one can know about this, who does not know what the animal is which has been imitated?

CLEINIAS: Impossible.

ATHENIAN: But even if we know that the thing pictured or sculptured is a man, who has received at the hand of the artist all his proper parts and colours and shapes, must we not also know whether the work is beautiful or in any respect deficient in beauty?

CLEINIAS: If this were not required, Stranger, we should all of us be judges of beauty.

ATHENIAN: Very true; and may we not say that in everything imitated, whether in drawing, music, or any other art, he who is to be a competent judge must possess three things;—he must know, in the first place, of what the imitation is; secondly, he must know that it is true; and thirdly, that it has been well executed in words and melodies and rhythms?

CLEINIAS: Certainly.

ATHENIAN: Then let us not faint in discussing the peculiar difficulty of music. Music is more celebrated than any other kind of imitation, and therefore requires the greatest care of them all. For if a man makes a mistake here, he may do himself the greatest injury by welcoming evil dispositions, and the mistake may be very difficult to discern, because the poets are artists very inferior in character to the Muses themselves, who would never fall into the monstrous error of assigning to the words of men the gestures and songs of women; nor after combining the melodies with the gestures of freemen would they add on the rhythms of slaves and men of the baser sort; nor, beginning with the rhythms and gestures of freemen, would they assign to them a melody or words which are of an opposite character; nor would they mix up the voices and sounds of animals and of men and instruments, and every other sort of noise, as if they were all one. But human poets are fond of introducing this sort of inconsistent mixture, and so make themselves ridiculous in the eyes of those who, as Orpheus says, 'are ripe for true pleasure.' The experienced see all this confusion, and yet the poets go on and make still further havoc by separating the rhythm and the figure of the dance from the melody, setting bare words to metre, and also separating the melody and the rhythm from the words, using the lyre or the flute alone. For when there are no words, it is very difficult to recognize the meaning of the harmony and rhythm, or to see that any worthy object is imitated by them. And we must acknowledge that all this sort of thing, which aims only at swiftness and smoothness and a brutish noise, and uses the flute and the lyre not as the mere accompaniments of the dance and song, is exceedingly coarse and tasteless. The use of either instrument, when unaccompanied, leads to every sort of irregularity and trickery. This is all rational enough. But we are considering not how our choristers, who are from thirty to fifty years of age, and may be over fifty, are not to use the Muses, but how they are to use them. And the considerations which we have urged seem to show in what way these fifty years' old choristers who are to sing, may be expected to be better trained. For they need to have a quick perception and knowledge of harmonies and rhythms; otherwise, how can they ever know whether a melody would be rightly sung to the Dorian mode, or to the rhythm which the poet has assigned to it?

CLEINIAS: Clearly they cannot.

ATHENIAN: The many are ridiculous in imagining that they know what is in proper harmony and rhythm, and what is not, when they can only be made to sing and step in rhythm by force; it never occurs to them that they are ignorant of what they are doing. Now every melody is right when it has suitable harmony and rhythm, and wrong when unsuitable.

CLEINIAS: That is most certain.

ATHENIAN: But can a man who does not know a thing, as we were saying, know that the thing is right?

CLEINIAS: Impossible.

ATHENIAN: Then now, as would appear, we are making the discovery that our newly-appointed choristers, whom we hereby invite and, although they are their own masters, compel to sing, must be educated to such an extent as to be able to follow the steps of the rhythm and the notes of the song,

that they may know the harmonies and rhythms, and be able to select what are suitable for men of their age and character to sing; and may sing them, and have innocent pleasure from their own performance, and also lead younger men to welcome with dutiful delight good dispositions. Having such training, they will attain a more accurate knowledge than falls to the lot of the common people, or even of the poets themselves. For the poet need not know the third point, viz., whether the imitation is good or not, though he can hardly help knowing the laws of melody and rhythm. But the aged chorus must know all the three, that they may choose the best, and that which is nearest to the best; for otherwise they will never be able to charm the souls of young men in the way of virtue. And now the original design of the argument which was intended to bring eloquent aid to the Chorus of Dionysus, has been accomplished to the best of our ability, and let us see whether we were right:—I should imagine that a drinking assembly is likely to become more and more tumultuous as the drinking goes on: this, as we were saying at first, will certainly be the case.

CLEINIAS: Certainly.

ATHENIAN: Every man has a more than natural elevation; his heart is glad within him, and he will say anything and will be restrained by nobody at such a time; he fancies that he is able to rule over himself and all mankind.

CLEINIAS: Quite true.

ATHENIAN: Were we not saying that on such occasions the souls of the drinkers become like iron heated in the fire, and grow softer and younger, and are easily moulded by him who knows how to educate and fashion them, just as when they were young, and that this fashioner of them is the same who prescribed for them in the days of their youth, viz., the good legislator; and that he ought to enact laws of the banquet, which, when a man is confident, bold, and impudent, and unwilling to wait his turn and have his share of silence and speech, and drinking and music, will change his character into the opposite—such laws as will infuse into him a just and noble fear, which will take up arms at the approach of insolence, being that divine fear which we have called reverence and shame?

CLEINIAS: True.

ATHENIAN: And the guardians of these laws and fellow-workers with them are the calm and sober generals of the drinkers; and without their help there is greater difficulty in fighting against drink than in fighting against enemies when the commander of an army is not himself calm; and he who is unwilling to obey them and the commanders of Dionysiac feasts who are more than sixty years of age, shall suffer a disgrace as great as he who disobeys military leaders, or even greater.

CLEINIAS: Right.

ATHENIAN: If, then, drinking and amusement were regulated in this way, would not the companions of our revels be improved? they would part better friends than they were, and not, as now, enemies. Their whole intercourse would be regulated by law and observant of it, and the sober would be the leaders of the drunken.

CLEINIAS: I think so too, if drinking were regulated as you propose.

ATHENIAN: Let us not then simply censure the gift of Dionysus as bad and unfit to be received into the State. For wine has many excellences, and one pre-eminent one, about which there is a difficulty in speaking to the many, from a fear of their misconceiving and misunderstanding what is said.

CLEINIAS: To what do you refer?

ATHENIAN: There is a tradition or story, which has somehow crept about the world, that Dionysus was robbed of his wits by his stepmother Here, and that out of revenge he inspires Bacchic furies and dancing madnesses in others; for which reason he gave men wine. Such traditions concerning the Gods I leave to those who think that they may be safely uttered (compare Euthyph.; Republic); I only know that no animal at birth is mature or perfect in intelligence; and in the intermediate period, in which he has not yet acquired his own proper sense, he rages and roars without rhyme or reason; and when he has once got on his legs he jumps about without rhyme or reason; and this, as you will remember, has been already said by us to be the origin of music and gymnastic.

CLEINIAS: To be sure, I remember.

ATHENIAN: And did we not say that the sense of harmony and rhythm sprang from this beginning among men, and that Apollo and the Muses and Dionysus were the Gods whom we had to thank for them?

CLEINIAS: Certainly.

ATHENIAN: The other story implied that wine was given man out of revenge, and in order to make him mad; but our present doctrine, on the contrary, is, that wine was given him as a balm, and in order to implant modesty in the soul, and health and strength in the body.

CLEINIAS: That, Stranger, is precisely what was said.

ATHENIAN: Then half the subject may now be considered to have been discussed; shall we proceed to the consideration of the other half?

CLEINIAS: What is the other half, and how do you divide the subject?

ATHENIAN: The whole choral art is also in our view the whole of education; and of this art, rhythms and harmonies form the part which has to do with the voice.

CLEINIAS: Yes.

ATHENIAN: The movement of the body has rhythm in common with the movement of the voice, but gesture is peculiar to it, whereas song is simply the movement of the voice.

CLEINIAS: Most true.

ATHENIAN: And the sound of the voice which reaches and educates the soul, we have ventured to term music.

CLEINIAS: We were right.

ATHENIAN: And the movement of the body, when regarded as an amusement, we termed dancing; but when extended and pursued with a view to the excellence of the body, this scientific training may be called gymnastic.

CLEINIAS: Exactly.

ATHENIAN: Music, which was one half of the choral art, may be said to have been completely discussed. Shall we proceed to the other half or not? What would you like?

CLEINIAS: My good friend, when you are talking with a Cretan and Lacedaemonian, and we have discussed music and not gymnastic, what answer are either of us likely to make to such an enquiry?

ATHENIAN: An answer is contained in your question; and I understand and accept what you say not only as an answer, but also as a command to proceed with gymnastic.

CLEINIAS: You quite understand me; do as you say.

ATHENIAN: I will; and there will not be any difficulty in speaking intelligibly to you about a subject with which both of you are far more familiar than with music.

CLEINIAS: There will not.

ATHENIAN: Is not the origin of gymnastics, too, to be sought in the tendency to rapid motion which exists in all animals; man, as we were saying, having attained the sense of rhythm, created and invented dancing; and melody arousing and awakening rhythm, both united formed the choral art?

CLEINIAS: Very true.

ATHENIAN: And one part of this subject has been already discussed by us, and there still remains another to be discussed?

CLEINIAS: Exactly.

ATHENIAN: I have first a final word to add to my discourse about drink, if you will allow me to do so.

CLEINIAS: What more have you to say?

ATHENIAN: I should say that if a city seriously means to adopt the practice of drinking under due regulation and with a view to the enforcement of temperance, and in like manner, and on the same principle, will allow of other pleasures, designing to gain the victory over them—in this way all of them may be used. But if the State makes drinking an amusement only, and whoever likes may drink whenever he likes, and with whom he likes, and add to this any other indulgences, I shall never agree or allow that this city or this man should practise drinking. I would go further than the Cretans and Lacedaemonians, and am disposed rather to the law of the Carthaginians, that no one while he is on

a campaign should be allowed to taste wine at all, but that he should drink water during all that time, and that in the city no slave, male or female, should ever drink wine; and that no magistrates should drink during their year of office, nor should pilots of vessels or judges while on duty taste wine at all, nor any one who is going to hold a consultation about any matter of importance; nor in the day-time at all, unless in consequence of exercise or as medicine; nor again at night, when any one, either man or woman, is minded to get children. There are numberless other cases also in which those who have good sense and good laws ought not to drink wine, so that if what I say is true, no city will need many vineyards. Their husbandry and their way of life in general will follow an appointed order, and their cultivation of the vine will be the most limited and the least common of their employments. And this, Stranger, shall be the crown of my discourse about wine, if you agree.

CLEINIAS: Excellent: we agree.

BOOK III.

ATHENIAN: Enough of this. And what, then, is to be regarded as the origin of government? Will not a man be able to judge of it best from a point of view in which he may behold the progress of states and their transitions to good or evil?

CLEINIAS: What do you mean?

ATHENIAN: I mean that he might watch them from the point of view of time, and observe the changes which take place in them during infinite ages.

CLEINIAS: How so?

ATHENIAN: Why, do you think that you can reckon the time which has elapsed since cities first existed and men were citizens of them?

CLEINIAS: Hardly.

ATHENIAN: But are sure that it must be vast and incalculable?

CLEINIAS: Certainly.

ATHENIAN: And have not thousands and thousands of cities come into being during this period and as many perished? And has not each of them had every form of government many times over, now growing larger, now smaller, and again improving or declining?

CLEINIAS: To be sure.

ATHENIAN: Let us endeavour to ascertain the cause of these changes; for that will probably explain the first origin and development of forms of government.

CLEINIAS: Very good. You shall endeavour to impart your thoughts to us, and we will make an effort to understand you.

ATHENIAN: Do you believe that there is any truth in ancient traditions?

CLEINIAS: What traditions?

ATHENIAN: The traditions about the many destructions of mankind which have been occasioned by deluges and pestilences, and in many other ways, and of the survival of a remnant?

CLEINIAS: Every one is disposed to believe them.

ATHENIAN: Let us consider one of them, that which was caused by the famous deluge.

CLEINIAS: What are we to observe about it?

ATHENIAN: I mean to say that those who then escaped would only be hill shepherds,—small sparks of the human race preserved on the tops of mountains.

CLEINIAS: Clearly.

ATHENIAN: Such survivors would necessarily be unacquainted with the arts and the various devices which are suggested to the dwellers in cities by interest or ambition, and with all the wrongs which they contrive against one another.

CLEINIAS: Very true.

ATHENIAN: Let us suppose, then, that the cities in the plain and on the sea-coast were utterly destroyed at that time.

CLEINIAS: Very good.

ATHENIAN: Would not all implements have then perished and every other excellent invention of political or any other sort of wisdom have utterly disappeared?

CLEINIAS: Why, yes, my friend; and if things had always continued as they are at present ordered, how could any discovery have ever been made even in the least particular? For it is evident that the arts were unknown during ten thousand times ten thousand years. And no more than a thousand or two thousand years have elapsed since the discoveries of Daedalus, Orpheus and Palamedes,—since Marsyas and Olympus invented music, and Amphion the lyre—not to speak of numberless other inventions which are but of yesterday.

ATHENIAN: Have you forgotten, Cleinias, the name of a friend who is really of yesterday?

CLEINIAS: I suppose that you mean Epimenides.

ATHENIAN: The same, my friend; he does indeed far overleap the heads of all mankind by his invention; for he carried out in practice, as you declare, what of old Hesiod (Works and Days) only preached.

CLEINIAS: Yes, according to our tradition.

ATHENIAN: After the great destruction, may we not suppose that the state of man was something of this sort:—In the beginning of things there was a fearful illimitable desert and a vast expanse of land; a herd or two of oxen would be the only survivors of the animal world; and there might be a few goats, these too hardly enough to maintain the shepherds who tended them?

CLEINIAS: True.

ATHENIAN: And of cities or governments or legislation, about which we are now talking, do you suppose that they could have any recollection at all?

CLEINIAS: None whatever.

ATHENIAN: And out of this state of things has there not sprung all that we now are and have: cities and governments, and arts and laws, and a great deal of vice and a great deal of virtue?

CLEINIAS: What do you mean?

ATHENIAN: Why, my good friend, how can we possibly suppose that those who knew nothing of all the good and evil of cities could have attained their full development, whether of virtue or of vice?

CLEINIAS: I understand your meaning, and you are quite right.

ATHENIAN: But, as time advanced and the race multiplied, the world came to be what the world is.

CLEINIAS: Very true.

ATHENIAN: Doubtless the change was not made all in a moment, but little by little, during a very long period of time.

CLEINIAS: A highly probable supposition.

ATHENIAN: At first, they would have a natural fear ringing in their ears which would prevent their descending from the heights into the plain.

CLEINIAS: Of course.

ATHENIAN: The fewness of the survivors at that time would have made them all the more desirous of seeing one another; but then the means of travelling either by land or sea had been almost entirely

lost, as I may say, with the loss of the arts, and there was great difficulty in getting at one another; for iron and brass and all metals were jumbled together and had disappeared in the chaos; nor was there any possibility of extracting ore from them; and they had scarcely any means of felling timber. Even if you suppose that some implements might have been preserved in the mountains, they must quickly have worn out and vanished, and there would be no more of them until the art of metallurgy had again revived.

CLEINIAS: There could not have been.

ATHENIAN: In how many generations would this be attained?

CLEINIAS: Clearly, not for many generations.

ATHENIAN: During this period, and for some time afterwards, all the arts which require iron and brass and the like would disappear.

CLEINIAS: Certainly.

ATHENIAN: Faction and war would also have died out in those days, and for many reasons.

CLEINIAS: How would that be?

ATHENIAN: In the first place, the desolation of these primitive men would create in them a feeling of affection and goodwill towards one another; and, secondly, they would have no occasion to quarrel about their subsistence, for they would have pasture in abundance, except just at first, and in some particular cases; and from their pasture-land they would obtain the greater part of their food in a primitive age, having plenty of milk and flesh; moreover they would procure other food by the chase, not to be despised either in quantity or quality. They would also have abundance of clothing, and bedding, and dwellings, and utensils either capable of standing on the fire or not; for the plastic and weaving arts do not require any use of iron: and God has given these two arts to man in order to provide him with all such things, that, when reduced to the last extremity, the human race may still grow and increase. Hence in those days mankind were not very poor; nor was poverty a cause of difference among them; and rich they could not have been, having neither gold nor silver:—such at that time was their condition. And the community which has neither poverty nor riches will always have the noblest principles; in it there is no insolence or injustice, nor, again, are there any contentions or envyings. And therefore they were good, and also because they were what is called simple-minded; and when they were told about good and evil, they in their simplicity believed what they heard to be very truth and practised it. No one had the wit to suspect another of a falsehood, as men do now; but what they heard about Gods and men they believed to be true, and lived accordingly; and therefore they were in all respects such as we have described them.

CLEINIAS: That quite accords with my views, and with those of my friend here.

ATHENIAN: Would not many generations living on in a simple manner, although ruder, perhaps, and more ignorant of the arts generally, and in particular of those of land or naval warfare, and likewise of other arts, termed in cities legal practices and party conflicts, and including all conceivable ways of

hurting one another in word and deed;—although inferior to those who lived before the deluge, or to the men of our day in these respects, would they not, I say, be simpler and more manly, and also more temperate and altogether more just? The reason has been already explained.

CLEINIAS: Very true.

ATHENIAN: I should wish you to understand that what has preceded and what is about to follow, has been, and will be said, with the intention of explaining what need the men of that time had of laws, and who was their lawgiver.

CLEINIAS: And thus far what you have said has been very well said.

ATHENIAN: They could hardly have wanted lawgivers as yet; nothing of that sort was likely to have existed in their days, for they had no letters at this early period; they lived by habit and the customs of their ancestors, as they are called.

CLEINIAS: Probably.

ATHENIAN: But there was already existing a form of government which, if I am not mistaken, is generally termed a lordship, and this still remains in many places, both among Hellenes and barbarians (compare Arist. Pol.), and is the government which is declared by Homer to have prevailed among the Cyclopes:—

'They have neither councils nor judgments, but they dwell in hollow caves on the tops of high mountains, and every one gives law to his wife and children, and they do not busy themselves about one another.' (Odyss.)

CLEINIAS: That seems to be a charming poet of yours; I have read some other verses of his, which are very clever; but I do not know much of him, for foreign poets are very little read among the Cretans.

MEGILLUS: But they are in Lacedaemon, and he appears to be the prince of them all; the manner of life, however, which he describes is not Spartan, but rather Ionian, and he seems quite to confirm what you are saying, when he traces up the ancient state of mankind by the help of tradition to barbarism.

ATHENIAN: Yes, he does confirm it; and we may accept his witness to the fact that such forms of government sometimes arise.

CLEINIAS: We may.

ATHENIAN: And were not such states composed of men who had been dispersed in single habitations and families by the poverty which attended the devastations; and did not the eldest then rule among them, because with them government originated in the authority of a father and a mother, whom, like a flock of birds, they followed, forming one troop under the patriarchal rule and sovereignty of their parents, which of all sovereignties is the most just?

CLEINIAS: Very true.

ATHENIAN: After this they came together in greater numbers, and increased the size of their cities, and betook themselves to husbandry, first of all at the foot of the mountains, and made enclosures of loose walls and works of defence, in order to keep off wild beasts; thus creating a single large and common habitation.

CLEINIAS: Yes; at least we may suppose so.

ATHENIAN: There is another thing which would probably happen.

CLEINIAS: What?

ATHENIAN: When these larger habitations grew up out of the lesser original ones, each of the lesser ones would survive in the larger; every family would be under the rule of the eldest, and, owing to their separation from one another, would have peculiar customs in things divine and human, which they would have received from their several parents who had educated them; and these customs would incline them to order, when the parents had the element of order in their nature, and to courage, when they had the element of courage. And they would naturally stamp upon their children, and upon their children's children, their own likings; and, as we are saying, they would find their way into the larger society, having already their own peculiar laws.

CLEINIAS: Certainly.

ATHENIAN: And every man surely likes his own laws best, and the laws of others not so well.

CLEINIAS: True.

ATHENIAN: Then now we seem to have stumbled upon the beginnings of legislation.

CLEINIAS: Exactly.

ATHENIAN: The next step will be that these persons who have met together, will select some arbiters, who will review the laws of all of them, and will publicly present such as they approve to the chiefs who lead the tribes, and who are in a manner their kings, allowing them to choose those which they think best. These persons will themselves be called legislators, and will appoint the magistrates, framing some sort of aristocracy, or perhaps monarchy, out of the dynasties or lordships, and in this altered state of the government they will live.

CLEINIAS: Yes, that would be the natural order of things.

ATHENIAN: Then, now let us speak of a third form of government, in which all other forms and conditions of polities and cities concur.

CLEINIAS: What is that?

ATHENIAN: The form which in fact Homer indicates as following the second. This third form arose when, as he says, Dardanus founded Dardania:—

'For not as yet had the holy Ilium been built on the plain to be a city of speaking men; but they were still dwelling at the foot of many-fountained Ida.'

For indeed, in these verses, and in what he said of the Cyclopes, he speaks the words of God and nature; for poets are a divine race, and often in their strains, by the aid of the Muses and the Graces, they attain truth.

CLEINIAS: Yes.

ATHENIAN: Then now let us proceed with the rest of our tale, which will probably be found to illustrate in some degree our proposed design:—Shall we do so?

CLEINIAS: By all means.

ATHENIAN: Ilium was built, when they descended from the mountain, in a large and fair plain, on a sort of low hill, watered by many rivers descending from Ida.

CLEINIAS: Such is the tradition.

ATHENIAN: And we must suppose this event to have taken place many ages after the deluge?

ATHENIAN: A marvellous forgetfulness of the former destruction would appear to have come over them, when they placed their town right under numerous streams flowing from the heights, trusting for their security to not very high hills, either.

CLEINIAS: There must have been a long interval, clearly.

ATHENIAN: And, as population increased, many other cities would begin to be inhabited.

CLEINIAS: Doubtless.

ATHENIAN: Those cities made war against Troy—by sea as well as land—for at that time men were ceasing to be afraid of the sea.

CLEINIAS: Clearly.

ATHENIAN: The Achaeans remained ten years, and overthrew Troy.

CLEINIAS: True.

ATHENIAN: And during the ten years in which the Achaeans were besieging Ilium, the homes of the besiegers were falling into an evil plight. Their youth revolted; and when the soldiers returned to their own cities and families, they did not receive them properly, and as they ought to have done, and

numerous deaths, murders, exiles, were the consequence. The exiles came again, under a new name, no longer Achaeans, but Dorians,—a name which they derived from Dorieus; for it was he who gathered them together. The rest of the story is told by you Lacedaemonians as part of the history of Sparta.

MEGILLUS: To be sure.

ATHENIAN: Thus, after digressing from the original subject of laws into music and drinking-bouts, the argument has, providentially, come back to the same point, and presents to us another handle. For we have reached the settlement of Lacedaemon; which, as you truly say, is in laws and in institutions the sister of Crete. And we are all the better for the digression, because we have gone through various governments and settlements, and have been present at the foundation of a first, second, and third state, succeeding one another in infinite time. And now there appears on the horizon a fourth state or nation which was once in process of settlement and has continued settled to this day. If, out of all this, we are able to discern what is well or ill settled, and what laws are the salvation and what are the destruction of cities, and what changes would make a state happy, O Megillus and Cleinias, we may now begin again, unless we have some fault to find with the previous discussion.

MEGILLUS: If some God, Stranger, would promise us that our new enquiry about legislation would be as good and full as the present, I would go a great way to hear such another, and would think that a day as long as this—and we are now approaching the longest day of the year—was too short for the discussion.

ATHENIAN: Then I suppose that we must consider this subject?

MEGILLUS: Certainly.

ATHENIAN: Let us place ourselves in thought at the moment when Lacedaemon and Argos and Messene and the rest of the Peloponnesus were all in complete subjection, Megillus, to your ancestors; for afterwards, as the legend informs us, they divided their army into three portions, and settled three cities, Argos, Messene, Lacedaemon.

MEGILLUS: True.

ATHENIAN: Temenus was the king of Argos, Cresphontes of Messene, Procles and Eurysthenes of Lacedaemon.

MEGILLUS: Certainly.

ATHENIAN: To these kings all the men of that day made oath that they would assist them, if any one subverted their kingdom.

MEGILLUS: True.

ATHENIAN: But can a kingship be destroyed, or was any other form of government ever destroyed, by any but the rulers themselves? No indeed, by Zeus. Have we already forgotten what was said a little while ago?

MEGILLUS: No.

ATHENIAN: And may we not now further confirm what was then mentioned? For we have come upon facts which have brought us back again to the same principle; so that, in resuming the discussion, we shall not be enquiring about an empty theory, but about events which actually happened. The case was as follows:—Three royal heroes made oath to three cities which were under a kingly government, and the cities to the kings, that both rulers and subjects should govern and be governed according to the laws which were common to all of them: the rulers promised that as time and the race went forward they would not make their rule more arbitrary; and the subjects said that, if the rulers observed these conditions, they would never subvert or permit others to subvert those kingdoms; the kings were to assist kings and peoples when injured, and the peoples were to assist peoples and kings in like manner. Is not this the fact?

MEGILLUS: Yes.

ATHENIAN: And the three states to whom these laws were given, whether their kings or any others were the authors of them, had therefore the greatest security for the maintenance of their constitutions?

MEGILLUS: What security?

ATHENIAN: That the other two states were always to come to the rescue against a rebellious third.

MEGILLUS: True.

ATHENIAN: Many persons say that legislators ought to impose such laws as the mass of the people will be ready to receive; but this is just as if one were to command gymnastic masters or physicians to treat or cure their pupils or patients in an agreeable manner.

MEGILLUS: Exactly.

ATHENIAN: Whereas the physician may often be too happy if he can restore health, and make the body whole, without any very great infliction of pain.

MEGILLUS: Certainly.

ATHENIAN: There was also another advantage possessed by the men of that day, which greatly lightened the task of passing laws.

MEGILLUS: What advantage?

ATHENIAN: The legislators of that day, when they equalized property, escaped the great accusation which generally arises in legislation, if a person attempts to disturb the possession of land, or to abolish debts, because he sees that without this reform there can never be any real equality. Now, in general, when the legislator attempts to make a new settlement of such matters, every one meets him with the cry, that 'he is not to disturb vested interests,'—declaring with imprecations that he is introducing agrarian laws and cancelling of debts, until a man is at his wits' end; whereas no one could quarrel with the Dorians for distributing the land,—there was nothing to hinder them; and as for debts, they had none which were considerable or of old standing.

MEGILLUS: Very true.

ATHENIAN: But then, my good friends, why did the settlement and legislation of their country turn out so badly?

MEGILLUS: How do you mean; and why do you blame them?

ATHENIAN: There were three kingdoms, and of these, two quickly corrupted their original constitution and laws, and the only one which remained was the Spartan.

MEGILLUS: The question which you ask is not easily answered.

ATHENIAN: And yet must be answered when we are enquiring about laws, this being our old man's sober game of play, whereby we beguile the way, as I was saying when we first set out on our journey.

MEGILLUS: Certainly; and we must find out why this was.

ATHENIAN: What laws are more worthy of our attention than those which have regulated such cities? or what settlements of states are greater or more famous?

MEGILLUS: I know of none.

ATHENIAN: Can we doubt that your ancestors intended these institutions not only for the protection of Peloponnesus, but of all the Hellenes, in case they were attacked by the barbarian? For the inhabitants of the region about Ilium, when they provoked by their insolence the Trojan war, relied upon the power of the Assyrians and the Empire of Ninus, which still existed and had a great prestige; the people of those days fearing the united Assyrian Empire just as we now fear the Great King. And the second capture of Troy was a serious offence against them, because Troy was a portion of the Assyrian Empire. To meet the danger the single army was distributed between three cities by the royal brothers, sons of Heracles,—a fair device, as it seemed, and a far better arrangement than the expedition against Troy. For, firstly, the people of that day had, as they thought, in the Heraclidae better leaders than the Pelopidae; in the next place, they considered that their army was superior in valour to that which went against Troy; for, although the latter conquered the Trojans, they were themselves conquered by the Heraclidae—Achaeans by Dorians. May we not suppose that this was the intention with which the men of those days framed the constitutions of their states?

MEGILLUS: Quite true.

ATHENIAN: And would not men who had shared with one another many dangers, and were governed by a single race of royal brothers, and had taken the advice of oracles, and in particular of the Delphian Apollo, be likely to think that such states would be firmly and lastingly established?

MEGILLUS: Of course they would.

ATHENIAN: Yet these institutions, of which such great expectations were entertained, seem to have all rapidly vanished away; with the exception, as I was saying, of that small part of them which existed in your land. And this third part has never to this day ceased warring against the two others; whereas, if the original idea had been carried out, and they had agreed to be one, their power would have been invincible in war.

MEGILLUS: No doubt.

ATHENIAN: But what was the ruin of this glorious confederacy? Here is a subject well worthy of consideration.

MEGILLUS: Certainly, no one will ever find more striking instances of laws or governments being the salvation or destruction of great and noble interests, than are here presented to his view.

ATHENIAN: Then now we seem to have happily arrived at a real and important question.

MEGILLUS: Very true.

ATHENIAN: Did you never remark, sage friend, that all men, and we ourselves at this moment, often fancy that they see some beautiful thing which might have effected wonders if any one had only known how to make a right use of it in some way; and yet this mode of looking at things may turn out after all to be a mistake, and not according to nature, either in our own case or in any other?

MEGILLUS: To what are you referring, and what do you mean?

ATHENIAN: I was thinking of my own admiration of the aforesaid Heracleid expedition, which was so noble, and might have had such wonderful results for the Hellenes, if only rightly used; and I was just laughing at myself.

MEGILLUS: But were you not right and wise in speaking as you did, and we in assenting to you?

ATHENIAN: Perhaps; and yet I cannot help observing that any one who sees anything great or powerful, immediately has the feeling that—'If the owner only knew how to use his great and noble possession, how happy would he be, and what great results would he achieve!'

MEGILLUS: And would he not be justified?

ATHENIAN: Reflect; in what point of view does this sort of praise appear just: First, in reference to the question in hand:—If the then commanders had known how to arrange their army properly, how would they have attained success? Would not this have been the way? They would have bound them all firmly together and preserved them for ever, giving them freedom and dominion at pleasure, combined with the power of doing in the whole world, Hellenic and barbarian, whatever they and their descendants desired. What other aim would they have had?

MEGILLUS: Very good.

ATHENIAN: Suppose any one were in the same way to express his admiration at the sight of great wealth or family honour, or the like, he would praise them under the idea that through them he would attain either all or the greater and chief part of what he desires.

MEGILLUS: He would.

ATHENIAN: Well, now, and does not the argument show that there is one common desire of all mankind?

MEGILLUS: What is it?

ATHENIAN: The desire which a man has, that all things, if possible,—at any rate, things human,—may come to pass in accordance with his soul's desire.

MEGILLUS: Certainly.

ATHENIAN: And having this desire always, and at every time of life, in youth, in manhood, in age, he cannot help always praying for the fulfilment of it.

MEGILLUS: No doubt.

ATHENIAN: And we join in the prayers of our friends, and ask for them what they ask for themselves.

MEGILLUS: We do.

ATHENIAN: Dear is the son to the father—the younger to the elder.

MEGILLUS: Of course.

ATHENIAN: And yet the son often prays to obtain things which the father prays that he may not obtain.

MEGILLUS: When the son is young and foolish, you mean?

ATHENIAN: Yes; or when the father, in the dotage of age or the heat of youth, having no sense of right and justice, prays with fervour, under the influence of feelings akin to those of Theseus when he

cursed the unfortunate Hippolytus, do you imagine that the son, having a sense of right and justice, will join in his father's prayers?

MEGILLUS: I understand you to mean that a man should not desire or be in a hurry to have all things according to his wish, for his wish may be at variance with his reason. But every state and every individual ought to pray and strive for wisdom.

ATHENIAN: Yes; and I remember, and you will remember, what I said at first, that a statesman and legislator ought to ordain laws with a view to wisdom; while you were arguing that the good lawgiver ought to order all with a view to war. And to this I replied that there were four virtues, but that upon your view one of them only was the aim of legislation; whereas you ought to regard all virtue, and especially that which comes first, and is the leader of all the rest—I mean wisdom and mind and opinion, having affection and desire in their train. And now the argument returns to the same point, and I say once more, in jest if you like, or in earnest if you like, that the prayer of a fool is full of danger, being likely to end in the opposite of what he desires. And if you would rather receive my words in earnest, I am willing that you should; and you will find, I suspect, as I have said already, that not cowardice was the cause of the ruin of the Dorian kings and of their whole design, nor ignorance of military matters, either on the part of the rulers or of their subjects; but their misfortunes were due to their general degeneracy, and especially to their ignorance of the most important human affairs. That was then, and is still, and always will be the case, as I will endeavour, if you will allow me, to make out and demonstrate as well as I am able to you who are my friends, in the course of the argument.

CLEINIAS: Pray go on, Stranger;—compliments are troublesome, but we will show, not in word but in deed, how greatly we prize your words, for we will give them our best attention; and that is the way in which a freeman best shows his approval or disapproval.

MEGILLUS: Excellent, Cleinias; let us do as you say.

CLEINIAS: By all means, if Heaven wills. Go on.

ATHENIAN: Well, then, proceeding in the same train of thought, I say that the greatest ignorance was the ruin of the Dorian power, and that now, as then, ignorance is ruin. And if this be true, the legislator must endeavour to implant wisdom in states, and banish ignorance to the utmost of his power.

CLEINIAS: That is evident.

ATHENIAN: Then now consider what is really the greatest ignorance. I should like to know whether you and Megillus would agree with me in what I am about to say; for my opinion is—

CLEINIAS: What?

ATHENIAN: That the greatest ignorance is when a man hates that which he nevertheless thinks to be good and noble, and loves and embraces that which he knows to be unrighteous and evil. This disagreement between the sense of pleasure and the judgment of reason in the soul is, in my opinion, the worst ignorance; and also the greatest, because affecting the great mass of the human soul; for

the principle which feels pleasure and pain in the individual is like the mass or populace in a state. And when the soul is opposed to knowledge, or opinion, or reason, which are her natural lords, that I call folly, just as in the state, when the multitude refuses to obey their rulers and the laws; or, again, in the individual, when fair reasonings have their habitation in the soul and yet do no good, but rather the reverse of good. All these cases I term the worst ignorance, whether in individuals or in states. You will understand, Stranger, that I am speaking of something which is very different from the ignorance of handicraftsmen.

CLEINIAS: Yes, my friend, we understand and agree.

ATHENIAN: Let us, then, in the first place declare and affirm that the citizen who does not know these things ought never to have any kind of authority entrusted to him: he must be stigmatized as ignorant, even though he be versed in calculation and skilled in all sorts of accomplishments, and feats of mental dexterity; and the opposite are to be called wise, even although, in the words of the proverb, they know neither how to read nor how to swim; and to them, as to men of sense, authority is to be committed. For, O my friends, how can there be the least shadow of wisdom when there is no harmony? There is none; but the noblest and greatest of harmonies may be truly said to be the greatest wisdom; and of this he is a partaker who lives according to reason; whereas he who is devoid of reason is the destroyer of his house and the very opposite of a saviour of the state: he is utterly ignorant of political wisdom. Let this, then, as I was saying, be laid down by us.

CLEINIAS: Let it be so laid down.

ATHENIAN: I suppose that there must be rulers and subjects in states?

CLEINIAS: Certainly.

ATHENIAN: And what are the principles on which men rule and obey in cities, whether great or small; and similarly in families? What are they, and how many in number? Is there not one claim of authority which is always just,—that of fathers and mothers and in general of progenitors to rule over their offspring?

CLEINIAS: There is.

ATHENIAN: Next follows the principle that the noble should rule over the ignoble; and, thirdly, that the elder should rule and the younger obey?

CLEINIAS: To be sure.

ATHENIAN: And, fourthly, that slaves should be ruled, and their masters rule?

CLEINIAS: Of course.

ATHENIAN: Fifthly, if I am not mistaken, comes the principle that the stronger shall rule, and the weaker be ruled?

CLEINIAS: That is a rule not to be disobeyed.

ATHENIAN: Yes, and a rule which prevails very widely among all creatures, and is according to nature, as the Theban poet Pindar once said; and the sixth principle, and the greatest of all, is, that the wise should lead and command, and the ignorant follow and obey; and yet, O thou most wise Pindar, as I should reply him, this surely is not contrary to nature, but according to nature, being the rule of law over willing subjects, and not a rule of compulsion.

CLEINIAS: Most true.

ATHENIAN: There is a seventh kind of rule which is awarded by lot, and is dear to the Gods and a token of good fortune: he on whom the lot falls is a ruler, and he who fails in obtaining the lot goes away and is the subject; and this we affirm to be quite just.

CLEINIAS: Certainly.

ATHENIAN: 'Then now,' as we say playfully to any of those who lightly undertake the making of laws, 'you see, legislator, the principles of government, how many they are, and that they are naturally opposed to each other. There we have discovered a fountain-head of seditions, to which you must attend. And, first, we will ask you to consider with us, how and in what respect the kings of Argos and Messene violated these our maxims, and ruined themselves and the great and famous Hellenic power of the olden time. Was it because they did not know how wisely Hesiod spoke when he said that the half is often more than the whole? His meaning was, that when to take the whole would be dangerous, and to take the half would be the safe and moderate course, then the moderate or better was more than the immoderate or worse.'

CLEINIAS: Very true.

ATHENIAN: And may we suppose this immoderate spirit to be more fatal when found among kings than when among peoples?

CLEINIAS: The probability is that ignorance will be a disorder especially prevalent among kings, because they lead a proud and luxurious life.

ATHENIAN: Is it not palpable that the chief aim of the kings of that time was to get the better of the established laws, and that they were not in harmony with the principles which they had agreed to observe by word and oath? This want of harmony may have had the appearance of wisdom, but was really, as we assert, the greatest ignorance, and utterly overthrew the whole empire by dissonance and harsh discord.

CLEINIAS: Very likely.

ATHENIAN: Good; and what measures ought the legislator to have then taken in order to avert this calamity? Truly there is no great wisdom in knowing, and no great difficulty in telling, after the evil has happened; but to have foreseen the remedy at the time would have taken a much wiser head than ours.

MEGILLUS: What do you mean?

ATHENIAN: Any one who looks at what has occurred with you Lacedaemonians, Megillus, may easily know and may easily say what ought to have been done at that time.

MEGILLUS: Speak a little more clearly.

ATHENIAN: Nothing can be clearer than the observation which I am about to make.

MEGILLUS: What is it?

ATHENIAN: That if any one gives too great a power to anything, too large a sail to a vessel, too much food to the body, too much authority to the mind, and does not observe the mean, everything is overthrown, and, in the wantonness of excess, runs in the one case to disorders, and in the other to injustice, which is the child of excess. I mean to say, my dear friends, that there is no soul of man, young and irresponsible, who will be able to sustain the temptation of arbitrary power—no one who will not, under such circumstances, become filled with folly, that worst of diseases, and be hated by his nearest and dearest friends: when this happens his kingdom is undermined, and all his power vanishes from him. And great legislators who know the mean should take heed of the danger. As far as we can guess at this distance of time, what happened was as follows:—

MEGILLUS: What?

ATHENIAN: A God, who watched over Sparta, seeing into the future, gave you two families of kings instead of one; and thus brought you more within the limits of moderation. In the next place, some human wisdom mingled with divine power, observing that the constitution of your government was still feverish and excited, tempered your inborn strength and pride of birth with the moderation which comes of age, making the power of your twenty-eight elders equal with that of the kings in the most important matters. But your third saviour, perceiving that your government was still swelling and foaming, and desirous to impose a curb upon it, instituted the Ephors, whose power he made to resemble that of magistrates elected by lot; and by this arrangement the kingly office, being compounded of the right elements and duly moderated, was preserved, and was the means of preserving all the rest. Since, if there had been only the original legislators, Temenus, Cresphontes, and their contemporaries, as far as they were concerned not even the portion of Aristodemus would have been preserved; for they had no proper experience in legislation, or they would surely not have imagined that oaths would moderate a youthful spirit invested with a power which might be converted into a tyranny. Now that God has instructed us what sort of government would have been or will be lasting, there is no wisdom, as I have already said, in judging after the event; there is no difficulty in learning from an example which has already occurred. But if any one could have foreseen all this at the time, and had been able to moderate the government of the three kingdoms and unite them into one, he might have saved all the excellent institutions which were then conceived; and no Persian or any other armament would have dared to attack us, or would have regarded Hellas as a power to be despised.

CLEINIAS: True.

ATHENIAN: There was small credit to us, Cleinias, in defeating them; and the discredit was, not that the conquerors did not win glorious victories both by land and sea, but what, in my opinion, brought discredit was, first of all, the circumstance that of the three cities one only fought on behalf of Hellas, and the two others were so utterly good for nothing that the one was waging a mighty war against Lacedaemon, and was thus preventing her from rendering assistance, while the city of Argos, which had the precedence at the time of the distribution, when asked to aid in repelling the barbarian, would not answer to the call, or give aid. Many things might be told about Hellas in connexion with that war which are far from honourable; nor, indeed, can we rightly say that Hellas repelled the invader; for the truth is, that unless the Athenians and Lacedaemonians, acting in concert, had warded off the impending yoke, all the tribes of Hellas would have been fused in a chaos of Hellenes mingling with one another, of barbarians mingling with Hellenes, and Hellenes with barbarians; just as nations who are now subject to the Persian power, owing to unnatural separations and combinations of them, are dispersed and scattered, and live miserably. These, Cleinias and Megillus, are the reproaches which we have to make against statesmen and legislators, as they are called, past and present, if we would analyse the causes of their failure, and find out what else might have been done. We said, for instance, just now, that there ought to be no great and unmixed powers; and this was under the idea that a state ought to be free and wise and harmonious, and that a legislator ought to legislate with a view to this end. Nor is there any reason to be surprised at our continually proposing aims for the legislator which appear not to be always the same; but we should consider when we say that temperance is to be the aim, or wisdom is to be the aim, or friendship is to be the aim, that all these aims are really the same; and if so, a variety in the modes of expression ought not to disturb us.

CLEINIAS: Let us resume the argument in that spirit. And now, speaking of friendship and wisdom and freedom, I wish that you would tell me at what, in your opinion, the legislator should aim.

ATHENIAN: Hear me, then: there are two mother forms of states from which the rest may be truly said to be derived; and one of them may be called monarchy and the other democracy: the Persians have the highest form of the one, and we of the other; almost all the rest, as I was saying, are variations of these. Now, if you are to have liberty and the combination of friendship with wisdom, you must have both these forms of government in a measure; the argument emphatically declares that no city can be well governed which is not made up of both.

CLEINIAS: Impossible.

ATHENIAN: Neither the one, if it be exclusively and excessively attached to monarchy, nor the other, if it be similarly attached to freedom, observes moderation; but your states, the Laconian and Cretan, have more of it; and the same was the case with the Athenians and Persians of old time, but now they have less. Shall I tell you why?

CLEINIAS: By all means, if it will tend to elucidate our subject.

ATHENIAN: Hear, then:—There was a time when the Persians had more of the state which is a mean between slavery and freedom. In the reign of Cyrus they were freemen and also lords of many others: the rulers gave a share of freedom to the subjects, and being treated as equals, the soldiers were on better terms with their generals, and showed themselves more ready in the hour of danger. And if there was any wise man among them, who was able to give good counsel, he imparted his wisdom to

the public; for the king was not jealous, but allowed him full liberty of speech, and gave honour to those who could advise him in any matter. And the nation waxed in all respects, because there was freedom and friendship and communion of mind among them.

CLEINIAS: That certainly appears to have been the case.

ATHENIAN: How, then, was this advantage lost under Cambyses, and again recovered under Darius? Shall I try to divine?

CLEINIAS: The enquiry, no doubt, has a bearing upon our subject.

ATHENIAN: I imagine that Cyrus, though a great and patriotic general, had never given his mind to education, and never attended to the order of his household.

CLEINIAS: What makes you say so?

ATHENIAN: I think that from his youth upwards he was a soldier, and entrusted the education of his children to the women; and they brought them up from their childhood as the favourites of fortune, who were blessed already, and needed no more blessings. They thought that they were happy enough, and that no one should be allowed to oppose them in any way, and they compelled every one to praise all that they said or did. This was how they brought them up.

CLEINIAS: A splendid education truly!

ATHENIAN: Such an one as women were likely to give them, and especially princesses who had recently grown rich, and in the absence of the men, too, who were occupied in wars and dangers, and had no time to look after them.

CLEINIAS: What would you expect?

ATHENIAN: Their father had possessions of cattle and sheep, and many herds of men and other animals, but he did not consider that those to whom he was about to make them over were not trained in his own calling, which was Persian; for the Persians are shepherds—sons of a rugged land, which is a stern mother, and well fitted to produce a sturdy race able to live in the open air and go without sleep, and also to fight, if fighting is required (compare Arist. Pol.). He did not observe that his sons were trained differently; through the so-called blessing of being royal they were educated in the Median fashion by women and eunuchs, which led to their becoming such as people do become when they are brought up unreproved. And so, after the death of Cyrus, his sons, in the fulness of luxury and licence, took the kingdom, and first one slew the other because he could not endure a rival; and, afterwards, the slayer himself, mad with wine and brutality, lost his kingdom through the Medes and the Eunuch, as they called him, who despised the folly of Cambyses.

CLEINIAS: So runs the tale, and such probably were the facts.

ATHENIAN: Yes; and the tradition says, that the empire came back to the Persians, through Darius and the seven chiefs.

CLEINIAS: True.

ATHENIAN: Let us note the rest of the story. Observe, that Darius was not the son of a king, and had not received a luxurious education. When he came to the throne, being one of the seven, he divided the country into seven portions, and of this arrangement there are some shadowy traces still remaining; he made laws upon the principle of introducing universal equality in the order of the state, and he embodied in his laws the settlement of the tribute which Cyrus promised,—thus creating a feeling of friendship and community among all the Persians, and attaching the people to him with money and gifts. Hence his armies cheerfully acquired for him countries as large as those which Cyrus had left behind him. Darius was succeeded by his son Xerxes; and he again was brought up in the royal and luxurious fashion. Might we not most justly say: 'O Darius, how came you to bring up Xerxes in the same way in which Cyrus brought up Cambyses, and not to see his fatal mistake?' For Xerxes, being the creation of the same education, met with much the same fortune as Cambyses; and from that time until now there has never been a really great king among the Persians, although they are all called Great. And their degeneracy is not to be attributed to chance, as I maintain; the reason is rather the evil life which is generally led by the sons of very rich and royal persons; for never will boy or man, young or old, excel in virtue, who has been thus educated. And this, I say, is what the legislator has to consider, and what at the present moment has to be considered by us. Justly may you, O Lacedaemonians, be praised, in that you do not give special honour or a special education to wealth rather than to poverty, or to a royal rather than to a private station, where the divine and inspired lawgiver has not originally commanded them to be given. For no man ought to have pre-eminent honour in a state because he surpasses others in wealth, any more than because he is swift of foot or fair or strong, unless he have some virtue in him; nor even if he have virtue, unless he have this particular virtue of temperance.

MEGILLUS: What do you mean, Stranger?

ATHENIAN: I suppose that courage is a part of virtue?

MEGILLUS: To be sure.

ATHENIAN: Then, now hear and judge for yourself:—Would you like to have for a fellow-lodger or neighbour a very courageous man, who had no control over himself?

MEGILLUS: Heaven forbid!

ATHENIAN: Or an artist, who was clever in his profession, but a rogue?

MEGILLUS: Certainly not.

ATHENIAN: And surely justice does not grow apart from temperance?

MEGILLUS: Impossible.

ATHENIAN: Any more than our pattern wise man, whom we exhibited as having his pleasures and pains in accordance with and corresponding to true reason, can be intemperate?

MEGILLUS: No.

ATHENIAN: There is a further consideration relating to the due and undue award of honours in states.

MEGILLUS: What is it?

ATHENIAN: I should like to know whether temperance without the other virtues, existing alone in the soul of man, is rightly to be praised or blamed?

MEGILLUS: I cannot tell.

ATHENIAN: And that is the best answer; for whichever alternative you had chosen, I think that you would have gone wrong.

MEGILLUS: I am fortunate.

ATHENIAN: Very good; a quality, which is a mere appendage of things which can be praised or blamed, does not deserve an expression of opinion, but is best passed over in silence.

MEGILLUS: You are speaking of temperance?

ATHENIAN: Yes; but of the other virtues, that which having this appendage is also most beneficial, will be most deserving of honour, and next that which is beneficial in the next degree; and so each of them will be rightly honoured according to a regular order.

MEGILLUS: True.

ATHENIAN: And ought not the legislator to determine these classes?

MEGILLUS: Certainly he should.

ATHENIAN: Suppose that we leave to him the arrangement of details. But the general division of laws according to their importance into a first and second and third class, we who are lovers of law may make ourselves.

MEGILLUS: Very good.

ATHENIAN: We maintain, then, that a State which would be safe and happy, as far as the nature of man allows, must and ought to distribute honour and dishonour in the right way. And the right way is to place the goods of the soul first and highest in the scale, always assuming temperance to be the condition of them; and to assign the second place to the goods of the body; and the third place to money and property. And if any legislator or state departs from this rule by giving money the place of honour, or in any way preferring that which is really last, may we not say, that he or the state is doing an unholy and unpatriotic thing?

MEGILLUS: Yes; let that be plainly declared.

ATHENIAN: The consideration of the Persian governments led us thus far to enlarge. We remarked that the Persians grew worse and worse. And we affirm the reason of this to have been, that they too much diminished the freedom of the people, and introduced too much of despotism, and so destroyed friendship and community of feeling. And when there is an end of these, no longer do the governors govern on behalf of their subjects or of the people, but on behalf of themselves; and if they think that they can gain ever so small an advantage for themselves, they devastate cities, and send fire and desolation among friendly races. And as they hate ruthlessly and horribly, so are they hated; and when they want the people to fight for them, they find no community of feeling or willingness to risk their lives on their behalf; their untold myriads are useless to them on the field of battle, and they think that their salvation depends on the employment of mercenaries and strangers whom they hire, as if they were in want of more men. And they cannot help being stupid, since they proclaim by their actions that the ordinary distinctions of right and wrong which are made in a state are a trifle, when compared with gold and silver.

MEGILLUS: Quite true.

ATHENIAN: And now enough of the Persians, and their present mal-administration of their government, which is owing to the excess of slavery and despotism among them.

MEGILLUS: Good.

ATHENIAN: Next, we must pass in review the government of Attica in like manner, and from this show that entire freedom and the absence of all superior authority is not by any means so good as government by others when properly limited, which was our ancient Athenian constitution at the time when the Persians made their attack on Hellas, or, speaking more correctly, on the whole continent of Europe. There were four classes, arranged according to a property census, and reverence was our queen and mistress, and made us willing to live in obedience to the laws which then prevailed. Also the vastness of the Persian armament, both by sea and on land, caused a helpless terror, which made us more and more the servants of our rulers and of the laws; and for all these reasons an exceeding harmony prevailed among us. About ten years before the naval engagement at Salamis, Datis came, leading a Persian host by command of Darius, which was expressly directed against the Athenians and Eretrians, having orders to carry them away captive; and these orders he was to execute under pain of death. Now Datis and his myriads soon became complete masters of Eretria, and he sent a fearful report to Athens that no Eretrian had escaped him; for the soldiers of Datis had joined hands and netted the whole of Eretria. And this report, whether well or ill founded, was terrible to all the Hellenes, and above all to the Athenians, and they dispatched embassies in all directions, but no one was willing to come to their relief, with the exception of the Lacedaemonians; and they, either because they were detained by the Messenian war, which was then going on, or for some other reason of which we are not told, came a day too late for the battle of Marathon. After a while, the news arrived of mighty preparations being made, and innumerable threats came from the king. Then, as time went on, a rumour reached us that Darius had died, and that his son, who was young and hot-headed, had come to the throne and was persisting in his design. The Athenians were under the impression that the whole expedition was directed against them, in consequence of the battle of Marathon; and hearing of the bridge over the Hellespont, and the canal of Athos, and the host of

ships, considering that there was no salvation for them either by land or by sea, for there was no one to help them, and remembering that in the first expedition, when the Persians destroyed Eretria, no one came to their help, or would risk the danger of an alliance with them, they thought that this would happen again, at least on land; nor, when they looked to the sea, could they descry any hope of salvation; for they were attacked by a thousand vessels and more. One chance of safety remained, slight indeed and desperate, but their only one. They saw that on the former occasion they had gained a seemingly impossible victory, and borne up by this hope, they found that their only refuge was in themselves and in the Gods. All these things created in them the spirit of friendship; there was the fear of the moment, and there was that higher fear, which they had acquired by obedience to their ancient laws, and which I have several times in the preceding discourse called reverence, of which the good man ought to be a willing servant, and of which the coward is independent and fearless. If this fear had not possessed them, they would never have met the enemy, or defended their temples and sepulchres and their country, and everything that was near and dear to them, as they did; but little by little they would have been all scattered and dispersed.

MEGILLUS: Your words, Athenian, are quite true, and worthy of yourself and of your country.

ATHENIAN: They are true, Megillus; and to you, who have inherited the virtues of your ancestors, I may properly speak of the actions of that day. And I would wish you and Cleinias to consider whether my words have not also a bearing on legislation; for I am not discoursing only for the pleasure of talking, but for the argument's sake. Please to remark that the experience both of ourselves and the Persians was, in a certain sense, the same; for as they led their people into utter servitude, so we too led ours into all freedom. And now, how shall we proceed? for I would like you to observe that our previous arguments have good deal to say for themselves.

MEGILLUS: True; but I wish that you would give us a fuller explanation.

ATHENIAN: I will. Under the ancient laws, my friends, the people was not as now the master, but rather the willing servant of the laws.

MEGILLUS: What laws do you mean?

ATHENIAN: In the first place, let us speak of the laws about music,—that is to say, such music as then existed—in order that we may trace the growth of the excess of freedom from the beginning. Now music was early divided among us into certain kinds and manners. One sort consisted of prayers to the Gods, which were called hymns; and there was another and opposite sort called lamentations, and another termed paeans, and another, celebrating the birth of Dionysus, called, I believe, 'dithyrambs.' And they used the actual word 'laws,' or nomoi, for another kind of song; and to this they added the term 'citharoedic.' All these and others were duly distinguished, nor were the performers allowed to confuse one style of music with another. And the authority which determined and gave judgment, and punished the disobedient, was not expressed in a hiss, nor in the most unmusical shouts of the multitude, as in our days, nor in applause and clapping of hands. But the directors of public instruction insisted that the spectators should listen in silence to the end; and boys and their tutors, and the multitude in general, were kept quiet by a hint from a stick. Such was the good order which the multitude were willing to observe; they would never have dared to give judgment by noisy cries. And then, as time went on, the poets themselves introduced the reign of

vulgar and lawless innovation. They were men of genius, but they had no perception of what is just and lawful in music; raging like Bacchanals and possessed with inordinate delights—mingling lamentations with hymns, and paeans with dithyrambs; imitating the sounds of the flute on the lyre, and making one general confusion; ignorantly affirming that music has no truth, and, whether good or bad, can only be judged of rightly by the pleasure of the hearer (compare Republic). And by composing such licentious works, and adding to them words as licentious, they have inspired the multitude with lawlessness and boldness, and made them fancy that they can judge for themselves about melody and song. And in this way the theatres from being mute have become vocal, as though they had understanding of good and bad in music and poetry; and instead of an aristocracy, an evil sort of theatrocracy has grown up (compare Arist. Pol.). For if the democracy which judged had only consisted of educated persons, no fatal harm would have been done; but in music there first arose the universal conceit of omniscience and general lawlessness;—freedom came following afterwards, and men, fancying that they knew what they did not know, had no longer any fear, and the absence of fear begets shamelessness. For what is this shamelessness, which is so evil a thing, but the insolent refusal to regard the opinion of the better by reason of an over-daring sort of liberty?

MEGILLUS: Very true.

ATHENIAN: Consequent upon this freedom comes the other freedom, of disobedience to rulers (compare Republic); and then the attempt to escape the control and exhortation of father, mother, elders, and when near the end, the control of the laws also; and at the very end there is the contempt of oaths and pledges, and no regard at all for the Gods,—herein they exhibit and imitate the old so-called Titanic nature, and come to the same point as the Titans when they rebelled against God, leading a life of endless evils. But why have I said all this? I ask, because the argument ought to be pulled up from time to time, and not be allowed to run away, but held with bit and bridle, and then we shall not, as the proverb says, fall off our ass. Let us then once more ask the question, To what end has all this been said?

MEGILLUS: Very good.

ATHENIAN: This, then, has been said for the sake—

MEGILLUS: Of what?

ATHENIAN: We were maintaining that the lawgiver ought to have three things in view: first, that the city for which he legislates should be free; and secondly, be at unity with herself; and thirdly, should have understanding;—these were our principles, were they not?

MEGILLUS: Certainly.

ATHENIAN: With a view to this we selected two kinds of government, the one the most despotic, and the other the most free; and now we are considering which of them is the right form: we took a mean in both cases, of despotism in the one, and of liberty in the other, and we saw that in a mean they attained their perfection; but that when they were carried to the extreme of either, slavery or licence, neither party were the gainers.

MEGILLUS: Very true.

ATHENIAN: And that was our reason for considering the settlement of the Dorian army, and of the city built by Dardanus at the foot of the mountains, and the removal of cities to the seashore, and of our mention of the first men, who were the survivors of the deluge. And all that was previously said about music and drinking, and what preceded, was said with the view of seeing how a state might be best administered, and how an individual might best order his own life. And now, Megillus and Cleinias, how can we put to the proof the value of our words?

CLEINIAS: Stranger, I think that I see how a proof of their value may be obtained. This discussion of ours appears to me to have been singularly fortunate, and just what I at this moment want; most auspiciously have you and my friend Megillus come in my way. For I will tell you what has happened to me; and I regard the coincidence as a sort of omen. The greater part of Crete is going to send out a colony, and they have entrusted the management of the affair to the Cnosians; and the Cnosian government to me and nine others. And they desire us to give them any laws which we please, whether taken from the Cretan model or from any other; and they do not mind about their being foreign if they are better. Grant me then this favour, which will also be a gain to yourselves:—Let us make a selection from what has been said, and then let us imagine a State of which we will suppose ourselves to be the original founders. Thus we shall proceed with our enquiry, and, at the same time, I may have the use of the framework which you are constructing, for the city which is in contemplation.

ATHENIAN: Good news, Cleinias; if Megillus has no objection, you may be sure that I will do all in my power to please you.

CLEINIAS: Thank you.

MEGILLUS: And so will I.

CLEINIAS: Excellent; and now let us begin to frame the State.

BOOK IV.

ATHENIAN: And now, what will this city be? I do not mean to ask what is or will hereafter be the name of the place; that may be determined by the accident of locality or of the original settlement—a river or fountain, or some local deity may give the sanction of a name to the newly-founded city; but I do want to know what the situation is, whether maritime or inland.

CLEINIAS: I should imagine, Stranger, that the city of which we are speaking is about eighty stadia distant from the sea.

ATHENIAN: And are there harbours on the seaboard?

CLEINIAS: Excellent harbours, Stranger; there could not be better.

ATHENIAN: Alas! what a prospect! And is the surrounding country productive, or in need of importations?

CLEINIAS: Hardly in need of anything.

ATHENIAN: And is there any neighbouring State?

CLEINIAS: None whatever, and that is the reason for selecting the place; in days of old, there was a migration of the inhabitants, and the region has been deserted from time immemorial.

ATHENIAN: And has the place a fair proportion of hill, and plain, and wood?

CLEINIAS: Like the rest of Crete in that.

ATHENIAN: You mean to say that there is more rock than plain?

CLEINIAS: Exactly.

ATHENIAN: Then there is some hope that your citizens may be virtuous: had you been on the sea, and well provided with harbours, and an importing rather than a producing country, some mighty saviour would have been needed, and lawgivers more than mortal, if you were ever to have a chance of preserving your state from degeneracy and discordance of manners (compare Ar. Pol.). But there is comfort in the eighty stadia; although the sea is too near, especially if, as you say, the harbours are so good. Still we may be content. The sea is pleasant enough as a daily companion, but has indeed also a bitter and brackish quality; filling the streets with merchants and shopkeepers, and begetting in the souls of men uncertain and unfaithful ways—making the state unfriendly and unfaithful both to her own citizens, and also to other nations. There is a consolation, therefore, in the country producing all things at home; and yet, owing to the ruggedness of the soil, not providing anything in great abundance. Had there been abundance, there might have been a great export trade, and a great return of gold and silver; which, as we may safely affirm, has the most fatal results on a State whose aim is the attainment of just and noble sentiments: this was said by us, if you remember, in the previous discussion.

CLEINIAS: I remember, and am of opinion that we both were and are in the right.

ATHENIAN: Well, but let me ask, how is the country supplied with timber for ship-building?

CLEINIAS: There is no fir of any consequence, nor pine, and not much cypress; and you will find very little stone-pine or plane-wood, which shipwrights always require for the interior of ships.

ATHENIAN: These are also natural advantages.

CLEINIAS: Why so?

ATHENIAN: Because no city ought to be easily able to imitate its enemies in what is mischievous.

CLEINIAS: How does that bear upon any of the matters of which we have been speaking?

ATHENIAN: Remember, my good friend, what I said at first about the Cretan laws, that they looked to one thing only, and this, as you both agreed, was war; and I replied that such laws, in so far as they tended to promote virtue, were good; but in that they regarded a part only, and not the whole of virtue, I disapproved of them. And now I hope that you in your turn will follow and watch me if I legislate with a view to anything but virtue, or with a view to a part of virtue only. For I consider that the true lawgiver, like an archer, aims only at that on which some eternal beauty is always attending, and dismisses everything else, whether wealth or any other benefit, when separated from virtue. I was saying that the imitation of enemies was a bad thing; and I was thinking of a case in which a maritime people are harassed by enemies, as the Athenians were by Minos (I do not speak from any desire to recall past grievances); but he, as we know, was a great naval potentate, who compelled the inhabitants of Attica to pay him a cruel tribute; and in those days they had no ships of war as they now have, nor was the country filled with ship-timber, and therefore they could not readily build them. Hence they could not learn how to imitate their enemy at sea, and in this way, becoming sailors themselves, directly repel their enemies. Better for them to have lost many times over the seven youths, than that heavy-armed and stationary troops should have been turned into sailors, and accustomed to be often leaping on shore, and again to come running back to their ships; or should have fancied that there was no disgrace in not awaiting the attack of an enemy and dying boldly; and that there were good reasons, and plenty of them, for a man throwing away his arms, and betaking himself to flight,—which is not dishonourable, as people say, at certain times. This is the language of naval warfare, and is anything but worthy of extraordinary praise. For we should not teach bad habits, least of all to the best part of the citizens. You may learn the evil of such a practice from Homer, by whom Odysseus is introduced, rebuking Agamemnon, because he desires to draw down the ships to the sea at a time when the Achaeans are hard pressed by the Trojans,—he gets angry with him, and says:

'Who, at a time when the battle is in full cry, biddest to drag the well-benched ships into the sea, that the prayers of the Trojans may be accomplished yet more, and high ruin fall upon us. For the Achaeans will not maintain the battle, when the ships are drawn into the sea, but they will look behind and will cease from strife; in that the counsel which you give will prove injurious.'

You see that he quite knew triremes on the sea, in the neighbourhood of fighting men, to be an evil;—lions might be trained in that way to fly from a herd of deer. Moreover, naval powers which owe their safety to ships, do not give honour to that sort of warlike excellence which is most deserving of it. For he who owes his safety to the pilot and the captain, and the oarsman, and all sorts of rather inferior persons, cannot rightly give honour to whom honour is due. But how can a state be in a right condition which cannot justly award honour?

CLEINIAS: It is hardly possible, I admit; and yet, Stranger, we Cretans are in the habit of saying that the battle of Salamis was the salvation of Hellas.

ATHENIAN: Why, yes; and that is an opinion which is widely spread both among Hellenes and barbarians. But Megillus and I say rather, that the battle of Marathon was the beginning, and the battle of Plataea the completion, of the great deliverance, and that these battles by land made the Hellenes better; whereas the sea-fights of Salamis and Artemisium—for I may as well put them both together—made them no better, if I may say so without offence about the battles which helped to save us. And in estimating the goodness of a state, we regard both the situation of the country and the order of the laws, considering that the mere preservation and continuance of life is not the most honourable thing for men, as the vulgar think, but the continuance of the best life, while we live; and that again, if I am not mistaken, is a remark which has been made already.

CLEINIAS: Yes.

ATHENIAN: Then we have only to ask, whether we are taking the course which we acknowledge to be the best for the settlement and legislation of states.

CLEINIAS: The best by far.

ATHENIAN: And now let me proceed to another question: Who are to be the colonists? May any one come out of all Crete; and is the idea that the population in the several states is too numerous for the means of subsistence? For I suppose that you are not going to send out a general invitation to any Hellene who likes to come. And yet I observe that to your country settlers have come from Argos and Aegina and other parts of Hellas. Tell me, then, whence do you draw your recruits in the present enterprise?

CLEINIAS: They will come from all Crete; and of other Hellenes, Peloponnesians will be most acceptable. For, as you truly observe, there are Cretans of Argive descent; and the race of Cretans which has the highest character at the present day is the Gortynian, and this has come from Gortys in the Peloponnesus.

ATHENIAN: Cities find colonization in some respects easier if the colonists are one race, which like a swarm of bees is sent out from a single country, either when friends leave friends, owing to some pressure of population or other similar necessity, or when a portion of a state is driven by factions to emigrate. And there have been whole cities which have taken flight when utterly conquered by a superior power in war. This, however, which is in one way an advantage to the colonist or legislator, in another point of view creates a difficulty. There is an element of friendship in the community of race, and language, and laws, and in common temples and rites of worship; but colonies which are of this homogeneous sort are apt to kick against any laws or any form of constitution differing from that which they had at home; and although the badness of their own laws may have been the cause of the factions which prevailed among them, yet from the force of habit they would fain preserve the very customs which were their ruin, and the leader of the colony, who is their legislator, finds them troublesome and rebellious. On the other hand, the conflux of several populations might be more disposed to listen to new laws; but then, to make them combine and pull together, as they say of horses, is a most difficult task, and the work of years. And yet there is nothing which tends more to the improvement of mankind than legislation and colonization.

CLEINIAS: No doubt; but I should like to know why you say so.

ATHENIAN: My good friend, I am afraid that the course of my speculations is leading me to say something depreciatory of legislators; but if the word be to the purpose, there can be no harm. And yet, why am I disquieted, for I believe that the same principle applies equally to all human things?

CLEINIAS: To what are you referring?

ATHENIAN: I was going to say that man never legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing laws. And the power of disease has often caused innovations in the state, when there have been pestilences, or when there has been a succession of bad seasons continuing during many years. Any one who sees all this, naturally rushes to the conclusion of which I was speaking, that no mortal legislates in anything, but that in human affairs chance is almost everything. And this may be said of the arts of the sailor, and the pilot, and the physician, and the general, and may seem to be well said; and yet there is another thing which may be said with equal truth of all of them.

CLEINIAS: What is it?

ATHENIAN: That God governs all things, and that chance and opportunity co-operate with Him in the government of human affairs. There is, however, a third and less extreme view, that art should be there also; for I should say that in a storm there must surely be a great advantage in having the aid of the pilot's art. You would agree?

CLEINIAS: Yes.

ATHENIAN: And does not a like principle apply to legislation as well as to other things: even supposing all the conditions to be favourable which are needed for the happiness of the state, yet the true legislator must from time to time appear on the scene?

CLEINIAS: Most true.

ATHENIAN: In each case the artist would be able to pray rightly for certain conditions, and if these were granted by fortune, he would then only require to exercise his art?

CLEINIAS: Certainly.

ATHENIAN: And all the other artists just now mentioned, if they were bidden to offer up each their special prayer, would do so?

CLEINIAS: Of course.

ATHENIAN: And the legislator would do likewise?

CLEINIAS: I believe that he would.

ATHENIAN: 'Come, legislator,' we will say to him; 'what are the conditions which you require in a state before you can organize it?' How ought he to answer this question? Shall I give his answer?

CLEINIAS: Yes.

ATHENIAN: He will say—'Give me a state which is governed by a tyrant, and let the tyrant be young and have a good memory; let him be quick at learning, and of a courageous and noble nature; let him have that quality which, as I said before, is the inseparable companion of all the other parts of virtue, if there is to be any good in them.'

CLEINIAS: I suppose, Megillus, that this companion virtue of which the Stranger speaks, must be temperance?

ATHENIAN: Yes, Cleinias, temperance in the vulgar sense; not that which in the forced and exaggerated language of some philosophers is called prudence, but that which is the natural gift of children and animals, of whom some live continently and others incontinently, but when isolated, was, as we said, hardly worth reckoning in the catalogue of goods. I think that you must understand my meaning.

CLEINIAS: Certainly.

ATHENIAN: Then our tyrant must have this as well as the other qualities, if the state is to acquire in the best manner and in the shortest time the form of government which is most conducive to happiness; for there neither is nor ever will be a better or speedier way of establishing a polity than by a tyranny.

CLEINIAS: By what possible arguments, Stranger, can any man persuade himself of such a monstrous doctrine?

ATHENIAN: There is surely no difficulty in seeing, Cleinias, what is in accordance with the order of nature?

CLEINIAS: You would assume, as you say, a tyrant who was young, temperate, quick at learning, having a good memory, courageous, of a noble nature?

ATHENIAN: Yes; and you must add fortunate; and his good fortune must be that he is the contemporary of a great legislator, and that some happy chance brings them together. When this has been accomplished, God has done all that he ever does for a state which he desires to be eminently prosperous; He has done second best for a state in which there are two such rulers, and third best for a state in which there are three. The difficulty increases with the increase, and diminishes with the diminution of the number.

CLEINIAS: You mean to say, I suppose, that the best government is produced from a tyranny, and originates in a good lawgiver and an orderly tyrant, and that the change from such a tyranny into a perfect form of government takes place most easily; less easily when from an oligarchy; and, in the third degree, from a democracy: is not that your meaning?

ATHENIAN: Not so; I mean rather to say that the change is best made out of a tyranny; and secondly, out of a monarchy; and thirdly, out of some sort of democracy: fourth, in the capacity for improvement, comes oligarchy, which has the greatest difficulty in admitting of such a change, because the government is in the hands of a number of potentates. I am supposing that the legislator is by nature of the true sort, and that his strength is united with that of the chief men of the state; and when the ruling element is numerically small, and at the same time very strong, as in a tyranny, there the change is likely to be easiest and most rapid.

CLEINIAS: How? I do not understand.

ATHENIAN: And yet I have repeated what I am saying a good many times; but I suppose that you have never seen a city which is under a tyranny?

CLEINIAS: No, and I cannot say that I have any great desire to see one.

ATHENIAN: And yet, where there is a tyranny, you might certainly see that of which I am now speaking.

CLEINIAS: What do you mean?

ATHENIAN: I mean that you might see how, without trouble and in no very long period of time, the tyrant, if he wishes, can change the manners of a state: he has only to go in the direction of virtue or of vice, whichever he prefers, he himself indicating by his example the lines of conduct, praising and rewarding some actions and reproving others, and degrading those who disobey.

CLEINIAS: But how can we imagine that the citizens in general will at once follow the example set to them; and how can he have this power both of persuading and of compelling them?

ATHENIAN: Let no one, my friends, persuade us that there is any quicker and easier way in which states change their laws than when the rulers lead: such changes never have, nor ever will, come to pass in any other way. The real impossibility or difficulty is of another sort, and is rarely surmounted in the course of ages; but when once it is surmounted, ten thousand or rather all blessings follow.

CLEINIAS: Of what are you speaking?

ATHENIAN: The difficulty is to find the divine love of temperate and just institutions existing in any powerful forms of government, whether in a monarchy or oligarchy of wealth or of birth. You might as well hope to reproduce the character of Nestor, who is said to have excelled all men in the power of speech, and yet more in his temperance. This, however, according to the tradition, was in the times of Troy; in our own days there is nothing of the sort; but if such an one either has or ever shall come into being, or is now among us, blessed is he and blessed are they who hear the wise words that flow from his lips. And this may be said of power in general: When the supreme power in man coincides with the greatest wisdom and temperance, then the best laws and the best constitution come into being; but in no other way. And let what I have been saying be regarded as a kind of sacred legend or oracle, and let this be our proof that, in one point of view, there may be a difficulty for a city to have

good laws, but that there is another point of view in which nothing can be easier or sooner effected, granting our supposition.

CLEINIAS: How do you mean?

ATHENIAN: Let us try to amuse ourselves, old boys as we are, by moulding in words the laws which are suitable to your state.

CLEINIAS: Let us proceed without delay.

ATHENIAN: Then let us invoke God at the settlement of our state; may He hear and be propitious to us, and come and set in order the State and the laws!

CLEINIAS: May He come!

ATHENIAN: But what form of polity are we going to give the city?

CLEINIAS: Tell us what you mean a little more clearly. Do you mean some form of democracy, or oligarchy, or aristocracy, or monarchy? For we cannot suppose that you would include tyranny.

ATHENIAN: Which of you will first tell me to which of these classes his own government is to be referred?

MEGILLUS: Ought I to answer first, since I am the elder?

CLEINIAS: Perhaps you should.

MEGILLUS: And yet, Stranger, I perceive that I cannot say, without more thought, what I should call the government of Lacedaemon, for it seems to me to be like a tyranny,—the power of our Ephors is marvellously tyrannical; and sometimes it appears to me to be of all cities the most democratical; and who can reasonably deny that it is an aristocracy (compare Ar. Pol.)? We have also a monarchy which is held for life, and is said by all mankind, and not by ourselves only, to be the most ancient of all monarchies; and, therefore, when asked on a sudden, I cannot precisely say which form of government the Spartan is.

CLEINIAS: I am in the same difficulty, Megillus; for I do not feel confident that the polity of Cnosus is any of these.

ATHENIAN: The reason is, my excellent friends, that you really have polities, but the states of which we were just now speaking are merely aggregations of men dwelling in cities who are the subjects and servants of a part of their own state, and each of them is named after the dominant power; they are not polities at all. But if states are to be named after their rulers, the true state ought to be called by the name of the God who rules over wise men.

CLEINIAS: And who is this God?

ATHENIAN: May I still make use of fable to some extent, in the hope that I may be better able to answer your question: shall I?

CLEINIAS: By all means.

ATHENIAN: In the primeval world, and a long while before the cities came into being whose settlements we have described, there is said to have been in the time of Cronos a blessed rule and life, of which the best-ordered of existing states is a copy (compare Statesman).

CLEINIAS: It will be very necessary to hear about that.

ATHENIAN: I quite agree with you; and therefore I have introduced the subject.

CLEINIAS: Most appropriately; and since the tale is to the point, you will do well in giving us the whole story.

ATHENIAN: I will do as you suggest. There is a tradition of the happy life of mankind in days when all things were spontaneous and abundant. And of this the reason is said to have been as follows:—Cronos knew what we ourselves were declaring, that no human nature invested with supreme power is able to order human affairs and not overflow with insolence and wrong. Which reflection led him to appoint not men but demigods, who are of a higher and more divine race, to be the kings and rulers of our cities; he did as we do with flocks of sheep and other tame animals. For we do not appoint oxen to be the lords of oxen, or goats of goats; but we ourselves are a superior race, and rule over them. In like manner God, in His love of mankind, placed over us the demons, who are a superior race, and they with great ease and pleasure to themselves, and no less to us, taking care of us and giving us peace and reverence and order and justice never failing, made the tribes of men happy and united. And this tradition, which is true, declares that cities of which some mortal man and not God is the ruler, have no escape from evils and toils. Still we must do all that we can to imitate the life which is said to have existed in the days of Cronos, and, as far as the principle of immortality dwells in us, to that we must hearken, both in private and public life, and regulate our cities and houses according to law, meaning by the very term 'law,' the distribution of mind. But if either a single person or an oligarchy or a democracy has a soul eager after pleasures and desires—wanting to be filled with them, yet retaining none of them, and perpetually afflicted with an endless and insatiable disorder; and this evil spirit, having first trampled the laws under foot, becomes the master either of a state or of an individual,—then, as I was saying, salvation is hopeless. And now, Cleinias, we have to consider whether you will or will not accept this tale of mine.

CLEINIAS: Certainly we will.

ATHENIAN: You are aware,—are you not?—that there are often said to be as many forms of laws as there are of governments, and of the latter we have already mentioned all those which are commonly recognized. Now you must regard this as a matter of first-rate importance. For what is to be the standard of just and unjust, is once more the point at issue. Men say that the law ought not to regard either military virtue, or virtue in general, but only the interests and power and preservation of the established form of government; this is thought by them to be the best way of expressing the natural definition of justice.

CLEINIAS: How?

ATHENIAN: Justice is said by them to be the interest of the stronger (Republic).

CLEINIAS: Speak plainer.

ATHENIAN: I will:—'Surely,' they say, 'the governing power makes whatever laws have authority in any state'?

CLEINIAS: True.

ATHENIAN: 'Well,' they would add, 'and do you suppose that tyranny or democracy, or any other conquering power, does not make the continuance of the power which is possessed by them the first or principal object of their laws'?

CLEINIAS: How can they have any other?

ATHENIAN: 'And whoever transgresses these laws is punished as an evil-doer by the legislator, who calls the laws just'?

CLEINIAS: Naturally.

ATHENIAN: 'This, then, is always the mode and fashion in which justice exists.'

CLEINIAS: Certainly, if they are correct in their view.

ATHENIAN: Why, yes, this is one of those false principles of government to which we were referring.

CLEINIAS: Which do you mean?

ATHENIAN: Those which we were examining when we spoke of who ought to govern whom. Did we not arrive at the conclusion that parents ought to govern their children, and the elder the younger, and the noble the ignoble? And there were many other principles, if you remember, and they were not always consistent. One principle was this very principle of might, and we said that Pindar considered violence natural and justified it.

CLEINIAS: Yes; I remember.

ATHENIAN: Consider, then, to whom our state is to be entrusted. For there is a thing which has occurred times without number in states—

CLEINIAS: What thing?

ATHENIAN: That when there has been a contest for power, those who gain the upper hand so entirely monopolize the government, as to refuse all share to the defeated party and their descendants—they live watching one another, the ruling class being in perpetual fear that some one

who has a recollection of former wrongs will come into power and rise up against them. Now, according to our view, such governments are not polities at all, nor are laws right which are passed for the good of particular classes and not for the good of the whole state. States which have such laws are not polities but parties, and their notions of justice are simply unmeaning. I say this, because I am going to assert that we must not entrust the government in your state to any one because he is rich, or because he possesses any other advantage, such as strength, or stature, or again birth: but he who is most obedient to the laws of the state, he shall win the palm; and to him who is victorious in the first degree shall be given the highest office and chief ministry of the gods; and the second to him who bears the second palm; and on a similar principle shall all the other offices be assigned to those who come next in order. And when I call the rulers servants or ministers of the law, I give them this name not for the sake of novelty, but because I certainly believe that upon such service or ministry depends the well- or ill-being of the state. For that state in which the law is subject and has no authority, I perceive to be on the highway to ruin; but I see that the state in which the law is above the rulers, and the rulers are the inferiors of the law, has salvation, and every blessing which the Gods can confer.

CLEINIAS: Truly, Stranger, you see with the keen vision of age.

ATHENIAN: Why, yes; every man when he is young has that sort of vision dullest, and when he is old keenest.

CLEINIAS: Very true.

ATHENIAN: And now, what is to be the next step? May we not suppose the colonists to have arrived, and proceed to make our speech to them?

CLEINIAS: Certainly.

ATHENIAN: 'Friends,' we say to them,—'God, as the old tradition declares, holding in his hand the beginning, middle, and end of all that is, travels according to His nature in a straight line towards the accomplishment of His end. Justice always accompanies Him, and is the punisher of those who fall short of the divine law. To justice, he who would be happy holds fast, and follows in her company with all humility and order; but he who is lifted up with pride, or elated by wealth or rank, or beauty, who is young and foolish, and has a soul hot with insolence, and thinks that he has no need of any guide or ruler, but is able himself to be the guide of others, he, I say, is left deserted of God; and being thus deserted, he takes to him others who are like himself, and dances about, throwing all things into confusion, and many think that he is a great man, but in a short time he pays a penalty which justice cannot but approve, and is utterly destroyed, and his family and city with him. Wherefore, seeing that human things are thus ordered, what should a wise man do or think, or not do or think'?

CLEINIAS: Every man ought to make up his mind that he will be one of the followers of God; there can be no doubt of that.

ATHENIAN: Then what life is agreeable to God, and becoming in His followers? One only, expressed once for all in the old saying that 'like agrees with like, with measure measure,' but things which have no measure agree neither with themselves nor with the things which have. Now God ought to be to us

the measure of all things, and not man (compare Crat.; Theaet.), as men commonly say (Protagoras): the words are far more true of Him. And he who would be dear to God must, as far as is possible, be like Him and such as He is. Wherefore the temperate man is the friend of God, for he is like Him; and the intemperate man is unlike Him, and different from Him, and unjust. And the same applies to other things; and this is the conclusion, which is also the noblest and truest of all sayings,—that for the good man to offer sacrifice to the Gods, and hold converse with them by means of prayers and offerings and every kind of service, is the noblest and best of all things, and also the most conducive to a happy life, and very fit and meet. But with the bad man, the opposite of this is true: for the bad man has an impure soul, whereas the good is pure; and from one who is polluted, neither a good man nor God can without impropriety receive gifts. Wherefore the unholy do only waste their much service upon the Gods, but when offered by any holy man, such service is most acceptable to them. This is the mark at which we ought to aim. But what weapons shall we use, and how shall we direct them? In the first place, we affirm that next after the Olympian Gods and the Gods of the State, honour should be given to the Gods below; they should receive everything in even numbers, and of the second choice, and ill omen, while the odd numbers, and the first choice, and the things of lucky omen, are given to the Gods above, by him who would rightly hit the mark of piety. Next to these Gods, a wise man will do service to the demons or spirits, and then to the heroes, and after them will follow the private and ancestral Gods, who are worshipped as the law prescribes in the places which are sacred to them. Next comes the honour of living parents, to whom, as is meet, we have to pay the first and greatest and oldest of all debts, considering that all which a man has belongs to those who gave him birth and brought him up, and that he must do all that he can to minister to them, first, in his property, secondly, in his person, and thirdly, in his soul, in return for the endless care and travail which they bestowed upon him of old, in the days of his infancy, and which he is now to pay back to them when they are old and in the extremity of their need. And all his life long he ought never to utter, or to have uttered, an unbecoming word to them; for of light and fleeting words the penalty is most severe; Nemesis, the messenger of justice, is appointed to watch over all such matters. When they are angry and want to satisfy their feelings in word or deed, he should give way to them; for a father who thinks that he has been wronged by his son may be reasonably expected to be very angry. At their death, the most moderate funeral is best, neither exceeding the customary expense, nor yet falling short of the honour which has been usually shown by the former generation to their parents. And let a man not forget to pay the yearly tribute of respect to the dead, honouring them chiefly by omitting nothing that conduces to a perpetual remembrance of them, and giving a reasonable portion of his fortune to the dead. Doing this, and living after this manner, we shall receive our reward from the Gods and those who are above us (i.e. the demons); and we shall spend our days for the most part in good hope. And how a man ought to order what relates to his descendants and his kindred and friends and fellow-citizens, and the rites of hospitality taught by Heaven, and the intercourse which arises out of all these duties, with a view to the embellishment and orderly regulation of his own life—these things, I say, the laws, as we proceed with them, will accomplish, partly persuading, and partly when natures do not yield to the persuasion of custom, chastising them by might and right, and will thus render our state, if the Gods co-operate with us, prosperous and happy. But of what has to be said, and must be said by the legislator who is of my way of thinking, and yet, if said in the form of law, would be out of place—of this I think that he may give a sample for the instruction of himself and of those for whom he is legislating; and then when, as far as he is able, he has gone through all the preliminaries, he may proceed to the work of legislation. Now, what will be the form of such prefaces? There may be a difficulty in including or describing them all under a single form, but I think that we may get some notion of them if we can guarantee one thing.

CLEINIAS: What is that?

ATHENIAN: I should wish the citizens to be as readily persuaded to virtue as possible; this will surely be the aim of the legislator in all his laws.

CLEINIAS: Certainly.

ATHENIAN: The proposal appears to me to be of some value; and I think that a person will listen with more gentleness and good-will to the precepts addressed to him by the legislator, when his soul is not altogether unprepared to receive them. Even a little done in the way of conciliation gains his ear, and is always worth having. For there is no great inclination or readiness on the part of mankind to be made as good, or as quickly good, as possible. The case of the many proves the wisdom of Hesiod, who says that the road to wickedness is smooth and can be travelled without perspiring, because it is so very short:

'But before virtue the immortal Gods have placed the sweat of labour, and long and steep is the way thither, and rugged at first; but when you have reached the top, although difficult before, it is then easy.' (Works and Days.)

CLEINIAS: Yes; and he certainly speaks well.

ATHENIAN: Very true: and now let me tell you the effect which the preceding discourse has had upon me.

CLEINIAS: Proceed.

ATHENIAN: Suppose that we have a little conversation with the legislator, and say to him—'O, legislator, speak; if you know what we ought to say and do, you can surely tell.'

CLEINIAS: Of course he can.

ATHENIAN: 'Did we not hear you just now saying, that the legislator ought not to allow the poets to do what they liked? For that they would not know in which of their words they went against the laws, to the hurt of the state.'

CLEINIAS: That is true.

ATHENIAN: May we not fairly make answer to him on behalf of the poets?

CLEINIAS: What answer shall we make to him?

ATHENIAN: That the poet, according to the tradition which has ever prevailed among us, and is accepted of all men, when he sits down on the tripod of the muse, is not in his right mind; like a fountain, he allows to flow out freely whatever comes in, and his art being imitative, he is often compelled to represent men of opposite dispositions, and thus to contradict himself; neither can he tell whether there is more truth in one thing that he has said than in another. This is not the case in a

law; the legislator must give not two rules about the same thing, but one only. Take an example from what you have just been saying. Of three kinds of funerals, there is one which is too extravagant, another is too niggardly, the third in a mean; and you choose and approve and order the last without qualification. But if I had an extremely rich wife, and she bade me bury her and describe her burial in a poem, I should praise the extravagant sort; and a poor miserly man, who had not much money to spend, would approve of the niggardly; and the man of moderate means, who was himself moderate, would praise a moderate funeral. Now you in the capacity of legislator must not barely say 'a moderate funeral,' but you must define what moderation is, and how much; unless you are definite, you must not suppose that you are speaking a language that can become law.

CLEINIAS: Certainly not.

ATHENIAN: And is our legislator to have no preface to his laws, but to say at once Do this, avoid that—and then holding the penalty in terrorem, to go on to another law; offering never a word of advice or exhortation to those for whom he is legislating, after the manner of some doctors? For of doctors, as I may remind you, some have a gentler, others a ruder method of cure; and as children ask the doctor to be gentle with them, so we will ask the legislator to cure our disorders with the gentlest remedies. What I mean to say is, that besides doctors there are doctors' servants, who are also styled doctors.

CLEINIAS: Very true.

ATHENIAN: And whether they are slaves or freemen makes no difference; they acquire their knowledge of medicine by obeying and observing their masters; empirically and not according to the natural way of learning, as the manner of freemen is, who have learned scientifically themselves the art which they impart scientifically to their pupils. You are aware that there are these two classes of doctors?

CLEINIAS: To be sure.

ATHENIAN: And did you ever observe that there are two classes of patients in states, slaves and freemen; and the slave doctors run about and cure the slaves, or wait for them in the dispensaries—practitioners of this sort never talk to their patients individually, or let them talk about their own individual complaints? The slave doctor prescribes what mere experience suggests, as if he had exact knowledge; and when he has given his orders, like a tyrant, he rushes off with equal assurance to some other servant who is ill; and so he relieves the master of the house of the care of his invalid slaves. But the other doctor, who is a freeman, attends and practices upon freemen; and he carries his enquiries far back, and goes into the nature of the disorder; he enters into discourse with the patient and with his friends, and is at once getting information from the sick man, and also instructing him as far as he is able, and he will not prescribe for him until he has first convinced him; at last, when he has brought the patient more and more under his persuasive influences and set him on the road to health, he attempts to effect a cure. Now which is the better way of proceeding in a physician and in a trainer? Is he the better who accomplishes his ends in a double way, or he who works in one way, and that the ruder and inferior?

CLEINIAS: I should say, Stranger, that the double way is far better.

ATHENIAN: Should you like to see an example of the double and single method in legislation?

CLEINIAS: Certainly I should.

ATHENIAN: What will be our first law? Will not the legislator, observing the order of nature, begin by making regulations for states about births?

CLEINIAS: He will.

ATHENIAN: In all states the birth of children goes back to the connexion of marriage?

CLEINIAS: Very true.

ATHENIAN: And, according to the true order, the laws relating to marriage should be those which are first determined in every state?

CLEINIAS: Quite so.

ATHENIAN: Then let me first give the law of marriage in a simple form; it may run as follows:—A man shall marry between the ages of thirty and thirty-five, or, if he does not, he shall pay such and such a fine, or shall suffer the loss of such and such privileges. This would be the simple law about marriage. The double law would run thus:—A man shall marry between the ages of thirty and thirty-five, considering that in a manner the human race naturally partakes of immortality, which every man is by nature inclined to desire to the utmost; for the desire of every man that he may become famous, and not lie in the grave without a name, is only the love of continuance. Now mankind are coeval with all time, and are ever following, and will ever follow, the course of time; and so they are immortal, because they leave children's children behind them, and partake of immortality in the unity of generation. And for a man voluntarily to deprive himself of this gift, as he deliberately does who will not have a wife or children, is impiety. He who obeys the law shall be free, and shall pay no fine; but he who is disobedient, and does not marry, when he has arrived at the age of thirty-five, shall pay a yearly fine of a certain amount, in order that he may not imagine his celibacy to bring ease and profit to him; and he shall not share in the honours which the young men in the state give to the aged. Comparing now the two forms of the law, you will be able to arrive at a judgment about any other laws—whether they should be double in length even when shortest, because they have to persuade as well as threaten, or whether they shall only threaten and be of half the length.

MEGILLUS: The shorter form, Stranger, would be more in accordance with Lacedaemonian custom; although, for my own part, if any one were to ask me which I myself prefer in the state, I should certainly determine in favour of the longer; and I would have every law made after the same pattern, if I had to choose. But I think that Cleinias is the person to be consulted, for his is the state which is going to use these laws.

CLEINIAS: Thank you, Megillus.

ATHENIAN: Whether, in the abstract, words are to be many or few, is a very foolish question; the best form, and not the shortest, is to be approved; nor is length at all to be regarded. Of the two forms

of law which have been recited, the one is not only twice as good in practical usefulness as the other, but the case is like that of the two kinds of doctors, which I was just now mentioning. And yet legislators never appear to have considered that they have two instruments which they might use in legislation—persuasion and force; for in dealing with the rude and uneducated multitude, they use the one only as far as they can; they do not mingle persuasion with coercion, but employ force pure and simple. Moreover, there is a third point, sweet friends, which ought to be, and never is, regarded in our existing laws.

CLEINIAS: What is it?

ATHENIAN: A point arising out of our previous discussion, which comes into my mind in some mysterious way. All this time, from early dawn until noon, have we been talking about laws in this charming retreat: now we are going to promulgate our laws, and what has preceded was only the prelude of them. Why do I mention this? For this reason:—Because all discourses and vocal exercises have preludes and overtures, which are a sort of artistic beginnings intended to help the strain which is to be performed; lyric measures and music of every other kind have preludes framed with wonderful care. But of the truer and higher strain of law and politics, no one has ever yet uttered any prelude, or composed or published any, as though there was no such thing in nature. Whereas our present discussion seems to me to imply that there is;—these double laws, of which we were speaking, are not exactly double, but they are in two parts, the law and the prelude of the law. The arbitrary command, which was compared to the commands of doctors, whom we described as of the meaner sort, was the law pure and simple; and that which preceded, and was described by our friend here as being hortatory only, was, although in fact, an exhortation, likewise analogous to the preamble of a discourse. For I imagine that all this language of conciliation, which the legislator has been uttering in the preface of the law, was intended to create good-will in the person whom he addressed, in order that, by reason of this good-will, he might more intelligently receive his command, that is to say, the law. And therefore, in my way of speaking, this is more rightly described as the preamble than as the matter of the law. And I must further proceed to observe, that to all his laws, and to each separately, the legislator should prefix a preamble; he should remember how great will be the difference between them, according as they have, or have not, such preambles, as in the case already given.

CLEINIAS: The lawgiver, if he asks my opinion, will certainly legislate in the form which you advise.

ATHENIAN: I think that you are right, Cleinias, in affirming that all laws have preambles, and that throughout the whole of this work of legislation every single law should have a suitable preamble at the beginning; for that which is to follow is most important, and it makes all the difference whether we clearly remember the preambles or not. Yet we should be wrong in requiring that all laws, small and great alike, should have preambles of the same kind, any more than all songs or speeches; although they may be natural to all, they are not always necessary, and whether they are to be employed or not has in each case to be left to the judgment of the speaker or the musician, or, in the present instance, of the lawgiver.

CLEINIAS: That I think is most true. And now, Stranger, without delay let us return to the argument, and, as people say in play, make a second and better beginning, if you please, with the principles which we have been laying down, which we never thought of regarding as a preamble before, but of

which we may now make a preamble, and not merely consider them to be chance topics of discourse. Let us acknowledge, then, that we have a preamble. About the honour of the Gods and the respect of parents, enough has been already said; and we may proceed to the topics which follow next in order, until the preamble is deemed by you to be complete; and after that you shall go through the laws themselves.

ATHENIAN: I understand you to mean that we have made a sufficient preamble about Gods and demigods, and about parents living or dead; and now you would have us bring the rest of the subject into the light of day?

CLEINIAS: Exactly.

ATHENIAN: After this, as is meet and for the interest of us all, I the speaker, and you the listeners, will try to estimate all that relates to the souls and bodies and properties of the citizens, as regards both their occupations and amusements, and thus arrive, as far as in us lies, at the nature of education. These then are the topics which follow next in order.

CLEINIAS: Very good.

BOOK V.

ATHENIAN: Listen, all ye who have just now heard the laws about Gods, and about our dear forefathers:—Of all the things which a man has, next to the Gods, his soul is the most divine and most truly his own. Now in every man there are two parts: the better and superior, which rules, and the worse and inferior, which serves; and the ruling part of him is always to be preferred to the subject. Wherefore I am right in bidding every one next to the Gods, who are our masters, and those who in order follow them (i.e. the demons), to honour his own soul, which every one seems to honour, but no one honours as he ought; for honour is a divine good, and no evil thing is honourable; and he who thinks that he can honour the soul by word or gift, or any sort of compliance, without making her in any way better, seems to honour her, but honours her not at all. For example, every man, from his very boyhood, fancies that he is able to know everything, and thinks that he honours his soul by praising her, and he is very ready to let her do whatever she may like. But I mean to say that in acting thus he injures his soul, and is far from honouring her; whereas, in our opinion, he ought to honour her as second only to the Gods. Again, when a man thinks that others are to be blamed, and not himself, for the errors which he has committed from time to time, and the many and great evils which befell him in consequence, and is always fancying himself to be exempt and innocent, he is under the idea that he is honouring his soul; whereas the very reverse is the fact, for he is really injuring her. And when, disregarding the word and approval of the legislator, he indulges in pleasure, then again he is far from honouring her; he only dishonours her, and fills her full of evil and remorse; or when he does not endure to the end the labours and fears and sorrows and pains which the legislator approves, but gives way before them, then, by yielding, he does not honour the soul, but by all such conduct he makes her to be dishonourable; nor when he thinks that life at any price is a good, does

he honour her, but yet once more he dishonours her; for the soul having a notion that the world below is all evil, he yields to her, and does not resist and teach or convince her that, for aught she knows, the world of the Gods below, instead of being evil, may be the greatest of all goods. Again, when any one prefers beauty to virtue, what is this but the real and utter dishonour of the soul? For such a preference implies that the body is more honourable than the soul; and this is false, for there is nothing of earthly birth which is more honourable than the heavenly, and he who thinks otherwise of the soul has no idea how greatly he undervalues this wonderful possession; nor, again, when a person is willing, or not unwilling, to acquire dishonest gains, does he then honour his soul with gifts—far otherwise; he sells her glory and honour for a small piece of gold; but all the gold which is under or upon the earth is not enough to give in exchange for virtue. In a word, I may say that he who does not estimate the base and evil, the good and noble, according to the standard of the legislator, and abstain in every possible way from the one and practise the other to the utmost of his power, does not know that in all these respects he is most foully and disgracefully abusing his soul, which is the divinest part of man; for no one, as I may say, ever considers that which is declared to be the greatest penalty of evil-doing—namely, to grow into the likeness of bad men, and growing like them to fly from the conversation of the good, and be cut off from them, and cleave to and follow after the company of the bad. And he who is joined to them must do and suffer what such men by nature do and say to one another,—a suffering which is not justice but retribution; for justice and the just are noble, whereas retribution is the suffering which waits upon injustice; and whether a man escape or endure this, he is miserable,—in the former case, because he is not cured; while in the latter, he perishes in order that the rest of mankind may be saved.

Speaking generally, our glory is to follow the better and improve the inferior, which is susceptible of improvement, as far as this is possible. And of all human possessions, the soul is by nature most inclined to avoid the evil, and track out and find the chief good; which when a man has found, he should take up his abode with it during the remainder of his life. Wherefore the soul also is second (or next to God) in honour; and third, as every one will perceive, comes the honour of the body in natural order. Having determined this, we have next to consider that there is a natural honour of the body, and that of honours some are true and some are counterfeit. To decide which are which is the business of the legislator; and he, I suspect, would intimate that they are as follows:—Honour is not to be given to the fair body, or to the strong or the swift or the tall, or to the healthy body (although many may think otherwise), any more than to their opposites; but the mean states of all these habits are by far the safest and most moderate; for the one extreme makes the soul braggart and insolent, and the other, illiberal and base; and money, and property, and distinction all go to the same tune. The excess of any of these things is apt to be a source of hatreds and divisions among states and individuals; and the defect of them is commonly a cause of slavery. And, therefore, I would not have any one fond of heaping up riches for the sake of his children, in order that he may leave them as rich as possible. For the possession of great wealth is of no use, either to them or to the state. The condition of youth which is free from flattery, and at the same time not in need of the necessaries of life, is the best and most harmonious of all, being in accord and agreement with our nature, and making life to be most entirely free from sorrow. Let parents, then, bequeath to their children not a heap of riches, but the spirit of reverence. We, indeed, fancy that they will inherit reverence from us, if we rebuke them when they show a want of reverence. But this quality is not really imparted to them by the present style of admonition, which only tells them that the young ought always to be reverential. A sensible legislator will rather exhort the elders to reverence the younger, and above all to take heed that no young man sees or hears one of themselves doing or saying anything

disgraceful; for where old men have no shame, there young men will most certainly be devoid of reverence. The best way of training the young is to train yourself at the same time; not to admonish them, but to be always carrying out your own admonitions in practice. He who honours his kindred, and reveres those who share in the same Gods and are of the same blood and family, may fairly expect that the Gods who preside over generation will be propitious to him, and will quicken his seed. And he who deems the services which his friends and acquaintances do for him, greater and more important than they themselves deem them, and his own favours to them less than theirs to him, will have their good-will in the intercourse of life. And surely in his relations to the state and his fellow citizens, he is by far the best, who rather than the Olympic or any other victory of peace or war, desires to win the palm of obedience to the laws of his country, and who, of all mankind, is the person reputed to have obeyed them best through life. In his relations to strangers, a man should consider that a contract is a most holy thing, and that all concerns and wrongs of strangers are more directly dependent on the protection of God, than wrongs done to citizens; for the stranger, having no kindred and friends, is more to be pitied by Gods and men. Wherefore, also, he who is most able to avenge him is most zealous in his cause; and he who is most able is the genius and the god of the stranger, who follow in the train of Zeus, the god of strangers. And for this reason, he who has a spark of caution in him, will do his best to pass through life without sinning against the stranger. And of offences committed, whether against strangers or fellow-countrymen, that against suppliants is the greatest. For the God who witnessed to the agreement made with the suppliant, becomes in a special manner the guardian of the sufferer; and he will certainly not suffer unavenged.

Thus we have fairly described the manner in which a man is to act about his parents, and himself, and his own affairs; and in relation to the state, and his friends, and kindred, both in what concerns his own countrymen, and in what concerns the stranger. We will now consider what manner of man he must be who would best pass through life in respect of those other things which are not matters of law, but of praise and blame only; in which praise and blame educate a man, and make him more tractable and amenable to the laws which are about to be imposed.

Truth is the beginning of every good thing, both to Gods and men; and he who would be blessed and happy, should be from the first a partaker of the truth, that he may live a true man as long as possible, for then he can be trusted; but he is not to be trusted who loves voluntary falsehood, and he who loves involuntary falsehood is a fool. Neither condition is enviable, for the untrustworthy and ignorant has no friend, and as time advances he becomes known, and lays up in store for himself isolation in crabbed age when life is on the wane: so that, whether his children or friends are alive or not, he is equally solitary.—Worthy of honour is he who does no injustice, and of more than twofold honour, if he not only does no injustice himself, but hinders others from doing any; the first may count as one man, the second is worth many men, because he informs the rulers of the injustice of others. And yet more highly to be esteemed is he who co-operates with the rulers in correcting the citizens as far as he can—he shall be proclaimed the great and perfect citizen, and bear away the palm of virtue. The same praise may be given about temperance and wisdom, and all other goods which may be imparted to others, as well as acquired by a man for himself; he who imparts them shall be honoured as the man of men, and he who is willing, yet is not able, may be allowed the second place; but he who is jealous and will not, if he can help, allow others to partake in a friendly way of any good, is deserving of blame: the good, however, which he has, is not to be undervalued by us because it is possessed by him, but must be acquired by us also to the utmost of our power. Let every man, then, freely strive for the prize of virtue, and let there be no envy. For the unenvious nature increases the

greatness of states—he himself contends in the race, blasting the fair fame of no man; but the envious, who thinks that he ought to get the better by defaming others, is less energetic himself in the pursuit of true virtue, and reduces his rivals to despair by his unjust slanders of them. And so he makes the whole city to enter the arena untrained in the practice of virtue, and diminishes her glory as far as in him lies. Now every man should be valiant, but he should also be gentle. From the cruel, or hardly curable, or altogether incurable acts of injustice done to him by others, a man can only escape by fighting and defending himself and conquering, and by never ceasing to punish them; and no man who is not of a noble spirit is able to accomplish this. As to the actions of those who do evil, but whose evil is curable, in the first place, let us remember that the unjust man is not unjust of his own free will. For no man of his own free will would choose to possess the greatest of evils, and least of all in the most honourable part of himself. And the soul, as we said, is of a truth deemed by all men the most honourable. In the soul, then, which is the most honourable part of him, no one, if he could help, would admit, or allow to continue the greatest of evils (compare Republic). The unrighteous and vicious are always to be pitied in any case; and one can afford to forgive as well as pity him who is curable, and refrain and calm one's anger, not getting into a passion, like a woman, and nursing ill-feeling. But upon him who is incapable of reformation and wholly evil, the vials of our wrath should be poured out; wherefore I say that good men ought, when occasion demands, to be both gentle and passionate.

Of all evils the greatest is one which in the souls of most men is innate, and which a man is always excusing in himself and never correcting; I mean, what is expressed in the saying that 'Every man by nature is and ought to be his own friend.' Whereas the excessive love of self is in reality the source to each man of all offences; for the lover is blinded about the beloved, so that he judges wrongly of the just, the good, and the honourable, and thinks that he ought always to prefer himself to the truth. But he who would be a great man ought to regard, not himself or his interests, but what is just, whether the just act be his own or that of another. Through a similar error men are induced to fancy that their own ignorance is wisdom, and thus we who may be truly said to know nothing, think that we know all things; and because we will not let others act for us in what we do not know, we are compelled to act amiss ourselves. Wherefore let every man avoid excess of self-love, and condescend to follow a better man than himself, not allowing any false shame to stand in the way. There are also minor precepts which are often repeated, and are quite as useful; a man should recollect them and remind himself of them. For when a stream is flowing out, there should be water flowing in too; and recollection flows in while wisdom is departing. Therefore I say that a man should refrain from excess either of laughter or tears, and should exhort his neighbour to do the same; he should veil his immoderate sorrow or joy, and seek to behave with propriety, whether the genius of his good fortune remains with him, or whether at the crisis of his fate, when he seems to be mounting high and steep places, the Gods oppose him in some of his enterprises. Still he may ever hope, in the case of good men, that whatever afflictions are to befall them in the future God will lessen, and that present evils He will change for the better; and as to the goods which are the opposite of these evils, he will not doubt that they will be added to them, and that they will be fortunate. Such should be men's hopes, and such should be the exhortations with which they admonish one another, never losing an opportunity, but on every occasion distinctly reminding themselves and others of all these things, both in jest and earnest.

Enough has now been said of divine matters, both as touching the practices which men ought to follow, and as to the sort of persons who they ought severally to be. But of human things we have not

as yet spoken, and we must; for to men we are discoursing and not to Gods. Pleasures and pains and desires are a part of human nature, and on them every mortal being must of necessity hang and depend with the most eager interest. And therefore we must praise the noblest life, not only as the fairest in appearance, but as being one which, if a man will only taste, and not, while still in his youth, desert for another, he will find to surpass also in the very thing which we all of us desire,—I mean in having a greater amount of pleasure and less of pain during the whole of life. And this will be plain, if a man has a true taste of them, as will be quickly and clearly seen. But what is a true taste? That we have to learn from the argument—the point being what is according to nature, and what is not according to nature. One life must be compared with another, the more pleasurable with the more painful, after this manner:—We desire to have pleasure, but we neither desire nor choose pain; and the neutral state we are ready to take in exchange, not for pleasure but for pain; and we also wish for less pain and greater pleasure, but less pleasure and greater pain we do not wish for; and an equal balance of either we cannot venture to assert that we should desire. And all these differ or do not differ severally in number and magnitude and intensity and equality, and in the opposites of these when regarded as objects of choice, in relation to desire. And such being the necessary order of things, we wish for that life in which there are many great and intense elements of pleasure and pain, and in which the pleasures are in excess, and do not wish for that in which the opposites exceed; nor, again, do we wish for that in which the elements of either are small and few and feeble, and the pains exceed. And when, as I said before, there is a balance of pleasure and pain in life, this is to be regarded by us as the balanced life; while other lives are preferred by us because they exceed in what we like, or are rejected by us because they exceed in what we dislike. All the lives of men may be regarded by us as bound up in these, and we must also consider what sort of lives we by nature desire. And if we wish for any others, I say that we desire them only through some ignorance and inexperience of the lives which actually exist.

Now, what lives are they, and how many in which, having searched out and beheld the objects of will and desire and their opposites, and making of them a law, choosing, I say, the dear and the pleasant and the best and noblest, a man may live in the happiest way possible? Let us say that the temperate life is one kind of life, and the rational another, and the courageous another, and the healthful another; and to these four let us oppose four other lives—the foolish, the cowardly, the intemperate, the diseased. He who knows the temperate life will describe it as in all things gentle, having gentle pains and gentle pleasures, and placid desires and loves not insane; whereas the intemperate life is impetuous in all things, and has violent pains and pleasures, and vehement and stinging desires, and loves utterly insane; and in the temperate life the pleasures exceed the pains, but in the intemperate life the pains exceed the pleasures in greatness and number and frequency. Hence one of the two lives is naturally and necessarily more pleasant and the other more painful, and he who would live pleasantly cannot possibly choose to live intemperately. And if this is true, the inference clearly is that no man is voluntarily intemperate; but that the whole multitude of men lack temperance in their lives, either from ignorance, or from want of self-control, or both. And the same holds of the diseased and healthy life; they both have pleasures and pains, but in health the pleasure exceeds the pain, and in sickness the pain exceeds the pleasure. Now our intention in choosing the lives is not that the painful should exceed, but the life in which pain is exceeded by pleasure we have determined to be the more pleasant life. And we should say that the temperate life has the elements both of pleasure and pain fewer and smaller and less frequent than the intemperate, and the wise life than the foolish life, and the life of courage than the life of cowardice; one of each pair exceeding in pleasure and the other in pain, the courageous surpassing the cowardly, and the wise exceeding the foolish. And so the one

class of lives exceeds the other class in pleasure; the temperate and courageous and wise and healthy exceed the cowardly and foolish and intemperate and diseased lives; and generally speaking, that which has any virtue, whether of body or soul, is pleasanter than the vicious life, and far superior in beauty and rectitude and excellence and reputation, and causes him who lives accordingly to be infinitely happier than the opposite.

Enough of the preamble; and now the laws should follow; or, to speak more correctly, an outline of them. As, then, in the case of a web or any other tissue, the warp and the woof cannot be made of the same materials (compare Statesman), but the warp is necessarily superior as being stronger, and having a certain character of firmness, whereas the woof is softer and has a proper degree of elasticity;—in a similar manner those who are to hold great offices in states, should be distinguished truly in each case from those who have been but slenderly proven by education. Let us suppose that there are two parts in the constitution of a state—one the creation of offices, the other the laws which are assigned to them to administer.

But, before all this, comes the following consideration:—The shepherd or herdsman, or breeder of horses or the like, when he has received his animals will not begin to train them until he has first purified them in a manner which befits a community of animals; he will divide the healthy and unhealthy, and the good breed and the bad breed, and will send away the unhealthy and badly bred to other herds, and tend the rest, reflecting that his labours will be vain and have no effect, either on the souls or bodies of those whom nature and ill nurture have corrupted, and that they will involve in destruction the pure and healthy nature and being of every other animal, if he should neglect to purify them. Now the case of other animals is not so important—they are only worth introducing for the sake of illustration; but what relates to man is of the highest importance; and the legislator should make enquiries, and indicate what is proper for each one in the way of purification and of any other procedure. Take, for example, the purification of a city—there are many kinds of purification, some easier and others more difficult; and some of them, and the best and most difficult of them, the legislator, if he be also a despot, may be able to effect; but the legislator, who, not being a despot, sets up a new government and laws, even if he attempt the mildest of purgations, may think himself happy if he can complete his work. The best kind of purification is painful, like similar cures in medicine, involving righteous punishment and inflicting death or exile in the last resort. For in this way we commonly dispose of great sinners who are incurable, and are the greatest injury of the whole state. But the milder form of purification is as follows:—when men who have nothing, and are in want of food, show a disposition to follow their leaders in an attack on the property of the rich—these, who are the natural plague of the state, are sent away by the legislator in a friendly spirit as far as he is able; and this dismissal of them is euphemistically termed a colony. And every legislator should contrive to do this at once. Our present case, however, is peculiar. For there is no need to devise any colony or purifying separation under the circumstances in which we are placed. But as, when many streams flow together from many sources, whether springs or mountain torrents, into a single lake, we ought to attend and take care that the confluent waters should be perfectly clear, and in order to effect this, should pump and draw off and divert impurities, so in every political arrangement there may be trouble and danger. But, seeing that we are now only discoursing and not acting, let our selection be supposed to be completed, and the desired purity attained. Touching evil men, who want to join and be citizens of our state, after we have tested them by every sort of persuasion and for a sufficient time, we will prevent them from coming; but the good we will to the utmost of our ability receive as friends with open arms.

Another piece of good fortune must not be forgotten, which, as we were saying, the Heraclid colony had, and which is also ours,—that we have escaped division of land and the abolition of debts; for these are always a source of dangerous contention, and a city which is driven by necessity to legislate upon such matters can neither allow the old ways to continue, nor yet venture to alter them. We must have recourse to prayers, so to speak, and hope that a slight change may be cautiously effected in a length of time. And such a change can be accomplished by those who have abundance of land, and having also many debtors, are willing, in a kindly spirit, to share with those who are in want, sometimes remitting and sometimes giving, holding fast in a path of moderation, and deeming poverty to be the increase of a man's desires and not the diminution of his property. For this is the great beginning of salvation to a state, and upon this lasting basis may be erected afterwards whatever political order is suitable under the circumstances; but if the change be based upon an unsound principle, the future administration of the country will be full of difficulties. That is a danger which, as I am saying, is escaped by us, and yet we had better say how, if we had not escaped, we might have escaped; and we may venture now to assert that no other way of escape, whether narrow or broad, can be devised but freedom from avarice and a sense of justice—upon this rock our city shall be built; for there ought to be no disputes among citizens about property. If there are quarrels of long standing among them, no legislator of any degree of sense will proceed a step in the arrangement of the state until they are settled. But that they to whom God has given, as He has to us, to be the founders of a new state as yet free from enmity—that they should create themselves enmities by their mode of distributing lands and houses, would be superhuman folly and wickedness.

How then can we rightly order the distribution of the land? In the first place, the number of the citizens has to be determined, and also the number and size of the divisions into which they will have to be formed; and the land and the houses will then have to be apportioned by us as fairly as we can. The number of citizens can only be estimated satisfactorily in relation to the territory and the neighbouring states. The territory must be sufficient to maintain a certain number of inhabitants in a moderate way of life—more than this is not required; and the number of citizens should be sufficient to defend themselves against the injustice of their neighbours, and also to give them the power of rendering efficient aid to their neighbours when they are wronged. After having taken a survey of their's and their neighbours' territory, we will determine the limits of them in fact as well as in theory. And now, let us proceed to legislate with a view to perfecting the form and outline of our state. The number of our citizens shall be 5040—this will be a convenient number; and these shall be owners of the land and protectors of the allotment. The houses and the land will be divided in the same way, so that every man may correspond to a lot. Let the whole number be first divided into two parts, and then into three; and the number is further capable of being divided into four or five parts, or any number of parts up to ten. Every legislator ought to know so much arithmetic as to be able to tell what number is most likely to be useful to all cities; and we are going to take that number which contains the greatest and most regular and unbroken series of divisions. The whole of number has every possible division, and the number 5040 can be divided by exactly fifty-nine divisors, and ten of these proceed without interval from one to ten: this will furnish numbers for war and peace, and for all contracts and dealings, including taxes and divisions of the land. These properties of number should be ascertained at leisure by those who are bound by law to know them; for they are true, and should be proclaimed at the foundation of the city, with a view to use. Whether the legislator is establishing a new state or restoring an old and decayed one, in respect of Gods and temples,—the temples which are to be built in each city, and the Gods or demi-gods after whom they are to be called,—if he be a man of sense, he will make no change in anything which the oracle of Delphi, or Dodona, or the God Ammon, or any

ancient tradition has sanctioned in whatever manner, whether by apparitions or reputed inspiration of Heaven, in obedience to which mankind have established sacrifices in connexion with mystic rites, either originating on the spot, or derived from Tyrrhenia or Cyprus or some other place, and on the strength of which traditions they have consecrated oracles and images, and altars and temples, and portioned out a sacred domain for each of them. The least part of all these ought not to be disturbed by the legislator; but he should assign to the several districts some God, or demi-god, or hero, and, in the distribution of the soil, should give to these first their chosen domain and all things fitting, that the inhabitants of the several districts may meet at fixed times, and that they may readily supply their various wants, and entertain one another with sacrifices, and become friends and acquaintances; for there is no greater good in a state than that the citizens should be known to one another. When not light but darkness and ignorance of each other's characters prevails among them, no one will receive the honour of which he is deserving, or the power or the justice to which he is fairly entitled: wherefore, in every state, above all things, every man should take heed that he have no deceit in him, but that he be always true and simple; and that no deceitful person take any advantage of him.

The next move in our pastime of legislation, like the withdrawal of the stone from the holy line in the game of draughts, being an unusual one, will probably excite wonder when mentioned for the first time. And yet, if a man will only reflect and weigh the matter with care, he will see that our city is ordered in a manner which, if not the best, is the second best. Perhaps also some one may not approve this form, because he thinks that such a constitution is ill adapted to a legislator who has not despotic power. The truth is, that there are three forms of government, the best, the second and the third best, which we may just mention, and then leave the selection to the ruler of the settlement. Following this method in the present instance, let us speak of the states which are respectively first, second, and third in excellence, and then we will leave the choice to Cleinias now, or to any one else who may hereafter have to make a similar choice among constitutions, and may desire to give to his state some feature which is congenial to him and which he approves in his own country.
